all, unless we be born again of water and the Holy Ghost, we cannot enter into the kingdom of Heaven, as Truth Himself has told us. The matter of this sacrament is true and natural water; and it is indifferent whether it be cold or hot. The form is: I baptize thee in the name of the Father and of the Son and of the Holy Ghost. We do not, however, deny that the words: Let this servant of Christ be baptized in the name of the Father and of the Son and of the Holy Ghost, constitute true baptism; because since the principal cause from which baptism has its efficacy is the Holy Trinity, and the instrumental cause is the minister who confers the sacrament exteriorly, then if the act exercised by the minister be expressed, together with the invocation of the Holy Trinity, the sacrament is perfected. The minister of this sacrament is the priest, to whom it belongs to baptize, by reason of his office. In case of necessity, however, not only a priest or deacon, but even a layman or woman, nay, even a pagan or heretic can baptize, provided he observes the form used by the Church, and intends to perform what the Church performs. The effect of this sacrament is the remission of all sin, original and actual; likewise of all punishment which is due for sin. As a consequence, no satisfaction for past sins is enjoined upon those who are baptized; and if they die before they commit any sin, they attain immediately to the kingdom of heaven and the vision of God."

(b) The negative document we call the canons on baptism decreed by the Council of Trent (Sess. VII, De Baptismo), in which the following doctrines are anathematized: "The baptism of John (the Precursor) had the same efficacy as the baptism of Christ. True and natural water is not necessary for baptism, and therefore the words of Our Lord Jesus Christ 'Unless a man be born again of water and the Holy Ghost' are metaphorical. The true doctrine of the sacrament of baptism is not taught by the Roman Church. Baptism given by heretics in the name of the Father and of the Son and of the Holy Ghost with the intention of performing what the Church performs, is not true baptism. Baptism is free, that is, not necessary for salvation. A baptized person, even if he wishes it, cannot lose grace, no matter how much he sins, unless he refuses to believe. Those who are baptized are obliged only to have faith, but not to observe the whole law of Christ. Baptized persons are not obliged to observe all the precepts of the Church, written and traditional, unless of their own accord they wish to submit to them. All vows made after baptism are void by reason of the promises made in baptism itself; because by these vows injury is done to the faith which has been professed in baptism and to the sacrament itself. All sins committed after baptism are either forgiven or rendered venial by the sole remembrance and faith of the baptism that has been received. Baptism although truly and properly administered, must be repeated in the case of a person who has denied the faith of Christ before infidels and has been brought again to repentance. No one is to be baptized except at the age at which Christ was baptized or at the moment of death. Infants, not being able to make an act of faith, are not to be reckoned among the faithful after their baptism, and therefore when they come to the age of discretion they are to be rebaptized; or it is better to omit their baptism entirely than to baptize them as believing on the sole faith of the Church, when they themselves cannot make a proper act of faith. Those baptized as infants are to be asked when they have grown up, whether they wish to ratify what their sponsors had promised for them at their baptism; and if they reply that they do not wish to do so, they are to be left to their own will in the matter

and not to be forced by penalties to lead a Christian life, except to be deprived of the reception of the Eucharist and of the other sacraments, until they reform." The doctrines here condemned by the Council of Trent, are those of various leaders among the early reformers. The contradictory of all these statements is to be held as the dogmatic teaching of the Church.

II. ETYMOLOGY.—The word *Baptism* is derived from the Greek word, *βάπτω*, or *βαπτίζω*, to wash or to immerse. It signifies, therefore, that lavage is of the essential idea of the sacrament. Scripture uses the term *baptize* both literally and figuratively. It is employed in a metaphorical sense in Acts, i, 5, where the abundance of the grace of the Holy Ghost is signified, and also in Luke, xii, 50, where the term is referred to the sufferings of Christ in His Passion. Otherwise in the New Testament, the root word from which baptism is derived is used to designate the lavage with water, and it is employed when speaking of Jewish lustrations, and of the baptism of John, as well as of the Christian Sacrament of Baptism (cf. Heb., vi, 2; Mark, vii, 4). In ecclesiastical usage, however, when the terms *Baptize*, *Baptism* are employed without a qualifying word, they are intended to signify the sacramental washing by which the soul is cleansed from sin at the same time that water is poured upon the body. Many other terms have been used as descriptive synonyms for baptism both in the Bible and Christian antiquity, as the laver of regeneration, illumination, the seal of God, the water of eternal life, the sacrament of the Trinity, etc. (cf. Bingham, Antiq. Eccl., IV). In English, the term *christen* is familiarly used for *baptize*. As, however, the former word signifies only the effect of baptism, that is, to make one a Christian, but not the manner and the act, moralists hold that "I christen" could probably not be substituted validly for "I baptize" in conferring the sacrament (Sabetti, n. 657; Lehmkuhl, n. 63; Amer. Eccl. Rev., V, I).

III. DEFINITION.—The Roman Catechism (Ad parochos, De bapt., 2, 2, 5) defines baptism thus: Baptism is the sacrament of regeneration by water in the word (*per aquam in verbo*). St. Thomas Aquinas (III, Q. lxxvi, a. 1) gives this definition: "Baptism is the external ablution of the body, performed with the prescribed form of words." Later theologians generally distinguish formally between the physical and the metaphysical defining of this sacrament. By the former they understand the formula expressing the action of ablution and the utterance of the invocation of the Trinity; by the latter, the definition: "Sacrament of regeneration" or that institution of Christ by which we are reborn to spiritual life. The term "regeneration" distinguishes baptism from every other sacrament, for although penance revivifies men spiritually, yet this is rather a resuscitation, a bringing back from the dead, than a rebirth. Penance does not make us Christians; on the contrary, it presupposes that we have already been born of water and the Holy Ghost to the life of grace, while baptism on the other hand was instituted to confer upon men the very beginnings of the spiritual life, to transfer them from the state of enemies of God to the state of adoption, as sons of God. The definition of the Roman Catechism combines the physical and metaphysical definitions of baptism. "The sacrament of regeneration" is the metaphysical essence of the sacrament, while the physical essence is expressed by the second part of the definition, i. e. the washing with water (matter), accompanied by the invocation of the Holy Trinity (form). Baptism is, therefore, the sacrament by which we are born again of water and the Holy Ghost, that is, by which we receive in a new and spiritual life, the dignity of adoption as sons of God and heirs of God's kingdom.

IV. TYPES.—Having considered the Christian

meaning of the term "baptism", we now turn our attention to the various rites which were its forerunners before the New Dispensation. Types of this sacrament are to be found among the Jews and Gentiles. Its place in the sacramental system of the Old Law was taken by circumcision, which is called by some of the Fathers "the laver of blood" to distinguish it from "the laver of water". By the rite of circumcision, the recipient was incorporated into the people of God and made a partaker in the Messianic promises; a name was bestowed upon him and he was reckoned among the children of Abraham, the father of all believers. Other forerunners of baptism were the numerous purifications prescribed in the Mosaic dispensation for legal uncleanness. The symbolism of an outward washing to cleanse an invisible blemish was made very familiar to the Jews by their sacred ceremonies. But in addition to these more direct types, both the New Testament writers and the Fathers of the Church find many mysterious foreshadowings of baptism. Thus St. Paul (I Cor., x) adduces the passage of Israel through the Red Sea, and St. Peter (I Pet., iii) the Deluge, as types of the purification to be found in Christian baptism. Other foreshadowings of the sacrament are found by the Fathers in the bathing of Naaman in the Jordan, in the brooding of the Spirit of God over the waters, in the rivers of Paradise, in the blood of the Paschal Lamb, during Old Testament times, and in the pool of Bethesda, and in the healing of the dumb and blind in the New Testament.

How natural and expressive the symbolism of exterior washing to indicate interior purification was recognized to be, is plain from the practice also of the heathen systems of religion. The use of lustral water is found among the Babylonians, Assyrians, Egyptians, Greeks, Romans, Hindus, and others. A closer resemblance to Christian baptism is found in a form of Jewish baptism, to be bestowed on proselytes, given in the Babylonian Talmud (Döllinger, First Age of the Church). But above all must be considered the baptism of St. John the Precursor. John baptized with water (Mark, i) and it was a baptism of penance for the remission of sins (Luke, iii). While, then, the symbolism of the sacrament instituted by Christ was not new, the efficacy which He joined to the rite is that which differentiates it from all its types. John's baptism did not produce grace, as he himself testifies (Matt., iii) when he declares that he is not the Messiah whose baptism is to confer the Holy Ghost. Moreover, it was not John's baptism that remitted sin, but the penance that accompanied it; and hence St. Augustine calls it (De Bapt. contra Donat., V) "a remission of sins in hope". As to the nature of the Precursor's baptism, St. Thomas (III, Q. xxxviii, a. 1) declares: "The baptism of John was not a sacrament of itself, but a certain sacramental as it were, preparing the way (*disponens*) for the baptism of Christ." Durandus calls it a sacrament, indeed, but of the Old Law, and St. Bonaventure places it as a medium between the Old and New Dispensations. It is of Catholic faith that the Precursor's baptism was essentially different in its effects from the baptism of Christ. It is also to be noted that those who had previously received John's baptism had to receive later the Christian baptism (Acts, xix).

V. INSTITUTION OF THE SACRAMENT.—That Christ instituted the Sacrament of Baptism is unquestionable. Rationalists, like Harnack (Dogmengeschichte, I, 68), dispute it, only by arbitrarily ruling out the texts which prove it. Christ not only commands His Disciples (Matt., xxviii, 19) to baptize and gives them the form to be used, but He also declares explicitly the absolute necessity of baptism (John, iii): "Unless a man be born again of water and the Holy Ghost, he can not enter into the Kingdom of God." More-

over, from the general doctrine of the Church on the sacraments, we know that the efficacy attached to them is derivable only from the institution of the Redeemer. When, however, we come to the question as to when precisely Christ instituted baptism, we find that ecclesiastical writers are not agreed. The Scriptures themselves are silent upon the subject. Various occasions have been pointed out as the probable time of institution, as when Christ was Himself baptized in the Jordan, when He declared the necessity of the rebirth to Nicodemus, when He sent His Apostles and Disciples to preach and baptize. The first opinion was quite a favourite with many of the Fathers and Schoolmen, and they are fond of referring to the sanctification of the baptismal water by contact with the flesh of the God-man. Others, as St. Jerome and St. Maximus, appear to assume that Christ baptized John on this occasion and thus instituted the sacrament. There is nothing, however, in the Gospels to indicate that Christ baptized the Precursor at the time of His own baptism. As to the opinion that it was in the colloquy with Nicodemus that the sacrament was instituted, it is not surprising that it has found few adherents. Christ's words indeed declare the necessity of such an institution, but no more. It seems also very unlikely that Christ would have instituted the sacrament in a secret conference with one who was not to be a herald of its institution.

The more probable opinion seems to be that baptism, as a sacrament, had its origin when Christ commissioned His Apostles to baptize, as narrated in John, iii and iv. There is nothing directly in the text as to the institution, but as the Disciples acted evidently under the instruction of Christ, He must have taught them at the very outset the matter and form of the sacrament which they were to dispense. It is true that St. John Chrysostom (Hom., xxviii in Joan.), Theophylactus (in cap. iii, Joan.), and Tertullian (De Bapt., c. ii) declare that the baptism given by the Disciples of Christ as narrated in these chapters of St. John was a baptism of water only and not of the Holy Ghost; but their reason is that the Holy Ghost was not given until after the Resurrection. As theologians have pointed out, this is a confusion between the visible and the invisible manifestation of the Holy Spirit. The authority of St. Leo (Ep. xvi ad Episc. Sicil.) is also invoked for the same opinion, inasmuch as he seems to hold that Christ instituted the sacrament when, after His rising from the dead, He gave the command (Matt., xxviii): "Go and teach . . . baptizing"; but St. Leo's words can easily be explained otherwise, and in another part of the same epistle he refers to the sanction of regeneration given by Christ when the water of baptism flowed from His side on the Cross; consequently, before the Resurrection. All authorities agree that Matt., xxviii, contains the solemn promulgation of this sacrament, and St. Leo does not seem to intend more than this. We need not delay on the arguments of those who declare baptism to have been necessarily established after Christ's death, because the efficacy of the sacraments is derived from His Passion. This would prove also that the Holy Eucharist was not instituted before His death, which is untenable. As to the frequent statement of the Fathers that the sacraments flowed from the side of Christ upon the Cross, it is enough to say that beyond the symbolism found therein, their words can be explained as referring to the death of Christ, as the meritorious cause or perfection of the sacraments, but not necessarily as their time of institution.

All things considered, we can safely state, therefore, that Christ most probably instituted baptism before His Passion. For in the first place, as is evident from John, iii and iv, Christ certainly conferred baptism, at least by the hands of His Disciples, before His

Passion. That this was an essentially different rite from John the Precursor's baptism seems plain, because the baptism of Christ is always preferred to that of John, and the latter himself states the reason: "I baptize with water . . . [Christ] baptizeth with the Holy Ghost" (John, i). In the baptism given by the Disciples as narrated in these chapters we seem to have all the requisites of a sacrament of the New Law: (1) the external rite, (2) the institution of Christ, for they baptized by His command and mission, and (3) the conferring of grace, for they bestowed the Holy Ghost (John, i). In the second place, the Apostles received other sacraments from Christ, before His Passion, as the Holy Eucharist at the Last Supper, and Holy orders (Conc. Trid., Sess. XXVI, c. 1). Now as baptism has always been held as the door of the Church and the necessary condition for the reception of any other sacrament, it follows that the Apostles must have received Christian baptism before the Last Supper. This argument is used by St. Augustine (Ep. clxiii, al. xlv) and certainly seems valid. To suppose that the first pastors of the Church received the other sacraments by dispensation, before they had received baptism, is an opinion with no foundation in Scripture or tradition and devoid of verisimilitude. The Scriptures nowhere state that Christ Himself conferred baptism, but an ancient tradition (Niceph., Hist. eccl., II, iii; Clem. Alex. Strom., III) declares that He baptized the Apostle Peter only, and that the latter baptized Andrew, James, and John, and they the other Apostles.

VI. MATTER AND FORM OF THE SACRAMENT.—(1) *Matter.* In all sacraments we treat of the matter and the form. It is also usual to distinguish the remote matter and the proximate matter. In the case of baptism, the remote matter is natural and true water. We shall consider this aspect of the question first. (a) It is of faith that true and natural water is the remote matter of baptism. In addition to the authorities already cited, we may also mention the Fourth Council of the Lateran (c. i). Some of the early Fathers, as Tertullian (De Bapt., i) and St. Augustine (Adv. Hær., xli and lix) enumerate heretics who rejected water entirely as a constituent of baptism. Such were the Gaians, Manichæans, Seleucians, and Hermians. In the Middle Ages, the Waldensians are said to have held the same tenet (Ewald, Contra Walden., vi). Some of the sixteenth century reformers, while accepting water as the ordinary matter of this sacrament, declared that when water could not be had, any liquid could be used in its place. So Luther (Tischr., xvii) and Beza (Ep., ii, ad Till.). It was in consequence of this teaching that certain of the Tridentine canons were framed. Calvin held that the water used in baptism was simply symbolic of the Blood of Christ (Instit., IV, xv). As a rule, however, those sects which believe in baptism at the present time, recognize water as the necessary matter of the sacrament. Scripture is so positive in its statements as to the use of true and natural water for baptism that it is difficult to see why it should ever be called in question. Not only have we the explicit words of Christ (John, iii, v), "Unless a man be born again of water", etc., but also in the Acts of the Apostles and the Epistles of St. Paul there are passages that preclude any metaphorical interpretation. Thus (Acts, x, 47) St. Peter says, "Can any man forbid water, that these should not be baptized?" In the eighth chapter of the Acts is narrated the episode of Philip and the eunuch of Ethiopia, and in verse 36 we read: "They came to a certain water; and the eunuch said: See, here is water: what doth hinder me from being baptized?" Equally positive is the testimony of Christian tradition. Tertullian (op. cit.) begins his treatise: "The happy sacrament of our water". Justin Martyr (Apol., I) describes the ceremony of baptism and declares: "Then they

are led by us to where there is water . . . and then they are laved in the water". St. Augustine positively declares that there is no baptism without water (Tr. xv in Joan.).

The remote matter of baptism, then, is water, and this taken in its usual meaning. Theologians tell us consequently that what men would ordinarily declare water is valid baptismal material, whether it be water of the sea, or fountain, or well, or marsh; whether it be clear or turbid; fresh or salty; hot or cold; coloured or uncoloured. Water derived from melted ice, snow, or hail is also valid. If, however, ice, snow, or hail be not melted, they do not come under the designation water. Dew, sulphur or mineral water, and that which is derived from steam are also valid matter for this sacrament. As to a mixture of water and some other material, it is held as proper matter, provided the water certainly predominates and the mixture would still be called water. Invalid matter is every liquid that is not usually designated true water. Such are oil, saliva, wine, tears, milk, sweat, beer, soup, the juice of fruits, and any mixture containing water which men would no longer call water. When it is doubtful whether a liquid could really be called water, it is not permissible to use it for baptism except in case of absolute necessity when no certainly valid matter can be obtained. On the other hand, it is never allowable to baptize with an invalid liquid. There is a response of Pope Gregory IX to the Archbishop of Trondhjem in Norway where beer (or mead) had been employed for baptism. The pontiff says: "Since according to the Gospel teaching, a man must be born again of water and the Holy Ghost, those are not to be considered validly baptized who have been baptized with beer" (*cervisia*). It is true that a statement declaring wine to be valid matter of baptism is attributed to Pope Stephen II, but the document is void of all authority (Labbe, Conc., VI). Those who have held that "water" in the Gospel text is to be taken metaphorically, appeal to the words of the Precursor (Matt., iii), "He shall baptize you in the Holy Ghost and fire". As "fire" must certainly be only a figure of speech here, so must "water" in the other texts. To this objection, it may be replied that the Christian Church, or at least the Apostles themselves, must have understood what was prescribed to be taken literally and what figuratively. The New Testament and church history prove that they never looked on fire as a material for baptism, while they certainly did require water. Outside of the insignificant sects of Seleucians and Hermians, not even heretics took the word "fire" in this text in its literal meaning. We may remark, however, that some of the Fathers, as St. John Damascene (Orth. Fid., IV, ix), concede this statement of the Baptist to have a literal fulfilment in the Pentecostal fiery tongues. They do not refer it, however, literally to baptism. That water alone is the necessary matter of this sacrament depends of course on the will of Him Who instituted it, although theologians discover many reasons why it should have been chosen in preference to other liquids. The most obvious of these is that water cleanses and purifies more perfectly than the others, and hence the symbolism is more natural.

(b) The proximate matter of baptism is the ablation performed with water. The very word "baptize", as we have seen, means a washing. Three forms of ablation have prevailed among Christians, and the Church holds them all to be valid because they fulfil the requisite signification of the baptismal laving. These forms are immersion, infusion, and aspersion. The most ancient form usually employed was unquestionably immersion. This is not only evident from the writings of the Fathers and the early rituals of both the Latin and Oriental Churches, but it can also be gathered from the Epistles of St. Paul,

who speaks of baptism as a bath (Ephes., v, 26; Rom., vi, 4; Tit., iii, 5). In the Latin Church, immersion seems to have prevailed until the twelfth century. After that time it is found in some places even as late as the sixteenth century. Infusion and aspersion, however, were growing common in the thirteenth century and gradually prevailed in the Western Church. The Oriental Churches have retained immersion, though not always in the sense of plunging the candidate's entire body below the water. Billuart (De Bapt., I, iii) says that commonly the catechumen is placed in the font, and then water is poured upon the head. He cites the authority of Goar for this statement. Although, as we have said, immersion was the form of baptism that generally prevailed in the early ages, it must not thereby be inferred that the other forms of infusion and aspersion were not also employed and held to be valid. In the case of the sick or dying, immersion was impossible and the sacrament was then conferred by one of the other forms. This was so well recognized that infusion or aspersion received the name of the baptism of the sick (*baptismus clinicorum*). St. Cyprian (Ep. lxxvi) declares this form to be valid. From the canons of various early councils we know that candidates for Holy orders who had been baptized by this method seem to have been regarded as irregular, but this was on account of the culpable negligence supposed to be manifested in delaying baptism until sick or dying. That such persons, however, were not to be rebaptized is an evidence that the Church held their baptism to be valid. It is also pointed out that the circumstances under which St. Paul (Acts, xvi) baptized his jailor and all his household seem to preclude the use of immersion. Moreover, the acts of the early martyrs frequently refer to baptizing in prisons where infusion or aspersion was certainly employed.

By the present authorized ritual of the Latin Church, baptism must be performed by a laving of the head of the candidate. Moralists, however, state that in case of necessity, the baptism would probably be valid if the water were applied to any other principal part of the body, as the breast or shoulder. In this case, however, conditional baptism would have to be administered if the person survived (St. Alph., no. 107). In like manner they consider as probably valid the baptism of an infant in its mother's womb, provided the water, by means of an instrument, would actually flow upon the child. Such baptism is, however, later to be repeated conditionally, if the child survives its birth (Lehmkuhl, n. 61). It is to be noted that it is not sufficient for the water to merely touch the candidate; it must also flow, otherwise there would seem to be no real ablution. At best, such a baptism would be considered doubtful. If the water touches only the hair, the sacrament has probably been validly conferred, though in practice the safer course must be followed. If only the clothes of the person have received the aspersion, the baptism is undoubtedly void. The water to be employed in solemn baptism should also be consecrated for the purpose, but of this we shall treat in another section of this article. It is necessary in baptizing to make use of a threefold ablution in conferring this sacrament, by reason of the prescription of the Roman ritual. This necessarily refers, however, to the licity, not to the validity of the ceremony, as St. Thomas (III, Q. lxvi, a. 8) and other theologians expressly state. The threefold immersion is unquestionably very ancient in the Church and apparently of Apostolic origin. It is mentioned by Tertullian (De cor. milit., iii), St. Basil (De Sp. S., xxvii), St. Jerome (Dial. Contra Luc., viii), and many other early writers. Its object is, of course, to honour the three Persons of the Holy Trinity in whose name it is conferred. That this threefold ablution was not considered necessary to

the validity of the sacrament, however, is plain. In the seventh century the Fourth Council of Toledo (633) approved the use of a single ablution in baptism, as a protest against the false trinitarian theories of the Arians, who seem to have given to the threefold immersion a significance which made it imply three natures in the Holy Trinity. To insist on the unity and consubstantiality of the three Divine Persons, the Spanish Catholics adopted the single ablution and this method had the approval of Pope Gregory the Great (I, Ep. xliii). The Eunomian heretics used only one immersion and their baptism was held invalid by the First Council of Constantinople (can. vii); but this was not on account of the single ablution, but apparently because they baptized in the death of Christ. The authority of this canon is, moreover, doubtful at best.

(2) *Form*.—The requisite and sole valid form of baptism is: "I baptize thee (or This person is baptized) in the name of the Father and of the Son and of the Holy Ghost." This was the form given by Christ to His Disciples in the twenty-eighth chapter of St. Matthew's Gospel, as far, at least, as there is question of the invocation of the separate Persons of the Trinity and the expression of the nature of the action performed. For the Latin usage: "I baptize thee", etc., we have the authority of the Council of Trent (Sess. VII, can. iv) and of the Council of Florence in the Decree of Union. In addition we have the constant practice of the whole Western Church. The Latins also recognize as valid the form used by the Greeks: "This servant of Christ is baptized", etc. The Florentine decree acknowledges the validity of this form and it is moreover recognized by the Bull of Leo X, "Accepimus nuper", and of Clement VII, "Provisionis nostræ". Substantially, the Latin and Greek forms are the same, and the Latin Church has never rebaptized Orientals on their return to unity. At one time some Western theologians disputed the Greek form, because they doubted the validity of the imperative or deprecatory formula: "Let this person be baptized" (*baptizetur*). As a matter of fact, however, the Greeks use the indicative, or enuntiative, formula: "This person is baptized" (*βαπτίζεται, baptizatur*). This is unquestionable from their Euchologies, and from the testimony of Arcudius (apud Cat., tit. ii, cap. i), of Goar (Rit. Græc. Illust.), of Martène (De Ant. Eccl. Rit., I) and of the theological compendium of the schismatical Russians (St. Petersburg, 1799). It is true that in the decree for the Armenians, Pope Eugene IV uses *baptizetur*, according to the ordinary version of this decree, but Labbe, in his edition of the Council of Florence seems to consider it a corrupt reading, for in the margin he prints *baptizatur*. It has been suggested by Goar that the resemblance between *βαπτίζεται* and *baptizetur* is responsible for the mistake. The correct translation is, of course, *baptizatur*.

In administering this sacrament it is absolutely necessary to use the word "baptize" or its equivalent (Alex. VIII, Prop. damn., xxvii), otherwise the ceremony is invalid. This had already been decreed by Alexander III (Cap. Si quis, I, x, De Bapt.), and it is confirmed by the Florentine decree. It has been the constant practice of both the Latin and Greek Churches to make use of words expressing the act performed. St. Thomas (III, Q. lxvi, a. 5) says that since an ablution may be employed for many purposes, it is necessary that in baptism the meaning of the ablution be determined by the words of the form. However, the words: "In the name of the Father", etc., would not be sufficient by themselves to determine the sacramental nature of the ablution. St. Paul (Coloss., iii) exhorts us to do all things in the name of God, and consequently an ablution could be performed in the name of the Trinity to obtain restoration of health. Therefore it is that in the form

of this sacrament, the act of baptism must be expressed, and the matter and form be united to leave no doubt of the meaning of the ceremony. In addition to the necessary word "baptize", or its equivalent, it is also obligatory to mention the separate persons of the Holy Trinity. This is the command of Christ to His Disciples, and as the sacrament has its efficacy from Him Who instituted it, we can not omit anything that He has prescribed. Nothing is more certain than that this has been the general understanding and practice of the Church. Tertullian tells us (De Bapt., xiii): "The law of baptism (*tingendi*) has been imposed and the form prescribed: Go, teach the nations, baptizing them in the name of the Father and of the Son and of the Holy Ghost." St. Justin Martyr (Apol., I) testifies to the practice in his time. St. Ambrose (De Myst., IV) declares: "Unless a person has been baptized in the name of the Father and of the Son and of the Holy Ghost, he can not obtain the remission of his sins." St. Cyprian (Ad Jubaian.), rejecting the validity of baptism given in the name of Christ only, affirms that the naming of all the persons of the Trinity was commanded by the Lord (*in plenâ et adunatâ Trinitate*). The same is declared by many other primitive writers, as St. Jerome (IV, in Matt.), Origen (De Princ., i, ii), St. Athanasius (Or. iv, Contr. Ar.), St. Augustine (De Bapt., vi, 25). It is not, of course, absolutely necessary that the common names Father, Son, and Holy Ghost be used, provided the persons be expressed by words that are equivalent or synonymous. But a distinct naming of the Divine persons is required and the form: "I baptize thee in the name of the Holy Trinity", would be of more than doubtful validity. The singular form "In the name", not "names", is also to be employed, as it expresses the unity of the Divine nature. When, through ignorance, an accidental, not substantial, change has been made in the form (as *In nomine patriâ* for *Patris*), the baptism is to be held valid.

The mind of the Church as to the necessity of observing the trinitarian formula in this sacrament has been clearly shown by her treatment of baptism conferred by heretics. Any ceremony that did not observe this form has been declared invalid. The Montanists baptized in the name of the Father and the Son and Montanus and Priscilla (St. Basil, Ep. I, Ad Amphil.). As a consequence, the Council of Laodicea ordered their rebaptism. The Arians at the time of the Council of Nicæa do not seem to have tampered with the baptismal formula, for that Council does not order their rebaptism. When, then, St. Athanasius (Or. ii, Contr. Ar.) and St. Jerome (Contra Lucif.) declare the Arians to have baptized in the name of the Creator and creatures, they must either refer to their doctrine or to a later changing of the sacramental form. It is well known that the latter was the case with the Spanish Arians and that consequently converts from the sect were rebaptized. The Anomæans, a branch of the Arians, baptized with the formula: "In the name of the uncreated God and in the name of the created Son, and in the name of the Sanctifying Spirit, procreated by the created Son" (Epiphanius, Hær., lxxvii). Other Arian sects, such as the Eunomians and Aetians, baptized "in the death of Christ". Converts from Sabellianism were ordered by the First Council of Constantinople (can. vii) to be rebaptized because the doctrine of Sabellius that there was but one person in the Trinity had infected their baptismal form. The two sects sprung from Paul of Samosata, who denied Christ's Divinity, likewise conferred invalid baptism. They were the Paulianists and Photinians. Pope Innocent I (Ad. Episc. Maced., vi) declares that these sectaries did not distinguish the Persons of the Trinity when baptizing. The Council of Nicæa (can. xix) ordered the rebaptism of Paulianists, and

the Council of Arles (can. xvi and xvii) decreed the same for both Paulianists and Photinians.

There has been a theological controversy over the question as to whether baptism in the name of Christ only was ever held valid. Certain texts in the New Testament have given rise to this difficulty. Thus St. Paul (Acts, xix) commands some disciples at Ephesus to be baptized in Christ's name: "They were baptized in the name of the Lord Jesus." In Acts, x, we read that St. Peter ordered others to be baptized "in the name of the Lord Jesus Christ". Those who were converted by Philip (Acts, viii) "were baptized in the name of Jesus Christ", and above all we have the explicit command of the Prince of the Apostles: "Be baptized every one of you in the name of Jesus Christ, for the remission of your sins" (Acts, ii). Owing to these texts some theologians have held that the Apostles baptized in the name of Christ only. St. Thomas, St. Bonaventure, and Albertus Magnus are invoked as authorities for this opinion, they declaring that the Apostles so acted by special dispensation. Other writers, as Peter Lombard and Hugh of St. Victor, hold also that such baptism would be valid, but say nothing of a dispensation for the Apostles. The most probable opinion, however, seems to be that the terms "in the name of Jesus", "in the name of Christ", either refer to baptism in the faith taught by Christ, or are employed to distinguish Christian baptism from that of John the Precursor. It seems altogether unlikely that immediately after Christ had solemnly promulgated the trinitarian formula of baptism, the Apostles themselves would have substituted another. In fact, the words of St. Paul (Acts, xix) imply quite plainly that they did not. For, when some Christians at Ephesus declared that they had never heard of the Holy Ghost, the Apostle asks: "In whom then were you baptized?" This text certainly seems to declare that St. Paul took it for granted that the Ephesians must have heard the name of the Holy Ghost when the sacramental formula of baptism was pronounced over them.

The authority of Pope Stephen I has been alleged for the validity of baptism given in the name of Christ only. St. Cyprian says (Ep. ad Jubaian.) that this pontiff declared all baptism valid provided it was given in the name of Jesus Christ. It must be noted that the same explanation applies to Stephen's words as to the Scriptural texts above given. Moreover, Firmilian, in his letter to St. Cyprian, implies that Pope Stephen required an explicit mention of the Trinity in baptism, for he quotes the pontiff as declaring that the sacramental grace is conferred because a person has been baptized "with the invocation of the names of the Trinity, Father and Son and Holy Ghost". A passage that is very difficult of explanation is found in the works of St. Ambrose (Lib. I, De Sp. S., iii), where he declares that if a person names one of the Trinity, he names all of them: "If you say Christ, you have designated God the Father, by whom the Son was anointed, and Him Who was anointed Son, and the Holy Ghost in whom He was anointed." This passage has been generally interpreted as referring to the faith of the catechumen, but not to the baptismal form. More difficult is the explanation of the response of Pope Nicholas I to the Bulgarians (cap. civ; Labbe, VIII), in which he states that a person is not to be rebaptized who has already been baptized "in the name of the Holy Trinity or in the name of Christ only, as we read in the Acts of the Apostles (for it is one and the same thing, as St. Ambrose has explained)". As in the passage to which the pope alludes, St. Ambrose was speaking of the faith of the recipient of baptism, as we have already stated, it has been held probable that this is also the meaning that Pope Nicholas intended his words to convey (see another explanation in Pesch, Prælect. Dogm., VI, no. 389). What seems to confirm this is

the same pontiff's reply to the Bulgarians (Resp. 15) on another occasion when they consulted him on a practical case. They inquired whether certain persons are to be rebaptized on whom a man, pretending to be a Greek priest, had conferred baptism? Pope Nicholas replies that the baptism is to be held valid "if they were baptized in the name of the supreme and undivided Trinity". Here the pope does not give baptism in the name of Christ only as an alternative. Moralists raise the question of the validity of a baptism in whose administration something else had been added to the prescribed form, as "and in the name of the Blessed Virgin Mary". They reply that such baptism would be invalid, if the minister intended thereby to attribute the same efficacy to the added name as to the names of the Three Divine Persons. If, however, it was done through a mistaken piety only, it would not interfere with the validity (S. Alph., n. 111).

VII. CONDITIONAL BAPTISM.—From the foregoing it is evident that not all baptism administered by heretics or schismatics is invalid. On the contrary, if the proper matter and form be used and the one conferring the sacrament really "intends to perform what the Church performs", the baptism is undoubtedly valid. This is also authoritatively stated in the decree for the Armenians and the canons of the Council of Trent already given. The question becomes a practical one when converts to the Faith have to be dealt with. If there were one authorized mode of baptizing among the sects, and if the necessity and true significance of the sacrament were uniformly taught and put in practice among them, there would be little difficulty as to the status of converts from the sects. But there is no such unity of teaching and practice among them, and consequently the particular case of each convert must be examined into when there is question of his reception into the Church. For not only are there religious denominations in which baptism is in all probability not validly administered, but there are those also which have a ritual sufficient indeed for validity, but in practice the likelihood of their members having received baptism validly is more than doubtful. As a consequence converts must be dealt with differently. If it be certain that a convert was validly baptized in heresy, the sacrament is not repeated, but the ceremonies which had been omitted in such baptism are to be supplied, unless the bishop, for sufficient reasons, judges that they can be dispensed with. (For the United States, see Conc. Prov. Balt., I.) If it be uncertain whether the convert's baptism was valid or not, then he is to be baptized conditionally. In such cases the ritual is: "If thou art not yet baptized, then I baptize thee in the name", etc. The First Synod of Westminster, England, directs that adult converts are to be baptized not publicly but privately with holy water (i. e. not the consecrated baptismal water) and without the usual ceremonies (Decr. xvi). Practically, converts in the United States are almost invariably baptized either absolutely or conditionally, not because the baptism administered by heretics is held to be invalid, but because it is generally impossible to discover whether they had ever been properly baptized. Even in cases where a ceremony had certainly been performed, reasonable doubt of validity will generally remain, on account of either the intention of the administrator or the mode of administration. Still each case must be examined into (S. C. Inquis., 20 Nov., 1878) lest the sacrament be sacrilegiously repeated.

As to the baptism of the various sects, Sabetti (no. 662) states that the Oriental Churches and the "Old Catholics" generally administer baptism accurately; the Socinians and Quakers do not baptize at all; the Baptists use the rite only for adults, and

the efficacy of their baptism has been called in question owing to the separation of the matter and the form, for the latter is pronounced before the immersion takes place; the Congregationalists, Unitarians, and Universalists deny the necessity of baptism, and hence the presumption is that they do not administer it accurately; the Methodists and Presbyterians baptize by aspersion or sprinkling, and it may be reasonably doubted whether the water has touched the body and flowed upon it; among the Episcopalians many consider baptism to have no true efficacy and to be merely an empty ceremony, and consequently there is a well-grounded fear that they are not sufficiently careful in its administration. To this may be added, that Episcopalians often baptize by aspersion, and though such a method is undoubtedly valid if properly employed, yet in practice it is quite possible that the sprinkled water may not touch the skin. Sabetti also notes that ministers of the same sect do not everywhere follow a uniform method of baptizing. The practical method of reconciling heretics with the Church is as follows:—If baptism be conferred absolutely, the convert is to make no abjuration or profession of faith, nor is he to make a confession of his sins and receive absolution, because the sacrament of regeneration washes away his past offences. If his baptism is to be conditional, he must first make an abjuration of his errors, or a profession of faith, then receive the conditional baptism, and lastly make a sacramental confession followed by conditional absolution. If the convert's former baptism was judged to be certainly valid, he is only to make the abjuration or the profession of faith and receive absolution from the censures he may have incurred (Excerpta Rit. Rom., 1878). The abjuration or profession of faith here prescribed is the Creed of Pius IV, translated into the vernacular. In the case of conditional baptism, the confession may precede the administration of the rite and the conditional absolution be imparted after the baptism. This is often done as a matter of fact, as the confession is an excellent preparation for the reception of the sacrament (De Herdt, VI, viii; Sabetti, no. 725).

VIII. REBAPTISM.—To complete the consideration of the validity of baptism conferred by heretics, we must give some account of the celebrated controversy that raged around this point in the ancient Church. In Africa and Asia Minor the custom had been introduced in the early part of the third century of rebaptizing all converts from heresy. As far as can be now ascertained, the practice of rebaptism arose in Africa owing to decrees of a Synod of Carthage held probably between 218 and 222; while in Asia Minor it seems to have had its origin at the Synod of Iconium, celebrated between 230 and 235. The controversy on rebaptism is especially connected with the names of Pope St. Stephen and of St. Cyprian of Carthage. The latter was the main champion of the practice of rebaptizing. The pope, however, absolutely condemned the practice, and commanded that heretics on entering the Church should receive only the imposition of hands in *penitentiam*. In this celebrated controversy it is to be noted that Pope Stephen declares that he is upholding the primitive custom when he declares for the validity of baptism conferred by heretics. Cyprian, on the contrary, implicitly admits that antiquity is against his own practice, but stoutly maintains that it is more in accordance with an enlightened study of the subject. The tradition against him he declares to be "a human and unlawful tradition". Neither Cyprian, however, nor his zealous abettor, Firmilian, could show that rebaptism was older than the century in which they were living. The contemporaneous but anonymous author of the book "De Rebaptismate" says that the ordinances of

Pope Stephen, forbidding the rebaptism of converts, is in accordance with antiquity and ecclesiastical tradition, and are consecrated as an ancient, memorable, and solemn observance of all the saints and of all the faithful. St. Augustine believes that the custom of not rebaptizing is an Apostolic tradition, and St. Vincent of Lérins declares that the Synod of Carthage introduced rebaptism against the Divine law (*canonem*), against the rule of the universal Church, and against the customs and institutions of the ancients. By Pope Stephen's decision, he continues, antiquity was retained and novelty was destroyed (*retenta est antiquitas, explosa novitas*). It is true that the so-called Apostolic Canons (xlv and xlvii) speak of the non-validity of baptism conferred by heretics, but Dollinger says that these canons are comparatively recent, and De Marca points out that St. Cyprian would have appealed to them had they been in existence before the controversy. Pope St. Stephen, therefore, upheld a doctrine already ancient in the third century when he declared against the rebaptism of heretics, and decided that the sacrament was not to be repeated because its first administration had been valid. This has been the law of the Church ever since. The whole controversy on rebaptism is exhaustively treated by Hefele in the first volume of his history of church councils.

IX. NECESSITY OF BAPTISM.—Theologians distinguish a twofold necessity, which they call a necessity of means (*medii*) and a necessity of precept (*præcepti*). The first (*medii*) indicates a thing to be so necessary that, if wanting (though inculpably), salvation cannot be attained. The second (*præcepti*) is had when a thing is indeed so necessary that it may not be omitted voluntarily without sin; yet, ignorance of the precept or inability to fulfil it, excuses one from its observance. Baptism is held to be necessary both *necessitate mediæ* and *præcepti*. This doctrine is founded on the words of Christ. In John, iii, He declares: "Unless a man be born again of water and the Holy Ghost, he can not enter into the kingdom of God." Christ makes no exception to this law and it is therefore general in its application, embracing both adults and infants. It is consequently not merely a necessity of precept but also a necessity of means. This is the sense in which it has always been understood by the Church, and the Council of Trent (Sess. IV, cap. vi) teaches that justification cannot be obtained, since the promulgation of the Gospel, without the laver of regeneration or the desire thereof (*in voto*). In the seventh session, it declares (can. v) anathema upon anyone who says that baptism is not necessary for salvation. We have rendered *votum* by "desire" for want of a better word. The council does not mean by *votum* a simple desire of receiving baptism or even a resolution to do so. It means by *votum* an act of perfect charity or contrition, including, at least implicitly, the will to do all things necessary for salvation and thus especially to receive baptism. The absolute necessity of this sacrament is often insisted on by the Fathers of the Church, especially when they speak of infant baptism. Thus St. Irenæus (II, xxii): "Christ came to save all who are reborn through Him to God, infants, children, and youths" (*infantes et parvulos et pueros*). St. Augustine (III, De Animâ) says: "If you wish to be a Catholic, do not believe, nor say, nor teach, that infants who die before baptism can obtain the remission of original sin." A still stronger passage from the same doctor (Ep. xxviii, Ad Hieron.) reads: "Whoever says that even infants are vivified in Christ when they depart this life without the participation of His Sacrament (Baptism), both opposes the Apostolic preaching and condemns the whole Church which hastens to baptize infants, because it unhesitatingly believes that otherwise they can not possibly be vivified in Christ." St.

Ambrose (II De Abraham., c. xi) speaking of the necessity of baptism, says: "No one is excepted, not the infant, not the one hindered by any necessity." In the Pelagian controversy we find similarly strong pronouncements on the part of the Councils of Carthage and Milevis, and of Pope Innocent I. It is owing to the Church's belief in this necessity of baptism as a means to salvation that, as was already noted by St. Augustine, she committed the power of baptism in certain contingencies even to laymen and women. When it is said that baptism is also necessary, by the necessity of precept (*præcepti*), it is of course understood that this applies only to such as are capable of receiving a precept, viz. adults. The necessity in this case is shown by the command of Christ to His Apostles (Matt., xxviii): "Go and teach all nations, baptizing them", etc. Since the Apostles are commanded to baptize, the nations are commanded to receive baptism.

The necessity of baptism has been called in question by some of the Reformers or their immediate forerunners. It was denied by Wyclif, Bucer, and Zwingli. According to Calvin it is necessary for adults as a precept but not as a means. Hence he contends that the infants of believing parents are sanctified in the womb and thus freed from original sin without baptism. The Socinians teach that baptism is merely an external profession of the Christian faith and a rite which each one is free to receive or neglect. An argument against the absolute necessity of baptism has been sought in the text of Scripture: "Except you eat the flesh of the Son of man and drink his blood, you shall not have life in you" (John, vi). Here, they say, is a parallel to the text: "Unless a man be born again of water". Yet everyone admits that the Eucharist is not necessary as a means but only as a precept. The reply to this is obvious. In the first instance, Christ addresses His words in the second person to adults; in the second, He speaks in the third person and without any distinction whatever. Another favourite text is that of St. Paul (I Cor., vii): "The unbelieving husband is sanctified by the believing wife; and the unbelieving wife is sanctified by the believing husband; otherwise your children should be unclean; but now they are holy." Unfortunately for the strength of this argument, the context shows that the Apostle in this passage is not treating of regenerating or sanctifying grace at all, but answering certain questions proposed to him by the Corinthians concerning the validity of marriages between heathens and believers. The validity of such marriages is proved from the fact that children born of them are legitimate, not spurious. As far as the term "sanctified" is concerned, it can, at most, mean that the believing husband or wife may convert the unbelieving party and thus become an occasion of their sanctification. A certain statement in the funeral oration of St. Ambrose over the Emperor Valentinian II has been brought forward as a proof that the Church offered sacrifices and prayers for catechumens who died before baptism. There is not a vestige of such a custom to be found anywhere. St. Ambrose may have done so for the soul of the catechumen Valentinian, but this would be a solitary instance, and it was done apparently because he believed that the emperor had had the baptism of desire. The practice of the Church is more correctly shown in the canon (xvii) of the Second Council of Braga: "Neither the commemoration of Sacrifice [*oblationis*] nor the service of chanting [*psallendi*] is to be employed for catechumens who have died without the redemption of baptism." The arguments for a contrary usage sought in the Second Council of Arles (c. xii) and the Fourth Council of Carthage (c. lxxix) are not to the point, for these councils speak, not of catechumens, but of penitents who had died suddenly before their expiation was

completed. It is true that some Catholic writers (as Cajetan, Durandus, Biel, Gerson, Toletus, Klee) have held that infants may be saved by an act of desire on the part of their parents, which is applied to them by some external sign, such as prayer or the invocation of the Holy Trinity; but Pius V, by expunging this opinion, as expressed by Cajetan, from that author's commentary on St. Thomas, manifested his judgment that such a theory was not agreeable to the Church's belief.

X. SUBSTITUTES FOR THE SACRAMENT.—The Fathers and theologians frequently divide baptism into three kinds: the baptism of water (*aquæ* or *fluminis*), the baptism of desire (*flaminis*), and the baptism of blood (*sanguinis*). However, only the first is a real sacrament. The latter two are denominated baptism only analogically, inasmuch as they supply the principal effect of baptism, namely, the grace which remits sins. It is the teaching of the Catholic Church that when the baptism of water becomes a physical or moral impossibility, eternal life may be obtained by the baptism of desire or the baptism of blood. (1) The baptism of desire (*baptismus flaminis*) is a perfect contrition of heart, and every act of perfect charity or pure love of God which contains, at least implicitly, a desire (*votum*) of baptism. The Latin word *flamen* is used because *Flamen* is a name for the Holy Ghost, whose special office it is to move the heart to love God and to conceive penitence for sin. The "baptism of the Holy Ghost" is a term employed in the third century by the anonymous author of the book "De Rebaptismate". The efficacy of this baptism of desire to supply the place of the baptism of water, as to its principal effect, is proved from the words of Christ. After He had declared the necessity of baptism (John, iii), He promised justifying grace for acts of charity or perfect contrition (John, xiv): "He that loveth Me, shall be loved of my Father: and I will love him and will manifest myself to him." And again: "If any one love me, he will keep my word, and my Father will love him, and we will come to him, and will make our abode with him." Since these texts declare that justifying grace is bestowed on account of acts of perfect charity or contrition, it is evident that these acts supply the place of baptism as to its principal effect, the remission of sins. This doctrine is set forth clearly by the Council of Trent. In the fourteenth session (cap. iv) the council teaches that contrition is sometimes perfected by charity, and reconciles man to God, before the Sacrament of Penance is received. In the fourth chapter of the sixth session, in speaking of the necessity of baptism, it says that men cannot obtain original justice "except by the laver of regeneration or its desire" (*voto*). The same doctrine is taught by Pope Innocent III (cap. Debitum, iv, De Bapt.), and the contrary propositions are condemned by Popes Pius V and Gregory XII, in proscribing the 31st and 33rd propositions of Baius.

We have already alluded to the funeral oration pronounced by St. Ambrose over the Emperor Valentinian II, a catechumen. The doctrine of the baptism of desire is here clearly set forth. St. Ambrose asks: "Did he not obtain the grace which he desired? Did he not obtain what he asked for? Certainly he obtained it because he asked for it." St. Augustine (IV, De Bapt., xxii) and St. Bernard (Ep. lxxvii, ad H. de S. Victore) likewise discourse in the same sense concerning the baptism of desire. If it be said that this doctrine contradicts the universal law of baptism made by Christ (John, iii), the answer is that the lawgiver has made an exception (John, xiv) in favour of those who have the baptism of desire. Neither would it be a consequence of this doctrine that a person justified by the baptism of desire would thereby be dispensed from seeking after the baptism of water when the latter became a

possibility. For, as has already been explained the *baptismus flaminis* contains the *votum* of receiving the *baptismus aquæ*. It is true that some of the Fathers of the Church arraign severely those who content themselves with the desire of receiving the sacrament of regeneration, but they are speaking of catechumens who of their own accord delay the reception of baptism from unpraiseworthy motives. Finally, it is to be noted that only adults are capable of receiving the baptism of desire.

(2) The baptism of blood (*baptismus sanguinis*) is the obtaining of the grace of justification by suffering martyrdom for the faith of Christ. The term "laver of blood" (*lavacrum sanguinis*) is used by Tertullian (De Bapt., xvi) to distinguish this species of regeneration from the "laver of water" (*lavacrum aquæ*). "We have a second laver," he says "which is one and the same [with the first], namely the laver of blood." St. Cyprian (Ep. lxxiii) speaks of "the most glorious and greatest baptism of blood" (*sanguinis baptismus*). St. Augustine (De Civ. Dei, XIII, vii) says: "When any die for the confession of Christ without having received the laver of regeneration, it avails as much for the remission of their sins as if they had been washed in the sacred font of baptism." The Church grounds her belief in the efficacy of the baptism of blood on the fact that Christ makes a general statement of the saving power of martyrdom in the tenth chapter of St. Matthew: "Every one therefore that shall confess me before men, I will also confess him before my Father who is in heaven" (v. 32); and: "He that shall lose his life for me shall find it" (v. 39). It is pointed out that these texts are so broadly worded as to include even infants, especially the latter text. That the former text also applies to them, has been constantly maintained by the Fathers, who declare that if infants cannot confess Christ with the mouth, they can by act. Tertullian (Adv. Valent., ii) speaks of the infants slaughtered by Herod as martyrs, and this has been the constant teaching of the Church. Another evidence of the mind of the Church as to the efficacy of the baptism of blood is found in the fact that she never prays for martyrs. Her opinion is well voiced by St. Augustine (Tr. lxxiv in Joan.): "He does an injury to a martyr who prays for him." This shows that martyrdom is believed to remit all sin and all punishment due to sin. Later theologians commonly maintain that the baptism of blood justifies adult martyrs independently of an act of charity or perfect contrition, and, as it were, *ex opere operato*, though, of course, they must have attrition for past sins. The reason is that if perfect charity, or contrition, were required in martyrdom, the distinction between the baptism of blood and the baptism of desire would be a useless one. Moreover, as it must be conceded that infant martyrs are justified without an act of charity, of which they are incapable, there is no solid reason for denying the same privilege to adults (Cf. Suarez, De Bapt., disp. xxxix.)

XI. UNBAPTIZED INFANTS.—The fate of infants who die without baptism must be briefly considered here. The Catholic teaching is uncompromising on this point, that all who depart this life without baptism, be it of water, or blood, or desire, are perpetually excluded from the vision of God. This teaching is grounded, as we have seen, on Scripture and tradition, and the decrees of the Church. Moreover, that those who die in original sin, without ever having contracted any actual sin, are deprived of the happiness of heaven is stated explicitly in the Confession of Faith of the Eastern Emperor Michael Palæologus, which had been proposed to him by Pope Clement IV in 1267, and which he accepted in the presence of Gregory X at the Second Council of Lyons in 1274. The same doctrine is found also in the Decree of Union of the Greeks, in the Bull "Lætatur Coeli" of Pope

Eugene IV, in the Profession of Faith prescribed for the Greeks by Pope Gregory XIII, and in that authorized for the Orientals by Urban VIII and Benedict XIV. Catholic theologians are unanimous, consequently, in declaring that infants dying without baptism, are excluded from the beatific vision; but as to the exact state of these souls in the next world they are not agreed. In speaking of souls who have failed to attain salvation, theologians distinguish the pain of loss (*pœna damni*), or privation of the beatific vision, and the pain of sense (*pœna sensus*). While it is certain that unbaptized infants must endure the pain of loss, it is not at all certain that they are subject to the pain of sense. St. Augustine (*De Pecc. et Mer.*, I, xvi) held that they would not be exempt from the pain of sense, but at the same time he thought it would be of the mildest form. On the other hand, St. Gregory Nazianzen (*Or. in S. Bapt.*) expresses the belief that such infants would suffer only the pain of loss. Sfrondati (*Nod. Prædest.*, I, 1) declares that while they are certainly excluded from heaven, yet they are not deprived of natural happiness. This opinion seemed so objectionable to some French bishops that they asked the judgment of the Holy See upon the matter. Pope Innocent XI replied that he would have the opinion examined into by a commission of theologians, but no sentence seems ever to have been passed upon it.

Since the twelfth century, the opinion of the majority of theologians has been that unbaptized infants are immune from all pain of sense. This was taught by St. Thomas Aquinas, Scotus, St. Bonaventure, Peter Lombard, and others, and is now the common teaching in the schools. It accords with the wording of a decree of Pope Innocent III (*III Decr.*, xlii, 3): "The punishment of original sin is the deprivation of the vision of God; of actual sin, the eternal pains of hell." Infants, of course, cannot be guilty of actual sin. As to the theory of some writers that infants may be saved also from the pain of loss by the faith of their parents, it is sufficiently evident that it is not in accord with the mind of the Church. It has been urged that, under the law of nature and the Mosaic dispensation, children could be saved by the act of their parents and that consequently the same should be even more easy of attainment under the law of grace, because the power of faith has not been diminished but increased. But this ignores the fact that infants are not said to be deprived of justification in the New Law through any decrease in the power of faith, but because of the promulgation by Christ of the precept of baptism which did not exist before the New Dispensation. Nor does this make the case of infants worse than it was before the Christian Church was instituted. While it works a hardship for some, it has undoubtedly improved the condition of most. Supernatural faith is now much more diffused than it was before the coming of Christ, and more infants are now saved by baptism than were justified formerly by the active faith of their parents. Moreover, baptism can more readily be applied to infants than the rite of circumcision, and by the ancient law this ceremony had to be deferred till the eighth day after birth, while baptism can be bestowed upon infants immediately after they are born, and in case of necessity even in their mother's womb. Finally it must be borne in mind that unbaptized infants are not unjustly deprived of heaven. The vision of God is not something to which human beings have a natural claim. It is a free gift of the Creator who can make what conditions He chooses for imparting it or withholding it. No injustice is involved when an undue privilege is not conferred upon a person. Original sin deprived the human race of an unearned right to heaven. Through the Divine mercy this bar to the enjoyment of God is removed by baptism; but if baptism be not conferred,

original sin remains, and the unregenerated soul, having no claim on heaven, is not unjustly excluded from it.

As to the question, whether in addition to freedom from the pain of sense, unbaptized infants enjoy any positive happiness in the next world, theologians are not agreed, nor is there any pronouncement of the Church on the subject. Many, following St. Thomas (*De Malo*, Q. v, a. 3), declare that these infants are not saddened by the loss of the beatific vision, either because they have no knowledge of it, and hence are not sensible of their privation; or because, knowing it, their will is entirely conformed to God's will, and they are conscious that they have missed an undue privilege through no fault of their own. In addition to this freedom from regret at the loss of heaven, these infants may also enjoy some positive happiness. St. Thomas (*In II Sent.*, dist. XXXIII, Q. ii, a. 5) says: "Although unbaptized infants are separated from God as far as glory is concerned, yet they are not separated from Him entirely. Rather are they joined to Him by a participation of natural goods; and so they may even rejoice in Him by natural consideration and love." Again (a. 2) he says: "They will rejoice in this, that they will share largely in the divine goodness and in natural perfections." While the opinion, then, that unbaptized infants may enjoy a natural knowledge and love of God and rejoice in it, is perfectly tenable, and indeed the more common opinion of the schools at present, yet it has not the certainty that would arise from a unanimous consent of the Fathers of the Church, or from a favourable pronouncement of ecclesiastical authority.

We may add here some brief remarks on the discipline of the Church in regard to unbaptized persons. As baptism is the door of the Church, the unbaptized are entirely without its pale. As a consequence: (1) Such persons, by the ordinary law of the Church, may not be buried in consecrated ground. This includes the infants of even Catholic parents. The reason of this regulation is given by Pope Innocent III (*Decr.*, III, XXVIII, xii): "It has been decreed by the sacred canons that we are to have no communion with those who are dead, if we have not communicated with them while alive." By a decree, however, of the Second Plenary Council of Baltimore (No. 390), catechumens may receive ecclesiastical sepulture. This council also decrees (No. 389) that the custom of burying the unbaptized relatives of Catholics in the family sepulchres may be tolerated. (2) A Catholic may not marry an unbaptized person without dispensation, under pain of nullity. This impediment, as far as illicitity is concerned, is derived from the natural law, because in such unions the Catholic party and the offspring of the marriage would, in most cases, be exposed to the loss of faith. The invalidity of such marriage, however, is a consequence only of positive law. For, in the beginning of Christianity, unions between the baptized and unbaptized were frequent, and they were certainly held valid. When, then, circumstances arise where the danger of perversion for the Catholic party is removed, the Church dispenses in her law of prohibition, but always requires guarantees from the non-Catholic party that there will be no interference with the spiritual rights of the partner of the union. (See *IMPEDIMENTS OF MATRIMONY*.) In general, we may state that the Church claims no authority over unbaptized persons, as they are entirely without her pale. She makes laws concerning them only in so far as they hold relations with the subjects of the Church.

XII. EFFECTS OF BAPTISM.—This sacrament is the door of the Church of Christ and the entrance into a new life. We are reborn from the state of slaves of sin into the freedom of the Sons of God. Baptism incorporates us with Christ's mystical body and makes us partakers of all the privileges flowing

from the redemptive act of the Church's Divine Founder.

The principal effects of baptism are:

(1) The remission of all sin, original and actual. This is clearly contained in Holy Writ. Thus we read (Acts, ii, 38): "Be baptized every one of you in the name of Jesus Christ, for the remission of your sins; and you shall receive the Holy Ghost. For the promise is to you and to your children and to all that are far off, whomsoever the Lord our God shall call." We read also in the twenty-second chapter of the Acts of the Apostles (v. 16): "Be baptized, and wash away thy sins." St. Paul in the fifth chapter of his Epistle to the Ephesians beautifully represents the whole Church as being baptized and purified (v. 25 sq.): "Christ loved the Church, and delivered Himself up for it: that he might sanctify it, cleansing it by the laver of water in the word of life: that he might present it to Himself a glorious Church, not having spot or wrinkle, or any such thing; but that it should be holy and without blemish." The prophecy of Ezechiel (xxxvi, 25) has also been understood of baptism: "I will pour upon you clean water, and you shall be cleansed from all your filthiness" (*inquinamentis*), where the prophet is unquestionably speaking of moral defilements. This is also the solemn teaching of the Church. In the profession of faith prescribed by Pope Innocent III for the Waldensians in 1210, we read: "We believe that all sins are remitted in baptism, both original sin and those sins which have been voluntarily committed." The Council of Trent (Sess. V., can. v) anathematizes whomsoever denies that the grace of Christ which is conferred in baptism does not remit the guilt of original sin; or asserts that everything which can truly and properly be called sin is not thereby taken away. The same is taught by the Fathers. St. Justin Martyr (Apol., I, lxvi) declares that in baptism we are created anew, that is, consequently, free from all stain of sin. St. Ambrose (De Myst., iii) says of baptism: "This is the water in which the flesh is submerged that all carnal sin may be washed away. Every transgression is there buried." Tertullian (De Bapt., vii) writes: "Baptism is a carnal act in as much as we are submerged in the water; but the effect is spiritual, for we are freed from our sins." The words of Origen (In Gen., xiii) are classic: "If you transgress, you write unto yourself the handwriting (*chirographum*) of sin. But, behold, when you have once approached to the cross of Christ and to the grace of baptism, your handwriting is affixed to the cross and blotted out in the font of baptism." It is needless to multiply testimonies from the early ages of the Church. It is a point on which the Fathers are unanimous, and telling quotations might also be made from St. Cyprian, Clement of Alexandria, St. Hilary, St. Cyril of Jerusalem, St. Basil, St. Gregory Nazianzen, and others.

(2) But baptism not only washes away sin, it also remits the punishment of sin. This was the plain teaching of the primitive Church. We read in Clement of Alexandria (Pædagog., i) of baptism: "It is called a laver because we are washed from our sins: it is called grace, because by it the punishments which are due to sin are remitted." St. Jerome (Ep. lxi) writes: "After the pardon (*indulgentiam*) of baptism, the severity of the Judge is not to be feared." And St. Augustine (De Pecc. et Mer., II, xxviii) says plainly: "If immediately [after baptism] there follows the departure from this life, there will be absolutely nothing that a man must answer for *quod obnoxium hominem teneat*, for he will have been freed from everything that bound him." In perfect accord with the early doctrine, the Florentine decree states: "No satisfaction is to be enjoined upon the baptized for past sins; and if they die before any sin, they will immediately attain to the kingdom of

heaven and to the vision of God." In like manner the Council of Trent (Sess. V) teaches: "There is no cause of damnation in those who have been truly buried with Christ by baptism. . . . Nothing whatever will delay their entrance into heaven."

(3) Another effect of baptism is the infusion of sanctifying grace and supernatural gifts and virtues. It is this sanctifying grace which renders men the adopted sons of God and confers the right to heavenly glory. The doctrine on this subject is found in the seventh chapter on justification in the sixth session of the Council of Trent. Many of the Fathers of the Church also enlarge upon this subject (as St. Cyprian, St. Jerome, Clement of Alexandria, and others), though not in the technical language of later ecclesiastical decrees.

(4) Theologians likewise teach that baptism gives man the right to those special graces which are necessary for attaining the end for which the sacrament was instituted and for enabling him to fulfil the baptismal promises. This doctrine of the schools, which claims for every sacrament those graces which are peculiar and diverse according to the end and object of the sacrament, was already enunciated by Tertullian (De Resurrect., viii). It is treated and developed by St. Thomas Aquinas (III, Q. lxii, a. 2). Pope Eugene IV repeats this doctrine in the decree for the Armenians. In treating of the grace bestowed by baptism, we presume that the recipient of the sacrament puts no obstacle (*obex*) in the way of sacramental grace. In an infant, of course, this would be impossible, and as a consequence, the infant receives at once all the baptismal grace. It is otherwise in the case of an adult, for in such a one it is necessary that the requisite dispositions of the soul be present. The Council of Trent (Sess. VI, c. vii) states that each one receives grace according to his disposition and co-operation. We are not to confound an obstacle (*obex*) to the sacrament itself with an obstacle to the sacramental grace. In the first case, there is implied a defect in the matter or form, or a lack of the requisite intention on the part of minister or recipient, and then the sacrament would be simply null. But even if all these essential requisites for constituting the sacrament be present, there can still be an obstacle put in the way of the sacramental grace, inasmuch as an adult might receive baptism with improper motives or without real detestation for sin. In that case the person would indeed be validly baptized, but he would not participate in the sacramental grace. If, however, at a later time he made amends for the past, the obstacle would be removed and he would obtain the grace which he had failed to receive when the sacrament was conferred upon him. In such a case the sacrament is said to revive and there could be no question of rebaptism.

(5) Finally, baptism, once validly conferred, can never be repeated. The Fathers (St. Ambrose, Chrysostom, and others) so understand the words of St. Paul (Heb., vi, 4), and this has been the constant teaching of the Church both Eastern and Western from the earliest times. On this account, baptism is said to impress an ineffaceable character on the soul, which the Tridentine Fathers call a spiritual and indelible mark. That baptism (as well as Confirmation and Holy orders) really does imprint such a character, is defined explicitly by the Council of Trent (Sess. VII, can. ix). St. Cyril (Præp. in Cat.) calls baptism a "holy and indelible seal", and Clement of Alexandria (De Div. Serv., xlii), "the seal of the Lord". St. Augustine compares this character or mark imprinted upon the Christian soul with the character *militaris* impressed upon soldiers in the imperial service. St. Thomas treats of the nature of this indelible seal, or character, in the Summa (III, Q. lxiii, a. 2).

The early leaders of the so-called Reformation held very different doctrines from those of Christian antiquity on the effects of baptism. Luther (*De Captiv. Bab.*) and Calvin (*Antid. C. Trid.*) held that this sacrament made the baptized certain of the perpetual grace of adoption. Others declared that the calling to mind of one's baptism would free him from sins committed after it; others again, that transgressions of the Divine law, although sins in themselves, would not be imputed as sins to the baptized person provided he had faith. The decrees of the Council of Trent, drawn up in opposition to the then prevailing errors, bear witness to the many strange and novel theories broached by various exponents of the nascent Protestant theology.

**XIII. MINISTER OF THE SACRAMENT.**—The Church distinguishes between the ordinary and the extraordinary minister of baptism. A distinction is also made as to the mode of administration. Solemn baptism is that which is conferred with all the rites and ceremonies prescribed by the Church, and private baptism is that which may be administered at any time or place according to the exigencies of necessity. At one time solemn and public baptism was conferred in the Latin Church only during the paschal season and Whitsuntide. The Orientals administered it likewise at the Epiphany.

(a) The ordinary minister of solemn baptism is first the bishop and second the priest. By delegation, a deacon may confer the sacrament solemnly as an extraordinary minister. Bishops are said to be ordinary ministers because they are the successors of the Apostles who received directly the Divine command: "Go and teach all nations, baptizing them in the name of the Father and of the Son and of the Holy Ghost." Priests are also ordinary ministers because by their office and sacred orders they are pastors of souls and administrators of the sacraments, and hence the Florentine decree declares: "The minister of this Sacrament is the priest, to whom it belongs to administer baptism by reason of his office." As, however, bishops are superior to priests by the Divine law, the solemn administration of this sacrament was at one time reserved to the bishops, and a priest never administered this sacrament in the presence of a bishop unless commanded to do so. How ancient this discipline was, may be seen from Tertullian (*De Bapt.*, xvii): "The right to confer baptism belongs to the chief priest who is the bishop, then to priests and deacons, but not without the authorization of the bishop." Ignatius (*Ep. ad Smyr.*, viii): "It is not lawful to baptize or celebrate the agape without the bishop." St. Jerome (*Contra Lucif.*, ix) witnesses to the same usage in his days: "Without chrism and the command of the bishop, neither priest nor deacon has the right of conferring baptism." Deacons are only extraordinary ministers of solemn baptism, as by their office they are assistants to the priestly order. St. Isidore of Seville (*De Eccl. Off.*, ii, 25) says: "It is plain that baptism is to be conferred by priests only, and it is not lawful even for deacons to administer it without permission of the bishop or priest." That deacons were, however, ministers of this sacrament by delegation is evident from the quotations adduced. In the service of ordination of a deacon, the bishop says to the candidate: "It behooves a deacon to minister at the altar, to baptize and to preach." Philip the deacon is mentioned in Holy Writ (*Acts*, viii) as conferring baptism, presumably by delegation of the Apostles. It is to be noted that though every priest, in virtue of his ordination is the ordinary minister of baptism, yet by ecclesiastical decrees he cannot use this power licitly unless he has jurisdiction. Hence the Roman Ritual declares: "The legitimate minister of baptism is the parish priest, or any other priest delegated by the parish priest or the bishop of the place." The

Second Plenary Council of Baltimore adds: "Priests are deserving of grave reprehension who rashly baptize infants of another parish or of another diocese." St. Alphonsus (n. 114) says that parents who bring their children for baptism without necessity to a priest other than their own pastor, are guilty of sin because they violate the rights of the parish priest. He adds, however, that other priests may baptize such children, if they have the permission, whether express, or tacit, or even reasonably presumed, of the proper pastor. Those who have no settled place of abode may be baptized by the pastor of any church they choose.

(b) In case of necessity, baptism can be administered lawfully and validly by any person whatsoever who observes the essential conditions, whether this person be a Catholic layman or any other man or woman, heretic or schismatic, infidel or Jew. The essential conditions are that the person pour water upon the one to be baptized, at the same time pronouncing the words: "I baptize thee in the name of the Father and of the Son and of the Holy Ghost." Moreover, he must thereby intend really to baptize the person, or technically, he must intend to perform what the Church performs when administering this sacrament. The Roman Ritual adds that, even in conferring baptism in cases of necessity, there is an order of preference to be followed as to the minister. This order is: if a priest be present, he is to be preferred to a deacon, a deacon to a subdeacon, a cleric to a layman, and a man to a woman, unless modesty should require (as in cases of childbirth) that no other than the female be the minister, or again, unless the female should understand better the method of baptizing. The Ritual also says that the father or mother should not baptize their own child, except in danger of death when no one else is at hand who could administer the sacrament. Pastors are also directed by the Ritual to teach the faithful, and especially midwives, the proper method of baptizing. When such private baptism is administered, the other ceremonies of the rite are supplied later by a priest, if the recipient of the sacrament survives.

This right of any person whatsoever to baptize in case of necessity is in accord with the constant tradition and practice of the Church. Tertullian (*De Bapt.*, vii) says, speaking of laymen who have an opportunity to administer baptism: "He will be guilty of the loss of a soul, if he neglects to confer what he freely can." St. Jerome (*Adv. Lucif.*, ix): "In case of necessity, we know that it is also allowable for a layman [to baptize]; for as a person receives, so may he give." The Fourth Council of the Lateran (*cap. Firmiter*) decrees: "The Sacrament of Baptism . . . no matter by whom conferred is available to salvation." St. Isidore of Seville (*can. Romanus de cons.*, iv) declares: "The Spirit of God administers the grace of baptism, although it be a pagan who does the baptizing." Pope Nicholas I teaches the Bulgarians (*Resp.* 104) that baptism by a Jew or a pagan is valid. Owing to the fact that women are barred from enjoying any species of ecclesiastical jurisdiction, the question necessarily arose concerning their ability to bestow valid baptism. Tertullian (*De Bapt.*, xvii) strongly opposes the administration of this sacrament by women, but he does not declare it void. In like manner, St. Epiphanius (*Hær.*, lxxix) says of females: "Not even the power of baptizing has been granted to them", but he is speaking of solemn baptism, which is a function of the priesthood. Similar expressions may be found in the writings of other Fathers, but only when they are opposing the grotesque doctrine of some heretics, like the Marcionites, Pepuzians, and Cataphrygians, who wished to make Christian priestesses of women. The authoritative decision of the Church, however, is plain. Pope Urban II (*c. Super quibus*, xxx, 4) writes: "It

a true baptism if a woman in case of necessity baptizes a child in the name of the Trinity." The Florentine decree for the Armenians says explicitly: "In case of necessity, not only a priest or a deacon, but even a layman or woman, nay even a pagan or heretic may confer baptism." The main reason for this extension of power as to the administration of baptism is of course that the Church has understood from the beginning that this was the will of Christ. St. Thomas (III, Q. lxvii, a. 3) says that owing to the absolute necessity of baptism for the salvation of souls, it is in accordance with the mercy of God, who wishes all to be saved, that the means of obtaining this sacrament should be put, as far as possible, within the reach of all; and as for that reason the matter of the sacrament was made of common water, which can most easily be had, so in like manner it was only proper that every man should be made its minister. Finally, it is to be noted that, by the law of the Church, the person administering baptism, even in cases of necessity, contracts a spiritual relationship with the child and its parents. This relationship constitutes an impediment that would make a subsequent marriage with any of them null and void unless a dispensation were obtained beforehand. See AFFINITY.

XIV. RECIPIENT OF BAPTISM.—Every living human being, not yet baptized, is the subject of this sacrament.

(1) As regards adults there is no difficulty or controversy. Christ's command excepts no one when He bids the Apostles teach all nations and baptize them.

(2) Infant baptism has, however, been the subject of much dispute. The Waldenses and Cathari, and later the Anabaptists, rejected the doctrine that infants are capable of receiving valid baptism, and some sectarians at the present day hold the same opinion. The Catholic Church, however, maintains absolutely that the law of Christ applies as well to infants as to adults. When the Redeemer declares (John, iii) that it is necessary to be born again of water and the Holy Ghost in order to enter the Kingdom of God, His words may be justly understood to mean that He includes all who are capable of having a right to this kingdom. Now, He has asserted such a right even for those who are not adults, when He says (Matt., xix, 14): "Suffer the little children, and forbid them not to come to me: for the kingdom of heaven is for such." It has been objected that this latter text does not refer to infants, inasmuch as Christ says "to come to me". In the parallel passage in St. Luke (xviii, 15), however, the text reads: "And they brought unto him also infants, that he might touch them"; and then follow the words cited from St. Matthew. In the Greek text, the words *βρέφη* and *πρότερον* refer to infants in arms. Moreover, St. Paul (Coloss., ii) says that baptism in the New Law has taken the place of circumcision in the Old. It was especially to infants that the rite of circumcision was applied by Divine precept. If it be said that there is no example of the baptism of infants to be found in Holy Writ, we may answer that infants are included in such phrases as: "She was baptized and her household" (Acts, xvi, 15); "Himself was baptized, and all his house immediately" (Acts, xvi, 33); "I baptized the household of Stephanus" (I Cor., i, 16).

The tradition of Christian antiquity as to the necessity of infant baptism is clear from the very beginning. We have given many striking quotations on this subject already, in dealing with the necessity of baptism. A few, therefore, will suffice here. Origen (in cap. vi, Ep. ad Rom.) declares: "The Church received from the Apostles the tradition of giving baptism also to infants". St. Augustine (Serm. xi, De Verb. Apost.) says of infant baptism: "This the

Church always had, always held; this she received from the faith of our ancestors; this she perseveringly guards even to the end." St. Cyprian (Ep. ad Fidum) writes: "From baptism and from grace . . . must not be kept the infant who, because recently born, has committed no sin, except, inasmuch as it was born carnally from Adam, it has contracted the contagion of the ancient death in its first nativity; and it comes to receive the remission of sins more easily on this very account that not its own, but another's sins are forgiven it." St. Cyprian's letter to Fidus declares that the Council of Carthage in 253 reprobated the opinion that the baptism of infants should be delayed until the eighth day after birth. The Council of Milevis in 416 anathematizes whosoever says that infants lately born are not to be baptized. The Council of Trent solemnly defines the doctrine of infant baptism (Sess. VII, can. xiii). It also condemns (can. xiv) the opinion of Erasmus that those who had been baptized in infancy, should be left free to ratify or reject the baptismal promises after they had become adult. Theologians also call attention to the fact that as God sincerely wishes all men to be saved, He does not exclude infants, for whom baptism of either water or blood is the only means possible. The doctrines also of the universality of original sin and of the all-comprehending atonement of Christ are stated so plainly and absolutely in Scripture as to leave no solid reason for denying that infants are included as well as adults.

To the objection that baptism requires faith, theologians reply that adults must have faith, but infants receive habitual faith, which is infused into them in the sacrament of regeneration. As to actual faith, they believe on the faith of another; as St. Augustine (De Verb. Apost., xiv, xviii) beautifully says: "He believes by another, who has sinned by another." As to the obligation imposed by baptism, the infant is obliged to fulfil them in proportion to its age and capacity, as is the case with all laws. Christ, it is true, prescribed instruction and actual faith for adults as necessary for baptism (Matt., xxviii; Mark, xvi), but in His general law on the necessity of the sacrament (John, iii) He makes absolutely no restriction as to the subject of baptism; and consequently while infants are included in the law, they cannot be required to fulfil conditions that are utterly impossible at their age. While not denying the validity of infant baptism, Tertullian (De Bapt., xviii) desired that the sacrament be not conferred upon them until they have attained the use of reason, on account of the danger of profaning their baptism as youths amid the allurements of pagan vice. In like manner, St. Gregory Nazianzen (Or. xl, De Bapt.) thought that baptism, unless there was danger of death, should be deferred until the child was three years old, for then it could hear and respond at the ceremonies. Such opinions, however, were shared by few, and they contain no denial of the validity of infant baptism. It is true that the Council of Neocaesarea (can. vi) declares that an infant cannot be baptized in its mother's womb, but it was teaching only that neither the baptism of the mother nor her faith is common to her and the infant in her womb, but are acts peculiar to the mother alone.

(3) This leads to the baptism of infants in cases of difficult parturition. When the Roman Ritual declares that a child is not to be baptized while still enclosed (*clausus*) in its mother's womb, it supposes that the baptismal water cannot reach the body of the child. When, however, this seems possible, even with the aid of an instrument, Benedict XIV (Syn. Dicec., vii, 5) declares that midwives should be instructed to confer conditional baptism. The Ritual further says that when the water can flow upon the head of the infant the sacrament is to be administered absolutely; but if it can be poured only on some other

part of the body, baptism is indeed to be conferred, but it must be conditionally repeated in case the child survives its birth. It is to be noted that in these last two cases, the rubric of the Ritual supposes that the infant has partly emerged from the womb. For if the fœtus was entirely enclosed, baptism is to be repeated conditionally in all cases (Lehmkuhl, n. 61). In case of the death of the mother, the fœtus is to be immediately extracted and baptized, should there be any life in it. Infants have been taken alive from the womb even forty-eight hours after the mother's death (Dub. Rev., no. 87). After the Cæsarean incision has been performed, the fœtus may be conditionally baptized before extraction if possible; if the sacrament is administered after its removal from the womb the baptism is to be absolute, provided it is certain that life remains. If after extraction it is doubtful whether it is still alive, it is to be baptized under the condition: "If thou art alive". Physicians, mothers, and midwives ought to be reminded of the grave obligation of administering baptism under these circumstances (Coppens, Lect., VI). It is to be borne in mind that according to the prevailing opinion among the learned, the fœtus is animated by a human soul from the very beginning of its conception (O'Kane, III, 18, etc.). In cases of parturition where the issue is a mass that is not certainly animated by human life, it is to be baptized conditionally: "If thou art a man".

(4) The perpetually insane, who have never had the use of reason, are in the same category as infants in what relates to the conferring of baptism, and consequently the sacrament is valid if administered. If at one time they had been sane, baptism bestowed upon them during their insanity would be probably invalid unless they had shown a desire for it before losing their reason. Moralists teach that, in practice, this latter class may always be baptized conditionally, when it is uncertain whether or not they had ever asked for baptism (Sabetti, no. 661). In this connexion it is to be remarked that, according to many writers, anyone who has a wish to receive all things necessary to salvation, has at the same time an implicit desire for baptism, and that a more specific desire is not absolutely necessary.

(5) Foundlings are to be baptized conditionally, if there is no means of finding out whether they have been validly baptized or not. If a note has been left with a foundling stating that it had already received baptism, the more common opinion is that it should nevertheless be given conditional baptism, unless circumstances should make it plain that baptism had undoubtedly been conferred (Sabetti, no. 662, 4). O'Kane (no. 214) says that the same rule is to be followed when midwives or other lay persons have baptized infants in case of necessity.

(6) The question is also discussed as to whether the infant children of Jews or infidels may be baptized against the will of their parents. To the general query, the answer is a decided negative, because such a baptism would violate the natural rights of parents, and the infant would later be exposed to the danger of perversion. We say this, of course, only in regard to the liceity of such a baptism, for if it were actually administered it would undoubtedly be valid. St. Thomas (III, Q. lxxviii, a. 10) is very express in denying the lawfulness of imparting such baptism, and this has been the constant judgment of the Holy See, as is evident from various decrees of the Sacred Congregations and of Pope Benedict XIV (II Bullarii). We say the answer is negative to the general question, because particular circumstances may require a different response. For it would undoubtedly be licit to impart such baptism if the children were in proximate danger of death; or if they had been removed from the parental care and there was no likelihood of their returning to it; or if they

were perpetually insane; or if one of the parents were to consent to the baptism; or finally, if, after the death of the father, the paternal grandfather would be willing, even though the mother objected. If the children were, however, not infants, but had the use of reason and were sufficiently instructed, they should be baptized when prudence dictated such a course (Sabetti, no. 662). In the celebrated case of the Jewish child, Edgar Mortara, Pius IX indeed ordered that he should be brought up as a Catholic, even against the will of his parents, but baptism had already been administered to him some years before when in danger of death.

(7) As to children of Protestants in the United States, Kenrick (no. 28) and Sabetti (no. 662, 2) declare that it is not licit to baptize them against the will of their parents; for their baptism would violate parental right, expose them to the danger of perversion, and be contrary to the practice of the Church. Kenrick also strongly condemns nurses who baptize the children of Protestants unless they are in danger of death.

(8) Should a priest baptize the child of non-Catholic parents if they themselves desire it? He certainly can do so if there is reason to hope that the child will be brought up a Catholic (Conc. Prov. Balt., I, decr. x). An even greater security for the Catholic education of such child would be the promise of one or both parents that they themselves will embrace the Faith.

(9) Concerning baptism for the dead, a curious and difficult passage in St. Paul's Epistle has given rise to some controversy. The Apostle says: "Otherwise what shall they do that are baptized for the dead, if the dead rise not again at all? Why are they then baptized for them?" (I Cor., xv, 29). There seems to be no question here of any such absurd custom as conferring baptism on corpses, as was practised later by some heretical sects. It has been conjectured that this otherwise unknown usage of the Corinthians consisted in some living person receiving a symbolic baptism as representing another who had died with the desire of becoming a Christian, but had been prevented from realizing his wish for baptism by an unforeseen death. Those who give this explanation say that St. Paul merely refers to this custom of the Corinthians as an *argumentum ad hominem*, when discussing the resurrection of the dead, without approving the usage mentioned.

Archbishop Mac Evilly in his exposition of the Epistles of St. Paul, holds a different opinion. He paraphrases St. Paul's text as follows: "Another argument in favour of the resurrection. If the dead will not arise, what means the profession of faith in the resurrection of the dead, made at baptism? Why are we all baptized with a profession of our faith in their resurrection?" The archbishop comments as follows: "It is almost impossible to glean anything like certainty as to the meaning of these very abstruse words, from the host of interpretations that have been hazarded regarding them (see Calmet's Dissertation on the matter). In the first place, every interpretation referring the words 'baptized', or 'dead' to either erroneous or evil practices, which men might have employed to express their belief in the doctrine of the resurrection, should be rejected; as it appears by no means likely that the Apostle would ground an argument, even though it were what the logicians call an *argumentum ad hominem*, on either a vicious or erroneous practice. Besides, such a system of reasoning would be quite inconclusive. Hence, the words should not be referred to either the *Clinics*, baptized at the hour of death, or to the *vicarious* baptisms in use among the Jews, for their departed friends who departed without baptism. The interpretation adopted in the paraphrase makes the words refer to the Sacrament of Baptism, which

all were obliged to approach with faith in the resurrection of the dead, as a necessary condition. '*Credo in resurrectionem mortuorum*'. This interpretation—the one adopted by St. Chrysostom—has the advantage of giving the words 'baptized' and 'dead' their literal signification. The only inconvenience in it is, that the word *resurrection* is introduced. But, it is understood from the entire context, and is warranted by a reference to other passages of Scripture. For, from the Epistle of the Hebrews (vi, 2) it appears that a knowledge of the faith of the resurrection was one of the elementary points of instruction required for adult baptism; and hence the Scriptures themselves furnish the ground for the introduction of the word. There is another probable interpretation, which understands the words 'baptism' and 'dead' in a metaphorical sense, and refers them to the sufferings which the Apostles and heralds of salvation underwent to preach the Gospel to the infidels, dead to grace and spiritual life, with the hope of making them sharers in the glory of a happy resurrection. The word 'baptism' is employed in this sense in Scripture, even by our divine Redeemer Himself,—'I have a baptism wherewith to be baptized', etc. And the word 'dead' is employed in several parts of the New Testament to designate those spiritually dead to grace and justice. In the Greek, the words 'for the dead', *ὑπὲρ τῶν νεκρῶν* that is, *on account of, or, in behalf of the dead*, would serve to confirm, in some degree, this latter interpretation. These appear to be the most probable of the interpretations of this passage; each, no doubt, has its difficulties. The meaning of the words was known to the Corinthians at the time of the Apostle. All that can be known of their meaning at this remote period, cannot exceed the bounds of probable conjecture" (loc. cit., chap. xv; cf. also Cornely in Ep. I Cor.).

XV. ADJUNCTS OF BAPTISM.—(1) *Baptistery*.—According to the canons of the Church, baptism except in case of necessity is to be administered in churches (Conc. Prov. Balt., I, Decree 16). The Roman Ritual says: "Churches in which there is a baptismal font, or where there is a baptistery close to the church". The term "baptistery" is commonly used for the space set aside for the conferring of baptism. In like manner the Greeks use *φωτιστήριον* for the same purpose—a word derived from St. Paul's designation of baptism as an "illumination". The words of the Ritual just cited, however, mean by "baptistery", a separate building constructed for the purpose of administering baptism. Such buildings have been erected both in the East and West, as at Tyre, Padua, Pisa, Florence, and other places. In such baptisteries, besides the font, altars were also built; and here the baptism was conferred. As a rule, however, the church itself contains a raised-off space containing the baptismal font. Anciently fonts were attached only to cathedral churches, but at the present day nearly every parish church has a font. This is the sense of the Baltimore decree above cited. The Second Plenary Council of Baltimore declared, however, that if missionaries judge that the great difficulty of bringing an infant to church is a sufficient reason for baptizing in a private house, then they are to administer the sacrament with all the prescribed rites. The ordinary law of the Church is that when private baptism is conferred, the remaining ceremonies are to be supplied not in the house but in the church itself. The Ritual also directs that the font be of solid material, so that the baptismal water may be safely kept in it. A railing is to surround the font, and a representation of St. John baptizing Christ should adorn it. The cover of the font usually contains the holy oils used in baptism, and this cover must be under lock and key, according to the Ritual.

(2) *Baptismal Water*.—In speaking of the matter of

baptism, we stated that true, natural water is all that is required for its validity. In administering solemn baptism, however, the Church prescribes that the water used should have been consecrated on Holy Saturday or on the eve of Pentecost. For the liceity (not validity) of the sacrament, therefore, the priest is obliged to use consecrated water. This custom is so ancient that we cannot discover its origin. It is found in the most ancient liturgies of the Latin and Greek Churches and is mentioned in the Apostolic Constitutions (VII, 43). The ceremony of its consecration is striking and symbolic. After signing the water with the cross, the priest divides it with his hand and casts it to the four corners of the earth. This signifies the baptizing of all the nations. Then he breathes upon the water and immerses the paschal candle in it. Next he pours into the water, first the oil of catechumens and then the sacred chrism, and lastly both holy oils together, pronouncing appropriate prayers. But what if during the year, the supply of consecrated water should be insufficient? In that case, the Ritual declares that the priest may add common water to what remains, but only in less quantity. If the consecrated water appears putrid, the priest must examine whether or not it is really so, for the appearance may be caused only by the admixture of the sacred oils. If it has really become putrid, the font is to be renovated and fresh water to be blessed by a form given in the Ritual. In the United States, the Holy See has sanctioned a short formula for the consecration of baptismal water (Conc. Plen. Balt., II).

(3) *Holy Oils*.—In baptism, the priest uses the oil of catechumens, which is olive oil, and chrism, the latter being a mixture of balsam and oil. The oils are consecrated by the bishop on Maundy Thursday. The anointing in baptism is recorded by St. Justin, St. John Chrysostom, and other ancient Fathers. Pope Innocent I declares that the chrism is to be applied to the crown of the head, not to the forehead, for the latter is reserved to bishops. The same may be found in the Sacramentaries of St. Gregory and St. Gelasius (Martène, I, i). In the Greek Rite the oil of catechumens is blessed by the priest during the baptismal ceremony.

(4) *Sponsors*.—When infants are solemnly baptized, persons assist at the ceremony to make profession of the faith in the child's name. This practice comes from antiquity and is witnessed to by Tertullian, St. Basil, St. Augustine, and others. Such persons are designated *sponsors*, *offerentes*, *susceptores*, *fidejussores*, and *patrini*. The English term is godfather and godmother, or in Anglo-Saxon, *gossip*. These sponsors, in default of the child's parents, are obliged to instruct it concerning faith and morals. One sponsor is sufficient and not more than two are allowed. In the latter case, one should be male and the other female. The object of these restrictions is the fact that the sponsor contracts a spiritual relationship to the child and its parents which would be an impediment to marriage. Sponsors must themselves be baptized persons having the use of reason and they must have been designated as sponsors by the priest or parents. During the baptism they must physically touch the child either personally or by proxy. They are required, moreover, to have the intention of really assuming the obligations of godparents. It is desirable that they should have been confirmed, but this is not absolutely necessary. Certain persons are prohibited from acting as sponsors. They are: members of religious orders, married persons in respect to each other, or parents to their children, and in general those who are objectionable on such grounds as infidelity, heresy, excommunication, or who are members of condemned secret societies, or public sinners (Sabetti, no. 663). Sponsors are also used in the solemn baptism

of adults. They are never necessary in private baptism.

(5) *Baptismal Name*.—From the earliest times (Martène, *De Ant. Ec. Rit.*, I, i) names were given in baptism. The priest is directed to see that obscene, fabulous, and ridiculous names, or those of heathen gods or of infidel men be not imposed. On the contrary the priest is to recommend the names of saints. This rubric is not a rigorous precept, but it is an instruction to the priest to do what he can in the matter. If parents are unreasonably obstinate, the priest may add a saint's name to the one insisted upon (O'Kane, III, 56).

(6) *Baptismal Robe*.—In the primitive Church, a white robe was worn by the newly baptized for a certain period after the ceremony (St. Ambrose, *De Myst.*, c. vii). As solemn baptisms usually took place on the eves of Easter or Pentecost, the white garments became associated with those festivals. Thus *Sabbatum in Albis* and *Dominica in Albis* received their names from the custom of putting off at that time the baptismal robe which had been worn since the previous vigil of Easter. It is thought that the English name for Pentecost—Whitsunday or Whitsuntide, also derived its appellation from the white garments of the newly baptized. In our present ritual, a white veil is placed momentarily on the head of the catechumen as a substitute for the baptismal robe (O'Kane, no. 350 sqq.).

XVI. CEREMONIES OF BAPTISM.—The rites that accompany the baptismal ablution are as ancient as they are beautiful. The writings of the early Fathers and the antique liturgies show that most of them are derived from Apostolic times. The infant is brought to the door of the church by the sponsors, where it is met by the priest. After the godparents have asked faith from the Church of God in the child's name, the priest breathes upon its face and exorcises the evil spirit. St. Augustine (*Ep. xciv, Ad Sicutum*) makes use of this Apostolic practice of exorcising to prove the existence of original sin. Then the infant's forehead and breast are signed with the cross, the symbol of redemption. Next follows the imposition of hands, a custom certainly as old as the Apostles. Some blessed salt is now placed in the mouth of the child. "When salt," says the Catechism of the Council of Trent, "is put into the mouth of the person to be baptized, it evidently imports that, by the doctrine of faith and the gift of grace, he should be delivered from the corruption of sin, experience a relish for good works, and be delighted with the food of divine wisdom." Placing his stole over the child, the priest introduces it into the church, and on the way to the font the sponsors make a profession of faith for the infant. The priest now touches the ears and nostrils of the child with spittle. The symbolic meaning is thus explained (*Cat. C. Trid.*): "His nostrils and ears are next touched with spittle and he is immediately sent to the baptismal font, that, as sight was restored to the blind man mentioned in the Gospel, whom the Lord, after having spread clay over his eyes, commanded to wash them in the waters of Siloe; so also we may understand that the efficacy of the sacred ablution is such as to bring light to the mind to discern heavenly truth." The catechumen now makes the triple renunciation of Satan, his works and his pomps, and he is anointed with the oil of catechumens on the breast and between the shoulders: "On the breast, that by the gift of the Holy Ghost, he may cast off error and ignorance and may receive the true faith, 'for the just man liveth by faith' (*Galat.*, iii, 11); on the shoulders, that by the grace of the Holy Spirit, he may shake off negligence and torpor and engage in the performance of good works; 'for, faith without works is dead' (*James*, ii, 26)", says the Catechism.

The infant now, through its sponsors, makes a

declaration of faith and asks for baptism. The priest, having meantime changed his violet stole for a white one, then administers the threefold ablution, making the sign of the cross three times with the stream of water he pours on the head of the child, saying at the same time: ". . . N. . . , I baptize thee in the name of the Father and of the Son and of the Holy Ghost." The sponsors during the ablution either hold the child or at least touch it. If the baptism be given by immersion, the priest dips the back part of the head three times into the water in the form of a cross, pronouncing the sacramental words. The crown of the child's head is now anointed with chrism, "to give him to understand that from that day he is united as a member to Christ, his head, and engrafted on His body; and therefore he is called a Christian from Christ, but Christ from chrism" (*Catech.*). A white veil is now put on the infant's head with the words: "Receive this white garment, which mayest thou carry without stain before the judgment seat of Our Lord Jesus Christ, that thou mayest have eternal life. Amen." Then a lighted candle is placed in the catechumen's hand, the priest saying: "Receive this burning light, and keep thy baptism so as to be without blame. Observe the commandments of God; that, when Our Lord shall come to His nuptials, thou mayest meet Him together with all the Saints and mayest have life everlasting, and live for ever and ever. Amen." The new Christian is then bidden to go in peace.

In the baptism of adults, all the essential ceremonies are the same as for infants. There are, however, some impressive additions. The priest wears the cope over his other vestments, and he should be attended by a number of clerics or at least by two. While the catechumen waits outside the church door, the priest recites some prayers at the altar. Then he proceeds to the place where the candidate is, and asks him the questions and performs the exorcisms almost as prescribed in the ritual for infants. Before administering the blessed salt, however, he requires the catechumen to make an explicit renunciation of the form of error to which he had formerly adhered, and he is then signed with the cross on the brow, ears, eyes, nostrils, mouth, breast, and between the shoulders. Afterwards, the candidate, on bended knees, recites three several times the Lord's Prayer, and a cross is made on his forehead, first by the godfather and then by the priest. After this, taking him by the hand, the priest leads him into the church, where he adores prostrate and then rising he recites the Apostles' Creed and the Lord's Prayer. The other ceremonies are practically the same as for infants. It is to be noted that owing to the difficulty of carrying out with proper splendour the ritual for baptizing adults, the bishops of the United States obtained permission from the Holy See to make use of the ceremonial of infant baptism instead. This general dispensation lasted until 1857, when the ordinary law of the Church went into force. (See BALTIMORE, COUNCILS OF.) Some American dioceses, however, obtained individual permissions to continue the use of the ritual for infants when administering adult baptism.

XVII. METAPHORICAL BAPTISM.—The name "baptism" is sometimes applied improperly to other ceremonies. (1) *Baptism of Bells*.—This name has been given to the blessing of bells, at least in France, since the eleventh century. It is derived from the washing of the bell with holy water by the bishop, before he anoints it with the oil of the infirm without and with chrism within. A fuming censer is then placed under it. The bishop prays that these sacramentals of the Church may, at the sound of the bell, put the demons to flight, protect from storms, and call the faithful to prayer. (2) *Baptism of Ships*.—At least since the time of the Crusades, rituals have contained a bless-

ing for ships. The priest begs God to bless the vessel and protect those who sail in it, as He did the ark of Noe, and Peter, when the Apostle was sinking in the sea. The ship is then sprinkled with holy water.

**Baptism by Heretics.** See BAPTISM.

**Baptismal Font,** a basin or vase, serving as a receptacle for baptismal water in which the candidate for baptism is immersed, or over which he is washed, in the ceremony of Christian initiation. In the Church's present practice it is ordinarily a decorative stone basin, though metal or wood are used, supported on a pedestal or columns at a convenient height for receiving the water which is poured over the head of the person baptized, a form which marks the term of a development graphically illustrating the history of the mode of conferring baptism.

ARCHÆOLOGY.—In the Apostolic Age, as in Jewish

times (John, iii, 23), baptism was administered without special fonts, at the seaside or in streams or pools of water (Acts, viii, 38); Tertullian refers to St. Peter's baptizing in the Tiber (De bapt., iv); similarly, in later periods of evangelization, missionaries baptized in rivers as is narrated of St. Paulinus in England by Bede (Hist. Eccl., II, xiv-xvi). Indoor baptism, however, was not uncommon (Acts, ix, 18; xvi, 33) and, for the sake of both privacy and solemnity, came to be the rule; while reverence for the rite itself and for the water, which came in time to receive a special consecration, gave rise to the use of a special basin or font for the baptismal ceremony and, at a later period, for the preservation of the water. With the establishment of distinctively Christian places of worship this font became one of their important adjuncts. In the East it took the form of a pool or cistern, similar to those of the baths, often larger, and deep enough to permit total immersion. Whence it was called *κολυμβήθρα* (swimming-bath), a name which in its Latin equivalent, *natorium*, was also used in the West, as was the term *piscina* with its apt allusion to birth and life in the waters (Tertullian, De bapt., i; St. Augustine, De schis. Donat., III, ii). The name *font* (a spring of water) was also in early use and came to prevail.

The oldest western fonts are found in the Roman catacombs, cisterns hewn from the tufa in the floor of baptismal chapels. (See BAPTISTERY.) Examples are to be found in the Ostrian Cemetery, where in a small shallow basin in the floor a spring wells up in the Cemetery of Pontianus, where an oblong reservoir, about eighteen square feet in surface area and three feet in depth, is yet filled with water (Marucchi, *Archéologie Chrétienne*, II, 63); that of St. Felicitas (*ibid.*, 304); and of St. Priscilla, where in 1901 was found a basin of particular interest on account of its presumably high antiquity as a baptismal centre (Marucchi in *Nuovo Bullettino*, 1901, 73). Besides these actual specimens, the font is also depicted in the remains of early Christian art. In nearly every instance it is a shallow pool or basin in which the neophyte stands with feet immersed, while water is poured on him from an overhead stream or from a vase held by the person baptizing. That this was the ordinary mode of baptizing during the early centuries, is a view the acceptance of which is compelled by all recent study in the archæology of baptismal fonts (de Rossi, *Bullettino di Archeol.*, 1876, 8-15; Duchesne, *Les Eglises séparées*, Paris, 1905, 89-96). With the church-building activity of the fourth century the font was reverently enshrined in the magnificent baptisteries which date from that period. It took the form of a basin which was either entirely below the level of the baptistery floor or was partially raised above it by a low curb of masonry, over which the neophytes passed by steps, in going down into the water; to the ascent and descent, as well as to the number of steps this involved, there was often attached a mystical significance (Isidore of Seville, *De divin. off.*, II, xxv). These fonts were either circular or octagonal in form and rarely hexagonal or square; a few were in the form of a cross (Gregory of Tours, *Mirac.*, I, xxiv), a type more common in the East than in the West, while an occasional sarcophagus-shaped font was suggested, perhaps by the allusion to baptism in Romans, vi, 4.

In size fonts varied, but as a rule they were large enough for the simultaneous baptism of a few catechumens. Their average depth of less than three feet points to the continued prevalence of but partial immersion down to the eighth century. Water was provided either by natural springs or by pipes leading into the basins, though there are many examples of its being poured in from above the font, over the heads of the neophytes. Drain pipes conducted the water into the earth or into a nearby stream after

the ceremony. These early fonts were lined and paved with marble or other decorative stone and were often highly ornamented, features more common in the West than in the East where simpler fonts, sometimes even of wood, were used. The "Liber Pontificalis" (ed. Duchesne, I, 174) describes in detail the Constantinian font in the Lateran baptistery as a porphyry basin heavily ornamented with silver; on its rim were a golden lamb and seven silver stags from whose mouths gushed water from the Claudian aqueduct; the golden lamb was flanked by statues of the Saviour and of St. John the Baptist. From the centre of the font arose a porphyry column bearing a golden lamp in which, during the ceremonies of baptism, was burned an oil of fragrant odour. This font was despoiled by the barbarian invaders, but its general design may be seen in the present day structure. The passing of the period of adult conversion to Christianity and the growing prevalence of infant baptism with a consequent frequency of administration determined a change in the structure of the fonts. Instead of a basin below the floor level, walls of masonry were built up to a height of three or four feet, to facilitate the ministers holding a child over its opening; or a font hewn from solid stone rested on the chapel floor. Immersion of children had come to be the rule, and as the practice was adopted too in the case of adults, the fonts were sometimes large enough to admit of their being immersed. With the thirteenth century, however, simple infusion came by degrees to be adopted, and with its general use, the font became smaller and more shallow, and was raised from the floor on piers or columns. The older type of font continued to find favour in Italy, but in the Northern countries the winter chill of the waters hastened the general use of infusion, and as this rite required for each person baptized but a small quantity of water, the font generally took the simple form and small dimensions it has to-day.

**CANON LAW AND LITURGY.**—The Church's legislation kept pace with this development. Early enactments urged stone as the regular material, though metal was permitted. With the erection of fonts for the continual preservation of the water, reverence and cleanliness became the Church's chief concern; the font, if not of impermeable stone, must be lined with metal; it must be used exclusively for baptism, and to guard it against profanation, securely covered and locked. Frequency of thirteenth-century legislation on this point throughout Northern Europe reveals the prevalence of a passing superstitious belief in the magical efficacy of the font and its waters. The constitutions of Bishop Poore of Sarum (Salisbury, c. 1217) and of St. Edmund of Canterbury (1236) combated the abuse in England as did the Councils of Tours (1236), Trier (1238), Fritzlar (1243), and Breslau (1248), on the Continent. The cover was enacted in the name of cleanliness and decoration as well, and, besides a close-fitting, cloth-lined lid, there was demanded in many dioceses an outer dome-like cover, sometimes highly ornamented and draped with a canopy or veil. The repugnance to continued repetition of baptism over a font whose water was to last for ten months, was overcome by providing two compartments, one to contain the baptismal water, the other, always empty and clean to receive the drippings and drain them into the *sacrarium*, a provision embodied by Benedict XIII in his still authoritative "Memoriale Rituum" (Tit. vi, cap. ii, § 5, 9). The Roman Ritual (Tit. ii, cap. i, 28-30) epitomizes the present law providing that the font should be in the church or in a nearby baptistery, within a railed enclosure and secured by lock and key; of a substantial material fit to hold water; of becoming shape and ornamentation and so covered as to exclude anything unclean (cf. Council II Balt., § 234-237). As models of diocesan legislation concerning

fonts are cited the synodal acts of St. Charles Borromeo (Acta Eccl. Mediolan., Paris, 1643, 58-63) and those of Benedict XIII when Archbishop of Benevento (Collectio Lacensis, I, 69 sq.).

Two important liturgical functions centre at the font, the baptismal rite itself, and the blessing of the font. The earliest allusion to such a blessing is by Tertullian who refers to the sanctification of the water by the invocation of God (De bapt., iv). St. Cyprian speaks of its being purified and sanctified by the priest (Ep. lxx, Ad Jan.); St. Basil considered the blessing, already of long-standing practice in his day, as of Apostolic institution (De Spiritu Sancto, xxvii); St. Ambrose first refers to an extended ritual including blessings, exorcism, and invocations (De myst., iii, 14-20). The oldest extant rite is that of the Apostolic Constitutions (VII, xliii), an extended prayer in Eucharistic form. The blessing of the font is henceforward an important feature of the sacramentaries and *ordines*, which contain nearly all the features of the present rite. It served as the preliminary to baptism, which was solemnized on the vigils of Easter and Pentecost; and notwithstanding the increasing frequency of solemn baptism, the blessing was reserved for those two days on which it should now be carried out in all churches having fonts (Decreta S. R. C., 3331-4005). This blessing is in the form of a long Eucharistic prayer the burden of which is an appeal that the Holy Spirit descend on the water and endow it with regenerative virtue, during which the celebrant performs a series of expressive ceremonies of high antiquity. He divides the water in the form of a cross; signs it with the cross; divides the water and casts a portion of it toward the four cardinal points; breathes on it in exorcism, and dips in it the Paschal candle. After the prayer he pours into the water first the oil of catechumens, then the Holy chrism, a rite alluded to by St. Gregory of Tours (loc. cit.), and finally the two oils simultaneously.

**Baptismal Vows,** the name popularly given to the renunciations required of an adult candidate for baptism just before the sacrament is conferred. In the case of infant baptism they are made in the name of the child by the sponsors. It is obvious that these promises have not the theological import of vows properly so called. According to the Roman Ritual, at present in use, three questions are to be addressed to the person to be baptized, as follows: "Dost thou renounce Satan? and all his works? and all his pomps?" To each of these interrogations the person, or the sponsor in his name, replies: "I do renounce". The practice of demanding and making this formal renunciation seems to go back to the very beginnings of organized Christian worship. Tertullian among the Latins and St. Basil among the Greeks are at one in reckoning it as a usage which, although not explicitly warranted in the Scriptures, is nevertheless consecrated by a venerable tradition. St. Basil says this tradition descends from the Apostles. Tertullian, in his "De Coronâ", appears to hint at a twofold renunciation as common in his time, one which was made at the moment of baptism and another made sometime before, and publicly in the

church, in the presence of the bishop. The form of this renunciation as found in the Apostolic Constitutions (VII, 4) has a quaint interest. It is as follows: "Let therefore the candidate for baptism declare thus in his renunciation: 'I renounce Satan and his works and his pomps and his worship and his angels and his inventions and all things that are under him'. And after his renunciation let him in his consociation say: 'And I associate myself to Christ and believe and am baptized into one unbegotten being'", etc.

Where there was a baptistery the renunciations were made in the *προαύλιον οίκον*, the vestibule or ante-room, as distinguished from the *ἐσώτερον οίκον*, the inner room where the baptism itself was administered. The catechumen, standing with his face to the West, which symbolized the abode of darkness, and stretching out his hand, or sometimes spitting out in defiance and abhorrence of the devil, was wont to make this abjuration. It was also customary after this for the candidate for baptism to make an explicit promise of obedience to Christ. This was called by the Greeks *συμμόρφωσις Χριστοῦ*, the giving of oneself over to the control of Christ. St. Justin Martyr testifies that baptism was only administered to those who, together with their profession of faith, made a promise or vow that they would live in conformity with the Christian code. Hence the generally employed formula: *συμμόρφωσαι σοί, Χριστέ*, "I surrender myself to thee, O Christ, to be ruled by thy precepts". This took place directly after the *ἑσώτης*, or renunciation of the devil, and was variously described by the Latins as *promissum*, *pactum*, and *votum*. During this declaration of attachment to Jesus Christ the person to be baptized turned towards the East as towards the region of light.

The practice of renewing the baptismal promises is more or less widespread. This is done under circumstances of special solemnity such as at the closing exercises of a mission, after the administration of First Communion to children, or the conferring of the Sacrament of Confirmation. It is thus intended as a way of reaffirming one's loyalty to the obligations taken over by membership in the Christian Church.

**Baptist, SAINT JOHN THE.** See JOHN THE BAPTIST, SAINT.

**Baptista Mantuanus** (or SPAGNOLI), BLESSED, Carmelite and Renaissance poet, b. at Mantua, 17 April, 1447, where he also died, 22 March, 1516. The eldest son of Peter Spagnoli, a Spanish nobleman at the court of Mantua, Baptista studied grammar under Gregorio Tifernate, and philosophy at Pavia under Polo Bagelardi. The bad example of his schoolfellows led him into irregularities. He fell into the hands of usurers and, returning home, was turned out of his father's house owing to some calumny. He went to Venice and later on to Ferrara where he carried out his resolution of entering the Carmelite convent which belonged to the then flourishing Reform of Mantua. In a letter addressed to his father (1 April, 1464), and in his first publication, "De Vita beatâ", he gave an account of his previous life and of the motives which led him to the cloister.

Baptista pursued his studies at Ferrara and Bologna where he was ordained priest, received his degrees, and delivered lectures in philosophy and divinity. The Duke of Mantua entrusted him with the education of his children, and the connexion with the ducal family resulted in a number of poetical

works, the "Trophæum Gonzagæ" and the "Fortuna Gonzagæ", on the various misfortunes of the young duke; "Contra amorem" containing good advice to Sigismondo Gonzaga, and other poems celebrating the latter's elevation to dignities, even to the Roman purple. Six times (each for two years with four years interval) Baptista was nominated vicar-general of his congregation, and, in 1513, general of the whole order through the exertions of his former disciples, the duke and the cardinal. The chapter, however, resenting the intervention, restricted his powers. He held the office until his death, but, broken in health and energy, he exercised but little influence beyond consolidating the congregation of Albi, a French imitation of the Mantuan Reform. Baptista Mantuanus was beatified in 1890, his feast being assigned to 23 March.

Chiefly known as one of the most prolific Renaissance poets he excelled in almost every form of Latin verse; Virgil, however, was his favourite model. A monument represents the two poets of Mantua with Poetry hesitating to whom she is to offer the crown: "Cui dabo?" Baptista exercised too little self-restraint, however, to deserve it. He was bitterly attacked concerning the good taste of his earlier works printed without his knowledge, and also, but groundlessly, with reference to the legitimacy of his birth. To the end he made too free use of pagan mythology.

*Opera omnia* (Bologna, 1502); *Historia domus Lauretanae*, s. d. (c. 1489), reprinted in CHEVALIER, *Notre Dame de Lorette* (Paris, 1906, 241 sqq.; Paris, 1513; Antwerp, 1576). His correspondence, chiefly with the two Pico de Mirandola, uncle and nephew, is in ZIMMERMAN, *Monumenta hist. Carmelitana* (Lérins, 1907), I; AMBROSIO, *De rebus gestis* (Turin, 1784); P.F. in *Chroniques du Carmel* (Soignies, 1902), 272 sqq.

BENEDICT ZIMMERMAN.

**Baptistery**, the separate building in which the Sacrament of Baptism was once solemnly administered, or that portion of the church-edifice later set apart for the same purpose. In ancient times the term was applied to a basin, pool, or other place for bathing. The Latin term *baptisterium* was also applied to the vessel or tank which contained the water for baptism, and in the Early Church denoted indifferently the baptismal font and the building or chapel in which it was enshrined. There is no means of knowing when the first baptisteries were built; but both their name and form seem borrowed from pagan sources. They remind one of the bathing apartments in the *thermae*, and the fact that Pliny, in speaking of the latter, twice uses the word *baptisteria* seems to point to this derivation. The term was also applied to the bath in the circular chamber of the baths at Pompeii and to the tank in the triangular court of suburban villas. The earliest extant type of baptistery is found in the catacomb chambers in which were the baptismal-pools. (See BAPTISMAL FONT.) These rooms were sometimes spacious; that in the Roman catacomb of Priscilla adjoins other larger cubicles used perhaps for the adjuncts of the baptismal rite; that of the Pontian cemetery bears traces of sixth-century mural decoration, a beautiful *crux gemmata* with other Christian symbols being yet visible. With the construction of edifices for Christian worship a special building was erected for the ceremonies of initiation. Ordinarily circular or polygonal, it contained in the centre the font; a circular ambulatory gave room for the ministers and witnesses who, with the neophytes, were numerous at the Easter and Pentecost solemnities; radiating from the structure were rooms for the preparation of the candidates, and sometimes a chapel with altar for the Eucharistic service following baptism (cf. BAPTISM), as may be seen in the Lateran baptistery. The building sometimes joined, but was generally adjacent to, the cathedral or church to which it belonged, and was usually situated near the atrium or

forecourt. Immersion gradually gave way to infusion, though in the South the custom of immersing children in the baptisteries persisted long after the North had commenced infusion in the small baptismal chapels. When separate baptisteries were no longer needed, the term was then applied to that part of the church which was set apart for and contained the baptismal font. The font was sometimes placed in a separate chapel or compartment, sometimes in an inclosure formed by a railing or open screen work; and often the font stands alone, either in the vestibule of the church, or in an arm of the transept, or at the western extremity of one of the aisles, and occasionally in the floor chamber of the western tower.

The modern baptistery is merely that part of the church set apart for baptism. According to the Roman Ritual, it should be railed off; it should have a gate fastened by a lock; and should be adorned, if possible, with a picture of the baptism of Christ by St. John. It is convenient that it should contain a chest with two compartments, one for the holy oils, the other for the salt, candle, etc. used in baptism. The form of the early baptisteries seems to have been derived from the Roman circular temples of tombs. And in adopting the plans, the early Christians modified them to some extent, for the internal columns, which in Roman examples were generally used in a decorative way, were now used to support the walls carrying the domes. To cover a large area with one roof was difficult; but by the addition of an aisle in one story, round a moderate-sized circular tomb, the inner walls could be replaced by columns in the lower half, which gave such buildings as these early baptisteries.

The earliest existing baptistery is that of the Lateran, said to have been erected in its original form under Constantine. Throughout the Roman world round or polygonal baptisteries seem to have been constantly employed from the fourth century onwards. In many places the Italians have preserved the separate building for baptism, while north of the Alps the practice generally prevailed of administering the rite in the churches. The construction of the baptistery of the Lateran is interesting because of a direct adaptation of the columnar system of the basilica to a concentric plan. The inner octagon is upheld by eight simple shafts, upon the straight entablature of which a second story of columns is superimposed. The original character of the ceiling and the roof cannot now be determined, but the weak supports were hardly adapted to bear a vault of masonry. Although baptisteries and mortuary chapels were generally built as simple cylindrical halls, without surrounding passages, other examples of the two modes of extension are not lacking.

The arrangement of the baptistery requires but brief notice. A flight of steps descended into the round or polygonal font (*piscina* or *font*), which was sunk beneath the level of the floor, and sometimes raised a little above it by a breastwork of stone. The font was surrounded by a row of columns which supported curtains to insure the most perfect privacy and decency during the immersion. The columns were united occasionally by archivolts, more frequently by architraves adorned by metrical inscriptions; the eight distichs in the Lateran baptistery are ascribed to Sixtus III.

The baptistery of Pisa, designed by Diotisalvi in 1153, is circular, 129 feet in diameter, with encircling aisle in two stories. Built of marble, it is surrounded externally on the lower story by half columns, connected by semicircular arches, above which is an open arcade in two heights, supported by small detached shafts. It was not completed till A. D. 1278, and has Gothic additions of the fourteenth

century, in consequence of which it is not easy to ascertain what the original external design really was. The structure is crowned by an outer hemispherical dome, through which penetrates a conical dome 60 feet in diameter over the central space, and supported on four piers and eight columns. Thus, if there were another internal hemispherical cupola, it would resemble the constructive dome of St. Paul, London. This baptistery bears remarkable similarity to the church of San Donato (ninth century) at Zara, in Dalmatia, which, however, has a space only 30 feet in diameter. The baptistery at Asti, if examined with those of San Antonio, will give a very complete idea of Lombardic architecture in the beginning of the eleventh century. More or less interesting examples of baptisteries exist at Biella, Brindisi, Cremona, Galliano, near Milan, Gravedona, Monte Sant' Angelo, Padua, Parma, Pinara, Pistoia, Spalato, Verona, and Volterra. There are very few examples in Italy of circular or polygonal buildings of any class belonging to the Gothic age. Baptisteries had passed out of fashion. One such building, at Parma, commenced in 1196, deserves to be quoted, not certainly for its beauty, but as illustrating those false principles of design shown in buildings of this age in Italy. In later Romanesque and Gothic periods, in Italy, where the churches were not derived from a combination of a circular Eastern church with a Western rectangular nave, as in France, but were correct copies of the Roman basilica, the baptistery always stands alone. In Germany, the earlier baptistery was joined to the square church and formed a western apse. The only examples in England are at Cranbrook and Canterbury; the latter, however, is supposed to have been originally part of the Treasury. It is not known at what time the baptistery became absorbed into the basilica. The change was made earlier in Rome than elsewhere. A late example of a separate baptistery, which, although small, is very beautiful in design, is in a court alongside the cathedral at Bergamo. This may be regarded as a connecting link between large buildings and fonts.

THOMAS H. POOLE.

**Baptistines.**—I. Hermits of St. John the Baptist. II. Missionaries of St. John the Baptist. III. Sisterhood of St. John the Baptist.

I. The Congregation of the Hermits of St. John the Baptist of France was founded about 1630 by Brother Michel de Saint-Sabine who reformed and united the hermits of various dioceses. He established for each diocese a visitor who was aided by four majors and a secretary. The bishop received the religious when they took the habit and made their profession, and the brothers in a diocese met together once a year. The pious reformer gave the congregation a collection of statutes which regulated their mode of life. The first bishops to make these statutes obligatory in their dioceses were the Bishop of Metz (1633), and the Bishop of Cambrai (1634). Brother Jean-Baptiste who had a great reputation for virtue carried this reform into the Dioceses of Vienne, Lyons, Geneva, Le Puy, and Langres. The Bishop of Langres, Louis-Armand de Simiane de Gardes, added in 1680, for the hermits in his diocese, several ordinances to those of Brother Michel. He established four visitors, one for each division of the diocese and the brothers wore a white habit to distinguish them from vagrant and lax hermits. Brother Jean-Baptiste went to the Diocese of Angers to found the hermitage of Gardelles; and died there in the odour of sanctity, 24 December, 1691.

II. The congregation of missionary priests of St. John the Baptist, called Baptistines, was founded by a

Genoese, Domenico Olivieri. He began by uniting several zealous priests with himself for the evangelization of the people of the cities and country. His plan of forming from this company an association the members of which should devote their time especially to missions was encouraged by Cardinal Spinola and the scheme afterwards received the approbation of Benedict XIV. The pope confirmed the new congregation in his Brief of 23 September, 1755, and placed it under the control of the Cardinal Prefect of the Propaganda. The institute had a house and an oratory at Rome near the church of St. Isidoro, and the members held missions in the different churches of the city and in the surrounding country. The Propaganda, realizing their zeal and virtue, wished to employ them in distant missions. A number of them were, therefore, sent to Bulgaria, Macedonia, and China; some became bishops. Foreign missions did not absorb all their activity, for a number were employed in the service of the Church in Italy, two, Father Imperiali and Father Spinelli becoming cardinals. The only vows imposed by the pious founder were those of continuance in the congregation and readiness to go to missions to which the members should be sent by the Propaganda. Olivieri died at Genoa in the odour of sanctity, 13 June, 1766. His society disappeared during the troubles which overwhelmed Italy at the end of the eighteenth century.

III. The Baptistines, or hermit sisters of St. John the Baptist, had as their founder Giovanna Maria Baptista Solimani. In 1730, when she was forty-two years old, she gathered her first companions together at Moneglia, not far from Genoa. The congregation intended to lead a life of penitence in imitation of the precursor of Christ and under his patronage. All the choir sisters, therefore, added to their names in religion that of Baptista in honour of their illustrious model. The Capuchin, Father Athanasius, aided them by his advice during the drawing up of their constitutions. Soon after, Providence gave them the direction of the saintly priest Olivieri, the cause of whose canonization has been introduced. Shortly after taking Olivieri as their director the congregation settled in the city of Genoa. Their founder now went to Rome to obtain the confirmation of the Holy See; through the aid of the Barnabites, Mario Maccabei, the approbation of Benedict XI was obtained in 1744. Two years later, 20 April, 1746, the Archbishop of Genoa received the religious profession of Giovanna Solimani and her twelve companions. Soon after this, Mother Solimani was elected abbess and governed the house until her death, 8 April, 1758. In 1755 the congregation had sent a colony to Rome which founded a convent near the church of San Nicolà da Tolentino. Houses were also founded in some of the other cities of Italy. The congregation drew its members from among the young girls and widows who were admitted into their houses as lay-sisters. Tertiaries took care of their churches and gathered the alms of which they had need. A rigorous cloister was observed. The sisters rose at midnight for Matins, slept in their clothes, went bare-footed, and observed a continual abstinence. The whole life was one of extreme austerity. Several convents of this congregation still exist in Italy.

JEAN M. BESSE.

**Baptists** (Greek, βαπτίζω, to baptize), a Protestant denomination, which exists chiefly in English-speaking countries and owes its name to its characteristic doctrine and practice regarding baptism.

I. DISTINCTIVE PRINCIPLES.—The Baptists con-

sider the Scriptures to be the sufficient and exclusive rule of faith and practice. In the interpretation of them, every individual enjoys unrestricted freedom. No non-Scriptural scheme of doctrine and duty is recognized as authoritative. General creeds are mere declarations of prevalent doctrinal views, to which no assent beyond one's personal conviction need be given. The two principal Baptist confessions of faith are the Confession of 1688, or Philadelphia Confession, and the New Hampshire Confession. The Philadelphia Confession is the Westminster (Presbyterian) Confession (1646) revised in a Baptist sense. It first appeared in 1677, was reprinted in 1688, approved by the English Baptist Assembly of 1689, and adopted by the Baptist Association at Philadelphia in 1742, a circumstance which accounts for its usual name. It is generally accepted by the Baptists in England and the Southern States of the Union, whereas the Northern States are more attached to the New Hampshire Confession. The latter was adopted by the New Hampshire State Convention in 1833. Its slight doctrinal difference from the Philadelphia Confession consists in a milder presentation of the Calvinistic system. Baptists hold that those only are members of the Church of Christ who have been baptized upon making a personal profession of faith. They agree in the rejection of infant baptism as contrary to the Scriptures, and in the acceptance of immersion as the sole valid mode of baptism. All children who die before the age of responsibility will nevertheless be saved. Baptism and the Eucharist, the only two sacraments, or ordinances as they call them, which Baptists generally admit, are not productive of grace, but are mere symbols. Baptism does not bestow, but symbolizes, regeneration, which has already taken place. In the Eucharist Jesus Christ is not really present; the Lord's Supper merely sets forth the death of Christ as the sustaining power of the believer's life. It was instituted for the followers of Christ alone; hence Baptists, in theory, commonly admit to it only their own church members and exclude outsiders (close communion). Open communion, however, has been practised extensively in England and is gaining ground to-day among American Baptists. In church polity, the Baptists are congregational, i. e. each church enjoys absolute autonomy. Its only officers are the elders or bishops and the deacons. The elder exercises the different pastoral functions and the deacon is his assistant in both spiritual and temporal concerns. These officers are chosen by common suffrage and ordained by "councils" consisting of ministers and representatives of neighbouring churches. A church may, in case of need, appeal for help to another church; it may, in difficulty, consult other churches; but never, even in such cases, can members of one congregation acquire authority over another congregation. Much less can a secular power interfere in spiritual affairs; a state church is an absurdity.

II. HISTORY.—(1) *The Baptists in the British Isles*. Persons rejecting infant baptism are frequently mentioned in English history in the sixteenth century. We learn of their presence in the island through the persecutions they endured. As early as 1535 ten Anabaptists were put to death, and the persecution continued throughout that century. The victims seem to have been mostly Dutch and German refugees. What influence they exerted in spreading their views is not known; but, as a necessary result, Baptist principles became, through them, less of an unacceptable novelty in the eyes of Englishmen. The first Baptist congregations were organized in the beginning of the seventeenth century. Almost at the very start, the denomination was divided into "Arminian", or "General" Baptists, so named because of their belief in the universal

character of Christ's redemption, and "Calvinistic" or "Particular" Baptists, who maintained that Christ's redemption was intended for the elect alone. The origin of the General Baptists is connected with the name of John Smyth (d. 1612), pastor of a church at Gainsborough, Lincolnshire, which had separated from the Church of England. About 1606, pastor and flock, to escape persecution, emigrated to Amsterdam, where they formed the second English congregation. In 1609, Smyth, owing possibly in some measure to Mennonite influence, rejected infant baptism, although he retained affusion. In this he was supported by his church. Some members of the congregation returned to England (1611 or 1612) under the leadership of Helwys (c. 1550-1616) and formed in London the nucleus of the first Baptist community. Persecution had abated, and they do not seem to have been molested. By 1626 there were in different parts of England five General Baptist churches; by 1644, they had increased, it is said, to forty-seven; and by 1660 the membership of the body had reached about 20,000. It was between 1640 and 1660 that the General Baptists began to claim that immersion was the only valid mode of baptism. They were persecuted by Charles II (1660-85); but the Act of Toleration (1689) brought relief and recognized the Baptists as the third dissenting denomination (Presbyterians, Independents, and Baptists). In the eighteenth century, Anti-Trinitarian ideas spread among the General Baptists, and by 1750, many, perhaps the majority of them, had become Unitarians. As a result of the great Wesleyan revival of the second half of the eighteenth century, new religious activity manifested itself among the General Baptists.

Dan Taylor (1738-1816) organized the orthodox portion of them into the New Connexion of the General Baptists. The latter appellation soon disappeared, as the "Old Connexion", or unorthodox party, gradually merged into the Unitarian denomination. In 1816, the General Baptists established a missionary society. Their doctrinal differences with the Particular Baptists gradually disappeared in the course of the nineteenth century, and the two bodies united in 1891.

The Particular Baptists originated shortly after the General Baptists. Their first congregation was organized in 1633 by former members of a London "Separatist Church", who seceded and were re-baptized. Mr. John Spillsbury became their minister. In 1638 a second secession from the original church occurred, and in 1640 another Particular Baptist Congregation was formed. The opinion now began to be held that immersion alone was real baptism. Richard Blunt was sent to the Netherlands to be duly immersed. On his return he baptized the others, and thus the first Baptist church in the full meaning of the term was constituted in 1641. In 1644 there were seven Particular Baptist churches in London. They drew up a confession of faith (1644), which was republished in 1646. The Particular Baptists now rapidly increased in numbers and influence. Some of them held prominent positions under Cromwell. With the latter's army Baptists came to Ireland, where the denomination never flourished, and to Scotland, where it took firm root only after 1750 and adopted some peculiar practices. Wales proved a more fruitful soil. A church was founded at or near Swansea in 1649. In the time of the Commonwealth (1649-60), churches multiplied owing to the successful preaching of Vavasour Powell (1617-70); and the number of Baptists, all Calvinistic, is to-day comparatively large in Wales and Monmouthshire. One of the prominent men who suffered persecution for the Baptist cause under Charles II was John Bunyan (1628-88), the author of "The Pilgrim's Progress". In the

first part of the eighteenth century the Particular Baptists injured their own cause by their excessive emphasis of the Calvinistic element in their teaching, which made them condemn missionary activity and bordered on fatalism. The Wesleyan revival brought about a reaction against the deadening influence of ultra-Calvinism. Andrew Fuller (1754-1815) and Robert Hall (1764-1831) propounded milder theological views. The Baptist Home Mission Society was formed in 1779. In 1792 the foundation of the Baptist Missionary Society at Kettering, Northamptonshire, inaugurated the work of missions to the heathen. In this undertaking William Carey (1761-1834) was the prime mover. Perhaps the most eminent Baptist preacher of the nineteenth century in England was C. H. Spurgeon (1834-92), whose sermons were published weekly and had a large circulation. In recent years, the Baptists created a "Twentieth Century Fund," to be expended in furthering the interests of the denomination.

(2) *The Baptists in the United States.*—The first Baptist Church in the United States did not spring historically from the English Baptist churches, but had an independent origin. It was established by Roger Williams (c. 1600-83). Williams was a minister of the Church of England, who, owing to his separatist views, fled to America in search of religious freedom. He landed at Boston (February, 1631), and shortly after his arrival was called to be minister at Salem. Certain opinions, e. g. his denial of the right of the secular power to punish purely religious offences and his denunciation of the charter of the Massachusetts Colony as worthless, brought him into conflict with the civil authorities. He was summoned before the General Court in Boston and refusing to retract, was banished (October, 1635). He left the colony and purchased from the Narragansett Indians a tract of land. Other colonists soon joined him, and the settlement, which was one of the first in the United States to be established on the principle of complete religious liberty, became the city of Providence. In 1639 Williams repudiated the value of the baptism he had received in infancy, and was baptized by Ezekiel Holliman, a former member of the Salem church. Williams then baptized Holliman with ten others, thus constituting the first Baptist church in the New World. A second church was founded shortly after (c. 1644) at Newport, Rhode Island, of which John Clarke (1609-76) became the pastor. In the Massachusetts Colony, from 1642 onward, Baptists, because of their religious views, came into conflict with the local authorities. A law was passed against them in 1644. In spite of this, we find at Rehoboth, in 1649, Baptists who began to hold regular meetings. In 1663 John Myles, who had emigrated with his Baptist church from Swansea, Wales, settled in the same place and most writers date the establishment of the first Baptist church in Massachusetts from the time of his arrival. The community removed in 1667 to a new site near the Rhode Island frontier, which they called Swansea. The first Baptist church in Boston was established in 1665, and the organization of the first one in Maine, then part of Massachusetts, was completed in 1682. The members of the latter, on account of the persecution to which they were still subjected, removed in 1684 to Charleston, South Carolina, and founded the first Baptist church in the South. The church of Groton (1705) was the first in Connecticut, where there were four in existence at the beginning of the religious revival known as the Great Awakening (1740).

During the period of these foundations in New England, Baptists appeared also in New York State, at least as early as 1656. The exact date of the establishment of the first church there is not ascertainable, but it was very probably at the beginning

of the eighteenth century. From 1684 on, churches also appeared in Pennsylvania, New Jersey, and Delaware. Cold Spring, Bucks Co., had the first one in Pennsylvania (1684); and Middletown heads the list in New Jersey (1688). A congregation was organized also in 1688 at Pennepack, or Lower Dublin, now part of Philadelphia. The latter churches were to exert very considerable influence in shaping the doctrinal system of the largest part of American Baptists. Philadelphia became a centre of Baptist activity and organization. Down to about the year 1700 it seemed as if the majority of American Baptists would belong to the General or Arminian branch. Many of the earliest churches were of that type. But only Particular Baptist congregations were established in and about Philadelphia, and these, through the foundation of the Philadelphia Association in 1707, which fostered mutual intercourse among them, became a strong central organization about which other Baptist churches rallied. As a result, we see to-day the large number of Particular (Regular) Baptists. Until the Great Awakening, however, which gave new impetus to their activity, they increased but slowly. Since that time their progress has not been seriously checked, not even by the Revolution. True, the academy of Hopewell, New Jersey, their first educational institution, established in 1756, disappeared during the war; but Rhode Island College, chartered in 1764, survived it and became Brown University in 1804. Other educational institutions, to mention only the earlier ones, were founded at the beginning of the nineteenth century: Waterville (now Colby) College, Maine, in 1818; Colgate University, Hamilton, New York, in 1820; and in 1821, Columbian College at Washington (now the undenominational George Washington University).

Organized mission work was also undertaken at about the same time. In 1814 "The General Missionary Convention of the Baptist Denomination in the United States of America for Foreign Missions" was established at Philadelphia. It split in 1845 and formed the "American Baptist Missionary Union" for the North, with present head-quarters at Boston, and the "Southern Baptist Convention", with head-quarters at Richmond (Virginia), and Atlanta (Georgia), for foreign and home missions respectively. In 1832, the "American Baptist Home Mission Society", intended primarily for the Western States, was organized in New York where it still has its head-quarters. In 1824, the "Baptist General Tract Society" was formed at Washington, removed to Philadelphia in 1826, and in 1840 became the "American Baptist Publication Society". The Regular Baptists divided in 1845, not indeed doctrinally, but organically, on the question of slavery. Since that time, attempts at reunion having remained fruitless; they exist in three bodies: Northern, Southern, and Coloured. The Northern Baptists constituted, 17 May, 1907, at Washington, a representative body, called the "Northern Baptist Convention", whose object is "to give expression to the sentiment of its constituency upon matters of denominational importance and of general religious and moral interest." Governor Hughes of New York was elected president of the new organization.

(3) *The Baptists in Other Countries.*—(a) *America.* The earliest Baptist church in the Dominion of Canada was organized at Horton, Nova Scotia, in 1763, by the Rev. Ebenezer Moulton of New England. This church, like many of the earlier ones, was composed of Baptists and Congregationalists. The influx of settlers from New England and Scotland and the work of zealous evangelists, such as Theodore Seth Harding, who laboured in the Maritime Provinces from 1795 to 1855, soon increased the number of Baptists in the country. The end of the eighteenth

century was marked by a period of revivals, which prepared the formation of the "Association of the Baptist churches of Nova Scotia and New Brunswick" in 1800. In 1815, a missionary society was formed, and the work of organization in every line was continued throughout the nineteenth century, growing apace with Baptist influence and numbers. In 1889 some previously existing societies were consolidated in the "Baptist Convention of Ontario and Quebec", whose various departments of work are: home missions, foreign missions, publications, church edifices, etc. Among the educational institutions of the Canadian Baptists may be mentioned Acadia College (founded 1838), Woodstock College (founded 1860), and McMaster University at Toronto (chartered 1887). Moulton College for women (opened 1888) is affiliated to the last mentioned institution. In other parts of America the Baptists are chiefly represented in the countries colonized by England. Thus we find a Baptist church in Jamaica as early as 1816. In Latin America the Baptist churches are not numerous and are of missionary origin. Recently, the Northern Baptists have taken Porto Rico as their special field, while the Southern Baptist Convention has chosen Cuba.

(b) *European Continent.* The founder of the Baptist churches in Germany was Johann Gerhard Oncken, whose independent study of the Scriptures led him to adopt Baptist views several years before he had an opportunity of receiving "believers' baptism". Having incidentally heard that an American Baptist, B. Sears, was pursuing his studies at Berlin, he communicated with him and was with six others baptized by him at Hamburg in 1834. His activity as an evangelist drew new adherents to the movement. The number of the Baptists increased, in spite of the opposition of the German state churches. In Prussia alone relative toleration was extended to them until the foundation of the Empire brought to them almost everywhere freedom in the exercise of their religion. A Baptist theological school was founded in 1881 at Hamburg-Horn. From Germany the Baptists spread to the neighbouring countries, Denmark, Sweden, Switzerland, Austria, Russia. Nowhere on the Continent of Europe has the success of the Baptists been so marked as in Sweden, where their number is larger to-day than even in Germany. The Swedish Baptists date from the year 1848, when five persons were baptized near Gothenburg by a Baptist minister from Denmark. Andreas Wiberg became their great leader (1855-87). They have had a seminary at Stockholm since 1866. Among the Latin nations the Baptists never gained a firm foothold, although a Particular Baptist church seems to have existed in France by 1646, and a theological school was established in that country in 1879.

(c) *Asia, Australasia, and Africa.* William Carey first preached the Baptist doctrine in India in 1793. India and the neighbouring countries have ever since remained a favourite field for Baptist missionary work and have flourishing missions. Missions exist also in China, Japan, and several other Asiatic countries. The first Baptist churches in Australasia were organized between 1830 and 1840 in different places. Immigration from England, whence the leading Baptist ministers were until very recently drawn, increased, though not rapidly, the numbers of the denomination. During the period which elapsed between 1860 and 1870, a new impulse was given to Baptist activity. Churches were organized in rapid succession in Australia, and missionary work was taken up in India. The two chief hindrances complained of by Baptists in that part of the world, are State Socialism, i. e. excessive concentration of power in the executive, and want of loyalty to strictly denominational principles and practices. The Baptist churches of the African continent are, if we except

South Africa, of missionary origin. The Negro Baptists of the United States had at an early date missionaries in this field. Two coloured men, Lott Carey, a former slave, and Colin Teague, set sail in 1820 for Liberia, where the first church was organized in 1821. To-day we find Baptist missions in various parts of Africa.

III. MINOR BAPTIST BODIES.—Side by side with the larger body of Baptists, several sects exist. They are found chiefly in the United States.

(1) *The Baptist Church of Christ* originated in Tennessee, about 1808, and spread to several other Southern States. Its doctrine is a mild form of Calvinism, with belief in a general atonement and admission of feet-washing as religious ordinance. [Communicants, 8,254 according to Dr. H. K. Carroll, the acknowledged authority, whose statistics, published in "The Christian Advocate" (New York, 17 January, 1907, p. 98), we shall quote for these sects.]

(2) *The Campbellites, Disciples of Christ, or Christians*, date back as a distinct religious body to the early part of the nineteenth century. They are the outgrowth of that movement which manifested itself simultaneously in some of the religious denominations in the United States in favour of the Bible alone without creeds. Thomas Campbell (1763-1854) and Alexander Campbell (1788-1866), father and son, became the leaders of the movement. (Communicants, 1,264,758.)

(3) *The Dunkards* (from the German *tunken*, to dip), *German Baptists*, or *Brethren*, were founded about 1708 in Germany by Alexander Mack. Between 1719 and 1729 they all emigrated to the United States and settled mostly in Pennsylvania. They are found to-day in many parts of the Union, but divisions have taken place among them. They practise threefold immersion, hold their communion service, which is preceded by the *agape*, in the evening, and seek to be excessively simple and unostentatious in their social intercourse, dress, etc. (Membership, 121,194.)

(4) *The Freewill Baptists* correspond in doctrine and practice to the English General Baptists, but originated in the United States. They exist in two distinct bodies. The older was founded in North Carolina and constituted an association in 1729. Many of its members subsequently joined the Regular Baptists. Those who did not unite became known as the "Free Willers" and later as the "Original Freewill Baptists", and are found in the two Carolinas. The larger body of the "Freewill Baptists" was founded in New Hampshire. Benjamin Randall organized the first church at New Durham in 1780. The denomination spread throughout New England and the West, and was joined in 1841 by the "Free-Communion Baptists" of New York (increase, 55 churches and 2,500 members). It maintains several colleges and academies, and has changed its official name to "Free Baptists". The American General Baptists are in substantial doctrinal agreement with the Freewill Baptists. (Membership: Original Freewill Baptists, 12,000; Freewill Baptists, 82,303; General Baptists, 29,347.)

(5) *The Old Two-Seed-in-the-Spirit Predestinarian Baptists* are Manichean in doctrine, holding that there are two seeds, one of good and one of evil. The doctrine is credited to Daniel Parker, who laboured in different parts of the Union in the first half of the nineteenth century (12,851 communicants).

(6) *The Primitive Baptists*, also called *Old-School*, *Anti-Mission*, and *Hard-Shell*, Baptists constitute a sect which is opposed to missions, Sunday schools, and in general to human religious institutions. They arose about 1835 (126,000 communicants).

(7) The foundation of the *Separate* and of the *United Baptists* was the result, either immediate or

mediate, of the attitude taken by some Baptists toward the Whitefield revival movement of the eighteenth century (Separate Baptist, 6,479; United Baptists, 13,209).

(8) *The Seventh-Day Baptists* differ from the tenets of the Baptists generally only in their observance of the seventh day of the week as the Sabbath of the Lord. They appeared in England in the latter part of the sixteenth century under the name of "Sabbatarian Baptists". Their first church in this country was organized at Newport, R. I., in 1671. In 1818 the name Seventh Day Baptists was adopted (Communicants, 8,493).

(9) *The Six-principle Baptists* are a small body and date from the seventeenth century. They are so called from the six doctrines of their creed, contained in Heb., vi, 1-2: (a) Repentance from dead works; (b) Faith toward God; (c) The doctrine of Baptism; (d) The imposition of hands; (e) The resurrection of the dead; (f) Eternal judgment. (858 communicants.)

(10) *The Winebrennerians or Church of God* were founded by John Winebrenner (1797-1860) in Pennsylvania, where their chief strength still lies. The first congregation was established in 1829. The Winebrennerians admit three Divine ordinances: baptism, feet-washing, and the Lord's Supper (41,475 communicants).

IV. STATISTICS.—According to the American Baptist Year-Book, published annually at Philadelphia, there were in 1907, not including the minor Baptist sects, 5,736,263 Baptists in the world. They had 55,505 churches and 38,216 ordained ministers. The denomination counted 4,974,014 members in North America; 4,812,653 in the United States, with church property worth \$109,960,610; and 117,842 in Canada. South America has but 4,465 Baptists; Europe 564,870 (434,751 in Great Britain, 44,656 in Sweden, 33,790 in Germany, 24,132 in Russia); Asia, 155,969; Australasia, 24,402; and Africa, 12,743. The statistic statement of Dr. H. K. Carroll, already referred to above, credits the Regular Baptists together with eleven branch denominations in the United States for 1906 with a membership of 5,140,770, 54,566 churches and 38,010 ministers; Regular Baptists, North, 1,113,222; South, 1,939,563; Coloured, 1,779,69.

Bar, CONFEDERATION OF. See POLAND.

Barac (Heb. *Bārāq*, lightning), the deliverer of the Israelites from the power of the Chanaanites under the judgeship of Debhora. He was the son of Abinoem of Cedes in Nephtali (Judges, iv, 6) and probably belonged to the tribe of Issachar (v, 15). When, after the death of the Judge Aod, "the children of Israel again did evil in the sight of the Lord"

(iv 1), they were delivered into the hands of the Chanaanite King Jabin of Asor who grievously oppressed them for twenty years (iv, 3). Thereupon the prophetess Debbora of Mount Ephraim, between Rama and Bethel, instigates Barac, manifestly a leading captain of the time, to assemble 10,000 men of the tribes of Nephtali and Zabulon (iv, 6; cf. v, 14) and to take the field against Sisara, the general of Jabin's army. Barac assembles his warriors at Cedes, moves to Mount Thabor, and by a rush down the mountain surprises the Chanaanites (iv, 10, 12, 14; cf. v, 15, 19, 21). The panic-stricken army of Sisara is attacked, routed, pursued, and finally cut to pieces (iv, 16). Sisara, having taken to flight, seeks refuge in the tent of Jahel, the wife of Haber, the Cinite, where he meets with a treacherous end (iv, 21; cf. v, 26). This signal victory of Barac, which put an end to the power and oppression of Jabin, and which was followed by a period of forty years' rest, is commemorated in the triumphal ode of Debbora and Barac (v). For the various accounts of Barac's exploits which critics detect in Judges, iv, and v, see JUDGES, BOOK OF.

F. X. E. ALBERT.

**Baradaeus**, JACOB, a Syrian Monophysite bishop, born at Tella, towards the end of the fifth or the beginning of the sixth century, died in 578. He was the son of Theophilus bar Mânû, a priest of Tella, and hence his real name was Jacob bar Theophilus; the surname Bûrde'ânâ, corrupted into Baradaeus, was derived from the coarse horse-cloth *bûrdâ'thân* which he usually wore. After receiving a good education he became a monk in the monastery of Peslâtâ, and a disciple of Severus, the head of the Monophysites. In the first half of the sixth century, Monophysitism, weakened by internal dissensions and by the opposition of the Emperor Justinian, was on the verge of disappearing, especially when its leader Severus died, 538. Probably through the influence of the Empress Theodora, Baradaeus was made Bishop of Edessa in 543, and henceforth devoted all his energies to the defence of Monophysitism. Through his untiring activity he breathed a new life into what seemed a mere expiring faction. At the cost of great hardships, he went around ordaining priests and deacons and strengthening his coreligionists. There exists a profession of faith addressed to him by the abbots of the province of Arabia, with 137 signatures (see Lamy, in "Actes du XI<sup>e</sup> Congrès des Orientalistes", § 4, Paris, 1897) showing that he was the undisputed leader in Monophysite circles. It is because of his prominence that the Monophysites were, and still are, called after his name, Jacobites. Baradaeus has left very little in writing: a liturgy, and a few letters.

The main source for the life of Baradaeus is JOHN OF EPHESUS, *Eccelesiastical History*, the third part of which has been published by CURETON (Oxford, 1853), and *Lives of the Oriental Saints*, LAND ed. in his *Anecdota Syriaca*, II, 249-257; DUVALL, *Littérature Syriacque* (2d ed., Paris, 1900); KLEYN, *Jacobus Baradaeus* (Leyden, 1882).

R. BUTIN.

**Baraga**, FREDERIC, first Bishop of Marquette, Michigan, U. S. A., b. 29 June, 1797, at Malavas, in the parish of Dobernice in the Austrian Dukedom of Carniola; d. at Marquette, Mich., 19 January, 1868. He was baptized on the very day of his birth, in the parish church of Dobernice, by the names of Irenæus Frederic, the first of which, however, he never used, retaining only the second. His parents, Johann Nepomuc Baraga and Maria Katharine Josefa (née de Jenčič), had five children, of whom Frederic was the fourth. His father was not rich, but his mother inherited after her father's death the estate of Malavas, besides a vast fortune. They were God-fearing and pious, and strove, while they survived, to give a good education to their children. His mother died in 1808, and his father in 1812,

and Frederic spent his boyhood in the house of Dr. George Dolinar, a layman, professor in the diocesan clerical seminary at Laibach.

In 1816 young Frederic Baraga entered the University of Vienna, studied law, and graduated in 1821, but soon turned his thoughts to the clerical state, and entered the seminary of Laibach that same year. He was ordained priest 21. September, 1823, at Laibach, and laboured with great zeal and spiritual success as assistant in St. Martin's parish, near Krainburg, and at Metlika, in Lower Carniola. On the 29th of October, 1830, he left his native land for the United States to spend the rest of his life in the Indian missionary field. After a journey of two months, he landed in New York on the 31st of December, 1830. He then proceeded to Cincinnati, Ohio, where he arrived 18 January, 1831. He was most kindly received by the Rt. Rev. Edward Fenwick, Bishop of Cincinnati, and during the winter and spring months laboured among the German Catholics of that city and elsewhere. On the 28th of May, 1831, he arrived at Arbre Croche, now Harbor Springs, his first Indian mission. There he laboured with apostolic zeal at the conversion of the Ottawas during two years and four months, during which time he baptized 547 Indian adults and children. He was succeeded in 1833 by Rev. F. Saenderl, Superior of the Redemptorists in the United States. On or about the 8th of September, 1833, Baraga left Arbre Croche to found a new Indian mission at Grand River, Mich. He arrived at his destination (now Grand Rapids, Mich.) on the 23d of September. He immediately began the building of a combination church, school, and pastoral residence, which was very poor, owing to the deficiency of funds. There he laboured most earnestly, though not as successfully as at Arbre Croche, until February, 1835, when he was succeeded by Father Andrew Viszoczky, a Hungarian priest. Baraga himself estimated the number of his converts at about two hundred, but Bishop Reese estimated the number of Indian converts in his diocese in 1834 at three thousand, with twelve churches or chapels.

Baraga's next Indian mission was among the Chippewas at La Pointe, Wisconsin, where he arrived 27 July, 1835. There he laboured successfully for about eight years, baptizing 981 Indians and whites. In 1843 he founded the L'Anse Indian mission in Michigan, arriving there on the 24th of October. For ten years he laboured in this vast mission, being for many years the only Catholic priest in Upper Michigan. He attended not only to the Indians, but also to the whites of the vast territory, as the discovery of iron and copper drew many German, French, and English-speaking Catholics to the Northern Peninsula of Michigan. Truly incredible are the hardships and labours of Baraga at this period of his life. On the 29th of July, 1853, the Northern Peninsula of Michigan was detached from the Diocese of Detroit and erected into a vicariate Apostolic, and Baraga was appointed its first bishop. He was consecrated in the cathedral

THE RIGHT REV. FREDERIC BARAGA

of Cincinnati by Archbishop Purcell, Bishop LeFevre of Detroit and Bishop Henni of Milwaukee officiating as assistant consecrators. Shortly after his elevation to the episcopal dignity Bishop Baraga issued two circulars to his people, one in Chippewa and the other in English. His jurisdiction extended not only to the whole Northern Peninsula of Michigan, but also to a large part of the Lower Peninsula, to Northern Wisconsin, and to the North Shore of Lake Superior. He laboured in this vast extent of territory for fifteen years, travelling almost incessantly, from the opening to the close of navigation year after year. On the 23d of October, 1865, by Apostolic authority he transferred his See from Sault Ste. Marie to Marquette, where he died at the age of seventy years.

Bishop Baraga will always rank with the foremost authors in American Indian literature. He composed the first known Chippewa grammar. This was a truly Herculean task, for he had to establish after long and close observation and deep study all the rules of the Chippewa grammar. This grammar has gone through three editions. In his preface to his Chippewa dictionary, printed in Cincinnati, O., in 1853, by Jos. A. Hermann, he says: "This is, to the best of my knowledge, the first Dictionary of the Otchipwe language ever published. The compilation of it has cost me several years of assiduous labour." This dictionary has also passed through several editions. Both grammar and dictionary are most highly prized and constantly used by Indian missionaries and others. His Indian prayer book and works of instruction are much read by both Indians and their pastors. Baraga always wrote in a very simple and clear style. His writings are admirably adapted to the limited capacity of his Indian readers, and can be understood even by ignorant Indian children. His "Dušna Paša", a prayer book in Slovenian, his own native language, passed through ten editions, the last, in 1906, with 84,000 copies. This alone is a proof of its great popularity and usefulness.

In addition to the "Theoretical and Practical Grammar of the Otchipwe [Chippewa] Language" (Detroit, 1850), the Chippewa dictionary, and the "Dušna Paša" mentioned above, the published works of Bishop Baraga include: "Veneration and Imitation of the Blessed Mother of God", in Slovenian (1830); "Animie-Misinaigan", an Ottawa prayer book; "Jesus o Bimadisiwim" (The Life of Jesus), in Ottawa (Paris, 1837); "On the manners and customs of the Indians" in Slovenian (Laibach, 1837); "Gagikwe-Masinaigan", a sermon-book, in Chippewa (1839 and 1859); "Zlata Jabelka"—"Golden Apples" (Laibach, 1844); "Kagige Debwewinan"—"Eternal Truths"; "Nanagatawendamo-Masinaigan"—Instructions on the Commandments and sacraments.

No Indian missionary of modern times was more beloved and revered by both Indians and whites than Baraga. He loved his Indians with a warm-hearted devotion which they reciprocated. Men of all positions in society, Catholics and non-Catholics, revered him as an ideal man, Christian, and bishop. Michigan has named after him one of her counties, several towns, and post offices, and his name has been given to one of the principal streets of Marquette. In his native country he is, if possible, even more popular than in America. His life, published in Slovenian, in 1906, has already (1907) reached a sale of 85,000 copies. That life might be summed up in the one phrase: Saintliness in action.

CHRYSOSTOM VERWYST.

BARAT, MADELEINE-SOPHIE, VENERABLE, foundress

of the Society of the Sacred Heart, b. at Joigny, Burgundy, 12 December, 1779; d. in Paris, 24 May, 1865. She was the youngest child of Jacques Barat, a vine-dresser and cooper, and his wife, Madeleine Fouf6, and received baptism the morning after her birth, her brother Louis, aged eleven, being chosen godfather. It was to this brother that she owed the exceptional education which fitted her for her life-work. Whilst her mother found her an apt pupil in practical matters, Louis saw her singular endowments of mind and heart; and when, at the age of twenty-two, he returned as professor to the seminary at Joigny, he taught his sister Latin, Greek, history, natural science, Spanish, and Italian. Soon she took delight in reading the classics in the original, and surpassed her brother's pupils at the seminary.

After the Reign of Terror, Louis called Sophie to Paris, to train her for the religious life, for which she longed. When he had joined the Fathers of the Faith, a band of fervent priests, united in the hope of becoming members of the Society of Jesus on its restoration, he one day spoke of his sister to Father Varin, to whom had been bequeathed by the saintly Léonor de Tournély the plan of founding a society of women wholly devoted to the worship of the Sacred Heart of Jesus, to prayer and sacrifice, and destined to do for girls what the restored Society of Jesus would do for boys. Father Varin had vainly sought a fitting instrument to begin this work; he now found one in this modest, retiring girl of twenty. He unfolded the project, which seemed to satisfy all her aspirations, and she bowed before his authoritative declaration that this was for her the will of God. With three companions she made her first consecration, 21 November, 1800, the date which marks the foundation of the Society of the Sacred Heart. In September, 1801, the first convent was opened at Amiens, and thither Sophie went to help in the work of teaching. It was impossible yet to assume the name "Society of the Sacred Heart", lest a political significance be attached to it; its members were known as *Dames de la Foi* or *de l'Instruction Chrétienne*. Father Varin allowed Sophie to make her vows, 7 June, 1802, with Geneviève Deshayes.

The community and school were increasing, and a poor school had just been added, when it became evident to Father Varin that Mademoiselle Loquet, who had hitherto acted as superior, lacked the qualities requisite for the office, and Sophie, although the youngest, was named superior (1802). Her first act was to kneel and kiss the feet of each of her sisters. Such was ever the spirit of her government. November, 1804, found her at Sainte-Marie-d'en-Haut, near Grenoble, receiving a community of Visitation nuns into her institute. One of them, Philippine Duchesne, was later to introduce the society into America. Grenoble was the first of some eighty foundations which Mother Barat was to make, not only in France, but in North America (1818), Italy (1828), Switzerland (1830), Belgium (1834), Algiers (1841). England (1842), Ireland (1842), Spain (1846), Holland (1848), Germany (1851), South America (1853) Austria (1853), Poland (1857).

Mother Barat was elected superior-general in January, 1806, by a majority of one vote only, for the influence of an ambitious priest, chaplain at Amiens, wellnigh wrecked the nascent institute. Prolonged prayer, silent suffering, tact, respect, charity, were the only means she used to oppose his designs. With Father Varin, now a Jesuit, she elaborated constitutions and rules grafted on the stock of the Institute of St. Ignatius. These rules were received with joy in all the houses, Amiens alone excepted; but Mother Barat's wisdom and humility soon won submission even here. In 1818 she sent Mother Duchesne, with four companions, to the New World; her strong and holy hand was ever

ready to support and guide this first missioner of the Society. She called all the superiors together in council at Paris in 1820, to provide a uniform course of studies for their schools. These studies were to be solid and serious, to fit the pupils to become intelligent wives and devoted mothers; to give that cultivation of mind, that formation of character, which go to make up a true woman; all was to be stamped and sealed with strong religious principles and devotion to the Sacred Heart.

Foundations multiplied, and Mother Barat, seeing the necessity of a stronger guarantee of unity, sought it in union with Rome. The solemn approbation was obtained much sooner than usual, owing to a memoir drawn up by the foundress and presented to Leo XII in May, 1826. The decree of approbation was promulgated in December. The society being now fully organized and sealed by Rome's approval, for forty years Mother Barat journeyed from convent to convent, wrote many thousand letters, and assembled general congregations, so as to preserve its original spirit. The Paris school gained European repute; Rome counted three establishments, asked for and blessed by three successive pontiffs. At Lyons Mother Barat founded the Congregation of the Children of Mary for former pupils and other ladies. In the same year (1832), she began at Turin the work of retreats for ladies of the world, an apostleship since widely and profitably imitated. Numerous foundations brought Mother Barat into personal contact with all classes. We find her crossing and re-crossing France, Switzerland, Italy, often on the eve of revolutions; now the centre of a society of *émigrés* whose intellectual gifts, high social position, and moral worth are seldom found united; now sought out by cardinals and Roman princesses during her visits to her Roman houses; at another time, speaking on matters educational with Madame de Genlis; or again, exercising that supernatural ascendancy which aroused the admiration of such men as Bishop Frayssinous, Doctor Récamier, and Duc de Rohan.

These exterior labours were far from absorbing all Mother Barat's time or energies; they coexisted with a life of ever-increasing holiness and continual prayer; for the real secret of her influence lay in her habitual seclusion from the outside world, in the strong religious formation of her daughters which this seclusion made possible, and in the enlightened, profound, and supernatural views on education which she communicated to the religious engaged in her schools. She worked by and through them all, and thus reached out to the ends of the earth. In spite of herself she attracted and charmed all who approached her. New foundations she always entrusted to other hands; for, like all great rulers, she had the twofold gift of intuition in the choice of persons fitted for office, and trust of those in responsible posts, allowing them much freedom of action in details, guiding them only by her counsels and usually from afar. Prelates who now and then ventured to attribute to her the successes of the Society, saw that instead of pleasing, they distressed her exceedingly.

Beloved by her daughters, venerated by princes and pontiffs, yet ever lowly of heart, Mother Barat died at the mother-house in Paris, on Ascension Day, 1865, as she had foretold, after four days' illness. She was buried at Conflans, the house of novitiate, where her body was found intact in 1893. In 1879 she was declared Venerable, and the process of beatification introduced.

ALICE POWER.

Barat, NICOLAS, a French Orientalist, b. at

Bourges during the first quarter of the seventeenth century; d. in 1706 at Paris. He began his studies at Sens, and continued them in Paris, where he was instructor in the Mazarin College. There he came under the influence of Richard Simon, the famous Orientalist and Biblical scholar. The greater part of his published work was done in collaboration with other scholars. With Père Bordès he edited the posthumous work of Thomassin, "Glossarium universale hebraicum" (Paris, 1697), and aided J. B. Duhamel in the publication of his Bible (Paris, 1706). At the time of his death he was engaged on a French translation of Schabtai's "Rabbinical Library". His critical opinions, and much curious literary information that he had acquired, were published posthumously under the title, "Nouvelle bibliothèque choisie" (Amsterdam, 1714, 2 vols.).

ENEAS B. GOODWIN.

**Barba**, ALVARO ALONZO, a secular priest of whom Nicolas Antonio (*Bibliotheca hispana nova*, 1786) says: "Bæticus ex oppido Lepe, apud Potosi"; hence of Andalusian origin. By Lepe and Potosi, Lipés in western Bolivia might be indicated. He lived at Potosi during the period when its silver-mines were most productive and luxury and revelry among the Spanish residents and mine-owners had nearly reached the climax. Father Barba, in the midst of a turmoil of sensuality, divided his time between his sacerdotal duties and a close study of the ores of this region and their treatment. There had been, since 1570, a complete revolution in the treatment of silver-ores, through the application of quicksilver, and a number of improvements followed, of which Barba had knowledge. In 1640 he published, at Madrid, a book entitled "Arte de los Metales", which, though properly metallurgic and out of date, is still of value as the earliest work on South American ores and minerals. Many of its indications are well worthy the attention of miners and prospectors. This is especially the case in regard to mineral localities in Bolivia. The book was republished in Spanish in 1729, in 1770 and, recently, in Chile. There is a French translation from 1751 and one also in English.

**Barbadoes**. See GUIANA.

**Barbalissos**, a titular see of Mesopotamia. It was a city in *Provincia Augusta Euphratensis*, where the *Equites Dalmatæ Illyriciani* kept garrison (Notit. Dignitat. Orientis, ed. Boecking, 88, 389). Justinian raised anew its walls (Procop., *De edific.*, II, 19; Malalas, *Chronograph.*, XVIII, in Migne, P. G., XCII, 676). At an early date it was a suffragan of Hierapolis, a metropolis in the Patriarchate of Antioch. Its bishop Antonius was present at the Council of Nicæa (325); two other bishops, Aquilinus and Marinianus, are known between 431 and 451 (Lequien, II, 949). The see is still mentioned in the sixth century. From 793 to 1042 five Jacobite bishops are known bearing this title (*Revue de l'Orient chrétien*, VI, 192). Its site is marked by the ruins at Qala' at Balis, which partly retains the old name, south of Meskene, on the road from Aleppo to Soura, where the Euphrates turns suddenly to the east. The spellings Barbalissos and Barbairissos in later "Notitiæ" are wrong; so is *Barbaricus campus* in Procopius (*De bello Persico*, II, 99). Lequien (I, 407) wrongly gives Barbalissus as synonymous with Balbisse, another bishopric in Cappadocia, known only in 1143.

S. VAILLÉ.

**Barbara**, SAINT, Virgin and Martyr.—There is no

reference to St. Barbara contained in the authentic early historical authorities for Christian antiquity, neither does her name appear in the original recension of St. Jerome's martyrology. Veneration of the saint was common, however, from the seventh century. At about this date there were in existence legendary Acts of her martyrdom which were inserted in the collection of Symeon Metaphrastes and were used as well by the authors (Ado, Usuard, etc.) of the enlarged martyrologies composed during the ninth century in Western Europe. According to these narratives, which are essentially the same, Barbara was the daughter of a rich heathen named Dioscorus. She was carefully guarded by her father who kept her shut up in a tower in order to preserve her from the outside world. An offer of marriage which was received through him she rejected. Before going on a journey her father commanded that a bath-house be erected for her use near her dwelling, and during his absence Barbara had three windows put in it, as a symbol of the Holy Trinity, instead of the two originally intended. When her father returned she acknowledged herself to be a Christian; upon this she was ill-treated by him and dragged before the prefect of the province, Martinianus, who had her cruelly tortured and finally condemned her to death by beheading. The father himself carried out the death-sentence, but in punishment for this he was struck by lightning on the way home and his body consumed. Another Christian named Juliana suffered the death of a martyr along with Barbara. A pious man called Valentinus buried the bodies of the saints; at this grave the sick were healed and the pilgrims who came to pray received aid and consolation. The emperor in whose reign the martyrdom is placed is sometimes called Maximinus and sometimes Maximianus; owing to the purely legendary character of the accounts of the martyrdom, there is no good basis for the investigations made at an earlier date in order to ascertain whether Maximinus Thrax (235-238), or Maximianus or Maximinus Daza (of the Diocletian persecutions), is meant.

The traditions vary as to the place of martyrdom, two different opinions being expressed: Symeon Metaphrastes and the Latin legend given by Mombricitus make Heliopolis in Egypt the site of the martyrdom, while other accounts, to which Baronius ascribes more weight, give Nicomedia. In the "Martyrologium Romanum parvum" (about 700), the oldest martyrology of the Latin Church in which her name occurs, it is said: "In Tuscia Barbaræ virginis et martyris", a statement repeated by Ado and others, while later additions to the martyrologies of St. Jerome and Bede say: "Romæ Barbaræ virginis" or "apud Antiochiam passio S. Barbaræ virg." These various statements prove, however, only the local adaptation of the veneration of the saintly martyr concerning whom there is no genuine historical tradition. It is certain that before the ninth century she was publicly venerated both in the East and in the West, and that she was very popular with the Christian populace. The legend that her father was struck by lightning caused her, probably, to be regarded by the common people as the patron saint in time of danger from thunder-storms and fire, and later, by analogy, as the protector of artillerymen and miners. She was also called upon as intercessor to assure the receiving of the Sacraments of Penance and Holy Eucharist at the hour of death. An occurrence of the year 1448 did much to further the spread of the veneration of the saint. A man named Henry Kook was nearly burnt to death in a fire at Gorkum; he called on St. Barbara, to whom he had always shown great devotion. She aided him to escape from the burning house and kept him alive until he could receive the last sacraments. A similar circumstance is related in an addition to the "Legenda

aurea". In the Greek and present Roman calendars the feast of St. Barbara falls on 4 December, while the martyrologies of the ninth century, with exception of Rabanus Maurus, place it on 16 December. St. Barbara has often been depicted in art; she is represented standing by a tower with three windows, carrying the palm of a martyr in her hand; often also she holds a chalice and sacramental wafer; sometimes cannon are displayed near her.

J. P. KIRSCH.

**Barbarigo**, GIOVANNI FRANCESCO, Italian Cardinal, nephew of Blessed Gregorio Barbarigo (1625-97), b. in 1658 at Venice; d. in 1730. He first entered the diplomatic service and was twice sent as representative of the Venetian Republic to the court of King Louis XIV of France. Later he entered the ecclesiastical state and became *primicerius* of the church of St. Mark at Venice. In 1697 he was named by Innocent XII Bishop of Verona, was transferred to Brescia in 1714, created cardinal 1720, and in 1723 became a successor of his uncle in the See of Padua. He was a zealous prelate, promoted the cause of beatification of Gregorio Barbarigo, and lent his encouragement to the production of literary works. To his suggestion was due the inception of the ecclesiastical history of Verona, and the works of St. Zeno, Bishop of Verona (362-380), were reprinted at his expense (Padua, 1710).

N. A. WEBER.

**Barbarossa**. See FREDERICK I.

**Barbastro** (BARBASTRUM and CIVITAS BARBASTRENSIS), DIOCESE OF, suffragan of the Spanish province of Huesca. The city (originally, perhaps, Bergidum or Bergiduna) is at the junction of the rivers Cinca and Vero. In the time of the Romans it was a part of Hither Spain (Hispania Citerior), afterwards called *Tarraconensis*. It was taken by the Arabs, under the leadership of Muza (711), and the name *Barbaschter* given to it, from which the name *Barbastrum*, according to the generally accepted opinion, is derived. It was held by the Saracens until about the year 1063, when it was retaken by Don Sancho Ramirez, King of Aragon. The Arabs once more obtained possession, but Arremengol IV, Count of Urgel, reconquered it, and after a third Arab conquest it was restored to Spain, in 1101, by Pedro I, King of Aragon, who, with the pope's consent, constituted it an episcopal see, transferring the see from the ancient city of Roda to Barbastro. The first bishop, Poncio, went to Rome to obtain the pope's permission for this transfer. Many provincial and diocesan councils have been held in the city; the Cortes of Spain has met there occasionally, and during one of its sessions, King Ramiro, called the Monk, abdicated the crown (1134).

The diocese is bounded on the north by the Pyrenees, on the east and south by the Diocese of Lérida, and on the west by those of Huesca and Yaca. It is a suffragan of Saragossa and is composed of 154 parishes under the supervision of ten archpriests, or vicars. The population is about 240,000. The clergy number about 220, and there are 231 churches and

177 chapels. The diocese was annexed to Huesca in the sixteenth century, but was afterwards made independent and remained so until the Concordat of 1851, which annexed it once more to Huesca, preserving its name and administration. It is administered at present by the titular Bishop of Claudiopolis, Don Juan Antonio Ruano, preconized Bishop of Lérída. Among its bishops, Ramón II, who is venerated as a saint, and the above-mentioned Ramiro, called the Monk, a prince of the royal house of Aragon, deserve special mention.

Bartolomé and Lupercio Argensola, historians and classical Spanish writers, were born in Barbastro. Bartolomé is the author of the "*Historia de las Molucas*", "*Anales de Aragón*", and "*Regla de Perfección*"; Lupercio wrote three tragedies, "*Isabel*", "*Jebé*", and "*Alejandro*", and some poems published with others written by his brother Bartolomé. The cathedral, the episcopal palace, the seminary, and the college of the Clerks Regular of the Pious Schools, or *Piaristas*, are among the most noted buildings in the city. Besides the seminary for the education of young ecclesiastics, there are, in the diocese, various communities of both sexes devoted to a contemplative life and the education of the young. The *Piaristas*, the Sons of the Immaculate Heart of Mary, the Poor Clares, and the Capuchin nuns have foundations in the capital, the Benedictines in the town of Pueyo, and the Discalced Carmelites in Graus and Salas-Altas. There are schools in all the towns of the diocese.

FLOREZ, *España Sagrada*, and its continuation by FATHER JOSÉ DE LA CANAL (1836), XLVI, 149-70; XLVIII, 225-28; ROMAN DE HUESCA, *Teatro de las Iglesias de Aragón* (1870), IX; MUÑOZ, *Bibl. hist. Esp.* (1858), 47-8.

#### TIRSO LÓPEZ.

Barbelin, FELIX-JOSEPH, styled the "Apostle of Philadelphia", b. at Lunéville, Province of Lorraine, France, 30 May, 1808; d. in Philadelphia, 8 June, 1869. He was the oldest of six children, of whom five became religious, his youngest brother Ignace-Xavier being the founder of the Apostolic School at Amiens. He received his early training at the home of a reverend grand-uncle, and made his philosophical and theological studies in a seminary of which another grand-uncle was president. He entered the Society of Jesus, 7 January, 1831, at Whitemarsh, Maryland, U. S. A., and for some years was stationed at Georgetown College, D. C., as disciplinarian and teacher of French. In 1836 he became assistant pastor of Holy Trinity Church at Georgetown, and in 1838 was transferred to Philadelphia, thereafter the scene of his apostolic labours. For more than a quarter of a century he was pastor of Old St. Joseph's, Willing's Alley, which became, mainly during his term of office, the centre from which radiated Catholic influences throughout the city and diocese. His zeal was untiring. He founded St. Joseph's Hospital in his adopted city, and was the first to establish sodalities for men and women and for the young who were always the objects of his fatherly solicitude. In 1852 he was appointed the first President of St. Joseph's College. His many good works brought him into contact with most of the Catholics of the city, while his charity towards all and particularly his love of children and devotion to their interests made him an object of veneration to Catholics and Protestants alike. His memory is still held in benediction.

His life was written by ELEANOR C. DONNELLY (Philadelphia, 1886); *Woodstock Letters*, IV, 108; V, 81.

Barber Family, THE.—DANIEL BARBER, soldier of the Revolution, Episcopalian minister and convert, b. at Simsbury, Connecticut, U. S. A., 2 October, 1756; d. at Saint Inigoes, Maryland, 1834. The

conversion of the Barber family, despite the prejudices of a Puritan education and environment, was one of the most notable and far-reaching in its results of any recorded in the early annals of the Church in New England. Daniel Barber has left a "*History of My Own Times*" (Washington, 1827), in which he states that his father and mother were Congregational Dissenters of strict Puritanic rule and he continued in that sect until his twenty-seventh year, when he joined the Episcopalians. Previous to this he had served two terms as a soldier in the Continental army. In his thirtieth year he was ordained a minister of the Episcopalian Church at Schenectady, New York. He married Chloe Case, daughter of Judge Owen of Simsbury, Connecticut, and about 1787, with his wife, his three sons, and a daughter, moved to Claremont, New Hampshire. He exercised the duties of the ministry for thirty years without doubt concerning the soundness of his ordination, when one day the chance reading of a Catholic book opened up for him the whole issue of the validity of Anglican orders, by impugning Parker's consecration. This doubt was further increased by a visit for conference to the famous Bishop Cheverus, then a priest in Boston, and the inability of his Episcopalian associates to offer any satisfactory refutation of the arguments advanced by the Catholic priest. Father Cheverus also gave him a number of Catholic books, which he and the other members of his family read eagerly.

In 1807, at the instance of her parents, he baptized Fanny, daughter of General Ethan Allen, who subsequently became a convert and died a nun in the convent of the Hôtel-Dieu, Montreal. A visit he made there greatly impressed him, and Miss Allen's change of faith indirectly had much to do with his own conversion. The books Father Cheverus gave him he not only studied carefully himself, but gave them to his wife and children. His son, Virgil Horace, who was a minister in charge of an Episcopalian academy at Fairfield, near Utica, New York, was specially attracted by these books when with his wife he visited his father, and he took Milner's "*End of Controversy*" back to New York. This visit resulted in the conversion of both husband and wife in 1817. The following year Virgil returned to Claremont from New York, taking with him Father Charles Ffrench, a Dominican who was officiating there at St. Peter's church. The priest remained a week in Daniel Barber's house preaching and saying Mass, with the result that he had seven converts, including Mrs. Daniel Barber and her children, Mrs. Noah Tyler, who was Daniel Barber's sister, and her eldest daughter Rosetta. Mrs. Tyler was the mother of William Tyler, first Bishop of Hartford, Connecticut. Her husband and six other children were subsequently converted, and four of the daughters became Sisters of Charity.

Mrs. Daniel Barber was a woman of great strength of mind and resolution. She died in her seventy-ninth year, 8 February, 1825. Her husband was not baptized with her, but on the fifteenth of November, 1818, gave up his place as minister of the Episcopalian parish of Claremont. He then went to visit friends in Maryland and Washington, where he took the final step and entered the Church. He spent the rest of his life, after the death of his wife, in Maryland and Pennsylvania, near his son Virgil, and he died in 1834 at the house of the Society of Jesus at Saint Inigoes, Maryland. Two pamphlets, printed at Washington, "*Catholic Worship and Piety Explained and Recommended in Sundry Letters to a Very Dear Friend and Others*" (1821), and "*History of My Own Times*", give interesting details of his life and show him to have been honest in his convictions and earnestly desirous of knowing the truth and disposed to embrace it when found.

**VIRGIL HORACE BARBER**, son of Daniel, b. at Claremont, New Hampshire, 9 May, 1782; d. at Georgetown, D. C., 25 March, 1847. He himself said that the first step leading to his conversion was the reading through curiosity of a little book "A Novena to St. Francis Xavier" belonging to a pious Irish servant girl who was employed in his house while he was principal of the Episcopalian Academy at Fairfield, New York. This raised doubts concerning his Protestant faith, which his bishop, Dr. Hobart, and other Episcopalian ministers could not solve for him. During a visit to New York City, in 1816, he called on Father Benedict J. Fenwick, S.J., with the result that he resigned his Episcopalian charge at Fairfield, and went to New York, where he and his wife Jerusha (b. New Town, Connecticut, 20 July, 1789) were received into the Church with their five children, Mary (b. 1810); Abigail (b. 1811); Susan (b. 1813); Samuel (b. 1814); and Josephine (b. 1816). At first he opened a school in New York, but this lasted only seven months, for both he and his wife determined to enter religious life, he the Society of Jesus, and she the Visitation Order. Under the direction of their friend, Father Fenwick, in June, 1817, they set out for Georgetown, D. C., where Mr. Barber and his son Samuel went to the college of the Jesuit Fathers, and his wife and the three oldest girls were received into the Visitation convent. The youngest child, Josephine, then ten months old, was taken care of by Father Fenwick's mother. The superior at Georgetown, Father John Grassi, S.J., shortly after sailed for Rome and took Mr. Barber with him as a novice. Mr. Barber remained there a year and then returned to Georgetown, where he continued his studies until December, 1822, when he was ordained a priest at Boston. After his ordination he was sent to his old home, Claremont, New Hampshire, where he built a church and laboured for two years. He then spent some time on the Indian missions in Maine, and was after recalled to Georgetown College, where he passed the remainder of his days.

Nearly three years after their separation, 23 February, 1820, husband and wife met in the chapel of Georgetown convent to make their vows in religion. She first went through the formula of the profession of a Visitation nun, and he the vows of a member of the Society of Jesus. Their five children, the eldest being ten and the youngest three and a half years old, were present. Mrs. Barber had been admitted into the Visitation convent on the twenty-sixth of July, 1817, taking the name of Sister Mary Augustine. Her novitiate was one of severe trials, as well on account of her affection for her husband as on account of her children, who were a heavy burden to the community then in a state of extreme poverty. Her pious perseverance triumphed, and she became one of the most useful members of the order, serving in the convents of Georgetown, Kasaskia, St. Louis, and Mobile, where she died 1 January, 1860. She had the happiness of seeing all her children embrace a religious life. Mary, the eldest, entered the Ursuline convent, Mt. Benedict, near Charlestown, Massachusetts, as Sister Mary Benedicta, 15 August, 1826, and died in the convent of the order in Quebec, 9 May, 1844. Abigail, Susan, and Josephine also became Ursulines. The first died in Quebec, 8 December, 1879, and Susan in the convent at Three Rivers, Canada, 24 January, 1837. Samuel, the son, graduated at Georgetown College in 1831 and immediately entered the Society of Jesus. After his novitiate he was sent to Rome, where he was ordained. He returned to Georgetown in 1840, and died, aged fifty years, at St. Thomas's Manor, Maryland, 23 February, 1864.

THOMAS F. MEEHAN.

**Barbieri, GIOVANNI**, called from his squinting, "Il Guercino"; a famous painter of religious subjects, b. at Cento, near Bologna, 2 February, 1591; d. at Bologna, 22 December, 1666. His parents were in very humble circumstances. It is related that he gave such early indication of his great talents that before he reached the age of ten he had painted on the front wall of his home a figure of the Virgin. His first instructor was Bartolommeo Bertozzi, and when sixteen he entered the school of Benedetto Gennari, the elder, at Cento. As a youth he had studied with great admiration a famous painting of Ludovico Carracci at the convent of the Capuchins at Cento, which had much influence on his work. Father Mirandola, head of the convent, took Barbieri under his protection, had him taught, and secured him commissions.

After spending some time in Bologna, where he studied with Cremonini and Gennari, the young painter went to Venice, where he received the counsels of Palma. At Ferrara he painted the portrait of the legate, Cardinal Jacopo Serra, who made him a chevalier. On the invitation of Cardinal Ludovisi, later Pope Gregory XV, he went to Rome. There he did the "Aurora" at the Villa Ludovisi, and his celebrated painting of St. Petronilla in the Capitol. After the death of his papal patron, Barbieri, refusing the invitations of James I to go to England and of Louis XIII to visit France, returned to Cento and established there an academy which was much frequented by foreign as well as native painters. He painted the portraits of the Duke of Modena, and after the death of Guido, whose style he imitated, he settled at Bologna, where he died, leaving much wealth.

**Barbo, PETER**. See PAUL II.

**Barbosa, AGOSTINO**, a noted canonist, b. at Guimaraens, Portugal, in 1589; consecrated in Rome, 22 March, 1649, Bishop of Ugento in Otranto, Italy, he died seven months later. Having studied canon law in his native land, he went to Rome. Being without books, his astounding memory served him instead. Sanctity and affability won for him entrance into the libraries of the city, where he passed long hours reading sedulously and memorizing without effort, so that returning to his room he was able to put in writing the fruits of the day's labour. About 1632 he went to Madrid, where he applied himself to writing and fulfilled various duties confided to him till 1648.

Among Barbosa's many writings, all of which evidence intimate acquaintance with authors, sources, and controverted questions, we mention the following: "Pastoralis Sollicitudinis, sive de Officio et Potestate Episcopi Tripartita Descriptio" (Rome, 1621; Lyons, 1629; in folio, 1641, 1650, etc.). A similar work relating to parish priests was published in Rome in 1632, Lyons, 1634, Geneva, 1662, Venice, 1705, in quarto. "Varie Juris Tractationes" (in folio, Lyons, 1631 and 1644; Strasburg, 1652). "Juris Ecclesiastici Universi Libri III" (Lyons, 1633, 1645, 1718). All the canonical works of Barbosa were published at Lyons, 1657-75, in 19 vols. in quinto, 16 vols. in folio, and again, 1698-1716, 20 vols. in quinto, 18 vols. in folio.

ANDREW B. MEEHAN.

**Barbosa-Machado**, IGNACIO, a Portuguese historian, b. at Lisbon in 1686; d. in 1734. He pursued his studies at the University of Coimbra, was later sent to Brazil as a magistrate, and after the death of his wife entered the ecclesiastical state. He has left a number of historical works, the most important of which is "*Fastos Politicos e Militares de Antiqua e Nova Lusitania*" (Lisbon, 1745), dealing with the history of Portugal and Brazil. He was a brother of the more famous Diego Machado Barbosa (1682-1772), also a priest and writer, and author of a notable monument of Portuguese literature "*Bibliotheca Lusitana, Historica, Critica e Chronologica*" (Lisbon, 1741-59). V. FUENTES.

**Barbour**, JOHN, Scottish ecclesiastic and author of "*The Bruce*", a historical poem in the early Scottish or Northern English dialect, b. about 1320; d. 1395. He was already Archdeacon of Aberdeen in 1357, an honour not likely to have been attained much before his fortieth year. At various times, 1357, 1364, 1365, 1368, he obtained, originally at the request of King David of Scotland, passports from the King of England for travel to Oxford or to France, presumably for the purpose of special study or research, or for the renewal of old college associations. In 1357 he was appointed by the Bishop of Aberdeen one of the commissioners to meet at Edinburgh and confer about the ransom from England of David II, captured at Neville's Cross, 1346. In 1373, and occasionally in later years, he was one of the auditors of the exchequer. In 1378, as a reward for his patriotic poem, he was assigned, from the royal rents payable by the city, a perpetual pension of twenty shillings, and in 1388, an additional royal pension for life of £10 Scots from the customs of Aberdeen. He received also from the king £10 in 1377, and £5 in 1386. Innes has pointed out that in addition to these pensions and gifts, and perquisites incidental to the wardship of a minor, Barbour enjoyed the revenue of a prebend and a considerable income as archdeacon. His pension of twenty shillings he left as a foundation for Masses for himself and his parents, to be said by all the priests at the cathedral on the Wednesday after Low Sunday. As Jamieson shows, the pension was not bequeathed to a hospital, but probably reverted to the Crown at the Reformation. The copy of the document assigning his pension to the dean and chapter of Aberdeen may be found in Skeat, along with the forty-eight other documents which establish the facts of Barbour's life.

Barbour, "the earliest poet and the first detailed historian of Scotland", writing in that northern dialect of Middle English which afterward came to be specifically called Scotch, composed, besides "*The Brut*" and "*The Stewart's Original*", which are lost, the long patriotic narrative poem called "*The Bruce*". This work, upon which Barbour was engaged in 1375, exists in two manuscripts, dated 1487 and 1489, written by John Ramsay, who has been identified with a later prior of the Carthusian monastery at Perth. The second of these copies was made at the request of Simon Lochmalony, vicar of Auchter Monsey, near Perth. An earlier, incomplete manuscript, written by Fenton, a monk of Melrose, in 1369, is not extant. "*The Bruce*", extending through 6,000 octosyllabic couplets, variously divided into fourteen or twenty books, told to a generation of Scotchmen flushed with victory and the sense of dearly-bought independence the story of the struggles of their grandfathers, sang the glories of freedom, and pictured the civic and knightly virtues of Bruce and Douglas. The narrative runs from the dispute for the crown of Scotland between Baliol and the first Robert, whom Barbour poetically identifies with his grandson, to the death of the Black

Douglas in Spain while on his way to the Holy Land with the heart of Bruce. It pictures such events as Bannockburn, the siege of Berwick, the expedition to Ireland, and the wanderings of the king, and sketches the characters of Stewart, Randolph, Bruce, and Douglas. The author finds a place, too, for descriptions of nature, for touches showing the tenderness of the true soldier, for snatches of grim humour or sharp dialogue, for digressions on necromancy and astrology, and for learned allusions to the favourite classic authors of the day. This narrative, which Barbour called a romance, is regarded as being in essential points a faithful history, and was so received by generations of readers. Scott used some of its material in "*Castle Dangerous*", "*The Lord of the Isles*", and "*Tales of a Grandfather*". The principal editions of "*The Bruce*" are those of Pinkerton (Edinburgh, 1790; Jamieson (Edinburgh, 1820); Cosmo Innes (Edinburgh), and, according to more modern requirements of scholarship, that of Professor Skeat for the "*Early English Text Society*", and the "*Early Scottish Text Society*". Some fragments on the tale of Troy, and a long poem on the lives of the saints formerly attributed to Barbour are no longer thought to be his work.

J. VINCENT CROWNE.

**Barbus**, PAULUS, Italian philosopher and theologian, b. at Soncino, Lombardy, and hence known also by the name of Soncinas which appears at the head of his books; d. at Cremona, 4 August, 1494. When a mere youth he entered the Dominican Order and made his philosophical and theological studies in its schools. He afterwards taught philosophy and theology with great success at Milan, Ferrara, and Bologna. At the time of his death he was prior of the Cremona Convent. Exhibiting extraordinary intellectual powers, and expressing his deep thoughts in eloquent speech and finished writing, he merited and received the esteem of his learned contemporaries, notably of Pico della Mirandola. Many of his writings were lost at an early date. The following have been printed frequently: (1) "*Quæstiones super divinâ sapientiâ Aristotelis*" (principal edition, Lyons, 1579); (2) "*Divinum Epitoma quæstionum in IV libros sententiarum a principe Thomistarum Joanne Capreolo Tolesano disputatarum*" (principal edition, Pavia, 1522). The place and date of (3) "*In libros prædicabilium et prædicamentorum expositio*" are unknown.

QUÉTIF AND ECHARD, *Scriptores Ordinis Prædicatorum*, I, 279. ARTHUR L. McMAHON.

**Barca**, a titular see of Cyrenaica in Northern Africa. According to most archæologists it was situated at Medinet el Merdja, but according to Graham (Roman Africa) at Tolometa, or Tolmeita. After being often destroyed and restored, it became, during the Roman period, a mere borough (Marquardt, *Staatsverwaltung*, I, 459), but was, nevertheless, the site of a bishopric. Its bishop, Zopyros (Zephyrius is a mistake), was present at the Council of Nicæa in 325 (Gelzer, *Patrum Nicænorum nomina*, 231). The subscriptions at Ephesus (431) and Chalcedon (451) give the names of two other bishops, Zenobius and Theodorus. The see must have disappeared when the Arabs conquered the Pentapolis in 643 (Butler, *The Arab Conquest of Egypt*, 430).

**Barcelona** (BARCINO), DIOCESE OF, one of the suffragans of the Archdiocese of Tarragona. The city of this name is the capital of Catalonia and of the province of Barcelona. It is situated on the coast of north-eastern Spain, and is familiarly known as the "Queen of the Mediterranean".

**History.**—Barcelona is one of the most ancient cities of Spain, and the most important after the capital. Founded by Hamilcar in the ancient region of Laetana, it was in the possession of the Carthaginians until they were driven out of Spain, when it passed under the power of the Romans, who favoured it in many ways. Julius Caesar bestowed on it the name of *Julia Augusta Faventia* in recognition of the support given him in his struggle with Pompey; later he made it a Roman colony and gave it the *jus Latii*, which conferred on the inhabitants, although still belonging to *Hispania Tarraconensis*, the full privileges of Roman citizenship. The city remained unimportant until Ataulf, King of the Visigoths, chose it for his residence (415). Later it passed successively into the hands of the Arabs (713) and the Franks (801). Finally, Wilfrid, Wilfrid the Hairy declared his independence and gave the Spanish March, or the *Marca Hispanica*, as the Franks had called it, the name of the County of Barcelona. It remained under the independent government of its own counts until the marriage of Petronilla, daughter of Ramiro the Monk, with the Count of Barcelona (1137) united Aragon and Catalonia. After 1164, when Petronilla resigned in favour of her son Alfonso, the two states formed but one kingdom.

Barcelona, being situated on the shores of the Mediterranean and on the military road between Spain and France, was comparatively easy of access, and the Gospel was preached there by the immediate disciples of the Apostles. The See of Barcelona, unlike most very ancient sees, whose origins are obscure, has preserved catalogues of its bishops from Apostolic times, and although all the names given cannot be admitted as authentic, the greater number are handed down in all the catalogues. In the twelfth century the diocese was restored by Ramon Berengar, Count of Barcelona, since which time the succession of bishops has been uninterrupted.

In the long line of bishops we find many illustrious names. St. Severus, a native of the city, was martyred by Dacianus in the reign of Diocletian. St. Pacianus (360–390) is famous for the clearness and spirituality of his doctrinal writings; in chapter cvi of his “*De Scriptoribus Ecclesiasticis*”, St. Jerome praises the chaste life of Pacianus, his eloquence, and his writings on baptism and penance, also those against heretics, particularly the Novatians. St. Oligarius, noted for the great purity of his life, was the first metropolitan of this province. Bishop Urquinaona was revered for his great charity; one of the handsomest plazas of Barcelona is still called by his name. Among the saints of this diocese are: the famous virgin, St. Eulalia, a martyr of the third century, whose relics are preserved in a rich shrine in the crypt of the cathedral; Sts. Juliana and Sempronia, virgins and martyrs; the African saints, Cucuphas and Felix, martyred in the city of Barcelona; St. Raymund of Pennafort, founder of the Order of Mercy for the Redemption of Captives, confessor of Gregory IX (1227–41), and compiler of the famous “*Decretals*”, in which he collected the scattered decrees of popes and councils.

**Councils of Barcelona.**—Many councils and assemblies of Spanish bishops were held in Barcelona, two provincial councils in the Visigothic period. The first (c. 540), at which the metropolitan and six bishops assisted, promulgated ten canons, ordaining that the *Miserere* should be said before the Cantic; that in the Vespers and Matins the benediction should be given to the people; that clerics should not wear the hair long or shave their beards; that penitents should wear the hair short, put on a religious garb, and devote their time to prayer; that the “beatific benediction” should be given to the sick so that they could receive Holy Communion, and that the decrees of the Council of Chalcedon (451) with regard

to monks should be observed. At the Second Provincial Council (c. 599), attended by the metropolitan and twelve bishops, four canons were promulgated, the first and second prohibiting any fee for Holy orders and for the chrism used for Confirmation; the third and fourth commanding the observation of the canons referring to those awaiting Holy orders, and excommunicating those who, after having made a vow of chastity and changed their secular dress for the religious garb, should contract a carnal marriage, even if a woman had been forced by violence, unless she immediately separated from the one who had violated her; a similar excommunication was also pronounced on those who married after they had received the “blessing of penance” (*benedictio penitentiae*), i. e. penitents who had taken an additional vow of continency. Other councils were also held there: that of 1125, presided over by St. Ole-

MONASTERY OF ST. OUGAT DEL VALLE, CLOISTER AND LANTERN

garius, the Metropolitan and Bishop of Barcelona; that of 1339 to decide in the matter of the subsidies asked from the clergy; that of 1377, a quasi-plenary council; that of 1387, on the occasion of the Western Schism, which proclaimed legitimate the election of Clement VII; those of 1417, 1517, and 1564 which are of no special importance. In 1904 the *Congreso Hispano-Americano de las Congregaciones Marianas* was held at Barcelona and was attended by thousands of persons for the purpose of making uniform laws for this congregation and that of the *Luisas*.

**Monuments.**—Among the many monuments of the city, the most important is the cathedral, built in the early days of the Church in honour of the Holy Cross. It was rebuilt by order of Berengar I, the Old, Count of Barcelona, and his wife, Doña Almodis, and consecrated in 1058. In the thirteenth century it was enlarged, and was finally completed in 1338. It is Gothic in style, one of its most notable features being the “door of the Inquisition”, a beautiful piece of work composed of small columns and pointed arches on a diminishing scale, which

conceals the jasper steps that lead to the sanctuary. The façade La Piedad, composed of graceful pointed arches, is one of the purest examples of Spanish Gothic. The church of St. Severus unites in its façade all the architectural charms of the fifteenth century in which it was built; its main tabernacle is noted for the rich carving of its pointed arches; its chapel of St. Eulalia is exceedingly delicate and beautiful. The church of Santa Ana has two pictures by Juncosa. The ancient church of Santa María del Mar is also a beautiful specimen of Gothic architecture. Santa María del Pino has the most spacious and lofty nave of all the Gothic churches in Barcelona. The church of Sts. Justo and Pastor was the first dedicated to the worship of the true God in Barcelona. Judging from its present appearance, the unfinished Templo Expiatorio de la Sagrada Familia, built from the alms of the faithful, will be the finest ecclesiastical edifice in Barcelona. The famous sanctuary of Montserrat is outside the city. Apart from its antiquity and religious interest, it is remarkable for its wealth of precious stones, and for the beautiful chapels representing the mysteries of the Rosary; all these are modern and are an evidence of the piety of the faithful. The Diocese of Barcelona also possesses archives of great value in which many precious documents, saved from the Almohad conquest under Almanzor (1184-98), are preserved, as well as the priceless books called *Exemplaria*, wherein are chronicled ecclesiastical functions, oaths of kings, and other notable events, which make them the best source of information for the history of Catalonia.

**Charity and Education.**—It would be difficult to find in Spain another city where Christian charity is manifested in more ways than in Barcelona. Besides many general and private hospitals in the city, there exist a multitude of asylums for all classes of persons maintained by religious congregations and pious associations. Notable among them is the girls' orphan asylum of San José de la Montaña. The asylum and maternity home (*casa de lactancia*) of Bressol, for the children of labourers, takes care annually of 1,200 healthy and 2,300 sick children. The asylum of La Sagrada Familia cares for about 300 children of working mothers. The asylum of La Madre de Dios del Carmen of Hostafranchs, besides sheltering about 600 children and old persons, has a pious association especially for arranging marriages between persons who have been living together illegally, and legitimizing the children; in one year it procured 120 such marriages. The asylum of St. Raphael is for scrofulous children, and the asylum Del Parque relieves annually 94,234 poor, and provides sleeping accommodations for 20,000 poor annually. The house of the Good Shepherd shelters about 300 young women rescued from houses of ill fame. The asylum of the Visitation assists young women who are in want, and in the nineteen years of its existence has preserved the purity and virtue of more than 3,000 young women. There are between forty and fifty other institutions for charitable purposes, among them the Durán asylum for incorrigible boys. Two have for their object the distribution of food and the serving of meals to working-men; one distributed 117,125 free rations in one year, and the other fed about 300 working-men daily. The *Montes Pios* of Nuestra Señora de la Esperanza, of Barcelona, of Santa Madrona, and of Nuestra Señora de Montserrat, are societies for the aid of female domestics and working-men. An association of fathers of families has in one year prevented the publication of 45,000 obscene books and photographs.

In addition to the diocesan seminary, there are Christian Doctrine classes attended by 6,000 children, and Sunday Schools, supervised by 161 young ladies,

where over 2,000 women receive instruction, and are thus prevented from attending public dance-halls. Connected with each of the asylums before mentioned is one or more schools; the religious orders conduct free schools attended by 12,000 boys and girls. There are 8 colleges, under the Jesuits, the Piarists, and other religious orders.

A number of Catholic periodicals are published in the diocese: the "Boletín Eclesiástico de la Diócesis", the "Revista Popular", founded and directed by Dr. Sarda y Salvany, author of the famous book "Liberalismo es Pecado", which has been translated into many languages; the "Comentarius Scholaris", published by the diocesan seminary students; "Anales del culto á San José"; the "Mensajero del Niño Jesús de Praga"; "Anales de Nuestra Señora del Sagrado Corazón"; "La Montaña de San José", official organ of the association; "El Boletín Salesiano"; "Las Misiones Católicas"; "La Hormiga de Oro"; "La Revista Social"; and "Los Estudios Franciscanos". "El Correo Catalán" is the only strictly Catholic newspaper. It has the blessing of the sovereign pontiff, and counts many of the clergy among its contributors.

**Statistics.**—There are 231 parishes, 13 archpriestates, 1,180 secular priests, 360 regular clergy, and 89 religious communities. In 1906 the population, nearly all Catholic, was 1,054,531.

**Barcelona, UNIVERSITY OF.**—This was an outgrowth of the ecclesiastical schools founded in the eleventh century. To these were added gradually the chairs held by the Dominicans in their convent and those established in the *Academia* by the Kings of Aragon. In 1430, the town council of Barcelona took measures for the founding of a *Studium Generale* in order to prevent the migration of their young men to Lerida and to the foreign universities of Paris, Toulouse, and Bologna. But the university as such dates from 1450, the year in which its charter was granted by Alfonso V of Aragon and confirmed by the Bull "Constitutus in Speculo" of Pope Nicholas V. The pope conferred upon the new university all the privileges enjoyed by the University of Toulouse and authorized the erection of chairs in theology, canon and civil law, arts, and medicine. The young institution had to struggle with all sorts of difficulties. For nearly a century it had no buildings adapted to its purposes. In 1544, however, it entered upon a new era, with suitable structures and equipment, and in 1567 it received the richly endowed priory of St. Ann, formerly held by the Order of St. John. The teaching of grammar and rhetoric was entrusted to the Jesuits (1576) and the diocesan seminary was affiliated to the university (1568). In 1714 the Faculties, with the exception of that of medicine, were transferred to Cervera. By royal decree of Charles III, a college of surgery was established at Barcelona in 1764. The Faculties returned from Cervera to Barcelona in 1823, and in 1837 the new university was formally inaugurated. It withstood the disturbances that occurred in 1840 and 1856, passed under State control in 1857, and was provided with additional buildings (1863-73). At present it has five Faculties: philosophy and letters, law, science, medicine, and pharmacy, with 56 instructors and 1,900 students. The Archives of the Crown of Aragon, founded in 1346, contain 3,759,314 documents, and the library about 2,000 manuscripts.

E. A. PAGE.

**Barcena** (also **BARZANA**), **ALONZO DE**, a native of Baeza in Andalusia, Spain, b. 1528; d. at Cuzco, Peru, 15 January, 1598. He became a Jesuit in 1565, and went to Peru in 1569. He was first destined for the missions of Huarochiri, whence he was ordered (1577) to Juli, on the shores of Lake Titicaca in Southern Peru. He became one of the founders of this important mission. Barcena remained in Central Bolivia for eleven years, when the Provincial Atienza sent him to Tucuman in Argentina. His work among the various tribes of that region and of Paraguay continued until 1593, when he was made Commissary of the Inquisition in those provinces. Exhausted physically by his long and arduous labours, Barcena died at Cuzco in Peru. He is credited with having had a practical knowledge of eleven Indian languages and with having written grammars, vocabularies, catechisms in most of them. These manuscripts are possibly still in the archives of Lima. Only one of his writings is known to have been published: a letter full of important ethnographic and linguistic detail, on the Indians of Tucuman, on the Calchaquis, and others. The letter (see below), published in 1885, is dated 8 September, 1594, at Asunción in Paraguay, and is addressed to the Provincial Juan Sebastian.

CALANCHA, *Crónica moralizada* (Lima, 1638), I; LOZANO, *Historia de la Compañía de Jesús de la provincia del Paraguay* (Madrid, 1756); IDEM, *Descripción del Gran Chaco* (Cordoba, 1733); LORENZO HERVAS, *Catálogo delle Lingue conosciute e notizia della loro affinità e diversità* (Foligno, 1784); CHARLEVOIX, *Histoire du Paraguay* (Paris, 1757); SALDAMANDO, *Antiguos Jesuitas del Perú* (Lima, 1882); *Relaciones geográficas de Indias* (Madrid, 1885), II, contains the Carta de F. Alonso de Barcena, de la Compañía de Jesús, al P. Juan Sebastian, su Provincial, the letter mentioned above (Appendix 30, III). LUDWIG, *The Literature of American Aboriginal Indians* (London, 1858), 76, mentions a work of Father Barcena under the title of *Lexica et praecepta grammatica, item liber confessionis et precum in quinque Indorum Linguis* (Peru, 1590); it is probably one of the manuscripts alluded to above. The title is taken from SOTWELL, *Bibliotheca Societatis Jesu* (Rome, 1676).

AD. F. BANDELIER.

**Barclay**, **JOHN**, author of the political novel "Argenis" and other Latin works in prose and verse, was b. 28 January, 1582, at Pont-à-Mousson; d. in Rome, August, 1621. His father was William Barclay (q. v. infra). John Barclay received his early schooling from the Jesuits, and at the age of nineteen he published a commentary on the "Thebais" of Statius. In 1603 father and son, perhaps attracted by the union of the Scotch and English crowns, tried their fortunes in London. The son dedicated to James his "Euphormionis Lusinini Satyricon". After a brief stay in France, John returned to England in 1605.

He married a brilliant and clever Frenchwoman, and was again in London in 1606. He published, in Paris, 1607, the second part of his "Satyricon" and about the same time his poems, under the title "Sylvæ", and a narrative of the Gunpowder Plot (English translation, Oxford, 1634). His publication in 1609 of his father's work, "De Potestate Papæ", which denied the temporal jurisdiction of the pope over princes, and his declaration therewith that he would defend his father's memory, led to a prolonged controversy, in which his known opponents were Bellarmine and a Jesuit, Andreas Eudæmon Joannes. A further series of polemics was occasioned by his "Apology" (1611) for the "Satyricon", in which he attacked the Jesuits and his father's former patron, the Duke of Lorraine. In his "Icon Animorum", a fourth part of the "Satyricon" (London, 1614), he described the character and manners of the European nations, mentioning Scot-

land with special affection. In 1615 a volume of his poems appeared in London.

In England Barclay received occasional help from the king and the Earl of Salisbury, and won the friendship of Isaac Casaubon, Ralph Thorne, and especially, in 1606, of du Peiresc, an attaché of the French Embassy and a patron of learning. In 1616 Barclay, at the invitation of Paul V, went to Rome, where he was welcomed by Bellarmine and pensioned by the pope. Perhaps to prove his Catholic loyalty he published in 1617 his "Parænesis ad Sectariorum". Completing in July, 1621, his Latin novel "Argenis", he died in the following month. The facts as to the removal of his monument and inscription from St. Onofrio have been perhaps permanently obscured by partisan dispute. His friend Ralph Thorne published an elegy in 1621. Barclay was admired by his contemporaries for his honesty, his rare courtesy, and a conversational charm that owed something to grave irony. His varied learning and talents made him a formidable opponent.

The most important of Barclay's writings, the "Argenis", published by du Peiresc at Paris, 1621, has been admired by Richelieu, Leibnitz, Jonson, Grotius, Pope, Cowper, Disraeli, and Coleridge. This work is a long romance which introduces the leading personages of international importance. To it were indebted, in whole or in part, Fénelon's "Télémaque", du Ryer's tragi-comedy "Argenis et Poliarque", Calderon's "Argenis y Poliarco", an Italian play "Argenide", by de Cruylles, and a German play by Christian Weysen, 1684. The "Argenis" was soon translated into French, Spanish, and German. English translations appeared as follows: by Kingsmill Long, London, 1626; by Sir Robert Le Grys and Thomas May, London, 1629, and in 1772, under the title of "The Phoenix", by Clara Reeve. Ben Jonson in 1623 entered a translation at Stationers' Hall. There have been translations into Italian, Dutch, Greek, Hungarian, Polish, Swedish, and Icelandic. An English translation, by Thomas May, of the fourth part of the "Satyricon", under the title, "The Mirror for Minds", was printed in London, 1633.

Portraits of Barclay may be found in the first edition of the "Argenis", in the volume of 1629 of Le Grys and May, and in the later work of Collignon. GARNETT in *Dict. Nat. B.* (Paris, 1902); SCHMID, *Barclay's Argenis—with bibliography and key* (Munich, 1903).

J. V. CROWNE.

**Barclay**, **WILLIAM**, Scottish Jurist, b. 1546; d. at Angers, France, 3 July, 1608. He was of a good Aberdeenshire family, and studied first at Aberdeen University and later, having emigrated to France like so many of the Catholic youth of Scotland at that time, under eminent teachers at Paris and Bourges. In 1578, on the recommendation of his uncle, Edmund Hay, first rector of the newly founded University of Pont-à-Mousson, he was appointed to the chair of civil law there by the Duke of Lorraine, who made him also dean of the faculty of law and a councillor of state. Three years later he married Anne de Malleviller, a lady of an honourable Lorraine family. Barclay published in 1600 his largest work, "De Regno et Regali potestate", in defence of the rights of kings, against Buchanan and other writers. The doctrines laid down in this book, which was dedicated to Henry IV, are discussed at length by Locke in his "Civil Government". After twenty-five years' tenure of his professorship, Barclay resigned his chair in 1603 and returned to England, where the

new monarch, James I, was inclined to welcome with favour one who had so learnedly asserted the views on the Divine right of kings which he himself held. Barclay's fidelity, however, to the Catholic religion stood in the way of his advancement, and, rejecting the king's offer of a lucrative appointment on condition that he renounced his faith, he returned to France. An offer was immediately made to the renowned jurist to accept the professorship of law in the University of Angers, which had been vacant for some years. In 1605 he published at Paris an elaborate work on the Pandects, dedicated to King James. Barclay mentions in this work his intention to write a book about the king, but he never lived to publish it. He was buried at the Cordeliers Church at Angers. His most famous work, "De Potestate Papæ", directed against the pope's authority over kings in temporal matters, appeared in 1609, with a preface written by his son. Cardinal Bellarmine published a rejoinder to it. (See BARCLAY, JOHN.)

D. O. HUNTER-BLAIR.

**Barco Centenera**, MARTIN DEL, b. 1535, at Logroño, in the Diocese of Plasencia of Estremadura (Spain); died c. 1602. He became a secular priest and in 1572 accompanied, as chaplain, the expedition of Juan Ortiz de Zárate to the Rio de La Plata. For twenty-four years he followed the vicissitudes of Spanish exploration in the Argentine with undaunted courage, and was made archdeacon of the church of Paraguay. In 1582 he went to Lima and acted as secretary to the third council held in that city. He returned to Europe, where he finished his poetical work, known as "La Argentina", which he dedicated to the Viceroy of Portugal (for Philip III of Spain). It appeared in 1602. Soon after, del Barco died. The poetic merit of the "Argentina" is slender, like that of all the epics composed about his time on American subjects. It is a work of ponderous rhyme. But its historical value is considerable. He describes nearly a quarter of a century of Spanish efforts in the Argentine and adjacent countries, of which he was mostly an eyewitness, and thus fills a considerable blank in our knowledge of the history of that period, otherwise but little known. He also alludes to the English piracies committed by Drake and Cavendish, and to events of importance in Peru during the administration of the Viceroy Toledo. Several of the violent earthquakes of the time are also mentioned and described, though not always with correctness in regard to dates.

AD. F. BANDELIER.

**Barcos**, MARTIN DE, a French theologian of the Jansenist School, b. at Bayonne, 1600; d. at St. Cyran, 1678. He was a nephew of du Vergier de Hauranne, Abbot of St. Cyran, who sent him to Belgium to be taught by Jansen. When he returned to France he served for a time as tutor to the son of Arnauld d'Andilly and later, 1644, succeeded his uncle at the Abbey of St. Cyran. He did much to improve the abbey; new buildings were erected, the library much increased, and the strictest rule enforced. Unlike many commendators of his day who scarcely ever saw the abbey over which they held authority, Barcos became an active member of St. Cyran, was ordained priest 1647, and gave himself up to the rigid asceticism preached by his sect. His

friendship with du Vergier and Arnauld and, through them, with Port-Royal soon brought him to the front in the debates of Jansenism. He collaborated with du Vergier in the "Petrus Aurelius" and with Arnauld in the book on "Frequent Communion".

Of his own treatises, some bear on authority in the Church and some on the then much-mooted questions of grace and predestination. To the first class belong (1) "De l'autorité de St. Pierre et de St. Paul" (1645). (2) "Grandeur de l'Eglise de Rome qui repose sur l'autorité de St. Pierre et de St. Paul" (1645). (3) "Eclaircissements sur quelques objections que l'on a formées contre la grandeur de l'Eglise de Rome" (1646). These three books were written in support of an assertion contained in the book "On Frequent Communion", namely: "St. Peter and St. Paul are the two heads of the Roman Church and the two are one". This theory of dual church authority, implying an equality of the two Apostles, was condemned as heretical by Pope Innocent X, in 1674 (Denzinger, *Enchiridion*, 965).

To the second class belong (1) A censure of Simond's "Prædestinatus" (1644). (2) "Quæsit Sancti Augustini et doctrinæ eius auctoritas in ecclesiâ?" (1650). Barcos holds that a proposition clearly founded on St. Augustine can be absolutely accepted and taught, regardless of a papal Bull. That exaggeration of the African Doctor's authority was, from the beginning of the controversy, the main prop of the Jansenists who read in St. Augustine what they pleased and then claimed immunity from the authority of the Church. This new error was condemned by Pope Alexander VIII, 1690 (Cf. Denzinger, no. 1187). (3) "Exposition de la foy de l'Eglise romaine touchant la grâce et la prédestination" (1696). This book was written at the request of the Jansenist Bishop of Aleth, Pavillon, and may be looked upon as the official exposé of Jansenism. It was condemned by the Holy Office, 1697, and again 1704, when it was published with the "Instructions sur la grâce" of Antoine Arnauld.

HURTER, *Nomenclator*, II (Innsbruck, 1893); MIGNÉ, *Dict. de biog. chrét.* (Paris, 1851); JUNGSMANN in *Kirchenlex.*, I, 1904; BEARD, *Port-Royal* (London, 1861); FUZET, *Les Jansenistes* (Paris, 1876); SAINT-BEUVE, *Port-Royal* (Paris, 1878).

J. F. SOLLIER.

**Bard**, HENRY, BARON BROMLEY and VISCOUNT BELLAMONT, an English soldier and diplomat, b. 1604; d. 1660. He was the son of the Reverend George Bard, Vicar of Staines, Middlesex, England, a representative of an old Norfolk family. He was educated at Eton, and in 1632 entered King's College, Cambridge, where he took the Master's degree and a fellowship. Before this date he had travelled considerably, having visited Paris, and journeyed on foot through France, Italy, Turkey, Palestine, and Egypt. It is alleged that during his sojourn in the last country he surreptitiously got possession of a copy of the Koran which was the property of one of the mosques, and which he appropriated and afterwards presented to his college.

Bard's habits of life were expensive, the liberality and generosity of his wealthy brother, Maximilian, enabling him to indulge them. His accomplishments included the knowledge of several languages and, coupled with his experience as a traveller and a wide knowledge of men and events, served to commend him to Charles I, with whom he became a favourite, and whose policy throughout the Civil War he sustained as a strong partisan. He was one of the earliest to take up arms in the king's behalf, obtaining through the queen a colonel's commission. He distinguished himself at York, and at the battle of Cheriton Down, was severely wounded, lost an arm, and was taken prisoner. In May of 1646 he received his discharge and on again joining the king received the reversionary grant of the office of Governor of the

Island of Guernsey and Captain of Cornet Castle. Later he was appointed to the command of a brigade and was made governor of Camden House, Gloucestershire. Failing to hold this post against the assaults of the Parliamentarians, he burned the house to the ground.

Bard was also Governor of Worcester about 1643, and in May, 1645, he distinguished himself by being the first to scale the ramparts of Leicester. He also took a prominent part in the battle of Naseby. On 8 July, 1646, he was created Baron Bard and Viscount Bellamont in the Kingdom of Ireland. In the following December Bard was again taken prisoner, when on his way to Ireland, but was finally liberated on his promising to go beyond the sea and never to return without permission. The court of Charles II at The Hague furnished the needed resting-place. In May of 1649 he was arrested, charged with murdering Dr. Dorislaus. The charge came to naught, and in 1656 Bard was sent from Bruges as special ambassador by Charles II to the Shah of Persia, to obtain financial help to recover the throne of England. The mission failed, as the Persian monarch was under obligations to England for aid rendered him at Ormuz and was therefore unable to comply with the request of Charles. Bard, who had been a Catholic for several years, lost his life in a windstorm in the desert of Arabia about 1660.

THOMAS GAFFNEY TAAFFE.

**Bardanes and Bardesanites.**—Bardanes (*Bar-daisan*), a Syrian Gnostic or, more correctly, a Syrian poet, astrologist, and philosopher, b. 11 July, 154 (164?), at Edessa, of wealthy Persian, or Parthian, parents; d. 222, at Edessa. To indicate the city of his birth his parents called him "Son of the Daisan", the river on which Edessa is situated. On account of his foreign extraction he is sometimes referred to as "the Parthian" (by Julius Africanus), or "the Babylonian" (by Porphyrius); and, on account of his later important activity in Armenia, "the Armenian" (by Hippolytus). His pagan parents, Nuhamā' and Nah'siram, must have been people of rank, for their son was educated with the crown-prince of the Osroënic kingdom, at the court of Abgar Manu VIII. Julius Africanus says that he saw Bardanes, with bow and arrow, mark the outline of a boy's face with his arrows on a shield which the boy held. Owing to political disturbances in Edessa, Bardanes and his parents moved for a while to Hierapolis (Mabûg), a strong centre of paganism. Here the boy was brought up in the house of a heathen priest Anôdûzbar. In this school, no doubt, he learnt all the intricacies of Babylonian astrology, a training which permanently influenced his mind and proved the bane of his later life. At the age of twenty-five he happened to hear the homilies of Hystaspes, the Bishop of Edessa; he received instruction, was baptized, and even admitted to the diaconate or the priesthood. "Priesthood", however, may merely imply that he ranked as one of the college of presbyters, for he remained in the world, had a son called Harmonius, and when Abgar IX, the friend of his youth, ascended the throne (179) he took his place at court. He was clearly no ascetic, but dressed in Oriental finery, "with beryls and caftan", according to St. Ephrem.

His acceptance of Christianity was perfectly sincere; nor do later stories, that he left the Catholic Church and joined the Valentinian Gnostics out of disappointed ambition, deserve much credit. His royal friend became (probably after 202, i. e. after his visit and honourable reception at Rome) the first Christian king; and both king and philosopher laboured to create the first Christian State. Bardanes showed great literary activity against Marcion and

Valentinus, the Gnostics of the day. But unfortunately, with the zeal of a convert anxious to use his previous acquirements in the service of the newly found truth, Bardanes mixed his Babylonian pseudo-astronomy with Christian dogma and thus originated a Christian sect, which was vigorously combated by St. Ephrem. The Romans under Caracalla, taking advantage of the anti-Christian faction in Edessa, captured Abgar IX and sent him in chains to Rome. Thus the Osroënic kingdom, after 353 years' existence, came to an end. Though he was urged by a friend of Caracalla to apostatize, Bardanes stood firm, saying that he feared not death, as he would in any event have to undergo it, even though he should now submit to the emperor. At the age of sixty-three he was forced to take refuge in the fortress of Ani in Armenia and tried to spread the Gospel there, but with little success. He died at the age of sixty-eight, probably at Edessa. According to Michael the Syrian, Bardanes had besides Harmonius two other sons called Abgarun and Hasdû.

**WRITINGS.**—Bardanes apparently was a voluminous author. Though nearly all his works have perished, we find notices of the following: (a) *Dialogues against Marcion and Valentinus* (Theodoretus, *Hæc. fab.*, I, xxii; Eusebius, *Hist. Eccl.*, IV, xxx, 3). (b) *Dialogue "Against Fate"* addressed to Antoninus. Whether this Antoninus is merely a friend of Bardanes or a Roman emperor and, in the latter case, which of the Antonini is meant, is a matter of controversy. It is also uncertain whether this dialogue is identical with "The Book of the Laws of the Countries", of which later on (Eusebius, *Hist. Eccl.*, IV, xxx, 2; Epiphanius, *Hæc.*, LVI, i; Theodoretus, *Hæc. fab.*, I, xxii). (c) A "Book of Psalms", 150 in number, in imitation of David's Psalter (St. Ephrem, *Serm. adv. hæc.*, liii). These psalms became famous in the history of Edessa; their words and melodies lived for generations on the lips of the people. Only, when St. Ephrem composed hymns in the same pentasyllabic metre and had them sung to the same tunes as the psalms of Bardanes, these latter gradually lost favour. We probably possess a few of Bardanes' hymns in the Gnostic "Acts of Thomas"; the "Hymn on the Soul"; the "Espousals of Wisdom"; the consecratory prayer at Baptism and at Holy Communion. Of these, however, only the "Hymn on the Soul" is generally acknowledged to be by Bardanes, the authorship of the others is doubtful. Though marred by many obscurities, the beauty of this hymn on the soul is very striking. The soul is sent from its heavenly home to the earth, symbolized by Egypt, to obtain the pearl of great price. In Egypt it forgets for a while its royal parentage and glorious destiny. It is reminded thereof by a letter from home, succeeds in snatching the pearl from the Serpent, and, once more clothed in a raiment of light, it returns to receive its rank and glory in the kingdom of its father. (d) *Astrologico-theological treatises*, in which his peculiar tenets were expounded. They are referred to by St. Ephrem, and amongst them was a treatise on light and darkness. A fragment of an astronomical work by Bardanes was preserved by George, Bishop of the Arab tribes, and republished by Nau in "Bardésane l'astrologue" etc. (Paris, 1899). (e) A "History of Armenia". Moses of Chorene (*History of G. A.*, II, 66) states that Bardanes, "having taken refuge in the fortress of Ani, read there the temple records in which also the deeds of kings were chronicled; to these he added the events of his own time. He wrote all in Syriac, but his book was afterwards translated into Greek." Though the correctness of this statement is not quite above suspicion, it probably has a foundation in fact. (f) "An Account of India". Bardanes obtained his information from the Hindu

ambassadors to the Emperor Eliogabalus. A few extracts are preserved by Porphyry and Stobæus (Langlois, *Fragm. hist. græc.*, V, lxxviii sqq.). "Book of the Laws of the Countries". This famous dialogue, the oldest remnant not only of Bardesanite learning, but even of Syriac literature, if we except the version of Holy Writ, is not by Bardesanes himself, but by a certain Philip, his disciple. The main speaker, however, in the dialogue is Bardesanes, and we have no reason to doubt that what is put in his mouth correctly represents his teaching. Excerpts of this work are extant in Greek in Euseb. (*Præp. Ev.*, VI, x, 6 sqq.) and in Cæsarius (*Questiones*, xlvii, 48); in Latin in the "Recognitions" of Pseudo-Clement, IX, 19 sqq. A complete Syriac text was first published from a sixth- or seventh-century MS. in the British Museum, by Cureton, in his "Spicilegium Syriacum" (London, 1855), and recently by Nau. It is disputed whether the original was in Syriac or in Greek; Nau is decidedly and rightly in favour of the former. Against a questioning disciple called Abida, Bardesanes seeks to show that man's actions are not entirely necessitated by Fate, as the outcome of stellar combinations. From the fact that the same laws, customs, and manners often prevail amongst all persons living in a certain district, or, though locally scattered, living under the same traditions, Bardesanes endeavours to show that the position of the stars at the birth of individuals can have but little to do with their subsequent conduct. Hence the title "Book of the Laws of the Countries."

**SYSTEM.**—Various opinions have been formed as to the real doctrine of Bardesanes. As early as Hippolytus (*Philos.*, VI, 50) his doctrine was described as a variety of Valentinianism, the most popular form of Gnosticism. A. Hilgenfeld in 1864 wrote an able defence of this view, based mainly on extracts from St. Ephrem, who devoted his life to combating Bardesanism in Edessa. But the strong and fervent expressions of St. Ephrem against the Bardesanes of his day are not a fair criterion of the doctrine of their master. The extraordinary veneration of his own countrymen, the very reserved and half-respectful allusion to him in the early Fathers, and above all the "Book of the Laws of the Countries" suggest a milder view of Bardesanes' aberrations. He cannot be called a Gnostic in the proper sense of the word. He believed in an Almighty God, Creator of heaven and earth, whose will is absolute, and to whom all things are subject. God endowed man with freedom of will to work out his salvation. This world He allowed to be a mixture of good and evil, light and darkness. All things, even those which we now consider inanimate, have a measure of liberty. In all of them the light has to overcome the darkness. After six thousand years this earth shall have an end, and a world without evil shall take its place. To Bardesanes the sun, moon, and planets were living beings, to whom, under God, the government of this world was largely entrusted; and though man was free, he was strongly influenced for good or for evil by the constellations. Bardesanes' catechism must have been a strange mixture of Christian doctrine and references to the signs of the Zodiac. Misled by the fact that "spirit" is feminine in Syriac, he seems to have held erroneous views on the Trinity. He apparently denied the Resurrection of the Body, but thought Our Lord's body was endowed with incorruptibility as with a special gift.

**SCHOOL.**—Bardesanes's son Harmonius strayed farther from the path of orthodoxy. Educated at Athens, he added to the Chaldee astrology of his father Greek errors concerning the soul, the birth and destruction of bodies, and a sort of metempsychosis. A certain Marinus, a follower of Bardesanes, is reputed in the "Dialogue of Adamantius". This Marinus, a dualist, held the doctrine of a two-fold prime-

val being; for the devil, according to him, is not created by God. He was also a Docetist, as he denied Christ's birth of a woman. According to St. Ephrem, the Bardesanes of his day were given to many puerilities and obscenities. Sun and Moon were considered male and female principles, and the ideas of heaven amongst the Bardesanes were not without an admixture of sensuality. St. Ephrem's zealous efforts to suppress this powerful heresy were not entirely successful. Rabbula, Bishop of Edessa in 431-432, found it flourishing everywhere. Its existence in the seventh century is attested by Jacob of Edessa; in the eighth by George, Bishop of the Arab tribes; in the tenth by the historian Masudi; and even in the twelfth by Shashrastāni. Bardesanism seems to have degenerated first into Valentinianism and then into common Manichæism. The last-named writer states: "The followers of Daisan believe in two elements, light and darkness. The light causes the good, deliberately and with free will; the darkness causes the evil, but by force of nature and necessity. They believe that light is a living thing, possessing knowledge, might, perception, and understanding; and from it movement and life take their source; but that darkness is dead, ignorant, feeble, rigid, and soulless, without activity and discrimination; and they hold that the evil within them is the outcome of their nature and is done without their co-operation" [Haarbrücker tr. (Halle, 1850), I, 293].

**Bar Hebræus (Abu'l Faraj)**, a Jacobite Syrian bishop, philosopher, poet, grammarian, physician, Biblical commentator, historian, and theologian, b. at Melitene (Malatia), Asia Minor, 1226; d. at Maragha, Persia, 1286. He was the son of a Jewish physician, Aaron, a convert to the Jacobite faith; hence his surname of Bar 'Ebrāyā (Bar Hebræus), "Son of the Hebrew". Under the care of his father he began as a boy (*a teneris unguiculis*) the study of medicine and of many other branches of knowledge, which he pursued as a youth at Antioch and Tripoli, and which he never abandoned until his death. In 1246 he was consecrated Bishop of Gubos, by the Jacobite Patriarch Ignatius II, and in the following year was transferred to the See of Lacabene. He was placed over the Diocese of Aleppo by Dionysius (1252) and finally was made Primate, or Maphrian, of the East by Ignatius III (1264). His episcopal duties did not interfere with his studies; he took advantage of the numerous visitations, which he had to make throughout his vast province, to consult the libraries and converse with the learned men whom he happened to meet. Thus he gradually accumulated an immense erudition, became familiar with almost all branches of secular and religious knowledge, and in many cases thoroughly mastered the bibliography of the various subjects which he undertook to treat. How he could have devoted so much time to such a systematic study, in spite of all the vicissitudes incident to the Mongol invasion, is almost beyond comprehension. The main claim of Bar Hebræus to our gratitude is not, however, in his original productions, but rather in his having preserved and systematized the work of his predecessors, either by way of condensation or by way of direct reproduction. Both on account of his virtues and of his science, Bar Hebræus was respected by all, and his death was mourned not only by men of his own faith, but also by the Nestorians and the Armenians. He was buried at the convent of Mar

Matthew, near Mosul. He has left us an autobiography, to be found in Assemani, "Biblioth. Orient.", II, 248-263; the account of his death (ibid.) was written by his own brother, Bar Sauma. The works of Bar Hebræus are:—

I. ENCYCLOPÆDIC AND PHILOSOPHICAL.—(1) His great encyclopædic work is his *Hēwadh Hēkhmethā*, "The Cream of Science", which deals with almost every branch of human knowledge, and comprises the whole Aristotelean discipline, after Avicenna and other Arabian writers. This work, so far, has not been published, with the exception of one chapter, by Margoliouth, in "Analecta Orientalia ad poeticam Aristotelem" (London, 1887), 114-139. The rest is to be found only in MSS., preserved at Florence, Oxford, London, and elsewhere. (2) *Tēghrāth Tēghrāthā*, "Commerce of Commercies", a résumé of the preceding, also unpublished. (3) *Kethābhā dhe-Bhābhāthā*, "Book of the Pupils of the Eyes"; compendium of logic and dialectics. (4) *Kethābhā dhe-Sewādh Sophia*, "Book of the Speech of Wisdom"; compendium of physics and metaphysics. To these should be added a few translations of Arabic works into Syriac, as well as some treatises written directly in Arabic.

II. BIBLICAL.—The most important work of Bar Hebræus is *Auḡār Rāzē*, "Storehouse of Secrets", a commentary on the entire Bible, both doctrinal and critical. Before giving his doctrinal exposition of a passage, he first considers its critical state. Although he uses the Peshitto as a basis, he knows that it is not perfect, and therefore controls it by the Hebrew, the Septuagint, the Greek versions of Symmachus, Theodotion, Aquila, by the Oriental versions, Armenian and Coptic, and finally by the other Syriac translations, Heracleian, Philoxenian and especially Syro-Hexapla. The work of Bar Hebræus is of prime importance for the recovery of these versions and more specially of the Hexapla of Origen, of which the Syro-Hexapla is a translation by Paul of Tella. His exegetical and doctrinal portions are taken from the Greek Fathers and previous Syrian Jacobite theologians. No complete edition of the work has yet been issued, but many individual books have been published at different times. (See bibliography at end of article.)

III. HISTORICAL.—Bar Hebræus has left a large historical work called *Mākhbhanūth Zākhne*, "Chronicon", in which he considers the history from the Creation down to his own day. It is divided into two portions: the first deals with political and civil history and is known as the "Chronicon Syriacum"; the second, "Chronicon Ecclesiasticum", comprising the religious history, begins with Aaron and treats in a first section of the history of the Western Syrian Church and the Patriarchs of Antioch, while a second section is devoted to the Eastern Church, the Nestorian Patriarchs, and the Jacobite Maphrians. Bar Hebræus utilized almost all that had been written before him. The best edition of the "Chronicon Syriacum" is that of Bedjan, "Gregorii Barhebræi Chronicon Syriacum" (Paris, 1890). The best edition of the "Chronicon Ecclesiasticum" is that of Abbeloos and Lamy (3 vols., Louvain, 1872-77). The "Chronicon Syriacum" was rendered into Arabic by Bar Hebræus himself under the name of "History of Dynasties"; the latest and best edition of this work is that of Salhani (Beirut, 1890).

IV. THEOLOGICAL.—In theology Bar Hebræus was a Monophysite. He probably, however, thought that the differences between Catholics, Nestorians, and the rest were of a theological, but not of a dogmatical nature, and that they did not affect the common faith; hence, he did not consider others as heretics, and was not himself considered as such, at least by the Nestorians and the Armenians. In this field, we have from him *Menārāth Qūdhshe*, "Lamp

of the Sanctuary", and the *Kethābhā dhe-Zālgē*, "Book of the Rays", a summary of the first. These works have not been published, and exist in manuscript in Paris, Berlin, London, Oxford, Rome. Ascetical and moral theology were also treated by Bar Hebræus, and we have from him *Kethābhā dhe-'Ithiqon*, "Book of Ethics", and *Kethābhā dhe-Yaund*, "Book of the Dove", an ascetical guide. Both have been edited by Bedjan in "Ethicon seu Moralia Gregorii Barhebræi" (Paris and Leipzig, 1898). The "Book of the Dove" was issued simultaneously by Cardahi (Rome, 1898). Bar Hebræus codified the juridical texts of the Jacobites, in a collection called *Kethābhā dhe-Hūdḥāyē*, "Book of Directions", edited by Bedjan, "Barhebræi Nomocanon" (Paris, 1898). A Latin translation is to be found in Mai, "Scriptorum Veter. Nova Collectio", vol. X.

Bar Hebræus has left besides many other works. On grammatical subjects we have the "Book of Splendours" and "Book of the Spark", both edited by Martin, "Œuvres grammaticales de Aboul Faradj dit Barhebræus" (2 vols., Paris, 1872); also works on mathematics, astronomy, cosmography, medicine, some of which have been published, but others exist only in manuscript.

Most editors of Bar Hebræus' works also give in their introductions some valuable biographical and bibliographical notes. ASSEMANI, *Bibliotheca Orientalis* (Rome, 1718-28), II, 248-321; WRIGHT, *A short history of Syriac Literature* (London, 1894), 265-281; DUVAL, *La littérature Syriacque* (Paris, 1900), *passim*, see index; GÖTTSCHEBERG, *Bar Hebræus u. seine Scholien z. Heiligen Schrift* (Freiburg im Breisgau, 1900).

For information as to works of BAR HEBRÆUS classified above under I: DUVAL, op. cit., 262, 432; GÖTTSCHEBERG, op. cit., 29-34.

For II (Biblical), lists of the published works are given in: KLOSTERMANN, *Syriacæ Grammaticæ* (Berlin, 1905), 138 sqq.; DUVAL, op. cit., 81, n. 2; GÖTTSCHEBERG, op. cit., 76; to which should be added GÖTTSCHEBERG in *Zeitschr. f. d. Alttest. Wissenschaft* (1901), 101-144. There exist several MSS. of the *Storehouse of Secrets*, for which see DUVAL, loc. cit.; GÖTTSCHEBERG, op. cit., 62-71.

III. For the *Chronicon*, see list of sources in ASSEMANI, op. cit., 313 sqq.

IV. (Theological) ASSEMANI, op. cit., 284 sqq.; DUVAL, op. cit., 235.

R. BUTIN.

Bari, ARCHDIOCESE OF, is situated in the province of the same name, in Apulia, Southern Italy. The city of Bari is the principal city in the province, with a population of about 65,000, and is located on a peninsula which extends into the Adriatic. Anciently called Barium, it fell into the power of the Romans after the war with Pyrrhus, retaining, however, its autonomy. Being a seaport facing the Orient, Bari must have received Christianity at a very early date. According to a local tradition, St. Peter himself preached the Gospel there and consecrated the first bishop. History, however, is silent as to the beginning of Christianity in this city.

The first known Bishop of Bari was Gervasius, who, in 347, assisted at the Council of Sardica. In 530 Bishop Peter held the title of Metropolitan under Epiphanius, Patriarch of Constantinople. In 780 Bishop Leontius was present at the Seventh Œcumenical Council, the Second of Nicæa. In the ninth century the Saracens laid waste Apulia, destroyed the city of Canosa (Canusium) and captured Bari. In 841, however, the Byzantine army reconquered Bari, and in 844 St. Angelarius, Bishop of Canosa, then in ruins, brought to Bari the relics of Sts. Rufinus, Memorius, and Sabinus, which he had rescued from the ruins. Pope Sergius II conferred on him the title of Bishop of the two dioceses of Bari and Canosa, a title which the Archbishops of Bari retain to the present time. In 933 Pope John XI granted the Bishops of Bari the use of the pallium. It seems that the Bishops were dependent on the Patriarch of Constantinople until the tenth century. Giovanni II (952) was able to withdraw from this influence, refusing to accept the

prescriptions of the patriarch concerning liturgical points. All connexion was finally severed in the eleventh century, and Bari became a direct dependency of Rome. Archbishop Bisanzio (1025) obtained from the pope the privilege of consecrating his suffragans; he also began the construction of the new cathedral, which was continued by his successors, Nicolò (1035), Andrea (1062), and Elia (1089), the last-named a member of the Benedictine Order.

In 1097 some Bari sailors, on their return from the East, brought with them the relics of St. Nicholas, Bishop of Mira, for which Roger, Duke of Apulia, built a splendid church; this became the object of great veneration and of innumerable pilgrimages. About this time Urban II, being in Apulia, went to Bari to venerate the relics of the holy wonder-worker and to consecrate the basilica. Here also he held a council, attended by 183 bishops, to consider the reunion of the Greeks with the Church of Rome. St. Anselm of Canterbury distinguished himself at this council by his learned defence of the procession of the Holy Ghost and the use of unleavened bread for the Holy Eucharist. Another council had been held at Bari in 1064, presided over by Arnolfo, Vicar of Alexander II. Of the later provincial councils that of 1607 is worthy of mention. In the reorganization of the dioceses of the Kingdom of Naples, at the beginning of the nineteenth century, the Diocese of Bitetto was suppressed and made a part of the Diocese of Bari. The suffragan sees under Bari are: Conversano, Rufo, and Bitonto.

The most celebrated religious edifice of Bari is the church of San Nicolò, one of the most beautiful examples of Norman architecture. It consists of an upper and a lower church, both richly adorned with precious marbles. The cathedral, dedicated to the Assumption, is likewise remarkable for the two high bell towers with which it is flanked.

The most celebrated Archbishops of Bari, in addition to those already mentioned, are: Romualdo Grisoni (1280), distinguished for his restorations of churches; Bartolomeo Prignano (1377), later Pope Urban VI, who, however, never saw this see; Ascanio Gesualdo (1613), who gave a wonderful example of charity in the earthquake of 1632; Diego Sersale (1638), who at his own expense rebuilt the cathedral, the episcopal palace, and the seminary; the Dominican Tommaso Maria, of the Dukes of Bagnara (1684), who died in the odour of sanctity.

The Diocese of Bari contains a population of 300,400. It contains 7 rural deaneries, 33 parishes, 260 churches, chapels, and oratories, 250 secular priests, 110 seminarians, 30 regular clergy, 34 lay brothers, 200 members of female congregations, 45 schools for boys, 35 for girls.

U. BENIGNI.

**Barillon, EMILE.** See MALACCA, DIOCESE OF.

**Barjesus** (Gr. Βαρϊσους), a false prophet found in the company of the Proconsul Sergius Paulus by St. Paul and Barnabas during their stay at Paphos in Cyprus (Acts, xiii, 6-12). Because of his opposition to the Proconsul's conversion to Christianity, Barjesus was struck blind by St. Paul. He was also called Elymos (Arab, *alim*, i. e. "wise"), which St. Luke translated by "magician" (Acts, xiii, 8).

F. X. E. ALBERT.

**Bar-Kepha**, Moses, one of the most celebrated Jacobite bishops and writers of the ninth century, b. at Balad, about the year 813; d. at the age of ninety, in 903. A biography of him, written by an anonymous Syriac writer, is preserved in one of the Vatican manuscripts, extracts from which are given by Assemani in his "*Bibliotheca Orientalis*" (II,

218 sq.). He was a monk and afterwards became bishop of three cities, Beth-Ramman, Beth-Kionaya, and Mossoul on the Tigris, assuming the name of Severus. For ten years he was the patriarchal "Periodeutes", or visitor, of the Diocese of Tagrit, where, by his wise administration and learning, he acquired a great fame and reputation. He was buried in the monastery of St. Sergius, situated on the Tigris, near his native city.

The works of Moses Bar-Kepha are very numerous, and deal with many theological, philosophical, controversial, exegetical, and liturgical subjects. The principal are: (1) A Commentary on the Old and New Testaments, often quoted by Bar Hebræus, and most of it still extant in manuscript form; (2) a treatise on predestination and free will, preserved in a MS. in the British Museum (Add. 14,731); (3) a commentary on Aristotle's "Dialectics", mentioned by Bar Hebræus; (4) a commentary on the Hexameron in five books, preserved in the Bibliothèque Nationale at Paris (Syr. 241), a passage of which is translated into French by Abbé Nau in his "Bardésane l'astrologue" (Paris, 1899), p. 59; (5) a "Tractatus de Paradiso", in three parts, dedicated to his friend Ignatius. [The Syriac original of this work is lost, but a Latin version of it was published by Masius (Antwerp, 1569) under the title "De Paradiso Commentarius".] (6) A treatise on the soul, in forty chapters, with a supplementary essay on the utility of offering prayers and sacrifices for the dead. [This treatise is preserved in the Vatican Library; a German translation of it is given by O. Braun in his "Moses Bar-Kepha und sein Buch von der Seele" (Freiburg, 1891).] (7) A "Tractatus de sectis", or, "Liber disputationum adversus hereses" (see Assemani, B. O. II, 57); (8) a treatise on the Sacraments; (9) a commentary on the Liturgy; (10) an ecclesiastical history. His other works comprise discourses, homilies, and a commentary on the writings of St. Gregory Nazianzen.

LAMY (Louvain, 1872-77), I, 394-395; II, 217; ASSEMANI, *Bibliotheca Orientalis*, II, 218 sqq.; WRIGHT, *A Short History of Syriac Literature* (London, 1894), 207-211; *Kirchenlex.*, s. v.; DUVAL, *La Littérature Syriacque* (Paris, 1907), 391-392.

GABRIEL OUSSANI.

**Barkworth** (alias LAMBERT), MARK, VENERABLE, priest and martyr, b. about 1572, in Lincolnshire; executed at Tyburn 27 February, 1601; he was educated at Oxford, and converted to the Faith at Douai in 1594, by Father George, a Flemish Jesuit. In 1596 Barkworth went to Rome and thence to Valladolid. On his way to Spain he is said to have had a vision of St. Benedict, who told him he would die a martyr, in the Benedictine habit. Admitted to the English College, 16 December, 1596, he was ordained priest in 1599, and set out for the English Mission together with Ven. Thomas Garnet. On his way he stayed at the Benedictine Abbey of Hyrae in Navarre, where his ardent wish to join the order was granted by his being made an Oblate with the privilege of making profession at the hour of death. After having escaped great peril at the hands of the heretics of La Rochelle, he was arrested on reaching England and thrown into Newgate, where he lay six months, and was then transferred to Bridewell. Here he wrote an appeal to Cecil, signed "George Barkworth". At his examinations he behaved with extraordinary fearlessness and frank gaiety. Having been condemned he was thrown into "Limbo", the horrible underground dungeon at Newgate, where he remained "very cheerful" till his death.

Barkworth suffered at Tyburn with Ven. Roger Filcock, S.J., and Ven. Anne Lyne. It was the first Tuesday in Lent, a bitterly cold day. He sang, on the way to Tyburn, the Paschal Anthem: "Hæc dies quam fecit Dominus exultemus et lætemur in ea".

On his arrival he kissed the robe of Mrs. Lyne, who was already dead, saying: "Ah, sister, thou hast got the start of us, but we will follow thee as quickly as we may"; and told the people: "I am come here to die, being a Catholic, a priest, and a religious man, belonging to the Order of St. Benedict; it was by this same order that England was converted". He was tall and burly of figure, gay and cheerful in disposition. He suffered in the Benedictine habit, under which he wore a hair-shirt. It was noticed that his knees, were, like St. James', hardened by constant kneeling, and an apprentice in the crowd picking up one of his legs, after the quartering, called out to the ministers: "Which of you Gospellers can show such a knee?"

Barkworth's devotion to the Benedictine Order led to his suffering much from the hands of the superiors of the Valladolid College. These sufferings are probably much exaggerated, however, by the anti-Jesuit writers Watson, Barneby, and Bell.

**Barlaam, Monk of GERACE.** See HESYCHASM.

**Barlaam and Josaphat**, the principal characters of a legend of Christian antiquity, which was a favourite subject of writers in the Middle Ages. The story is substantially as follows: Many inhabitants of India had been converted by the Apostle St. Thomas and were leading Christian lives. In the third or fourth century King Abenner (Avenier) persecuted the Church. The astrologers had foretold that his son Josaphat would one day become a Christian. To prevent this the prince was kept in close confinement. But, in spite of all precautions, Barlaam, a hermit of Senaar, met him and brought him to the true Faith. Abenner tried his best to pervert Josaphat, but, not succeeding, he shared the government with him. Later Abenner himself became a Christian, and, abdicating the throne, became a hermit. Josaphat governed alone for a time, then resigned, went into the desert, found his former teacher Barlaam, and with him spent his remaining years in holiness. Years after their death, the bodies were brought to India and their grave became renowned by miracles. Barlaam and Josaphat found their way into the Roman Martyrology (27 November), and into the Greek Calendar (26 August). Vincent of Beauvais, in the thirteenth century, had given the story in his "Speculum Historiale". It is also found in an abbreviated form in the "Golden Legend" of Jacobus de Voragine of the same century.

The story is a Christianized version of one of the legends of Buddha, as even the name Josaphat would seem to show. This is said to be a corruption of the original Josaphat, which is again corrupted from the middle Persian *Buddsif* (*Budsaf* = *Bodhisattva*). Still it is of historical value, since it contains the "Apology" presented by the Athenian philosopher Aristides to the Emperor Adrian (or Antoninus Pius). The Greek text of the legend, written probably by a monk of the Sabbas monastery near Jerusalem at the beginning of the seventh century, was first published by Boissonade in his "Anecdota Græca" (Paris, 1832), IV, and is reproduced in Migne, P. G., XCVI, among the works of St. John Damascene. The legend cannot, however, have been the work of the great Damascene, as was proved by Zotenberg in "Notices sur le livre de Barlaam et Josaphat" (Paris, 1886) and by Hammel in "Verhandl. des 7 internat. Orientalisten Congresses", Semit. Section (Vienna, 1888). Another edition of the Greek was made by Kechajoglos (Athens, 1884). From the original Greek a German

translation was made by F. Liebrecht (Münster, 1847). Latin translations (Migne, P. L., LXXIII), were made in the twelfth century and used for nearly all the European languages, in prose, verse and in miracle plays. Among them is prominent the German epic by Rudolph of Ems in the thirteenth century (Königsberg, 1818, and somewhere later at Leipzig). From the German an Icelandic and a Swedish version were made in the fifteenth century. At Manila the legend appeared in the Tagala language of the Philippines. In the East it exists in Syriac, Arabic, Ethiopic, Armenian, and Hebrew.

FRANCIS MERSHMAN.

**Barletta, GABRIEL** (sometimes called BARLETE, DE BAROLO, BAROLUS), preacher, b., according to some, in the Neapolitan territory at Barletta, whence he took his name, or, according to others, at Aquino; d. sometime after 1480. Little is known of his life other than that he was a Dominican and probably a pupil of St. Antoninus. All his contemporaries held him in high esteem as an orator. He was generally proposed, even during his lifetime, as the model orator. After his death his fame did not diminish, if the popular saying which Altamura has preserved for us be a criterion. Throughout Italy it was the common saying: *Nescit prædicare qui nescit barlettare*. His sermons appeared in two volumes at Brixen in 1497, and have been reprinted very frequently since. Eychard says that no less than thirteen editions appeared in eighty years. The best edition is that of Venice (1577), in two volumes.

In form his sermons are nothing else than the ordinary homily on the virtues and vices of life. He spares none of the foibles and weaknesses of his contemporaries, and in his denunciations passages of eloquent and biting sarcasm are often met with. At times he descends to an almost burlesque mimicry, as witness his sermon on the manner in which the rich ecclesiastic says the Lord's prayer. Coarse things are also to be found, but not so frequently as in the printed sermons of some of his rivals. He has been blamed for this coarseness by Bayle and Theophilus Raynaud, but his name has been completely vindicated by Dominic Casales, O.P., in the work "Candor lili seu Ordo Prædicatorum a calumniis Petri a Valle Claussa [i. e. Theop. Reynaldi] vindicatus". Some maintain (Tübing, *Quartalschrift*, 1872, II, 270) that Barletta is not the author of the sermons which bear his name. They base their contention on a sentence of Leander Alberti [Descrizione di tutta Italia (Bologna, 1550), 200], who says that an unskilled youth whom he knew gathered together old and unknown sermons and ascribed them to Barletta. Furthermore, they must have appeared in the vernacular, whilst we know them in the Latin alone. Thus they have suffered many changes and alterations. But up to the seventeenth century there was no question of the authorship. They show sure signs of the times and are not unworthy of his fame. Hence, scholars generally accept them as authentic.

THOS. M. SCHWERTNER.

**Barletta, DIOCESE OF.** See TRANI AND BARLETTA.

**Barlings, ABBEY OF**, located about six miles E.N.E. of Lincoln, England, founded in 1154 in honour of Our Lady by Ralph de Haya who had given some lands to the Abbot of Newhouse (also in Lincolnshire, the first abbey of the Norbertine Order erected in England, founded in 1143) with the request to send a colony of White Canons to Barlings. The abbey was afterwards removed to Oxeney, another locality in the same township, where it was dissolved by Henry VIII in 1537. Much information concerning the Abbey of Barlings, as well as concerning other Norbertine abbeys in England, may be derived from Bishop Redman's "Register of Visitations", preserved in the Bodleian Library at Oxford, and lately published in three volumes by Abbot Gasquet under the title of "Collectanea Anglo-Premonstratensia". This register contains various documents, lists of White Canons in each abbey, notes and remarks made at the time of each visitation, during a period of about thirty-five years that Redman was visitor of all the Norbertine abbeys and priories in England for the Abbot-General of the Order of Prémontré. Richard Redman was Abbot of the Norbertine Abbey of Shap in Westmoreland when he became visitor, and he acted in the same capacity when he successively became Bishop of St. Asaph in 1472, of Exeter in 1495, and of Ely in 1501. He died 24 August, 1505.

This register records no fewer than nine visitations of Barlings Abbey made by Redman. The various lists found therein give the names of about eighteen canons at each visitation. The names of nineteen abbots are known; the first abbot was called Adam (1154), the last Matthew Mackarel (1532-37) who is said to have been one of the leaders of the Pilgrimage of Grace in Lincolnshire. The supposed complicity of Abbot Mackarel, like that of other heads of religious houses, gave Henry VIII the opportunity of laying hands upon the Abbey of Barlings and of placing it under the law of attainder. The abbey church, 300 feet in length, was defaced, the lead torn from the roofs, and melted down under the special direction of Cromwell. Abbot Mackarel, some of his religious, and many of the clergy and laity were taken to Lincoln, and some of these were afterwards sent to the Tower in London. Those in Lincoln, among whom there were four canons of Barlings, were tried 6 March, 1537, and ordered for immediate execution. Towards the end of March, Abbot Matthew Mackarel, one of his canons and some others were tried in London before Chancellor Oudeley, found guilty, and condemned to be hanged and quartered. At the time of the dissolution the abbey and its possessions were granted to Charles, Duke of Suffolk. An arch and part of a wall are the only remains. The Right Rev. Martin Geudens, of Corpus Christi Priory, Manchester, was named Titular Abbot of Barlings, 7 May, 1898, and blessed 17 September, of the same year.

#### MARTIN GEUDENS.

**Barlow (alias RADCLIFFE and BRERETON)**, EDWARD AMBROSE, VENERABLE, priest and martyr, b. at Barlow Hall, 1585; d. 10 September, 1641. He was the fourth son of Sir Alexander Barlow, Knight of Barlow Hall, near Manchester, by Mary, daughter of Sir Uryan Brereton, Knight of Handforth Hall, Co. Chester, and was baptised at Didsbury Church 30 November, 1585; the entry in the register may still be seen. Educated at the Benedictine monastery of St. Gregory, Douai, he entered the English College, Valladolid, 20 September, 1610, but returned to Douai,

where his elder brother William Rudesind was a professed monk. He was himself professed in 1616 and ordained, 1617. Sent to England, he laboured in South Lancashire with apostolic zeal and fervour. He resided chiefly at Wardley Hall, the seat of the Downe family, near Manchester, and at Morley's Hall, a mansion of the Tyldesleys, in the parish of Leigh, some seven miles from Manchester. At the former, his skull is still preserved, in a little receptacle on the staircase. At the latter he was apprehended for the fifth and last time on Easter Sunday, 25 April, 1641. He was arrested by the Vicar of Eccles, who marched at the head of his parishioners, clad in his surplice, and was followed by some 400 men armed with clubs and swords. He was preaching at the time and could have escaped in the confusion, but yielded himself up to his enemies, and was carried off to Lancaster Castle. Here after four months' imprisonment he was tried, on 6 or 7 September, and sentenced next day, having confessed that he was a priest. On Friday, 10 September, he suffered the usual penalties at Lancaster.

A beautiful picture of his life is given by Challoner from two MS. relations belonging to St. Gregory's monastery, one written by his brother Dom Rudesind Barlow, President of the Anglo-Benedictine Congregation. There is another MS., entitled "The Apostolical Life of Ambrose Barlow", written by one of his pupils for Dom Rudesind, which is at present in the Library of Owen's College, Manchester. It is to be printed among the publications of the Chetham Society. This contains many details hitherto unpublished. Two portraits of this martyr exist and also one of his father, Sir Alexander. Many of his relics are also preserved, a hand being at Stanbrook Abbey near Worcester. A full biography is in course of preparation.

#### BEDE CAMM.

**Barlow, WILLIAM RUDESIND**, third son of Sir Alexander Barlow of Barlow Hall, near Manchester, England, and Mary Brereton his wife, date of birth uncertain; d. at Douai, 19 Sept., 1656. The martyr, Ven. Edward Barlow, was his younger brother and was educated with him at the English College, Douai. Wishing to become a Benedictine, he joined the Spanish congregation, being professed at Cella Nueva in Galicia in 1605. Ordained priest in 1608 he became Doctor of Divinity at Salamanca. In 1611 he went to St. Gregory's, Douai, where he was made prior in 1614, and, two years later, professor of theology at St. Vaast's College, an office which he held for forty years. Weldon says: "He formed almost all the bishops, abbots, and professors that flourished in those parts for some time after. He was esteemed the first or chief of the scholastic divines or casuists of his time, and in knowledge of the canon law inferior to no one of his time or the age before." The circle of his friends included Bellarmine and other contemporary scholars.

He more than once refused the dignity of abbot and bishop, "and it was thought he would have refused that of cardinal, which was said to have been preparing for him." From 1621 to 1629 he was President-General of the English Congregation. In 1633 he became titular Cathedral-Prior of Canterbury. Beyond a circular letter to the English Benedictines about their relations to the vicar Apostolic, none of his writings are left, although Gee, writing in 1624, attributes to him a book called "The Enemies of God". Weldon adds that after his death a bishop offered the Benedictines of Douai an establishment if they would give him Father Rudesind's

writings. "But in vain they were sought for, for they were destroyed by an enemy." It is said that on the death of Dr. Bishop, the vicar Apostolic, he was consulted by the pope as to the best successor, and that he warmly recommended Dr. Smith, who was appointed, but later he opposed that prelate on the question of the extent of the vicar Apostolic's jurisdiction.

EDWIN BURTON.

**Barnabas, EPISTLE ATTRIBUTED TO.**—*Authorities for the Text and Editions.*—There is a triple tradition of the Greek text of this document. Up to 1843 eight manuscripts of the Epistle of Barnabas were known to be in Western libraries. These manuscripts were all derived from a common source, and no one of them contained chapters i-v, 7a. Since then two complete manuscripts of the text have been discovered that are independent of each other and of the preceding group of texts, namely: the famous Codex Sinaiticus of the Bible (fourth century), in which the Epistle of Barnabas and the "Pastor" follow the books of the New Testament, and the Jerusalem Codex (eleventh century), which includes the Didache. There is also an old Latin version of the first seventeen chapters which is, perhaps, of the end of the fourth century (St. Petersburg, Q., I, 39). This version is a very free one and can hardly serve for the restoration of the text. The same is true of the citations from the epistle in the writings of Clement of Alexandria, of Origen, and others. The best authority for the text is the Codex Sinaiticus. The Epistle of Barnabas has been edited among the works of the Apostolic Fathers. The two chief editions are: Gebhard and Harnack, "Barnabæ Epistula" in "Patrum Apostolicorum Opera" (Leipzig, 1878), I, II, and Funk, "Patres Apostolici" (Tübingen, 1901), I. Use can also be made of the edition of Sharpe, "St. Barnabas' Epistle in Greek with Translation" (London, 1880), as well as that of Lightfoot, ed. Harmer, "The Apostolic Fathers" (London, 1898), and of Vizzini, "Patres Apostolici" (Rome, 1902), III.

*Contents.*—The Epistle of Barnabas contains no clue to its author nor to those for whom it was intended. Its aim is to impart to its readers the perfect wisdom (*gnosis*), that is an exact knowledge of the economy of salvation. It is made up of two parts, the subject of each being announced in verses 6 and 7 of the first chapter. The first part (ch. i-v, 4) is hortatory; in the evil days that are now at hand in which the end of the world and the Judgment shall appear, the faithful, freed from the bonds of the Jewish ceremonial law, are to practise the virtues and to flee from sin. The second part (ch. v, 5-xvii) is more speculative, although it tends, owing to the nature of the argument, to establish the freedom of Christians in respect to the Mosaic regulations. The author wishes to make his readers comprehend the real nature of the Old Testament. He shows how the ordinances of the Law should be understood as referring allegorically to the Christian virtues and institutions, and he pauses to make plain by a series of symbolical explanations, that are often singular, how the Old Testament prefigures Christ, His Passion, His Church, etc. Before concluding (ch. xxi) the author repeats and enlarges the exhortations of the first part of the epistle by borrowing from another document (the Didache or its source) the description of the two ways, the way of light and that of darkness (xviii-xx).

*Use of Allegory.*—The epistle is characterized by the use of exaggerated allegory. In this particular the writer goes far beyond St. Paul the author of the

Epistle to the Hebrews, and St. Ignatius. Not content with regarding the history and institutions of the Jews as containing types of Christianity, he casts aside completely the transitory historical character of the old religion. According to many scholars he teaches that it was never intended that the precepts of the Law should be observed in their literal sense, that the Jews never had a covenant with God, that circumcision was the work of the Devil, etc.; thus he represents a unique point of view in the struggle against Judaism. It might be said more exactly that he condemns the exercise of worship among the Jews in its entirety because, in his opinion, the Jews did not know how to rise to the spiritual and typical meaning which God had mainly had in view in giving them the Law. It is this purely material observance of the ceremonial ordinances, of which the literal fulfilment was not sufficient, that the author holds to be the work of the Devil, and, according to him, the Jews never received the Divine covenant because they never understood its nature (ch. vii, 3, 11; ix, 7; x, 10; xiv).

*Intent.*—The Epistle of Barnabas is not a polemic. The author takes no notice of paganism. Although he touches on different points that had relations to the doctrines of the Gnostics, still he has no knowledge of these latter. The perfectly composed manner in which he expounds the wisdom he desires to impart shows that another, heretical wisdom (*gnosis*) is not in his thoughts. Moreover, the way in which he speaks of the Old Testament would not be explicable if he had known the wrong use that a Basilides or a Marcion could make of it. Besides, there was nothing in the Judaizing theories to alarm his faith. He speaks of Judaism only in the abstract, and nothing in the letter excites the suspicion that the members of his flock had been exposed to the peril of falling again under the yoke of the Law. No clear situation is described in the letter. In short, it should be regarded rather as the peaceful speculations of a catechist and not as the cries of alarm of a pastor. Consequently, it cannot be admitted that the author may have wished to take part in the struggle against the Judaizers either at Jerusalem (Di Pauli) or at Rome (Völter).

*Date.*—This abstract discussion of Judaism is the sign of an epoch when the Judaizing controversies were already a thing of the past in the main body of the Church. In settling the date of the letter reference is often made to verses 3-5 of chapter four, where the writer, it is believed, finds the fulfilment of the prophecy of Daniel (Dan., vii, 7, sqq.) in the succession of the Roman Emperors of his time. Starting from this, some critics place the composition of the epistle in the reign of Vespasian (Weizsäcker, Lightfoot), others in the reign of Domitian (Wieseler), and still others in the reign of Nerva (Bardenheuer, Funk). But there is nothing to prove that the author considers the prophecy to be already accomplished. Besides, he might have taken the words of the prophecy to mean a series of kingdoms instead of a line of kings. It is necessary, therefore, to fall back, with Schürer and Harnack, on verses 3-5 of chapter xvi. Reference is here made to the command given by Adrian in A. D. 130 for the reconstruction, in honour of Jupiter, of the Temple at Jerusalem, which had been destroyed by Titus. Adrian had also forbidden the Jews to practise circumcision. The writer of the letter makes allusion to this (ch. ix, 4). The epistle must, consequently, have been written in A. D. 130-131.

*General Characteristics.*—In what befell Jerusalem and the Temple the author saw the refutation by events of the errors of the Jews, or rather of the Ebionites, for it is the latter that he has in mind whenever his language grows more definite (ch. iv, 4, 6; v, 5; xii, 10; xvi, 1). His flock are not in danger

of falling into these errors. Therefore he never attacks them directly. He simply takes advantage of the opportunity that occurrences offer him to give his opinions as to the position and nature of Judaism and its Law. Hence the epistle, in its general character, is more like a treatise or a homily than a letter. However, the epistolary form is not entirely fictitious. The author is not writing to Christians in general, but to a particular church in which he has exercised the office of a *διδάσκαλος* and from which he finds himself separated (ch. i, 2, 4; xxi, 7, 9).

From a literary point of view the Epistle of Barnabas has no merit. The style is tedious, poor in expression, deficient in clearness, in elegance, and in correctness. The author's logic is weak, and his matter is not under his control; from this fact arise the numerous digressions. These digressions, however, afford no reason for doubting the integrity of the letter, or for regarding as interpolations either entire chapters (Schenkel, Heydecke, Völter), or a consecutive number of verses or parts of verses in each chapter (Weiss). Wehofer recently thought that he had discovered, in the arrangement of the epistle, an adherence to the laws of the Semitic strophe. But the phenomena noted are found in all authors who work out their thought without being able to subordinate the argument to the rules of literary style.

From the dogmatic point of view the chief importance of the epistle is in its relation to the history of the Canon of the Scriptures. It cites, in fact, the Gospel of St. Matthew as Scripture (ch. iv, 14), and even recognizes as in the Canon of the Sacred Books (*γράμματα*), along with the collection of Jewish writings, a collection of Christian ones (ch. v, 2), the contents of which, however, cannot be determined. The author regards several apocryphal books as belonging to the Old Testament—probably IV Esdras (ch. xii, 1) and without doubt Henoch (ch. iv, 3; xvi, 5). In his Christology, his soteriology and his doctrine concerning justification the author develops the ideas of Paul with originality. It has been wrongly said that he regards the pre-existent Christ as only a spirit in the image of God. Without explicitly asserting the consubstantiality and the true sonship, he evidently acknowledges the Divine nature of Christ from before the Creation. The eschatological descriptions are decidedly moderate. He is a millenarian, but in speaking of the Judgment to come he simply expresses a vague belief that the end is approaching.

*Nationality of the Author.—History of the Epistle.*—The extremely allegorical character of the exegesis leads to the supposition that the author of the letter was an Alexandrian. His way of constantly placing himself and his readers in opposition to the Jews makes it impossible to believe that either he or the larger part of his readers were of Jewish origin. Besides, he is not always familiar with the Mosaic rites (cf. ch. vii). The history of the epistle confirms its Alexandrine origin. Up to the fourth century only the Alexandrians were acquainted with it, and in their Church the epistle attained to the honour of being publicly read. The manner in which Clement of Alexandria and Origen refer to the letter gives confirmation to the belief that, about the year A. D. 200, even in Alexandria the Epistle of Barnabas was not regarded by every one as an inspired writing.

P. LADEUZE.

**Barnabas** (originally JOSEPH), SAINT, styled an Apostle in Holy Scripture, and, like St. Paul, ranked by the Church with the Twelve, though not one of them; b. of Jewish parents in the Island of Cyprus about the beginning of the Christian Era. A Levite, he naturally spent much time in Jerusalem, probably even before the Crucifixion of Our Lord, and appears also to have settled there (where his relatives, the family of Mark the Evangelist, likewise had their homes, Acts, xii, 12) and to have owned land in its vicinity (iv, 36, 37). A rather late tradition recorded by Clement of Alexandria (Strom., II, 20, P. G., VIII, col. 1060) and Eusebius (H. E., II, i, P. G., XX, col. 117) says that he was one of the seventy Disciples; but Acts (iv, 36-37) favours the opinion that he was converted to Christianity shortly after Pentecost (about A. D. 29 or 30) and immediately sold his property and devoted the proceeds to the Church. The Apostles, probably because of his success as a preacher, for he is later placed first among the prophets and doctors of Antioch (xiii, 1), sur-named him Barnabas, a name then interpreted as meaning "son of exhortation" or "consolation". (The real etymology, however, is disputed. See Encycl. Bibl., I, col. 484.) Though nothing is recorded of Barnabas for some years, he evidently acquired during this period a high position in the Church.

When Saul the persecutor, later Paul the Apostle, made his first visit (dated variously from A. D. 33 to 38) to Jerusalem after his conversion, the Church there, remembering his former fierce spirit, was slow to believe in the reality of his conversion. Barnabas stood sponsor for him and had him received by the Apostles, as the Acts relate (ix, 27), though he saw only Peter and James, the brother of the Lord, according to Paul himself (Gal., i, 18, 19). Saul went to his house at Tarsus to live in obscurity for some years, while Barnabas appears to have remained at Jerusalem. The event that brought them together again and opened to both the door to their lifework was an indirect result of Saul's own persecution. In the dispersion that followed Stephen's death, some Disciples from Cyprus and Cyrene, obscure men, inaugurated the real mission of the Christian Church by preaching to the Gentiles. They met with great success among the Greeks of Antioch in Syria, reports of which coming to the ears of the Apostles, Barnabas was sent thither by them to investigate the work of his countrymen. He saw in the conversions effected the fruit of God's grace and, though a Jew, heartily welcomed these first Gentile converts. His mind was opened at once to the possibilities of this immense field. It is a proof how deeply impressed Barnabas had been by Paul that he thought of him immediately for this work, set out without delay for distant Tarsus, and persuaded Paul to go to Antioch and begin the work of preaching. This incident, shedding light on the character of each, shows it was no mere accident that led them to the Gentile field. Together they laboured at Antioch for a whole year and "taught a great multitude". Then, on the coming of famine, by which Jerusalem was much afflicted, the offerings of the Disciples at Antioch were carried (about A. D. 45) to the mother-church by Barnabas and Saul (Acts, xi). Their mission ended, they returned to Antioch, bringing with them the cousin, or nephew of Barnabas (Col., iv, 10), John Mark, the future Evangelist (Acts, xii, 25).

The time was now ripe, it was believed, for more systematic labours, and the Church of Antioch felt inspired by the Holy Ghost to send out missionaries

to the Gentile world and to designate for the work Barnabas and Paul. They accordingly departed, after the imposition of hands, with John Mark as helper. Cyprus, the native land of Barnabas, was first evangelized, and then they crossed over to Asia Minor. Here, at Perge in Pamphylia, the first stopping place, John Mark left them, for what reason his friend St. Luke does not state, though Paul looked on the act as desertion. The two Apostles, however, pushing into the interior of a rather wild country, preached at Antioch of Pisidia, Iconium, Lystra, at Derbe, and other cities. At every step they met with opposition and even violent persecution from the Jews, who also incited the Gentiles against them. The most striking incident of the journey was at Lystra, where the superstitious populace took Paul, who had just cured a lame man, for Hermes (Mercury) "because he was the chief speaker", and Barnabas for Jupiter, and were about to sacrifice a bull to them when prevented by the Apostles. Mob-like, they were soon persuaded by the Jews to turn and attack the Apostles and wounded St. Paul almost fatally. Despite opposition and persecution, Paul and Barnabas made many converts on this journey and returned by the same route to Perge, organizing churches, ordaining presbyters and placing them over the faithful, so that they felt, on again reaching Antioch in Syria, that God had "opened a door of faith to the Gentiles" (Acts, xiii, 13—xiv, 27; see article PAUL, SAINT).

Barnabas and Paul had been for "no small time" at Antioch, when they were threatened with the undoing of their work and the stopping of its further progress. Preachers came from Jerusalem with the gospel that circumcision was necessary for salvation, even for the Gentiles. The Apostles of the Gentiles, perceiving at once that this doctrine would be fatal to their work, went up to Jerusalem to combat it; the older Apostles received them kindly and at what is called the Council of Jerusalem (dated variously from A. D. 47 to 51) granted a decision in their favour as well as a hearty commendation of their work (Acts, xiv, 27—xv, 30; see articles JERUSALEM, COUNCIL OF; PETER, SAINT). On their return to Antioch, they resumed their preaching for a short time. St. Peter came down and associated freely there with the Gentiles, eating with them. This displeased some disciples of James; in their opinion, Peter's act was unlawful, as against the Mosaic law. Upon their remonstrances, Peter yielded, apparently through fear of displeasing them, and refused to eat any longer with the Gentiles. Barnabas followed his example. Paul considered that they "walked not uprightly according to the truth of the gospel" and upbraided them before the whole church (Gal., ii, 11—15). Paul seems to have carried his point. Shortly afterwards, he and Barnabas decided to revisit their missions. Barnabas wished to take John Mark along once more, but on account of the previous defection Paul objected. A sharp contention ensuing, the Apostles agreed to separate. Paul was probably somewhat influenced by the attitude recently taken by Barnabas, which might prove a prejudice to their work. Barnabas sailed with John Mark to Cyprus, while Paul took Silas and revisited the churches of Asia Minor. It is believed by some that the church of Antioch, by its God-speed to Paul, showed its approval of his attitude; this inference, however, is not certain (Acts, xv, 35—41).

Little is known of the subsequent career of Barnabas. He was still living and labouring as an Apostle in 56 or 57, when Paul wrote I Cor. (ix, 5, 6), from which we learn that he, too, like Paul, earned his own living, though on an equality with the other Apostles. The reference indicates also that the friendship between the two was unimpaired. When Paul was a prisoner in Rome (61—63), John Mark

was attached to him as a disciple, which is regarded as an indication that Barnabas was no longer living (Col., iv, 10). This seems probable. Various traditions represent him as the first Bishop of Milan, as preaching at Alexandria and at Rome, whose fourth (?) bishop, St. Clement, he is said to have converted, and as having suffered martyrdom in Cyprus. The traditions are all late and untrustworthy. With the exception of St. Paul and certain of the Twelve, Barnabas appears to have been the most esteemed man of the first Christian generation. St. Luke, breaking his habit of reserve, speaks of him with affection, "for he was a good man, full of the Holy Ghost and of Faith". His title to glory comes not only from his kindness of heart, his personal sanctity, and his missionary labours, but also from his readiness to lay aside his Jewish prejudices, in this anticipating certain of the Twelve; from his large-hearted welcome of the Gentiles, and from his early perception of Paul's worth, to which the Christian Church is indebted, in large part at least, for its great Apostle. His tenderness towards John Mark seems to have had its reward in the valuable services later rendered by him to the Church. The feast of St. Barnabas is celebrated on 11 June. He is credited by Tertullian (probably falsely) with the authorship of the Epistle to the Hebrews, and the so-called Epistle of Barnabas (see BARNABAS, EPISTLE ATTRIBUTED TO) is ascribed to him by many Fathers.

JOHN F. FENLON.

**Barnabas of Terni (Interamna)**, Friar Minor and missionary, d. 1474 (or 1477). He belonged to the noble family of the Manassei and was a man of great learning, being Doctor of Medicine and well versed in letters and philosophy. Despising the honours and vanities of the world, he entered the Order of Friars Minor in the Umbria province of the order and practised, with unusual fervour, every virtue of the religious life. After devoting himself assiduously to the study of theology, Barnabas began to preach with wonderful success, but a severe illness obliged him to abandon this work. Although gifted with the grace of prayer and contemplation in an eminent degree, he was almost continually employed in different offices of importance, for which his prudence, kindness, and affability well fitted him. By word and example he proved himself a zealous promoter of that branch of the order known as the Observance. He died at the hermitage of the Carceri on Mount Subiaco at an advanced age and his remains were deposited there in the Chapel of St. Mary Magdalene. He is commemorated in the Franciscan martyrology on 17 February. To Barnabas belongs the honour of having established the first of the celebrated *monti di pietà*, or charitable loan-institutions, designed to protect poor people against the outrageous usury of the Jews. After consulting his fellow religious Fortunatus Coppoli, who had been an eminent jurisconsult, and with the generous co-operation of the wealthy Perugians, Barnabas established the first *monte di pietà* in their city in 1462. Violent opposition ensued, but Barnabas and Fortunatus prevailed over their enemies at a public disputation. Barnabas next extended his work to other cities; it was enthusiastically taken up by several great Franciscan missionaries, and, in their day, the *monti di pietà* wonderfully improved the social conditions of Italy. (See BERNARDINE OF FELTRE.)

THOMAS PLASSMANN

**Barnabites**, the popular name of a religious order which is canonically known by the title, given to it by Pope Paul III in 1535, of Regular Clerics of St. Paul (*Clerici Regulares Sancti Pauli*). This institute was founded by three Italian noblemen: St. Anton Maria Zaccaria (canonized by Leo XIII, 27 March, 1897), Ven. Barthelemy Ferrari, and Ven. Jacopo Morigia, the last two of Milan. Second in seniority of the orders of regular clerics (the Theatines being first), the foundation of the Barnabites as a congregation dates from the year 1530. Clement VII, by the Brief "Vota per quas vos", 18 February, 1533, canonically approved of the congregation; Paul III, by the Bulls "Dudum felicitis recordationis", 28 July, 1535, and "Pastoralis officii cura", 29 November, 1543, exempted them from the jurisdiction of their diocesan. Lastly, the Bulls of Julius III, "Rationi congruit" and "Ad hoc nos Deus prætulit", dated respectively 22 February, and 11 August, 1550, confirmed and augmented the existing privileges of the institute, which, from being a congregation, thenceforward became a religious order in the strict canonical sense, its members, however, still adhering to the custom of calling it "the Congregation".

The popular name *Barnabites* came naturally to the Congregation through its association with the church of St. Barnabas, Milan, which came into its possession within the earliest years of the foundation of the institute, which was at first peculiarly Milanese. St. Charles Borromeo, Archbishop of Milan, presided, in 1579, as Cardinal Protector, over the commission which determined once for all the constitution of the order, and the general chapters were regularly held at Milan until the reign of Alexander VII (1655-67), who ordered them to convene in Rome. Innocent XI (1676-89), however, finally decreed that the general chapters of the Barnabites should assemble in Rome and Milan alternately. These assemblies of the provincials are held every three years for the election of a new general, whose term of office is limited to that period, only one re-election being allowed to each incumbent of the office. The members of the order make, in addition to the three regular vows of poverty, chastity, and obedience, a vow never to strive for any office or position of dignity, or to accept such otherwise than under a command of the Holy See. The scope of their special vocation, besides preaching in general, catechizing, hearing confessions, giving missions, ministrations in hospitals and prisons, and the education of youth, includes also a particular devotion to the thorough study and exposition of St. Paul's Epistles. Their habit is the black soutane (*tunica talaris*) which formed the usual garb of Milanese secular priests in the time of St. Charles Borromeo.

**Spread of the Order.**—The Congregation has never failed of the holy object for which it was instituted: to revive the ecclesiastical spirit and zeal for souls among the clergy. Church history records the substantial assistance which that saint received from them in his great work of reforming the Diocese of Milan; his biographies make mention of his affection for them and of the satisfaction which he took in sojourning at their house of St. Barnabas. St. Francis of Sales, who loved to call himself a Barnabite, invited the Congregation into his diocese, to establish colleges at Annecy and at Thonon; while the Barnabite Guérin was his coadjutor and later, having succeeded him in the See of Geneva, was conspicuous for the zeal with which he promoted his canonization. The Barnabites, who take a holy pride in the title of *episcoporum adiutores*, have constantly cultivated the meek and gentle spirit of St. Francis of Sales in their relations with ecclesiastical authorities, the diocesan clergy, and members of other religious orders. Though never very extensive, the spreading of the order in Europe began very soon after its founda-

tion. Their chief theatres of action were in Italy, France, Savoy, Austria, and Bohemia. In 1582, Pope Gregory XIII, at the solicitation of the Sovereign Order of St. John of Jerusalem, sent Barnabite Fathers to Malta, and in 1610 Henry IV of France obtained their services in defence of Catholicism in Béarn, whence they spread to Paris and other parts of France. The Emperor Ferdinand II invited them into Austria, in 1627, to oppose the spread of Protestantism, and gave them the court parish of St. Michael, where a house was built for their accommodation. The order also possesses at Vienna the parish church of Maria-Hilf, a famous sanctuary erected in thanksgiving for Sobieski's deliverance of the city from the Turks in 1683. Belgium has recently proved a providential refuge for the order, those expelled from France by the Government of that country having established themselves at Brussels and in other parts of the neighbouring kingdom.

**Foreign Missions.**—In 1718, when Clement XI sent Monsignor Mezzabarba to the Emperor of China to attempt a settlement of the famous question of the Chinese Rites, His Holiness attached five Barnabites to the special mission. No substantial result was obtained, but when the rest of the party left the country, one member of the order, Father Ferrari, remained in China, taking up his residence first at Peking and then at Canton, where he sowed the first seed of that work of the Holy Infancy with which the name of the French Bishop Forbin-Janson is justly associated. From that time until 1738 the companions of Father Ferrari preached the Gospel in Cochin China, where Father Alessandro degli Alessandri was for sixteen years vicar Apostolic. The Holy See meanwhile desiring a regular Barnabite mission in Ava and Pegu, the order willingly assumed that duty, and the mission was maintained until 1832, when the inability to supply labourers for this field, the consequence of Napoleon's suppression of the religious orders, necessitated its transfer to the Paris Society of Foreign Missions. An account of what the Barnabites accomplished in Ava and Pegu may be found in Cardinal Wiseman's translation (published by the Asiatic Society) of Sauzerman's "*Religione del regno Birmano*". The Regular Clerics of St. Paul also kept missionaries, for some time, in Scandinavia. Their missions are now established in Brazil.

**Saints and other distinguished members of the Congregation.**—Besides its canonized Saints Anton Maria Zaccaria and Alexander Sauli, and Blessed Xavier M. Bianchi (d. 1815) who was known as the Thaumaturgus of Naples, the Barnabite Order glories in a number of Venerables, among whom have been several religious distinguished for their austere purity and taken to their reward while yet young. Upon the extraordinary graces, such as miracles and visions, undeniably vouchsafed to members of the order, it is not expedient here to insist; Alfonso Paleotti, however, who in 1591 succeeded his cousin, Cardinal Gabriel Paleotti, in the Archbishopric of Bologna, relates in his autobiography that when he was praying for light and help in the government of his archdiocese, a holy man who was commonly called *il Vidente*, on account of his gift of visions, told him, as a message from the Blessed Virgin, that he ought to send for the Barnabites and make them *penitenzieri*, because they had a great devotion for her, were her faithful servants, and she would assist them in drawing souls to the practice of daily Communion.

Learning, the pursuit of which the Barnabites regard as a great preservative of religious observance has always been cultivated among them in all its branches. To cite only a few names, the order has been distinguished in theology by Rotarius, Pozzobonelli, and Maderni; in Biblical science by Corio and Vercellone; in ecclesiastical history by Tornielli, whose "*Annales Sacri*" are regarded as an intro-

duction to those of Baronius; in liturgy by Gavantus; in archæology by Caronni, whose work receives praise in Eckel's "*Doctrina nummorum veterum*"; Cortanova, who illustrated the antiquities of Friuli and Aquileia; Delle Torre, who restored the *Forum Julii* of Cividale; Ungarelli the Egyptologist, friend of Champollion and Rosellini, and interpreter of the Roman obelisk; and Benzi, who elucidated the inscription of Vercelli. Among the names of Barnabites who have been eminent in philosophy are those of Baranzano, the friend of Galileo and of Francis Bacon, who communicated to him first the theory of the "*Novum Organum*", of Cardinal Gerdil, and of Pini, the author of "*Protologia*"; among those eminent in physical and mathematical science, Frisi, Cavallesi, Densa, founder of the Italian Meteorological Society and first director of the Vatican Observatory, and Bertelli, the seismologist. To the Barnabite architect Binaghi is due the restoration of the Escorial towards the close of the sixteenth century, whilst the Barnabite Mazenta was the architect both of the Cathedral of Bologna and of the fortifications of Leghorn. To these names might be added those of many Barnabites who have become famous in literature, and the order has given to the Catholic Church more than fifty bishops and these six members of the Sacred College: Caddini, Fontana, Gerdil, Lambruschini, Bilio, and Graziello.

In 1856 Count Schouvaloff, a distinguished Russian convert, joined the Barnabite Congregation, and died in 1859. It was his ardent desire that his brethren might do something for the reunion of Christendom. With this object the order has founded an Association of Masses, and by the Brief "*Apostolum super Nobis*", dated 30 April, 1872, Pius IX. granted a plenary indulgence to all who should assist at the Mass for the reunion of Christendom to be celebrated once a month in the Chapel of the Barnabites at Paris. His Holiness, moreover, granted to the general of the order faculties for extending the like privilege to any other church in which a monthly Mass for the same intention should be said upon the day appointed by the ordinary. This privilege is freely extended by the general to all bishops who may desire it.

CES. TONDINI DI QUARENGHI.

**Baroccio** (BAROCCI), FEDERIGO, called Fiore d'Urbino, a distinguished painter and engraver, b. at Urbino, 1528; d. at the same place, 30 September, 1612. His father, who was Ambrogio Baroccio, a sculptor, of a Milanese family, gave him his first art lessons. He then studied drawing with Francesco Manzocchi of Forlì. His uncle, the architect Bartolommeo Genga, deciding that Federigo must become an artist, placed him with the eminent Venetian painter, Battista Franco, then in the service of Duke Guidobaldo II at Urbino. On Franco's departure Baroccio went to his uncle's house at Pesaro, and while studying perspective with him, copied some pictures of Titian in the ducal gallery. When twenty he went to Rome and spent his time chiefly in the study of the works of his great townsman, Raphael. On his return to Urbino, Baroccio copied the pastels of Correggio, and painted some pictures which brought him much reputation. His subjects were chiefly religious, and included some large altarpieces. Of these he etched two masterpieces, "*The Pardon of San Francesco d'Assisi*", which is

at Urbino, and "*The Annunciation*", which is at Loretto.

Returning to Rome, where Guido della Rovere was one of his patrons, the artist, together with Federigo Zuccaro, received from Pope Pius IV the commission to decorate the little palace of the Bosco di Belvedere in the Vatican. At this time it is said that he was poisoned at a banquet given him by some painters jealous of his success. From this he never recovered, for four years was unable to work at all, and for the rest of his life but a few hours a day. After three years at Perugia, and a short visit to Florence, Baroccio returned to end his long life of eighty-four years at Urbino, dying of apoplexy. In the Louvre are his "*Circumcision*", "*The Virgin and Child Jesus adored by St. Anthony and St. Lucy*", and "*St. Catherine*"; in the London National Gallery a "*Holy Family*"; at Urbino a "*Last Supper*" and "*St. Sebastian*"; at the cathedral in Perugia a "*Descent from the Cross*"; at Ravenna "*The Martyrdom of St. Vitalis*"; at Naples a "*Holy Family*"; and at Rome a "*Last Supper*" and "*Christ and Magdalen*".

BRYAN, *Dictionary of Painters and Engravers* (London and New York, 1903-05).

AUGUSTUS VAN CLEEF.

**Barocco style** (Fr. *baroque*), a debased application to architecture of Renaissance features. The term is also employed to denote a bad taste in design and ornament generally. Carlo Maderna (1556-1639), Bernini (1598-1680), and Borromini (1599-1667), were among the more famous who practised this form of art. Among the most prominent examples are the churches of Santa Maria della Vittoria by Maderna, and Santa Agnese, by Borromini, both at Rome. Naples particularly is full of baroque churches, a few of which, like the Gesù Nuovo, are dignified and creditable designs. The domical church of Santa Maria della Salute, at Venice, by Longhena, is a majestic edifice in excellent style, and here and there other churches offer exceptions to the then prevalent baseness of architecture. The three Venetian churches, San Barnaba (1749), San Basso (1670), and San Moise, are examples of three different types of the baroque. This style prevailed in church architecture for nearly two centuries. See RENAISSANCE.

THOMAS H. POOLE.

**Baron**, BONAVENTURA, a distinguished Irish Franciscan theologian, philosopher, and writer of Latin prose and verse, b. at Clonmel, County Tipperary, Ireland, 1610; d. at Rome, 18 March, 1696. His mother was a sister of the well-known Franciscan, Luke Wadding, and his brother Geoffrey was a trusted ambassador of the Irish Confederates in their negotiations with the continental rulers. He himself joined the Franciscan community of Clonmel, pursued his studies in philosophy at Louvain, and afterwards proceeded to Rome, where he took up his residence in the Irish College of St. Isidore founded by his uncle, Father Wadding. Here, on the completion of his theological course, he was appointed professor, and devoted himself specially to a defence of the Scotist system then generally assailed. During his stay in Rome he published numerous works on theology, philosophy, and history, a full list of which is appended below. About the year 1651 he left Rome, owing, it is said, to some difficulty with the master of the sacred palace, and went first to a house of his order at Schwaz in the Tyrol, and then to Salzburg, where he was kindly received by Archbishop Guidobald. He was sent as provincial commissary into Hungary (about 1656), was again in Schwaz (1661), went to Paris, taught for some time at Würzburg, where he published a volume of his "*Opuscula*" (1668), taught theology at Lyons, and finally returned to Italy. It is said that representations were made to secure his appointment to the

Archbishopric of Cashel, but that he declined the office. He was appointed historiographer (1676) by Cosmo de' Medici, Grand-duke of Tuscany, and was elected a member of the Academy of Florence. While under the patronage of the grand-duke he published the "Trias Tuscia", in honour of three remarkable religious of the country, and, in the same year, the "Orbes Medicei". His last work was a history of the Order for Redemption of Captives, from 1198 till 1297. He died 18 March, 1696, and was buried at St. Isidore's in Rome, where his tomb with the inscription, written by John De Burgo, a rector of the college, still exists. Two contemporary oil paintings of him have come down to us, one preserved in St. Isidore's, the other in the Franciscan house, Dublin. His principal works are: "Panegyrici Sacroprophani" (Rome, 1643; Lyons, 1656); "Obsidio et expugnatio Arcis Duncannon sub Thomâ Preston"; "Pærlusiones Philosophicæ" (Rome, 1651; Lyons, 1661); "Boetius Absolutus" (Rome, 1653); "Scotus defensus et amplificatus" (3 vols., Cologne, 1664); "Cursus Theologicus" (6 vols., 1670); "Opuscula" (4 vols., 1666-71); "Annales Ordinis Sanctæ Trinitatis pro redemptione captivorum ab anno 1198 usque ad annum 1297" (Rome, 1664).

*Annales Minorum* (Fonseca, 1731); WARE, *Irish Writers*, ed. HARRIS, 253; GILBERT ed., *History of Irish Confederation and War in Ireland, 1641-43* (Dublin, 1882); *Franciscan MSS.* (Dublin); MEEHAN, *Rise and Fall of the Irish Franciscan Monasteries* (Dublin, 1872), 89-93, 217.

JAMES MACCAFFREY.

**Baron. VINCENT**, a Dominican theologian and preacher b. at Martres, in the department of the Haute-Garonne, France, 17 May, 1604; d. in Paris, 21 January 1674. At the age of seventeen he passed from the college of the Jesuits in Toulouse to the Dominican convent of St. Thomas in the same city. There he made his religious profession, 16 May, 1622, completed his course in philosophy and theology, and taught these branches. As early as 1634 he was first professor in his convent and conventual doctor in the University of Toulouse. Rare erudition, depth of thought, and clearness of exposition earned for him the reputation of being one of the leading theologians of France. While discharging his professorial duties he delivered courses of Lenten sermons in the principal churches of Toulouse, Avignon, Bordeaux, and other cities of Southern France. Upon the invitation of the bishops of Languedoc he preached throughout their dioceses for ten years, reviving the faith of Catholics, elevating their morals and combating the errors of the Calvinists, with whose ministers he frequently joined in open debate, sometimes in their public synods. He published an abridgment of these controversies under the title "L'hérésie convaincue" (Paris, 1668). Of his sermons to Catholic congregations we have only those preached at Paris in 1658 and 1659 (Paris, 1660), doctrinal discourses and panegyrics possessing much intellectual merit, composed in the forced style and manner of his age. In the pulpit Father Baron was always a teacher; but while intent upon forming the minds of his hearers he won their hearts by his disinterestedness, sincerity, and charity. From 1630 to 1659 he filled the office of prior in the convents of Toulouse (twice), Rhodéz, Castres, Albi, Avignon, and in the general novitiate in Paris, always promoting the reforms in study and religious observance inaugurated by Sebastian Michaelis in the first years of the century. In 1660, having declined the office of provincial in the Province of Toulouse, he was sent by the master-general of his order to make a canonical visitation of the Portuguese convents. On his return to Paris he devoted himself during the remaining fourteen years of his life to the composition of theological works.

His most important productions were written to satisfy the desire expressed by Pope Alexander VII to the

Dominicans assembled in a general chapter at Rome in 1656, that they should publish a course in moral theology conformable to the doctrine of St. Thomas, and thus correct the laxity of morals encouraged by certain casuists. These works were: (1) "Theologiæ Moralis adv. laxiores probabilistas pars prior" (Paris, 1665); (2) "Manuductionis ad Moralem Theologiam pars altera" (Paris, 1665); (3) "Theologiæ moralis Summa bipartita" (Paris, 1667). In these works, while condemning opinions that seemed too lax, and censuring others that appeared to be too rigorous, he ably defended the system of Probabiliorism. With the famous critic Jean de Launoy he was long in controversy as to the "Summa Theologica" of St. Thomas Aquinas the authenticity of which he ably defended, although he did not demonstrate it, as later writers have done. The manuscript of a work entitled "Apologia pro sacra congregatione Indicis" having been published with alterations made by a stranger, which brought upon it the condemnation of the Sacred Congregation, he promised a new edition, which was embodied in his "SS. Augustini et Thomæ vera et una mens de libertate humanâ" (Paris, 1666). Another valuable work is his "Libri V apologetici pro religione, utraq; theologiâ, moribus ac juri bus Ord. Præd." (Paris, 1666). At the time of his death he was engaged on a complete course in theology to be entitled "D. Thomas sui Interpres". From this work, but half completed and never published, the one bearing the same title by Antoninus Mas-soulié, O.P., is entirely distinct.

QUÉTIF ET ECHARD, *Script. Ord. Præd.*, II, 655; TOURON, *Hist. des hommes illust. de l'ordre de St. Dominique*, V, 489-498.

ARTHUR L. McMAHON.

**Baronius, CESARE, VENERABLE**, Cardinal and ecclesiastical historian, b. at Sora in the Kingdom of Naples, 30 August, 1538; d. at Rome, 30 June, 1607; author of "Annales Ecclesiastici", a work which marked an epoch in historiography and merited for its author, after Eusebius, the title of a Father of Ecclesiastical History.

Baronius was descended from the Neapolitan branch of a once powerful family, whose name, *de Barono*, was changed by Cesare himself to the Roman form, *Baronius*. His parents, humble citizens of Sora in the Sabines, some sixty miles east of Rome, could bestow no ancestral wealth and power upon their only son. He was, however, to pos-

sess qualities which better proclaim nobility—a deeply religious spirit, a charity to which selfishness was painfully repugnant, a firmness of will tempered in humble obedience, and a keenness and vigour of mind scrupulously dedicated to the cause of truth. These qualities distinguished Baronius as a peer in sanctity and scholarship among many saintly and learned contemporaries. He inherited his more vigorous traits of character from his father, Camillo, a worldly and ambitious man, whose strong will and tenacity of purpose were one day to clash with like qualities

CARDINAL CESARE BARONIUS

in his equally determined son. To the influence of his pious and charitable mother, Portia Phaebonia, whose devotion to Cesare's religious interests was intensified by what she considered his miraculous deliverance from death in infancy, he owed his conspicuous tender qualities and childlike simplicity of faith. To this latter was due his vivid realization of God's guidance, vouchsafed often in visions and dreams. Baronius received his early education from his intelligent parents and in the schools of nearby Veroli. His intense love of study and intellectual maturity encouraged his father to send him, at the age of eighteen, to the school of law at Naples. There, after a few months, the confusion due to the Franco-Spanish war for Italian dominion compelled him to remove to Rome, where, in 1557, he became a pupil of Cesare Costa, a master in civil and canon law.

He was there but a short time when he met one who was potent to influence his destiny and determine, even to details, his career and occupations. It was Philip Neri, a priest remarkable for his sanctity and for the spirit of piety and charity with which he inspired a little group of priests and laymen whom he had formed into a confraternity of good works at the church of San Girolamo della Carità. The importance of this meeting cannot be overestimated; a Baronius the world might have had, but the Baronius of history is the creature of St. Philip Neri. He was impressed by the serious law student of such transparent innocence of life and finding in him a responsive subject, enrolled him in his little band. This did not prevent Baronius from continuing the studies for which he came to Rome, but in all else his surrender of self to Philip's guidance was spontaneous and complete. It was not without its sacrifices. In token of renunciation he burned a volume of his own Italian verses in the composition of which he had shown marked proficiency; the same fate later befell his doctorate diploma. For three years, in his zeal, he yearned to become a Capuchin friar, but Philip restrained him. More distressing still was the bitter antagonism of his father, who saw in all this but folly and the frustration of his paternal ambition. He feared, too, the extinction of his family, whose hope for a brilliant revival was centred alone in Cesare. Father and son were firm. Camillo cut off his scanty allowance and Cesare was compelled to live on the hospitality of one of Philip's friends. For six years Baronius led a semi-religious life with the community of San Girolamo, the nucleus of the Congregation of the Oratory. From Philip he received direction in study and spiritual guidance, and at his bidding gave all his spare time to charitable work among the sick and poor. During the year 1558 Philip assigned to him the important work of preaching at the conferences given often during the week in the church of San Girolamo. In 1564 he received priestly ordination and resolved to cast his lot with Philip's little band, but so intense was his ardour for the religious life that he had already taken vows of poverty, chastity, humility, and obedience to Philip as to a superior. Of his will he was to be the yielding instrument for yet twenty-five years. That time was to be given to the preparation for his work on ecclesiastical history, about which Baronius' life-interest henceforth centred.

The credit of its conception belongs to Philip, as Baronius testifies with filial devotion in the "Annals". The saint shared keenly in the distress and dismay caused in Catholic circles by the publication of the "Centuries of Magdeburg" (*Ecclesiastica Historia: integram ecclesiæ Christi ideam complectens, congesta per aliquot studiosos et pios viros in urbe Magdeburgicâ*, 13 vols., Basle, 1559-74). The purpose of this work was to commit history to the cause of Protestantism by showing how far the Catholic

Church had departed from primitive teaching and practices, in contrast to the consonance therewith of the Reformed Church. It was conceived in 1552 by Mathias Flach Francowicz (Flacius Illyricus) and, with the collaboration of several Lutheran scholars and the co-operation of evangelical princes and other wealthy Protestants, was hurriedly completed. Its thirteen volumes dealt each with a century of the Christian Era, whence the name "Centuriators" applied to the authors. Though the work had the great merit of being the pioneer in the field of modernized church history, and displayed considerable critical spirit, its unscrupulously partisan colouring of Lutheran claims and its misrepresentations of Catholicity predestined it to but ephemeral honour. It is of interest only as a sunken landmark in the field of historical literature, and as the stimulus of Baronius's genius. The publication of its initial volumes, however, at a time when its polemical value made it acceptable to Protestants, provided the Reformers with a most formidable weapon of attack on the Catholic Church. It did much harm. The feasibility of a counter attack appealed to Catholic scholars, but nothing adequate was provided, for the science of history was still a thing of the future. Its founder was as yet but twenty-one years of age and knew very little of history. It was in that youth that St. Philip Neri discerned a possible David who would rout the Philistines of Magdeburg. He forthwith directed Baronius to devote his conferences at San Girolamo exclusively to the history of the Church. Baronius was disconcerted. History had no attraction for him. His youthful zeal would rather vent itself in the fiery moral conferences which he had creditably given during the preceding year. But he obeyed, and within three years summarily covered the field of church history in his conferences and developed a keen interest in historical studies. Twice he gave the course before his ordination to the priesthood, and five times again did he repeat it during the following twenty-three years, perfecting his work with each succeeding series. The early historians and the Fathers became his familiars. The libraries of Rome yielded to his diligent quest a host of unpublished documents. Monuments, coins, and inscriptions told to him unsuspected stories. What he did in and about Rome willing correspondents did for him elsewhere, and the name of Baronius came to be known over Europe as a synonym for unprecedented historical penetration, power of research, and zeal for verification. Philip's plan for arranging in lasting form the material thus garnered must have been made known to Baronius before 1569, but despite the importance of the work, he was compelled by his master to share in all the exercises of the now growing Oratory. At the church of San Giovanni dei Fiorentini, which he served from 1564 to 1575, he had his part in the parish ministrations and took his turn in the menial domestic services. "Baronius coquus perpetuus" was the legend he playfully inscribed in the Oratory kitchen, where he often received distinguished visitors. To the many mortifications imposed by Philip he added generously, and thereby provoked the digestive disorders that often racked his body in life and ultimately precipitated his death. Despite all obstacles, his prodigious capacity for work and contentment with but four to five hours sleep a night made possible an amazing progress in his researches. After the canonical foundation of the Oratory (15 July, 1575) he took up his residence at Santa Maria in Vallicella, definitive home of the new congregation, and led the same busy life. In the early eighties plans were matured for the publication of the new church history, and by 1584, a quarter of a century since he began his preparation, Baronius had the work well under way, when his patience suffered a new

trial Gregory XIII confided to him the revision of the Roman Martyrology. The work was necessary because of confusion in feast-days due to the Gregorian calendar-reform (1582); besides, it was an opportune time to correct the many errors of copyists long accumulating in the Martyrology. Baronius gave two years to the wide research and keen criticism the work demanded. His annotations and corrections were published in 1586, and in a second edition he corrected several errors which he was chagrined to have overlooked in the first (*Martyrologium Romanum, cum Notationibus Cæsaris Baronii*, Rome, 1589).

The difficulties which beset Baronius in the publication of the "Annals" were many and annoying. He prepared his manuscript unaided, writing and re-writing every page with his own hand. His brother Oratorians at Rome could lend him no assistance. Those at Naples, who helped him in revising his copy, were scarcely competent and almost exasperated him by their dilatoriness and uncritical judgment. The proofs he read himself. His printers, in the infancy of their art, were neither prompt nor painstaking. In the spring of 1588 the first volume appeared and was universally acclaimed for its surprising wealth of information, its splendid erudition, and its timely vindication of papal claims. The "Centuries" were eclipsed. Those highest in ecclesiastical and civil authority complimented the author; but more gratifying still was the truly phenomenal sale the book secured and the immediate demand for its translation into the principal European languages. It was Baronius' intention to produce a volume every year; but the second was not ready until early in 1590. The next four appeared yearly, the seventh late in 1596, the other five at still longer intervals, up to 1607, when, just before his death, he completed the twelfth volume, which he had foreseen in a vision would be the term of his work. It brought the history down to 1198, the year of the accession of Innocent III.

Baronius' student life during the twenty years of publication was even more disturbed than formerly. His growing repute brought heavy penalties to one of his humility. Three successive popes would have made him a bishop. In 1593 he became superior of the Oratory, succeeding the aged Philip, on whose death, in 1596, he was re-elected for another triennial term. In 1595 Clement VIII, whose confessor he was, made him protonotary Apostolic and, on 5 June, 1596, created him cardinal. Baronius bitterly regretted his removal from the Oratory to reside at the Vatican, or even away from Rome when the papal court was absent from the city, a circumstance doubly distressing as it prevented active work on the "Annals". In 1597 Clement paid the highest possible tribute to his erudition by naming him Librarian of the Vatican. This office, together with the charge of the newly founded Vatican press and his duties in the Congregations, left him still less time for his "Annals". Troubles he had of another order. His zeal for the liberties of the Church had early invited the disfavour of Philip II of Spain, who, because he was the strongest Catholic sovereign in Europe, was striving to exercise undue influence on the papacy. He incurred Philip's further displeasure by supporting the cause of his enemy, the excommunicate Henry IV of France, whose absolution Baronius warmly advocated. The "Annals" were condemned by the Spanish Inquisition. Later on, when he published his treatise on the Sicilian Monarchy, proving the prior claim of the papacy to that of Spain in the suzerainty of Sicily and Naples, he provoked the bitter hostility of both Philip II and Philip III. He found solace, however, in the thought that the enmity of Spain would prevent the growing possibility of his being made pope. This hope was

severely tried in the two conclaves of 1605. Baronius was the choice of a majority of the cardinals and, despite Spanish opposition, might have been elected had he not turned his diplomacy to encompass his own defeat. Thirty-seven votes out of a necessary forty in the first conclave and a violent attempt to precipitate his "adoration" in the second attest the esteem in which he was held.

In the spring of 1607 Baronius returned to the Oratory, for a vision had warned him that his sixty-ninth year would be his last, and he had reached the portended last volume of the "Annals". Soon, critically ill, he was removed to Frascati, but, discerning the end, he returned to Rome, where he died 30 June, 1607. His tomb is at the left of the high altar in the church of Santa Maria in Vallicella (Chiesa Nuova).

Cardinal Baronius left a reputation for profound sanctity which led Benedict XIV to proclaim him "Venerable" (12 January, 1745). The restorations which he made in his titular church of Sts. Nereus and Achilleus and in St. Gregory's on the Coelian still feebly bespeak his zeal for decorous worship. But the "Annals" constitute the most conspicuous and enduring monument of his genius and devotion to the Church. For three centuries they have been the inspiration of students of history and an inexhaustible storehouse for research. No one work has treated so completely the epoch with which they deal. Nowhere are there to be found collected so many important documents. Unbiased scholars recognize in them the foundation-stone of true historical science, and in their author the qualities of the model historian: indefatigable diligence in research, passion for verification, accuracy of judgment, and unswerving loyalty to truth. Even in the bitter controversies which the early volumes aroused, Baronius' most scholarly critics acknowledged his thoroughness and honesty. But this does not imply that his work was faultless or final. Master though he was, Baronius was a pioneer. Gifted with a critical spirit which was, to say the least, much keener than that of his contemporaries, his exercise of it was tentative and timid. Yet he stimulated a spirit of criticism which would infallibly advance the science of history far beyond the reaches attainable by himself. With this wider vision his successors have been enabled to subject the "Annals" to no little corrective criticism. His scanty knowledge of Greek and Hebrew limited his resources in dealing with Oriental questions. Despite his care, he cited many documents as authentic which a more enlightened criticism has rejected as apocryphal. His most serious defects were incident to the very accuracy he essayed in casting his history in the strictly annalistic form. The attempt to assign to each successive year its own events involved him in numerous chronological errors. Baronius himself recognized the possibility of this and made many corrections in his second edition (Mainz, 1601-05); and later it was by his allies, and not by enemies, that the most thorough efforts at chronological revision were made, a point seemingly lost on those who refer to Pagi's "refutation" of Baronius' errors. One has but to recall the diversity of opinion in matters of chronology among the chief exponents of historical science to-day to find palliation for the mistakes of that science's founder. Whatever must be said in justice to Baronius, it remains true that the present-day value of his work is to be measured in the light of these defects, and it is to the critical editions of the "Annals" that the student will profitably refer, bearing always in mind that the mistakes of Baronius affect but little the value of the precious legacy his industry and genius handed down to later historians. The most extensive work of emendation is that of the Pagi: "*Critica historico-chronologica in Annales*", etc.

(3d ed., Antwerp, 1727, 4 vols.). Its preface contains a good study of the early criticism of the "Annals". To the original twelve volumes of the "Annals" there have been added continuations in the style of Baronius. The most worthy are those of the three Oratorians: Raynaldus, abbot of the continuators, who with material accumulated by Baronius carried the history to the year 1565 (Rome, 1646-77, 9 vols.); Laderchi, who continued it thence to 1571 (Rome, 1728-37, 3 vols.); and August Theiner, to 1583 (Rome, 1856). Less notable are the continuations of the Polish Dominican, Bzovius, 1198 to 1571 (Cologne, 1621-30, 9 vols.), and the French bishop, Sponde, 1198 to 1647 (Paris, 1659). There is a good study of the work of the continuators by Mansi in the Bar-le-Duc edition of Baronius, XX, pp. iii-xi. Many epitomes of the work have been made, the best being that of Sponde (Cologne, 1690, 2 vols.). As an exemplar of recent scientific working of a small portion of the field covered by Baronius may be cited, Rauschen, "Jahrbücher der Christlichen Kirche unter dem Kaiser Theodosius dem Grossen. Versuch einer Erneuerung der Annales Ecclesiastici des Baronius für die Jahre 378-395" (Freiburg im Br., 1897). The best editions of Baronius are those of Lucca (1738-59, 38 vols.) and Bar-le-Duc (1864-83, 37 vols.); the former contains the continuations of Raynald and Laderchi, the critique of Pagi and others, and is enriched by the notes of Archbishop Mansi; the latter contains what is best in the former and the editorial additions of Father Theiner, whose continuation was to be included. Publication was suspended with the history of the year 1571. Baronius published many lesser works, most of which found place in the "Annals". His life of St. Gregory Nazianzen is in Acta SS., XV, 371-427.

Materials for the life of Baronius are found in an unfinished *Life* in Buccio's MS. preserved in the Roman Oratory; the extant correspondence etc. has been gathered by ALBERTUS, *Ven. Caesaris Baronii . . . Epistolarum, Opuscula . . . Vita* (Rome, 1759-70, 3 vols.); recent discoveries by LAEMMER, *De Caesaris Baronii Litterarum Commercio Diatriba* (Freiburg im Br., 1903). The older *Life*s, based largely on Buccio, and the references Baronius makes to his work in the *Annals* are by SPONDE in his *Epitome*; BARNABEO (Vienna, 1718); and RICCI (Rome, 1745); SARRA, *Vita del Venerabile Card. Ces. Baronio* (Rome, 1862); LE FEBVRE, *Vie de Card. Baronius* (Douai, 1868); KERR, *Life of Cesare Card. Baronius* (London, 1898); CAPECELATRO-POPE, *Life of St. Philip Neri* (London, 1882), I, 316-321; II, 1-31, 529-530.

Adverse criticism of Baronius: CASAUBON, *Exercitationes* (Geneva, 1654), cf. PATTISON, *Isaac Casaubon* (Oxford, 1892), 315-341—shallow and extreme; CAVE, *Historia Literaria Scriptorum. Eccl.* (London, 1668), XXV-XXVI; DOWLING, *Introduction to Critical Study of Eccl. History* (London, 1838), 106-128.

JOHN B. PETERSON.

**Baronius, JUSTUS.** See CALVIN, JUSTUS.

**Barquisimeto (DE BARQUISIMETO), DIOCESE OF,** in Venezuela, South America. The city is the capital of the State of Lara, is about 161 miles southwest of Caracas, and contains about 30,000 inhabitants, though some authorities give a lower figure. Founded in 1552 by the Spaniards, under the name of Nueva Segovia, Barquisimeto is one of the oldest Spanish possessions in South America. In 1812 it was almost entirely destroyed by an earthquake. The Diocese of Barquisimeto was erected in 1847, comprising the three States of Lara, Carabobo, and Falcon. By a decree of the Congregation of the Consistory, 12 February, 1907, the episcopal residence was transferred to Valencia (38,654), in the State of Carabobo, and the boundaries of the diocese rearranged. It is now bounded on the north and west by the Caribbean Sea, on the south by the Diocese of Merida (or the State of Trujillo), on the east by the State of Calabozo and the two dioceses of Zamora, and Guiana. The diocese contains 528,215 Catholics, 68 priests, and 110 churches and chapels.

U. BENIGNI.

**Barradas, SEBASTIÃO,** a Portuguese exegete and preacher, b. at Lisbon in 1543; d. at Coimbra in 1615. In 1558 he entered the Society of Jesus. He was professor of Scripture for many years at Coimbra and Evora and preached with such zeal that he was styled the Apostle of Portugal. He published two works: (1) "Commentaria in concordiam et historiam evangelicam" (4 vols., Coimbra, 1599-1611). This work, which is a treasure house for preachers on the Gospels, was frequently reprinted in Germany, Italy, and France. The last edition was printed at Augsburg, 1642. (2) "Itinerarium filiorum Israel ex Egypto in terram repromissionis" (Lyons, 1620). It is a useful commentary on the Book of Exodus.

JOHN CORBETT.

**Barral, LOUIS-MATHIAS, COUNT DE,** Archbishop of Tours, France, b. 26 April, 1746, at Grenoble; d. 7 June, 1816, at Paris. He was educated for the priesthood at the seminary of St. Sulpice, in Paris, and after ordination was made secretary, then coadjutor, and in 1790, successor, to his uncle, the Bishop of Troyes. In 1791, he refused to take the oath to the civil constitution of the clergy, and withdrew from France to Constance in Switzerland and later to England. In 1801 he returned home, and was appointed, under the new concordat between France and the Holy See, to govern the Diocese of Meaux, and in 1805 was promoted to the Archbishopric of Tours. During the long and harassing negotiations which Napoleon carried on with Pope Pius VII, while the latter was virtually a prisoner at Savona and Fontainebleau, Archbishop de Barral acted frequently as the emperor's intermediary. He was afterwards appointed almoner to the Empress Josephine, and he pronounced her funeral oration. Later still he was named a senator and a count of the Empire. On the downfall of Napoleon, the archbishop took his seat in the Chamber of Peers under Louis XVIII, and in the government of the "Hundred Days", which followed on the return of Napoleon from Elba, he still retained his political position. On the second restoration of the Bourbons, however, he was obliged to resign, and from this time till his death, which occurred in the following year, he confined himself entirely to the administration of his archdiocese. He has left among other works:—"Fragments relatifs à l'histoire ecclésiastique des premières années du XIX<sup>e</sup> siècle" (Paris, 1814); and a posthumous work, published by his brother: "Défense des libertés de l'église gallicane et de l'assemblée du clergé de France tenue en 1682, ou refutation de plusieurs ouvrages publiés récemment en Angleterre sur l'infailibilité du Pape" (Paris, 1817).

ROHRBACHER, *Histoire universelle de l'église catholique* (Paris, 1883); DESIDOUR, *Histoire des rapports de l'église et de l'état en France de 1789 à 1870* (Paris, 1898); BAUDRILLART, *Quatre cents ans de concordat* (Paris, 1905); SEVESTRE, *L'histoire du concordat de 1801* (Paris, 1905); SICARD, *L'ancien clergé de France, les évêques pendant la révolution* (Paris, 1903).

EDWARD A. GILLIGAN.

**Barrande, JOACHIM,** French palæontologist, b. at Sangués (Haute-Loire), 11 August, 1799; d. at Frohsdorff, near Vienna, 5 October, 1883. He was educated at the Ecole Polytechnique in Paris and was selected by Charles X to be the tutor of his grandson, the Duc de Bordeaux, also known as the Count de Chambord. When the king abdicated in 1830 he accompanied the royal family to England and Scotland and finally to Prague. He continued throughout his life on terms of intimate friendship with the duke, who, after the death of the king, took up his residence at Frohsdorff, and he acted also as the administrator of his property. Barrande's interest was early awakened in the fossil remains of his adopted country and their distribution in the various strata. The

field was a new one for until the date of his first publication scarcely any attention had been paid to stratigraphical geology and palaeontology in Bohemia. During the summers of 1840-50 he made preliminary surveys on foot of the Silurian district, an area of about 140 sq. miles. This was the beginning of his extensive investigations on the Silurian system of Bohemia. Quarries were opened and workmen engaged to search for fossils, and for forty-three years he devoted his time and resources to the vast undertaking and especially to describing, naming, and figuring the numerous specimens which were discovered. The results of his labours are contained in his great work—"Système silurien du centre de la Bohême—which stands almost unrivalled in palaeontological literature" (von Zittel). The first volume was published in 1852 and at the time of his death twenty-two large quarto volumes with 1160 plates had appeared. Barrande was also the author of "Colonie dans le bassin silurien de la Bohême" (1860); "Documents sur la faune primordiale et le système taconique en Amérique" (1861); "Représentation de colonies de la Bohême dans le bassin silurien du nord-ouest de la France" (1863); "Cephalopodes—Etudes générales". His private life was simple and uneventful. He carried on a correspondence with the leading geologists of other countries, some of whom visited him at Prague. At his death he provided means for the completion of his "Système silurien" and bequeathed his library and valuable collection of fossils to the Natural History Museum at Prague.

H. M. BROCK.

**BARRASA** (OR BARRAZA), JACINTO, b. at Lima, Peru, early in the seventeenth century; d. there, 22 Nov., 1704. When, in the seventeenth century, the different religious orders appointed historiographers or official chroniclers of the work done in their several American provinces, the Jesuits selected Father Ignacio Arbieta for their Peruvian missions, but as his account was not accepted Father Jacinto Barrasa was appointed in his stead. His fame was principally as a preacher, and two volumes of his "Sermones" were published, one at Madrid in 1678, the other at Lima in 1679. In the latter year he finished his voluminous history of the Society of Jesus in Peru, which is still at Lima in private hands, and comprises 1,350 pages of manuscript. Its title is: "Historia de las fundaciones de los colegios y casas de la Compañía de Jesús, con la noticia de las vidas y virtudes religiosas de algunos varones ilustres que en ella trabajaron." No allusions are made in that chronicle to any other events than those of a religious or ecclesiastical nature. In addition to the "Sermones", a "Panegirico", pronounced by him in 1669 on the beatification of St. Rose of Lima, was also printed.

TORRES SALDAMANDO, *Los antiguos Jesuitas del Perú* (Lima, 1882); COBO, *Historia de la fundación de Lima* (published at Lima, 1882, but written in the year 1639).

AD. F. BANDELIER.

**Barre**, ANTOINE-LEFEBVRE, SIEUR DE LA, tenth French Governor-General of Canada, b. at Paris in 1622; d. in 1690. De la Barre was made a counsellor of the Parlement (High Court) in 1646, master of requests in 1653, and was Intendant of Paris during the civil war. After this he successively held other offices until he became Intendant of Bourbonnais in 1663. There he formed a company called "Compagnie de la France équinoxiale" to colonize Guiana, and was appointed lieutenant-general and governor of that part of America. He sailed from Rochelle in 1664 with the Marquis de Tracy, who had been appointed viceroy of the French possessions in America. After establishing himself at Cayenne,

which de Tracy had taken from the Dutch, de la Barre returned to France in the autumn of the same year, and while there published an account of his mission and his hopes for the future of Guiana, under the title of "La Description de la France équinoxiale". Soon after, he was appointed commander of Guiana and the French Antilles. In 1671 he was made captain of a man-of-war; in the same year he published the "Journal du voyage du sieur de la Barre en la terre ferme et île de Cayenne".

De la Barre was appointed Governor-General of Canada to replace Frontenac, and reached Quebec early in October, 1682. He received wise and detailed instructions for his guidance in the government of the colony and was especially directed to prevent the disorders caused by the traders and to keep them from fraudulent practices. De la Barre was already old and was animated more by the love of money than by the desire to advance the interests of the colony. He was induced by some of the traders to join in various enterprises. Instead of devoting himself to the organization of the internal affairs of the colony he allowed his advisers to dispatch a trading expedition to Hudson Bay and aided them in sending clandestine trading parties to Albany, to the region of the Mississippi, and the West. In 1684, under pretext of overawing the Iroquois, he took a body of ill-equipped troops as far as Fort Frontenac at the head of Lake Ontario. The troops were in reality intended to be an escort to a trading expedition in which he was interested. Sickness broke out among his soldiers, and he was obliged to make a disgraceful treaty with the Iroquois. De la Barre gave the Iroquois unrestricted rights in the region extending towards the country of the Illinois Indians, which de la Salle at that time was on the point of winning for France in spite of all the obstacles that the governor put in his way. Louis XIV heard of the disastrous expedition to Fort Frontenac and recalled de la Barre (10 March, 1685), who did not leave Quebec, however, until the arrival of his successor, the Marquis de Denonville, in October, 1685. In 1687 de la Barre was again appointed Governor of Cayenne and died three years later.

J. EDMOND ROY.

**Barreira**, BALTHASAR, a Portuguese Jesuit missionary, b. at Lisbon, 1531; d. 1612, on the mission of Angola, south-west coast of Africa, the scene of his life's labours. His literary works consist chiefly of "Relations" written to the superiors of the Society of Jesus, describing the condition of the province with regard to both its political and spiritual aspects. He has recounted in detail the victory of the Spaniards, led by Paul de Moraes, over an army of native negroes in the year 1583. Accounts of the conversion of pagan tribes and the baptisms of native kings as well as treatises on the manners and customs of the people are the principal subjects of his writings.

SOMMERVOGEL, *Bibl. de la c. de J.*, I, 918.

JAMES M. COTTER.

**Barrientos**, LOPEZ DE, a Spanish Dominican bishop, patriot, and diplomat, b. at Medina del Campo, Kingdom of Leon 1382; d. at Cuenca, 21 May, 1469. He was of noble parentage, and after receiving a liberal education in the University of Salamanca, entered the Dominican Order, in his native town, when about eighteen years of age. After his religious profession, he was again sent to Salamanca for a course of divinity. In this he showed extraordinary talent and love for study. He soon became known as one of the greatest theologians of Spain, and was appointed to the first chair of theology in that famous university. In 1433,

**John II of Castile and Leon** called him to his court, to be his confessor and tutor to the heir presumptive, afterwards Henry IV. Because of his ability and prudence, he was then made Grand Chancellor of State and Inquisitor General. He became successively Bishop of Segovia, 1439; of Avila, 1442; of Cuenca, 1444. Later he refused the Archbishopric of Compostella. John II, in his last will and testament, 1454, also named him tutor to Prince Alphonso, a younger son. By his wise counsel and eminent statesmanship, he rendered his king and country conspicuous service. He also did much in the way of religious reformation and works of charity, and was a liberal patron of learning. His name frequently appears in the Spanish history of these troublous times. His writings comprise a treatise on the sacraments, a compendium of moral theology, a commentary on a part of the "Book of Decretals" (all in Latin), and several Spanish manuscripts on ecclesiastical matters and doctrinal subjects.

TOURON, *Hist. des hommes ill. de l'ordre de Saint Dominique* (Paris, 1743-49), III; ECHARD, *Script. Ord. Præd.* (Paris, 1719-21), I; MARIANA, *Historia de rebus Hispania* (Toledo, 1592).

VICTOR F. O'DANIEL.

**Barrière, JEAN DE LA.** See FEUILLANTS.

**Bartos, João DE,** historian, b. in Portugal, 1496; d. 20 October, 1570. Of his early youth little is known. In 1522, he went to Mina in Portuguese Africa, and was made treasurer of the Casa da India, Mina, and Ceuta (African possessions) in 1525, and again in 1532. Here he cultivated his literary inclinations and attached himself to the Crown of Portugal by other ties than those of a faithful subordinate and accountant. At the age of twenty-four, he published a romance of the Emperor Clarimundo, a legendary ancestor of the kings of Portugal. In 1539, when Brazil had begun to be looked upon as an important accession to Portuguese colonial possessions, he obtained a grant of fifty leagues along the coast at the mouth of the Amazon and forthwith equipped an expedition to occupy it. Ten vessels with nine hundred men, under command of Aires da Cunha, set sail for Brazil, but were wrecked at the bar of the Maranhão, and nearly everybody perished. Two sons of Barros were in the expedition, but their fate is not given. This brought Barros almost to the verge of poverty. He thereafter clung to historic studies, protected and favoured by the king, at whose instigation he wrote his classical work, "Asia", considered of value as a fine piece of Portuguese literature and for the information it affords. Besides giving an account of discovery and conquest, it touches frequently upon the earliest attempts at Christianization by the Portuguese in their African and Asiatic possessions, the founding of churches, etc. The first decade appeared in 1552. Only three have been fully published. A fourth, of somewhat questionable authenticity, has been partly printed.

On the life of Bartos, see DE FERIA, *Vida de João de Barros* (Lisbon, 1778); SILVA, *Diccionario bibliográfico português* (Lisbon, 1859), III; *Biographie universelle* (Paris, 1854), I.

AD. F. BANDELIER.

**Barrow, JOHN,** priest, descended from a family of stanch Catholic yeomen, b. 13 May, 1735, at Westby-in-the-Fylde, Lancashire; d. 12 February, 1811, at Cloughton, Lancashire. His uncle, Father Edward Barrow, S.J., had been serving the mission at Westby Hall in 1717 when he was outlawed as a popish priest and his goods forfeited. John Barrow, after a course of seven years at the English College in Rome, was impressed at Portsmouth and served five years in the navy. Deserting at Dunkirk, he was acquitted by the court-martial through pretending successfully to understand no language but Italian. In 1761, after escorting two young women from London to the Convent of the Poor Clares at

Gravelines, where his sister was a nun, he resumed his studies at Douai, and was ordained there 27 June, 1766. After a short stay in London at the house in Red Lion Square occupied by the parents of Bishop Milner, he set out on horseback for Cloughton in Lancashire. At this mission, which had been formerly attached to the Hall, the seat of the ancient family of Brockholes, he remained from the time of his arrival, in July, 1766, until his death. He was buried at the adjoining mission of New House.

Father Barrow was a man of notable courage, will, and industry. He was a master of French and Italian, wrote elegant Latin and forceful English. "He may sometimes have shown but scant courtesy to the wishes or commands of his own bishop, but he insisted that everybody else should be obedient and deferential to ecclesiastical authority" (Gillow). He enlarged the parish church of Cloughton, in 1794, improved the roads as township overseer, made wise reinvestments of the fund for the secular clergy, and negotiated with Sir Edward Smythe for the acquirement by exchange of the land for Ushaw College. Though his name is on the list of Douai writers, no description of his writings is recorded. It is likely that he contributed to the Catholic Committee controversy. Gillow's quotations from unpublished letters would imply that Barrow was no gentle opponent. In a letter preserved at Cloughton the Cardinal Secretary of State praises warmly Father Barrow's Catholic loyalty and his zeal for the cause of the Holy See.

J. V. CROWNE.

**Barrow, WILLIAM, VENERABLE** (alias WARING, alias HARCOURT), an English Jesuit martyr, b. in Lancashire, in 1609; d. 30 June, 1679. He made his studies at the Jesuit College, St. Omers, and entered the Society at Watten in 1632. He was sent to the English mission in 1644 and worked on the London District for thirty-five years, becoming, in the beginning of 1678, its superior. In May of that year he was arrested and committed to Newgate on the charge of complicity in the Oates Plot. The trial, in which he had as fellow-prisoners his colleagues, Fathers Thomas Whitbread, John Fenwick, John Gavan, and Anthony Turner, commenced 13 June, 1679, and is famous, or rather infamous, in history. Lord Chief Justice Scroggs presided, and Oates, Bedloe, and Dugdale were the principal witnesses for the Crown. The prisoners were charged with having conspired to kill the king and subvert the Protestant religion. They made a brave defence, and by the testimony of their own witnesses and their cross-examinations of their accusers proved clearly that the latter were guilty of wholesale perjury. But Scroggs laid down the two monstrous principles that (1) as the witnesses against them had recently received the royal pardon, none of their undeniable previous misdemeanours could be legally admitted as impairing the value of their testimony; and (2) that no Catholic witness was to be believed, as it was presumable that he had received a dispensation to lie. Moreover, he obstructed the defence in every way by his brutal and constant interruptions. Accordingly, Father Barrow and the others, though manifestly innocent, were found guilty, and condemned to undergo the punishment of high treason. They suffered together at Tyburn, 20 June, 1679. By the papal decree of 4 December, 1886, this martyr's cause was introduced under the name of "William Harcourt".

SYDNEY F. SMITH.

**Barruel**, AUGUSTIN, controversialist and publicist, b. at Villeneuve de Berg (Ardèche), 2 October, 1741; d. at Paris, 5 October, 1820. He entered the Society of Jesus in 1756 and taught grammar at Toulouse in 1762. The storm against the Jesuits in France drove him from his country and he was occupied in college work in Moravia and Bohemia until the suppression of the order in 1773. He then returned to France and his first literary work appeared in 1774: "Ode sur le glorieux avènement de Louis Auguste au trône". That same year he became a collaborator of the "Année littéraire", edited by Fréron. His first important work was "Les Helviennes, ou Lettres Provinciales philosophiques" (Amsterdam, 1781). The seventh edition of the work (Paris, 1839) contains a sketch of the author. Of these letters, the seventy-sixth is considered the most brilliant. His book provoked a controversy with M. Giraud-Soulavie, and the replies and counter-replies were many.

In the meantime, national affairs in France were growing more and more turbulent, but Barruel continued his literary activity, which from now on occupied itself specially with public questions. In 1789 appeared "Lettres sur le Divorce", a refutation of a book by Hennet. From 1788 to 1792 he edited the famous "Journal Ecclésiastique" founded by Dinouart in 1760. In this periodical was published Barruel's "La Conduite du S. Siège envers la France", a vigorous defence of Pope Pius VI. He likewise wrote a number of pamphlets against the civil oath demanded from ecclesiastics and against the new civil constitution during 1790 and 1791. He afterwards gathered into one "Collection Ecclésiastique" all the works relative to the clergy and civil constitution. The ninth volume of this collection was published in 1793.

The storm of the French Revolution had in the meantime (1792) forced Barruel to seek refuge in England, where he became almoner to the refugee Prince de Conti. Here he wrote in 1793 his well-known "Histoire du Clergé pendant la Révolution Française". He dedicated the work to the English nation in recognition of the hospitality it had shown towards the unfortunate French ecclesiastics. It has been translated into German, Italian, Spanish, Polish, and English. The English version went through several editions and did much to strengthen the British nation in its opposition to French revolutionary principles. An American edition of the work appeared at Burlington in 1824. While in London, Barruel published an English work: "A Dissertation on Ecclesiastical Jurisdiction in the Catholic Church" (1794). But none of his works attracted so much attention as his "Mémoires pour servir à l'histoire du Jacobinisme" (London, 1797-98). It appeared in an English dress: "Memoirs of the History of Jacobinism and Freemasonry of Barruel, translated into English by the Hon. Robert Clifford" (London, 1798) in four volumes. This important work is an endeavour to account for the French Revolution by a study of the anti-Christian and anti-social principles of the secret societies and encyclopedic philosophers. Owing to its translation into every modern language it was everywhere read and commented upon. A sharp criticism in the "Monthly Review", brought forth a reply from Barruel, who greatly increased the circulation of his book by issuing an abridgment of it in 1798. The Freemasons of France, Germany, and England angrily contested his assertions and a voluminous literature was the consequence. While some are of the opinion that Barruel's work attributes to the secret societies many evil deeds for which they are not responsible, all admit that his exposition of their principles and the logical consequences flowing from them is the work of a powerful mind. Barruel, indeed, seems to have

been the first to portray clearly the necessary consequences to civil governments, to the Church, and to social order that must result from the atheistic oathbound associations which had acquired such tremendous power on the continent of Europe.

On the fall of the Directory in 1802, Barruel was enabled to return to France. He fully accepted and persuaded many other clergymen to accept the new political order of things in his native country and he wrote several books to defend his opinions. When the Concordat was made in 1801 between Pius VII and Napoleon, Barruel wrote: "Du Pape et des Droits Religieux". His last important controversy was a defence of the Holy See in its deposition of the French bishops, which had been necessitated by the new order of things in France, established by the Concordat. His book appeared also in English: "The Papal Power, or an historical essay on the temporal power of the Pope" (London, 1803). Many attacked the work, but as usual the author did not suffer an antagonist to go unanswered. His new book involved him in a very extended controversy, for his work was translated into all the principal European languages. His friends and foes alike became involved in a wordy war. Blanchard published in London no less than three refutations. Two works are erroneously attributed to Barruel: "L'Histoire civile, politique et religieuse de Pie VI" and "Découverte importante sur le système de la Constitution du Clergé, décrété par l'Assemblée nationale". The many articles Barruel contributed to journals and his many published letters are not touched on here. He had promised to compose two works which never appeared, viz: "Histoire des Sociétés Secrètes au Moyen-Age" and "Dissertation sur la Croisade contre les Albigeois". In regard to the latter work, Barruel stated that his object would be to defend the Church against the reproach of having deposed kings and having freed their subjects from the oath of allegiance. He contended that objections on this score arose only from an ignorance of history. During the whole course of a life of multiplied activity, Barruel was ever the wakeful apologist and unwearied defender of Christian truth and of the rights of the Church. At the time of his death, he was engaged on a refutation of the philosophical system of Kant, but never completed his work.

WILLIAM H. W. FANNING.

**Barry.** See GIRALDUS CAMBRENSIS.

**Barry**, JOHN, captain in the United States navy, b. at Tacumshane, County Wexford, Ireland, in 1745; d. at Philadelphia, 13 September, 1803. At an early age Barry was sent to sea. He arrived at Philadelphia when he was fifteen years old, and made that city his home to the time of his death. He was employed in the West Indian trade and commanded several vessels until December, 1774, when he sailed from Philadelphia, as captain of a fine large ship "The Black Prince", bound for Bristol, England, returning to Philadelphia 13 October, 1775, the day the Continental Congress, then in session there, authorized the purchase of two armed vessels for the beginning of the Continental Navy. Barry immediately volunteered his services, and he was assigned to the command of the first vessel purchased, the "Lexington". His commission was dated 7 December, 1775, the first issued by the Marine Committee of the Continental Congress. On 22 December, 1775, Esek Hopkins was appointed Commander-in-chief of the Navy—but was dropped from its roll in March, 1777. Barry was in command of the "Lexington" from his appoint-

ment until October, 1776, when he was assigned to the "Effingham", 28 guns, then building in Philadelphia. During that time he performed efficient service in lower Delaware Bay; on 31 March, 1776, he put to sea, eluding the British man-of-war "Roebuck" on guard in Delaware Bay, and on 7 April fell in with the "Edward", a tender of the British man-of-war "Liverpool", and after a sharp engagement captured her; Barry brought his prize to Philadelphia, arriving 11 April, 1776. This was the first war-vessel captured by a commissioned Continental naval officer that was brought to that city. He was officially connected with the "Effingham" until her destruction, 7 May, 1778, by the British forces then in control of Philadelphia. She had been sunk, by order of Washington and the Naval Board, in the Delaware for some time previously and then raised only to be destroyed by the enemy. In December, 1776, Barry, owing to the blockade of his ship in the Delaware by the English, with a company of volunteers joined the army under Washington and took part in the battles of Trenton and Princeton. He was aide to General Cadwallader and special aid to General Washington, who held him in high esteem. Returning to his command, he carried out many gallant and daring boat expeditions on the Delaware, successfully annoying and capturing vessels laden with supplies for the British army. In 1778 he was ordered to command the "Raleigh", 32 guns, and sailed from Boston 25th September, 1778. On the 27th he fell in with two British frigates, the "Experiment", 50 guns, and "Unicorn", 22 guns, and after a gallant and unequal engagement Barry ran his ship ashore and set her on fire, escaping with most of his crew. Being without a Continental command Barry accepted, 18 February, 1779, command of the privateer "Delaware", 12 guns, and during the cruise captured the British sloop of war "Harlem", 14 guns. In November, 1780, he was ordered to command the "Alliance", 36 guns, at Boston, in which he sailed to France, 11th February, 1781, with Col. John Laurens, special commissioner to the French Government. On the return trip he captured the brig "Mars", 22 guns, and the brig "Minerva", 10 guns. On 28th May he fell in with the "Atlanta", 16 guns, and the "Trepassey", 14 guns, and after a very sharp fight of three hours they struck their colours. In this fight Barry was severely wounded in the shoulder by a grape shot. On 23 December, 1781, he sailed from Boston for France with the Marquis de Lafayette as passenger, and returning arrived at New London 13 May, 1782. He sailed, 4 August, 1782, on the most successful cruise of the war; the prizes he captured sold for more than £600,000. Returning by way of the West Indies and Havana, on 10 March, 1783, he fell in with the British frigate "Sybille", 38 guns, and after a sharp fight of forty-five minutes she hauled off apparently much injured and joined two other ships with which she had been in company. This was the

JOHN BARRY, U.S.N.

last encounter of the Revolutionary war at sea. Peace was declared 11 April, 1783, the "Alliance" was sold, and the country was without a navy. The United States navy was permanently organised by Act of Congress, 27 March, 1794. Six captains were appointed by President Washington, "by and with the consent of the Senate", and Barry headed the list. His commission, signed by George Washington, President, was dated 22 February, 1797 and appointed him captain in the navy "to take rank from the 4th day of June, 1794"—"Registered No. 1". He was thus made officially the ranking officer of the United States navy. He superintended the building of the frigate "United States", 44 guns, and made several cruises in her with other vessels under his command. In 1801 the navy was reduced to a peace basis; nine captains were retained Barry being at the head of the list. His sea service was ended, and being in poor health he remained at this home in Philadelphia until his death. Barry has often been referred to as "Commodore"; there was no such grade in the United States navy until 17 July, 1862. Captain was the

highest grade before that date, although the non-official title of commodore was generally applied to a captain while in command of two or more vessels. Barry was married twice, both times to Protestants who subsequently became converts to the Catholic faith. His first wife died in 1771, and on 7 July 1777 he married Sarah Austin who survived him. She died 13 November, 1831. Both his wives were buried with him in the graveyard of St. Mary's Church, Philadelphia. There was no issue from either marriage. His epitaph was written by Dr. Benjamin Rush, a signer of the Declaration of Independence. A statue and fountain were erected to his memory in 1876, in Fairmount Park, Philadelphia, by the Catholic Total Abstinence Union of America. A portrait (copy of

original by Gilbert Stuart) was presented to the city of Philadelphia by the Friendly Sons of St. Patrick, 18 March, 1895, to be placed in Independence Hall. In 1906 Congress passed a bill appropriating \$50,000 for the erection of a monument in Washington to the memory of Captain John Barry; and 16 March, 1907, a bronze statue of him was erected in Independence Square, Philadelphia, by the Friendly Sons of St. Patrick.

JOHN FUREY.

Barry, JOHN, second Bishop of Savannah, Georgia, U. S. A.; b. 1799 in the parish of Oylegate, Co. Wexford, Ireland; d. in Paris 19 November, 1859. He was accepted as an ecclesiastical student by

Bishop England, and was ordained priest at Charleston, S. C., 24 September, 1825. After ministering for several years in Georgia, in which State he opened the first Catholic day school at Savannah, he was made Vicar-General of the Diocese of Charleston and superior of the seminary in 1844, while still retaining charge of the parish at Augusta, Georgia. In 1853 he was appointed Vicar-General of Savannah, under Bishop Gartland, and when, in 1854, that prelate died of yellow fever, he was named administrator of the diocese, and as such attended the Eighth Provincial Council of Baltimore, in May, 1855. He was then appointed to the vacant see and consecrated at Baltimore, 2 August, 1857. He governed the diocese with energy and was especially notable during his missionary labours for his charity and zeal in several yellow-fever epidemics. Ill health forcing him to make a visit (July, 1859) to Europe, he died at the house of the Brothers of St. John of God, in Paris, 19 November, 1859, having lost his reason some time before his death. His body was brought back to Savannah for burial, in September, 1865.

THOMAS F. MEEHAN.

Barry, PATRICK, horticulturist, b. near Belfast, Ireland, May, 1816; d. at Rochester, New York, U. S. A., 23 June, 1890. After teaching for a while in his native land, he emigrated to America in 1836 and was employed by a nurseryman at Flushing, Long Island. In 1849 he became a partner in the same business with George Ellwanger at Rochester, New York. The firm took the lead in importing from abroad or developing by culture improved varieties of flowering plants and fruits, hardy exotics, and introducing to cultivation wild species of shade trees. Their nurseries developed into the largest in the country. Barry wrote extensively on subjects connected with pomology and flower-gardening, and edited "The Genesee Farmer" from 1844 to 1852, and "The Horticulturalist" from 1852 to 1854. His published works include a "Treatise on the Fruit Garden" (New York, 1851; new ed. 1872) and a "Catalogue of the American Pomological Society".

*Cycl. of Am. Biog.* (New York, 1900).

THOMAS F. MEEHAN.

Barry, PAUL DE, b. at Leucate in 1587; d. at Avignon, 28 July, 1661. He was a member of the Society of Jesus, rector of the Jesuit colleges at Aix, Nîmes, and Avignon, and Provincial of Lyons. He composed a number of devotional works on the Blessed Virgin, St. Joseph, and the saints, and a "Penses-y-bien", which latter had a large circulation and has been translated into several languages. The only ones of his works translated into English are "Pious Remarks upon the Life of St. Joseph", published in 1600; the "Glories of St. Joseph" (Dublin, 1835); "Devotions to St. Joseph", edited by the Rev. G. Tickell, S.J. (London, 187-).

Barry, THOMAS FRANCIS. See CHATHAM, DIOCESE OF.

Barsanians. See MONOPHYTISM.

Barthe, JOHN MARY. See TRICHINOPOLY, DIOCESE OF.

Barthel, JOHANN CASPAR, a German canonist, b. 10 June, 1697, at Kitzingen, Bavaria; d. 8 April, 1771. He was the son of a fisherman, attended the schools of his native place, and from 1709 to 1715 studied at the Jesuit College at Würzburg. In 1715 he entered the seminary of the latter city and in

1721 was ordained priest. Christopher von Hutten, Prince-Bishop of Würzburg, sent him, in 1725, to Rome to study ecclesiastical law under Prosper Lambertini, later Pope Benedict XIV. Barthel returned as *Doctor Utriusque Juris*, in 1727, to Würzburg, where he became president of the seminary and (1728) professor of canon law at the university. Other ecclesiastical and academical honours, among them the vice-chancellorship of the university (1754) were conferred upon him. He took an active part in settling the controversy occasioned by the erection of the new Diocese of Fulda (1752). His chief importance, however, lies in his career as a teacher. His work in that line was appreciated by both Catholics and Protestants, and his lectures were circulated at various schools. He broke with the traditional method in canonical science, being one of the first to adopt the historico-critical treatment in Germany. His efforts to distinguish between the essentials and nonessentials in Catholic doctrines, and his attribution of excessive power to the State in its relations with the Church caused his opinions to be denounced at Rome as unorthodox. In his "promemoria" (1751) he submitted his views and method to his former teacher, Benedict XIV, and obtained a favourable decision. His works, apart from what was written in the Fulda controversy, as "De Pallio" (1753), deal principally with the relations between Church and State, especially in Germany. Several of them are found in the "Opuscula juridica varii argumenti" (Würzburg, 1765, 1771).

N. A. WEBER.

Barthélemy, JEAN-JACQUES, a celebrated French numismatologist and writer, b. at Vassis (Provence), 1716; d. in Paris, 1795. He began his classical studies at the College of the Oratory in Marseilles, took up philosophy and theology at the Jesuits' college, and finally attended the seminary of the Lazarists, where he devoted most of his time to Oriental languages. He soon became renowned for his scholarship and earnestness in learned researches, in which he rivalled the Humanists of the Renaissance. Having completed his course, he received the tonsure and wore the ecclesiastical habit without taking Holy orders. For several years he lived in his lonely residence at Aubagne, near Marseilles, devoting himself entirely to numismatics, under the direction of his friend, M. Cary of Marseilles. In 1744, he went to Paris and became secretary to M. de Boze, keeper of the medals at the King's Library, and three years later he was elected to the Academy of Inscriptions and Belles-Lettres. In 1753, he succeeded M. de Boze and remained in this position until the Revolution, during his term nearly doubling the collection.

In 1754, he was sent to Italy on a scientific mission. On his way, he gathered a large number of medals, and conceived the idea of the book which made his name famous, "Voyage du Jeune Anacharsis en Grèce vers le milieu du IV<sup>e</sup> siècle avant l'ère vulgaire". This book, begun in 1756, was not finished until 1788, and was a description of ancient Greece, of Hellenic civilization, institutions, arts, history, philosophy, and literature, appealing to every class by reason of its charming narratives and vivid pictures. In successive reprints and English translations (London, 1790, 1800), it still finds readers. Recent archaeological discoveries have shown some of the statements to be erroneous, but on the whole, the book remains a very successful attempt to diffuse a correct knowledge of Greek manners and customs. From the time of Barthélemy's journey through Italy,

the Duke of Choiseul had been his patron and had given him many pensions and benefices. After the fall of his friend (1770), Barthélemy followed him into exile at Chanteloup, near Amboise, where unlike the *abbés de cour* he was busily engaged in polishing his elaborate literary productions. He was elected to the French Academy in 1789. During the Revolution, he was arrested (September, 1793) and confined in a prison for a few days. On his release, he declined to resume his functions as keeper of the medals, and having been despoiled of his fortune by the Revolution died in poverty. Besides the "*Voyage du jeune Anacharsis*", Barthélemy has left a number of essays on Oriental languages and archaeology, originally read before the Academy of Inscriptions and Belles-Lettres; "*Les amours de Caryte et de Polydore*", a novel illustrating ancient manners; "*Un voyage en Italie*"; and "*Mémoires*" of his life. His works were edited by Villenave (1821).

LOUIS N. DELAMARRE.

**Bartholi**, FRANCESCO DELLA ROSSA, Friar Minor and chronicler, died c. 1272. Little is known of his life save what may be gathered from his own writings. A native of Assisi, he is found in 1312 as a student in Perugia, and in 1316 at Cologne, whence he returned to Umbria bearing many relics, including those of St. Louis, King of France, given him by the latter's daughter, Princess Blanche, who had become a Poor Clare. In 1320 and in 1326, he was lector of theology at the Porziuncula, in 1332 guardian at S. Damiano and in 1334 he was at the Sacro Convento. He appears to have lived to a great age. He was acquainted with Marinus of Assisi, Blessed John of La Verna, Alvarus Pelagius and other well-known Franciscans. Whether he is to be identified with the Francesco Rubea who is mentioned among the partisans of Michael de Cesena or with the Franciscus de Assisio who was long imprisoned at Florence on a charge of heresy is a matter of conjecture. Although Bartholi wrote several works including a history of the Passion, he is best known for his "*Tractatus de Indulgentiâ Sanctæ Mariæ de Portiuncula*" composed about 1335. He spent many of his later years in retouching and completing this treatise, which is of great importance for the history of the origin and evolution of the Indulgence, in so far as it comprises a complete collection of the ecclesiastical information and popular legends then obtainable on the subject. It was first published by Paul Sabatier with a wealth of critical apparatus in the "*Collection d'Études*" (Paris, 1900, Vol. II). (See PORTIUNCULA.)

WADDING, *Script. Ord. Min.* (1650), 114; SBARALEA, *Supplementum* (1806), 246; MAZZUCHELLI, *Scrittori d'Italia* (1758), II, 1, 441-442; NARDUCCI, *Giunte al Mazzuchelli* (1884), 60; FALOCI in *Msell. Francescana* (1887), II, 149-153; VAN ORTROY in *Analect. Bolland.* (1902), LXXI, 372-380.

PASCAL ROBINSON.

**Bartholomæus a Martyribus.** See BARTHOLOMEW OF BRAGA.

**Bartholomæus Anglicus**, Franciscan encyclopedist of the thirteenth century. An Englishman by birth he had been professor of theology at the University of Paris, when, in 1224 or 1225, he entered the newly established Order of St. Francis in company with his countryman and fellow-professor of theology, Haymo of Faversham, and two other professors of the same faculty. He continued his lectures in the claustral school till 1231, when he was sent to Magdeburg in Germany. He was succeeded by his illustrious countryman Alexander of Hales (q. v.) who, by being a member of the university, raised the private school of the Franciscans to the dignity of a school of

the university. The date of Bartholomæus's death is unknown. He was formerly identified with a later Franciscan and Englishman, Bartholomæus of Glanvilla, or Glanvilla, who died about 1360, and to him the famous work "*De proprietatibus rerum*" was ascribed. Recent researches place beyond doubt that the two men must be distinguished and that the authorship of the work in question must be attributed to the Magdeburg professor of 1231.

"*De proprietatibus rerum*" is an encyclopedia of all the sciences of that time: theology, philosophy, medicine, astronomy, chronology, zoology, botany, geography, mineralogy, are the subjects treated in the nineteen books of this work. We have in it the first important encyclopedia of the Middle Ages and the first in which the works of Greek, Arabian, and Jewish naturalists and medical writers, which had been translated into Latin shortly before, were laid under contribution. Aristotle, Hippocrates, Theophrastus, the Jew Isaac Medicus, the Arabian Haly, and other celebrities are quoted. To Bartholomæus must be given that honour which has been accorded until recently to the Dominican, Vincent of Beauvais, whose work exceeds by ten times the 400-page folio volume of Bartholomæus. Like the latter "*Speculum universale*" of Vincent, the "*De proprietatibus rerum*" enjoyed unbounded popularity. Witness to this are the many manuscripts and editions. There is hardly a large library in Europe which has not manuscript copies of it, the National Library at Paris possessing as many as eighteen. Very many editions appeared in print, at least fourteen before the year 1500, and one as late as 1601 at Frankfurt. By being translated and thus made accessible to the laity, the encyclopedia of Bartholomæus exercised a greater influence on medieval thought than that of Vincent. Of the latter's work only the "*Speculum historiale*" was translated, but Bartholomæus's work went through eight editions in French, two in Belgian, one in English, and one in Spanish prior to 1500. The work of Bartholomæus, though not fulfilling modern requirements of natural sciences, remains a valuable source of information to the student of medieval times.

DELISLE in *Histoire litt. de la France* (Paris, 1888), XXX, 352 sqq.; FELDER, *Geschichte der Studien im Franziskanerorden* (Freiburg, 1904), 248, 396 sqq.

JOHN M. LENHART.

**Bartholomew**, SAINT, one of the Twelve Apostles, mentioned sixth in the three Gospels lists (Matt. x, 3; Mark, iii, 18; Luke, vi, 14), and seventh in the list of Acts (i, 13). The name (*Βαρθολομαῖος*) means "son of Talmi" (or Tholmai), which was an ancient Hebrew name, borne, e. g. by the King of Gessur whose daughter was a wife of David (II Kings, iii, 3). It shows, at least, that Bartholomew was of Hebrew descent; it may have been his genuine proper name or simply added to distinguish him as the son of Talmi. Outside the instances referred to, no other mention of the name occurs in the New Testament. Nothing further is known of him for certain. Many scholars, however, identify him with Nathanael (John, i, 45-51; xxi, 2). The reasons for this are that Bartholomew is not the proper name of the Apostle; that the name never occurs in the Fourth Gospel, while Nathanael is not mentioned in the synoptists; that Bartholomew's name is coupled with Philip's in the lists of Matthew and Luke, and found next to it in Mark, which agrees well with the fact shown by St. John that Philip was an old friend of Nathanael's and brought him to Jesus; that the call of Nathanael, mentioned with the call of several Apostles, seems to mark him for the apostolate, especially since the rather full and beautiful narrative leads one to expect some important development; that Nathanael was of Galilee where Jesus found most; not all, of the Twelve; finally, that on the occasion of the appeal

ance of the risen Saviour on the shore of the Sea of Tiberias, Nathanael is found present, together with several Apostles who are named and two unnamed Disciples who were, almost certainly, likewise Apostles (the word "apostle" not occurring in the Fourth Gospel and "disciple" of Jesus ordinarily meaning Apostle) and so, presumably, was one of the Twelve. This chain of circumstantial evidence is ingenious and pretty strong; the weak link is that, after all, Nathanael may have been another personage in whom, for some reason, the author of the Fourth Gospel may have been particularly interested, as he was in Nicodemus, who is likewise not named in the synoptists. (See NATHANAEL.)

No mention of St. Bartholomew occurs in ecclesiastical literature before Eusebius, who mentions that Pantænus, the master of Origen, while evangelizing India, was told that the Apostle had preached there before him and had given to his converts the Gospel of St. Matthew written in Hebrew, which was still treasured by the Church. "India" was a name covering a very wide area, including even Arabia Felix. Other traditions represent St. Bartholomew as preaching in Mesopotamia, Persia, Egypt, Armenia, Lycaonia, Phrygia, and on the shores of the Black Sea; one legend, it is interesting to note, identifies him with Nathanael. The manner of his death, said to have occurred at Albanopolis in Armenia, is equally uncertain; according to some, he was beheaded, according to others, flayed alive and crucified, head downward, by order of Astyages, for having converted his brother, Polymius, King of Armenia. On account of this latter legend, he is often represented in art (e. g. in Michelangelo's Last Judgment) as flayed and holding in his hand his own skin. His relics are thought by some to be preserved in the church of St. Bartholomew-in-the-Island, at Rome. His feast is celebrated on 24 August. An apocryphal gospel of Bartholomew existed in the early ages.

LE CAMUS, *Vie de Notre-Seigneur* (tr. New York, 1906), I; IDEM in *Vig. Dict. de la Bible*, where references are given for the sources of the traditions; FOUARD, *Life of Christ* (New York, 1891).

JOHN F. FENLON.

**Bartholomew**, Apostle of Armenia, also called Bartholomæus Parvus (the Little), b. at Bologna, year not known; d. 15 August, 1333. Nothing certain has been preserved as to his family. At the end of the thirteenth century, while still young, he entered the Dominican Order, made his studies in the monastery of his native town, and soon became noted as a capable theologian and a preacher zealous for souls. Pope John XXII cherished a great desire not only to keep the Catholic Armenians in connexion with the Roman See, but also to lead the schismatic part of this people into unity with the Church; for this reason he supported and encouraged the Dominican missions in the regions inhabited by Armenians. Bartholomew was selected to be the head and leader of a little band of Dominican missionaries whom John XXII sent to Armenia. He was consecrated bishop and received as his see the city of Maragha, lying east of Lake Urumiah. Accompanied by several companions the new missionary bishop arrived (1318-20) in the territory assigned to him. He studied the Armenian language, built a monastery for his brethren of the order, and with the aid of these began his apostolic labours. He met with such success that large numbers of heathen and Mohammedans were converted and many schismatic Armenians were brought into Catholic unity. The zealous bishop gave great care to this latter part of his missionary labours, as he found many Armenians favourably disposed to union. Bartholomew's reputation for saintliness and learning spread rapidly into distant regions and came to the knowledge of a group of Armenian monks who were striving after a higher degree of perfection and the attainment of Church unity. The

leader of these monks was the learned John of Kherna (Kherni), the head of a monastery near Kherna in the district of Erechtschag (now Alenja), not far from Nachidjewan. John was a pupil of the celebrated theologian Isaia, whose school had produced 370 doctors of theology (*Vartabed*). In 1328 John of Kherna sought out Bishop Bartholomew, remained with him a year and a half and became a warm advocate of union with the Roman Church. He sent an invitation to a conference, drawn up by the zealous missionary, to his former fellow-students, and Bartholomew went with him to Kherna, where the conference was held. The result was that a large number of learned monks joined John of Kherna in submitting to the authority of the Holy See. In order to promote union and raise religious life John founded in 1330, with the consent of Bartholomew, a religious congregation called the "Uniates (Unitores) of St. Gregory the Illuminator", which was later incorporated with the Dominicans. About this time Bartholomew seems to have substituted Nachidjewan for Maragha as his see. This brought him nearer to the centre of Armenia, so that he was able to work more efficiently for the development of the union. He translated a number of works into the Armenian language, as: the Psalter, treatises of St. Augustine, the "Summa contra Gentiles" of St. Thomas, and a part of the Summa theologia; he also wrote several original works, especially a work on casuistry and a treatise on the sacraments.

J. P. KIRSCH.

**Bartholomew**, GOSPEL OF. See APOCRYPHA.

**Bartholomew of Braga**, VENERABLE, b. at Verdela, near Lisbon, May, 1514; d. at Viana, 16 July, 1590. Bartholomew Fernandez, later known as Martyribus, out of veneration for the church in which he was baptized, came of humble parentage. He entered the Dominican Order, 11 November, 1527, and was professed 20 November, 1529. On the completion of his studies, he taught philosophy in the monastery at Lisbon, and then for about twenty years theology in various houses of his order. In 1551 he received the Master's degree at the provincial chapter of Salamanca. While teaching theology in the monastery of Batalha, he was summoned to Evora by the Infante Dom Luis to undertake the religious education of his son, Dom Antonio, who was entering the ecclesiastical state. He devoted two years to this task. In 1558, against his own desires, and only out of obedience to his provincial, Luis of Granada, he accepted the appointment to the archiepiscopal See of Braga, for which he had been chosen by Queen Catherine, and in 1559 received episcopal consecration. With true apostolic zeal he devoted himself to the duties of his new office.

On the resumption of the General Council of Trent in 1561, Bartholomew repaired to the council and took part in the last sessions. He was highly esteemed among the Fathers of the council both on account of his theological learning and the holiness of his life, and he exercised great influence in the discussions, particularly those with regard to the decrees on the reform of ecclesiastical life. On the conclusion of the council he returned, in February, 1564, to his see, and in 1566 held an important provincial synod in which excellent decrees were passed for the restoration of ecclesiastical discipline and the elevation of the moral life of clergy and people (*Concilium provinciale Bracaraense quartum*).

Braga, 1567). The archbishop now devoted himself most zealously to the task of carrying out the reforms of the Council of Trent as well as the decrees of his own provincial synod. A great famine and a visitation of the plague revealed the depths of his charity. After repeated requests, having received, on 20 February, 1582, permission to resign his see, he withdrew to the monastery of his order at Viana, to prepare in solitude for the end.

In 1845 Gregory XVI declared him Venerable. In the interests of a truly Christian life and the promotion of ecclesiastical discipline, he wrote: "Compendium spiritualis doctrinæ ex variis sanct. Patrum sententiis magna ex parte collectum" (Lisbon, 1582); "Stimulus pastorum ex gravissimis sanct. Patrum sententiis concinnatus, in quo agitur de vitâ et moribus episcoporum aliorumque prælatorum" (Rome, 1564; published at the instance of St. Charles Borromeo); "Catechismo ou Doutrina christiana" (Lisbon, 1562). All these writings have been frequently republished and translated into several languages. A collective edition is: "Opera omnia curâ et studio Malachiæ d'Inguibert, archiep. Theodos." (1 vol. fol. in 2 parts, Rome, 1734-35).

QUÉTIÉ-ÉCHARD, *Script. ord. Præd.* (Paris, 1721), II, 296; MUÑOZ, *Vida de Fra Bartholomé de los Martyres* (Madrid, 1645); DE SACY, *La vie de Dom Barthélémy des Martyrs* (Paris, 1663). There is a detailed biography in the introduction to the above-mentioned collective edition of his works. For his beatification, *Romana seu Bracharen. beatificationis et canonisationis Barth. de Martyribus positio super virtutibus* (3 vols. fol., Rome, 1819-44).

J. P. KIRSCH.

**Bartholomew of Bragança**, b. about 1200; d. 1 July, 1271. He made his studies at Padua, receiving there the habit of the Dominican Order from the hands of St. Dominic. According to Leander, author of the oldest life of Bartholomew, he was made master of the sacred palace in 1235, during the pontificate of Gregory IX; but there is no mention of this event in his last testament, where he expressly states the important positions held by him. He was appointed to the See of Nemonicum, in Cyprus, 1248; what city this was is not now known. While King Louis of France was engaged upon his expedition against the Infidel, Bartholomew joined the king and queen at Joppa, Sidon, and Acre, in the character of Apostolic legate, according to some writers, his own account merely stating that he visited the king and queen at these places. King Louis desired him to make a visit to France, promising rich relics for his church, should he comply with the request. To ensure the presence of so distinguished a prelate at his own court, Alexander IV made him Bishop of Vicenza, in 1250, and during his tenure of that see he was subject to the tyranny of Ezzelino, a notorious enemy of religion. This persecution, however, served to bring out the true qualities of pastor which Bartholomew possessed in a high degree. It has been said that he was named Patriarch of Jerusalem, but this is doubtful, his testament being silent on this point also. In 1254, he was sent as legate to the courts of England and France and as Henry III was, at this time, in Aquitaine, thither Bartholomew betook himself, towards the close of that year, accompanying the English king and queen to Paris. He was, on this occasion, presented by the King of France with a relic of the true Cross and a thorn from Our Saviour's Crown. These he afterwards placed in the beautiful Dominican Church, built by him, at Vicenza and known as the Church of the Crown. He was venerated by the people and, according to the Bollandists, has always been honoured with the title of Blessed. He wrote commentaries on Scripture, was the reputed author of a commentary on the "Hierarchy" of St. Dionysius the Areopagite, of two volumes of sermons, and some smaller works. *Acts SS.*, July, I, 246 sqq.; also May, VII, 692.

WILLIAM DEVLIN.

**Bartholomew of Brescia**, an Italian canonist, b. probably in the second half of the twelfth century at Brescia; d. 1258. He studied Roman and ecclesiastical law at Bologna, where he himself became a teacher. It is believed that he was murdered, when Ezzelino, the leader of the Ghibellines, captured Brescia (1258). His literary work consisted almost entirely in the revision of the productions of other writers. His "Brocarda", or Canonical Rules (Lyons, 1519), were a working-over of those of Damasus (twelfth and thirteenth centuries); his "Casus decretorum" were a revision of the "Casus" of Benencasa (d. c. 1206); the "Historiæ super libro Decretorum" reproduced the work of an unknown author. Both his "Casus" and "Historiæ" derive their importance from their incorporation into the Paris edition (1505) of Gratian's "Decretum". The "Ordo Judiciarum" of Tancred (d. c. 1235) was also revised by Bartholomew. More important than the preceding works was his "Glossa Ordinaria" to the "Decretum" of Gratian, a correction of the "Glossa", or "Apparatus", of Johannes Teutonicus (thirteenth century). His only certain independent work was the "Questiones dominicales et venerales", lectures delivered on Sundays and Fridays.

N. A. WEBER.

**Bartholomew of Cattanza**. See CARRANZA, BARTOLOMEO.

**Bartholomew of Edessa**, Syrian apologist and polemical writer. The place of his birth is not known, it was probably Edessa or some neighbouring town, for he was certainly a monk of that city, and in his refutation of Agarenius, he calls himself several times "the monk of Edessa". The time in which he flourished is also doubtful; it is certain, however, that it was after the Mohammedan conquest of Syria, and the controversy concerning the sacred images which began in 725. There is a work of his written in Greek, which he directed against one Agarenius, a Mohammedan. The beginning of the refutation is lost; the title as given by Le Moyne (*Varia Sacra*, Leyden, 1685), is "Elenchus et Confutatio Agareni". This work may be read in the Migne collection, P. G., CVI, 1381-1448. This treatise, as it now stands, opens with a statement of the objections of Mohammedans against Christianity, among which are the dogmas of the Blessed Trinity, of the Incarnation, and of Confession. Bartholomew then gives his answers, and makes many counter-charges against Mohammed and his so-called Revelation.

The main lines of argumentation are taken from the life of the prophet himself. Bartholomew shows that nothing either in his parentage, education, or life betrays any God-given mission. From this he concludes that Mohammed was an impostor, preaching without any Divine credentials. Bartholomew is well acquainted not only with the Christian position which he defends, but also with the position of his adversaries; he knows the customs, practices, and beliefs of the Arabs, and he boasts that he has read all of their books. A second treatise "Contra Muhammedum" is also printed in Migne (loc. cit., 1448-58) under the name of Bartholomew of Edessa; but, in spite of the numerous resemblances, explainable otherwise than by identity of authorship, the differences are of such a nature as to make the ascription of it to Bartholomew unjustified. Such are e. g. the names and the number of Mohammed's wives and children; the editor of the Koran; the Nestorian monk who taught Mohammed Christianity, etc.

R. BUTIN.

**Bartholomew of Lucca** (or DE FIADONIBUS, sometimes abbreviated PROLOMEO or TOLOMEO), historian, b. about 1227 at Lucca; d. about 1327. At an early age he entered the Dominican Order. He was distinguished for piety, and his intense application to study, for which reasons he won the respect and warm friendship of St. Thomas Aquinas. He was not only his disciple, but also his confidant and confessor (Ptolom., H. E., XXIII, viii). In 1272 he accompanied St. Thomas from Rome to Naples where he still was in 1274, when the news of his master's death at Fossa Nuova reached him. He was elected prior of the convent of his native city in 1288. At Naples (1294), he took an active part in the public demonstration which was made to prevent Pope Celestine V from resigning. In 1301 he was elected Prior of Santa Maria Novella at Florence. Later he removed to Avignon where he was chaplain for nine years (1309-18) to Cardinal Patrasso, Bishop of Albano, and after the Cardinal's death in 1311 to his fellow-religious Cardinal William of Bayonne. Echard affirms that he was the close friend and often the confessor of John XXII, who appointed him Bishop of Torcello, March 15, 1318. A conflict with the Patriarch of Grado concerning the appointment of an abbot of St. Anthony's at Torcello led to his excommunication in 1321, and exile. In 1323 he made peace with the patriarch, returned to his see, and died there in 1327.

The best-known work of Bartholomew is his "Annales" (1061-1303), finished about 1307, wherein are recorded in terse sentences the chief events of this period. (Muratori, *Rer. Ital. Script.*, XI, 1249 sqq.; or in the better edition of C. Minutoli, "Documenti di Storia Italiana", Florence, 1876, VI, 35 sqq.). His "Historia Ecclesiastica Nova" in twenty-four books relates the history of the Church from the birth of Christ till 1294; considering as appendixes the lives of Boniface VIII, Benedict XI, and Clement V, it reaches to 1314 (Muratori, loc. cit., XI, 751 sqq.; the life of Clement V is in Baluze, "Vitæ pap. Aven.", 23 sqq.). He also wrote a "Historia Tripartita" known only from his own references and citations. The "Extracta de chronico Fr. Ptolomæi de Luca" and the "Excerpta ex chronicis Fr. Ptolomæi" are no longer considered original works by separate authors, but are extracts from the "Historia Ecclesiastica Nova" by some unknown compiler who lived after the death of Bartholomew. He is also well known for his completion of the "De Regimine Principum," which St. Thomas Aquinas had been unable to finish before his death. This was no small task, for the share of Bartholomew begins with the sixth chapter of the second book and includes the third and fourth books (vol. XVI, in the Parma, 1865, edition of St. Thomas). Though he does not follow the order of the saint, yet his treatment is clear and logical. A work on the "Hexameron" by him was published by Masetti in 1880. With a few exceptions, the writings of Bartholomew have always been held in high esteem. He showed great care in verifying his statements. The lives of the Avignon popes were written from original documents under his hands and were controlled by the statements of eye-witnesses. His acceptance of fables now exploded, e. g. the Popess Joan, must be attributed to the uncritical temper of his time.

THOMAS M. SCHWERTNER.

**Bartholomew of Pisa**, Friar Minor and chronicler. The fact that there were two Friars Minor

named Bartholomew living in Pisa at the same time has caused considerable confusion, and most recent writers, following Marianus of Florence, Mark of Lisbon, and Wadding, have fallen into the error of attributing to Bartholomew Albisi the famous "Book of Conformities", which was really written by Bartholomew Rinonico. The latter, with whom we are here concerned, was a Pisan of noble family. In 1352 he was a student at Bologna and later filled the office of Lector there as well as at Padua, Pisa, Sienna, and Florence. He also preached for many years with great success in different Italian cities. He died about 1401, renowned no less for sanctity than for learning, and is commemorated in the Franciscan Martyrology on 4 November.

Bartholomew's chief title to fame rests upon his remarkable book, "De Conformitate Vitæ B. P. Francisci ad Vitam Domini Nostri Jesu Christi", begun in 1385 and formally approved by the general chapter held at Assisi in 1399. Enthusiastically received on its appearance and long held in high esteem, this work became the object of bitter and stupid attacks on the part of Lutherans and Jansenists. Against it Erasmus Alber wrote the "Alcoranus Franciscanus" (Der Barfüsser Mönche Eulenspiegel und Alcoran mit einer Vorrede D. M. Luthers, 1531) in reply to which Henry Sedulius, O. F. M., published his "Apologeticus adversus Alcoranum Franciscanorum pro libro Conformitatum" (Antwerp, 1607). Subsequent writers on Franciscan history treated the Pisan's work with most unmerited ostracism; more recently it has come to be lauded in certain circles in terms which savour of exaggeration. Between these extreme views, the patient and discerning student will find the "Conformities" a book of very uneven value. The parallels between the lives of Our Lord and St. Francis which form its basis are sometimes forced, but nowhere does it make St. Francis the equal of Christ. Side by side with fantastic legends, ridiculous visions, and other absurdities, it contains much really credible and precious historical information, revealing besides a deep knowledge of Scripture and theology and a critical temper not usual at the time it was written. It is rightly considered a source of great importance for students of Franciscan history. It was first printed at Milan in 1510 and in 1513. The new edition published at Bologna in 1590 is mutilated and corrupted, especially in the historical parts, at almost every page. A sorely needed critical edition of the text has lately been published in tom. IV of the "Analecta Franciscana" (Quaracchi, 1906).

In addition to the "Conformities", Bartholomew left some thirty other works, including an exposition of the Rule of the Friars Minor found in the "Speculum" Morin (Rouen, 1509) and a book "De Vitâ B. Mariæ Virginis", published at Venice in 1596; his Lenten sermons were printed at Milan in 1498, Venice, 1503, and Lyons, 1519. Sbaralea and others have erroneously attributed to him the "Summa Casuum Conscientiæ", which is really the work of Bartholomew a S. Concordio of Pisa, O. P., and the "Vita B. Gerardi", which was written by Bartholomew Albisi mentioned above.

PASCHAL ROBINSON.

**Bartholomew of San Concordio** (also OF PISA), canonist, and man of letters, b. at San Concordio near Pisa about 1260; d. at Pisa, 11 June, 1347. He entered the Dominican Order in 1277, studied at Pisa, Bologna, and Paris, and taught at Lucca.

Florence, and Pisa. A preacher of renown, he was as learned as he was devout, as skilled in Latin and Tuscan poetry as he was versed in canon and civil law. His fame rests chiefly on his alphabetically arranged "Summa de Casibus Conscientie", variously called "Pisana", "Pisanella", "Bartholomæa", and "Magistrucchia". The idea if not the basis of this work was a "Summa Confessorum" by John Rumsik, O. P., Lector of Freiburg (d. 1314). Bartholomew's treatise was clear and concise, and it conformed to the newer laws and canons of his time. Evidently a highly useful digest, it was very popular and much used during the fourteenth and fifteenth centuries, and was among the first books undertaken by some of the earliest printers of Germany, France, and Italy. Nicholas of Osimo, O. M., added a supplement in 1444, which also appeared in many editions. Others likewise incorporated the work in later handbooks, notably James of Ascoli, O. M., 1464, and Ange de Clavasio, O. M., in his "Summa Angelica". Apart from several MSS. on moral and literary subjects, his works include "De documentis antiquorum", edited by Albertus Clarus, O. P. (Tarvisi, 1601) in 8vo. The same treatise in the vernacular, "Ammestraamenti degli antichi" (Florence, 1662), came to be regarded as a Tuscan classic.

JOHN R. VOLZ.

**Bartholomew's Day, MASSACRE OF.** See SAINT BARTHOLOMEW'S DAY.

**Bartholomites**, the name given to Armenian monks who sought refuge in Italy after the invasion of their country by the Sultan of Egypt in 1296. The first of their number landed at Genoa, where a church of St. Bartholomew was built for them, hence their name Bartholomites. Others soon followed this first band and were established in various Italian cities, in Parma, Sienna, Pisa, Florence, Civitavecchia, Rome, and Ancona. To these early foundations were afterwards added others at Milan, Naples, Perugia, Gubbio, Ferrara, Bologna, Padua, Rimini, Viterbo, etc.; in fact the Bartholomites were both numerous and prosperous. In the beginning they observed the Rule of St. Basil and the Armenian Liturgy, Clement V acknowledging their right thereto. But in time they abandoned their national traditions for the Roman Liturgy, adopted a habit resembling that of the Dominicans and finally replaced the Rule of St. Basil by that of St. Augustine. Innocent VI, who approved this change (1356), also confirmed the union of their monasteries into one congregation governed by a superior-general and a general chapter. The superiors-general were at first elected for life, but in 1474 Pope Sixtus IV caused them to be voted for every three years.

Boniface IX granted the congregation the privileges of the Order of St. Dominic and Innocent VIII and Paul III ratified the same; nevertheless the Bartholomites were prohibited from joining any other religious order except that of the Carthusians. Durazzo, their first cardinal protector, was appointed by Urban VIII in 1640, but they did not long enjoy this signal advantage. Their regular observance began to decline, their ranks were but meagrely recruited and most of their houses had to be closed till at length only four or five were left, in which about forty monks lived as best they could. There seemed to be no way of averting this decadence. Innocent X authorized the Bartholomites to enter other religious orders or else to secularize themselves, assuring each of them a pension. He suppressed their congregation and its houses and revenues were put to new uses. Among the most noted Bartholomites were: Father Martin, who conducted the first Armenian monks to

Genoa and was their superior; Father Anthony of Pisa, who was the first superior-general of their congregation; Esteban Palma, who four times held the office of general and laboured zealously for the reform of the congregation; Cherubini Cerebelloni of Genoa and Paul Costa of Milan, who were celebrated preachers and Scotti, Pori, Girolamo Cavalieri, J. B. Ladrani, and Gregorio Bitio who left literary works which were, however, soon forgotten. In their church at Genoa is still preserved the celebrated portrait of Christ known as the Holy Face of Edessa.

BRIOT, *Relazione del principio e stato della Religione de' Fr. di S. Basili degli armeni in Italia*; HÉLYOT, *Histoire des ordres monastiques*, I, 243-248.

J. M. BESSE.

**Bartoli, DANIELO**, a historian and *littérateur*, b. at Ferrara, 12 February, 1608; d. in Rome, 12 January, 1685. After a brilliant course of studies under the Jesuits, he entered the novitiate of San Andrea, Rome, in 1623, before the completion of his sixteenth year. The story of the labours and sufferings of the members of the Society of Jesus in the Indies and Japan awakened in the youthful religious an ardent desire to emulate the zeal and devotion of the missionaries. He asked to be sent on the foreign missions, but Father Mutius Vitelleschi, the General of the order, kept him in Italy. After some years of teaching, Father Bartoli began his apostolic career as a preacher, his sermons meeting with extraordinary success in Ferrara, his native place, Genoa, Lucca, Florence, and Rome. He was engaged in this fruitful ministry when the contemplation of the evils to youth, caused by the reading of romances, suggested one of his first books, "The Learned Man". This work was received with great applause and is said to have gone through eight editions in the first year of its publication; it was translated into French, German, and English.

The success of this venture decided the vocation of Father Bartoli as a writer. He was called to Rome by his superiors in 1650, and from that time until his death he published many works in history as well as in other departments of literature, all of them written in Italian. The best known and the most important is a history of the Society of Jesus, which appeared in Rome from 1650 to 1673, in six volumes folio, and was translated into Latin by Father Janin, S.J. Bartoli's works were collected and published in Florence in 1826, in 50 vols., 16mo. He is universally esteemed for his erudition, as well as for the purity and elegance of his style. His fellow-countrymen have honoured him with a place among the classical writers of the Italian language.

**Bartolocci, GIULIO**, a Cistercian monk and learned Hebrew scholar, b. at Celleno in the old kingdom of Naples, 1 April, 1613; d. at Rome, 19 October, 1687. He began his Hebrew studies under Giovanni Battista, a converted Jew, and in 1651 was appointed professor of Hebrew and rabbinical literature at the Collegium Neophytorum at Rome and Scriptor Hebraicus at the Vatican Library. It was here that he, with the assistance of Battista, collated the materials for his famous work "Bibliotheca Magna Rabbinica" which ap-

peared in four volumes during the years 1675-93. The last volume was published by his disciple, Carlo Giuseppe Imbonati, who also published a supplementary volume in 1694. This monumental work contains an account of Jewish literature and embodies, besides its numerous bibliographical and biographical data, a number of dissertations on Jewish customs, etc. Although it has been adjudged uncritical by Richard Simon, Bartolucci's work was adopted by Wolf as the basis of his own "*Bibliotheca Hebraica*". Bartolucci died as Abbot of the monastery of St. Sebastiani ad Catacumbas in Rome.

F. X. E. ALBERT.

**Bartolommeo**, FRA, an Italian painter and a member of the Dominican Order, b. in 1475 in the territory belonging to Florence; d. at Florence in 1517. He bore the worldly name of Bartolommeo di Pagholo del Fattorino and was called, more familiarly, Baccio della Porta, the nickname being a reference to the circumstances of his family. His work as a painter characterizes the transition of the Renaissance from its early period to the time of its greatest splendour. In 1484 he entered the studio of Cosimo Rosselli, one of whose pupils at the same time was a lad of about Bartolommeo's age, Mariotto Albertinelli. The friendship between Bartolommeo and the somewhat more worldly Albertinelli caused the two to form a business partnership in 1490 which lasted until 1512. At times the two friends were estranged on account of Bartolommeo's admiration for Savonarola.

Bartolommeo adopted Savonarola's theories concerning art, painted the reformer's picture a number of times and after Savonarola's tragic end (1498) entered the same order to which the reformer had belonged. Before this, though, he had painted the

ing, threw his secular and mythological designs into the bonfire.

For a number of years after his entrance (1500) into the Convent of San Marco he gave up his art, although he did not become a priest. However, he resumed his work, painting in the style of Angelico, which was in agreement with the spirit of Savonarola, and also in part in the style of Masaccio and Filippino. He had previously studied the Florentine art of the time with great care and painted, above all, in the manner of this school. The influence of Leonardo da Vinci, who worked at Florence, or near by, from 1501 to 1508, is also evident. The "*Last Judgment*" drew the attention of Raphael, who was eight years the younger of the two, to Bartolommeo. Bartolommeo had charge of the studio of San Marco when Raphael came to Florence. Raphael visited Bartolommeo and the acquaintance was productive of benefit to both. In 1508 Raphael went to Rome. In the same year a visit to Venice gave Bartolommeo a new stimulus. The influence of the rich colouring used by Bellini and Titian showed itself in the altar-piece (in the Museum at Lucca), which represents God the Father, with St. Catherine and Mary Magdalen in ecstasy. Some years later Bartolommeo went for a short time to Rome. Here he studied the works of Michelangelo in addition to those of Raphael. For a while he was in Lucca, but generally he worked at San Marco, where he finally died.

Fra Bartolommeo developed his undoubted talent for painting by the most diligent study. In his work depth of religious feeling and the dignity suitable to sacred subjects are happily united with the advance in the technic of art of his time. In perspective, characterization of his subject, drapery, colour, grouping, and rhythm of pose and movement Bartolommeo holds to the Cinquecento, while the impression made by his devotional pictures is in no way lowered by realism or by seeking after external effect. The works which he painted to sell are not so naive and unconscious as the Fiesole pictures, for Bartolommeo came more in contact with the world. The "*Vision of St. Bernard*" exhibits a shy, tender grace; the "*Marriage of St. Catherine*" (in the Pitti Palace, Florence) has more animation although filled with the mystic depths of religious feeling. Bartolommeo loved symmetry in the grouping, but he understood how to avoid monotony by varying the position of the body, the turn of the head, and by the use of other signs of movement as, for example, in the "*Mother of Mercy*" in the museum at Lucca. In an unfinished altar-piece a beauty of form expressive of the character of the personages is united to skilful variety and strict adherence to the subject. This altar-piece (in the Uffizi Palace, Florence) represents the patron saints of Florence with the Madonna and Child. St. Anna who is also portrayed is somewhat higher in position, while two angels sit at the foot of the altar and others are poised over the whole group.

The art with which Bartolommeo expressed the individuality of his subjects is still greatly admired in small frescoes which he produced, such as the "*Ecce Homo*" and representations of the Madonna with various saints. The heroic figure of St. Mark in the Pitti Palace, Florence, an imitation of the style of Michelangelo, is less striking in expression and pose than in the treatment of the drapery. A delightful simplicity and dignity characterize the painting of a Risen Christ blessing the world. The evangelists are with him and the world is seen as a landscape in a mirror held by two angels. Still more unassuming but yet more beautiful is a Madonna with St. Stephen and John the Baptist. Another canvas which is greatly admired is a "*Descent from the Cross*"; or, "*Lamentation over Christ*", in which the expression of suffering on the faces is most finely

THE DESCENT FROM THE CROSS (Pitti Gallery, Florence)

fresco of the Last Judgment, which is in the Church of Santa Maria Nuova, Florence. The upper part of the fresco depicts the Saviour, the Virgin Mary, and the Apostles; the figures while preserving their traditional dignity exhibit a striking freedom in the pose. The work also shows an entirely new perception of perspective. The lower half of the fresco, painted by Albertinelli, is also skilfully composed. At times, perhaps, a little more action would be preferable. Besides this work all that we have of Bartolommeo's first period are numerous carefully executed drawings which are in various collections. Savonarola made the same deep impression on Bartolommeo that he made on many other Florentine painters. According to Vasari, the artist, influenced by Savonarola's preach-

graded and so subdued that a heavenly peace illumines the group. Bartolommeo's masterpieces are to be found chiefly in Florence and Lucca.

G. GIETMANN.

**Bartolozzi**, FRANCESCO, an engraver, etcher, and painter, b. at Florence, 1727; d. at Lisbon, 1815. His father was a goldsmith of excellent family and early taught the use of the burin to his boy who, when ten years of age, engraved two heads which gave promise of his future powers. In the Florentine Academy he learned to work in oil, chalks, and aquarelle. Unsurpassed by any artist of his day in his knowledge of anatomy, and with a passion for the antique, young Bartolozzi became a master in depicting beauty of expression, movement, and form.

From 1745 until 1751 he studied with Wagner, the Venetian historical engraver. This apprenticeship ended, he married Lucia Ferro and the young pair, on Cardinal Bottari's invitation, went to Rome. Returning to Venice, his fame grew very rapidly, and in 1764, Dalton, King George III's librarian, took him to England, where he was appointed Engraver to the King, and, four years later, Royal Academician. In London he engraved over two thousand plates, nearly all in stipple or the "red-chalk style", a method recently invented by the French, but brought into vogue and elevated into a distinct art by Bartolozzi. He devoted himself to the human figure, and his engravings abound in sweet and tender types of beauty, graceful in form and outline. Everywhere are found delicate modulations of light and shade with a roundness, finish, and suggestion of flesh never before seen in engraved work.

Bartolozzi's drawing was superb; and although he was a reproductive artist he improved the work he copied, especially the drawing, even Sir Joshua Reynolds thanking him for such a service. His pupils called him the "god of drawing". His splendid line work was obscured by the great popularity attained by his stippled prints, and his few etchings show a free, bold, and unfettered sweep of line. They, too, were reproduced from pictures by others, but the translation always improved on the original. In 1802 Bartolozzi went to Lisbon, where he was knighted, and where he worked and taught until his death. He was buried in the church of Saint Isabella. Among Bartolozzi's best productions are the "Royal Academy Diploma", "The Marlborough Gems", the "Illustrations to Shakespeare", and some of his small "Tickets", all in stipple; and "The Silence" and "Clytie", engraved in pure line.

TURN, *Bartolozzi and His Works* (London, 1881), 2 vols.

LEIGH HUNT.

**Barton**, ELIZABETH, b. probably in 1506; executed at Tyburn, 20 April, 1534; called the "Nun of Kent". The career of this visionary, whose prophecies led to her execution under Henry VIII, has been the source of a historical controversy which resolves itself into the question: Was she gifted with supernatural knowledge or was she an impostor? In 1525, when nineteen years of age, being then employed as a domestic servant at Aldington, Kent, she had an illness, during which she fell into frequent trances and told "wondrously things done in other places whilst she was neither herself present nor yet heard no report thereof". From the first her utterances assumed a religious character and were "of marvellous holiness in rebuke of sin and vice". Her parish priest, Richard Masters, convinced of her sincerity, reported the matter to the Archbishop of Canterbury,

who sent a commission of three Canterbury Benedictines, Bocking, Hadleigh, and Barnes, two Franciscans, Hugh Rich and Richard Risby, a diocesan official, and the parish priest to examine her again. Shortly after this commission pronounced in her favour, her prediction that the Blessed Virgin would cure her at a certain chapel was fulfilled, when in presence of a large crowd she was restored to health. She then became a Benedictine nun, living near Canterbury, with a great reputation for holiness. Her fame gradually spread until she came into wide public notice. She protested "in the name and by the authority of God" against the king's projected divorce. To further her opposition, besides writing to the pope she had interviews with Fisher, Wolsey, and the king himself. Owing to her reputation for sanctity she proved one of the most formidable opponents of the royal divorce, so that in 1533 Cromwell took steps against her, and after examination by Cranmer she was in November, with Dr. Bocking, her confessor, and others, committed to the Tower. Subsequently all the prisoners were made to do public penance at St. Paul's and at Canterbury and to publish confessions of deception and fraud.

In January, 1534, a bill of attainder was framed against her and thirteen of her sympathizers, among whom were Fisher and More. Except the latter, whose name was withdrawn, all were condemned under this bill; seven including Bocking, Masters, Rich, Risby, and Elizabeth herself being sentenced to death, while Fisher and five others were condemned to imprisonment and forfeiture of goods. Elizabeth and her companions were executed at Tyburn on 20 April, 1534, when she is said to have repeated her confession. Protestant authors allege that these confessions alone are conclusive of her imposture, but Catholic writers, though they have felt free to hold divergent opinions about the nun, have pointed out the suggestive fact that all that is known as to these confessions emanates from Cromwell or his agents; that all available documents are on his side; that the confession issued as hers is on the face of it not her own composition; that she and her companions were never brought to trial, but were condemned and executed unheard; that there is contemporary evidence that the alleged confession was even then believed to be a forgery. For these reasons the matter cannot be considered as settled, and unfortunately the difficulty of arriving at any satisfactory and final decision now seems insuperable.

EDWIN BURTON.

**Baruch** (Heb. בְּרָכְיָה, *Bārākh*, blessed, Benedict; Sept. Βαρούχ), I. BĀRUCH, the disciple of Jeremias, and the traditional author of the deuterocanonical book, which bears his name. He was the son of Nerias (Jer., xxxii, 12, 16; xxxvi, 4, 8, 32; Bar., i, 1), and most probably the brother of Saraias, chief chamberlain to King Sedecias (Jer., xxxii, 12; li, 59; Bar., i, 1). After the Temple of Jerusalem had been plundered by Nabuchodonosor (599 B. C.), he wrote under the dictation of Jeremias the oracles of that great prophet, foretelling the return of the Babylonians, and read them at the risk of his life in the hearing of the Jewish people. He wrote also the second and enlarged edition of the prophecies of Jeremias after the first had been burned by the infuriated king, Joakim (Jer., xxxvi). Throughout his life he remained true to the teachings and ideals of the great prophet, although he seems at times to have given way to feelings of despondency, and perhaps even of personal ambition (cf. Jer., xlv). He was with Jeremias during the last siege of Jerusalem

and witnessed the purchase by the prophet of his ancestral estate in Anathoth (Jer., xxxii). After the fall of the Holy City and the ruin of the Temple (588 B. C.) Baruch lived probably for some time with Jeremias at Masphath. His enemies accused him of having prompted the prophet to advise the Jews to remain in Juda, instead of going down into Egypt, as they were contemplating. In consequence, he was carried, together with his master, to Egypt (Jer., xliii), where, according to a Hebrew tradition preserved by St. Jerome (In Isai., xxx, 6, 7), both died before Nabuchodonosor invaded that country. This tradition, however, conflicts with the data found in the opening chapter of the Prophecy of Baruch, wherein we are told of Baruch writing his book in Babylonia, reading it publicly in the fifth year after the burning of the Holy City, and apparently being sent to Jerusalem by the Jewish captives with sacred vessels and gifts destined to the sacrificial service in Yahweh's Temple. It conflicts likewise with various traditions, both Jewish and Christian, which perhaps contain some particles of truth, but which do not allow us to determine the date, place, or manner of Baruch's death, with anything like probability.

In the Catholic Bible "the Prophecy of Baruch" is made up of six chapters, the last of which bears the special title of an "Epistle of Jeremias", and does not belong to the book proper. The Prophecy opens with an historical introduction (i, 1-14), stating first (1-2) that the book was written by Baruch at Babylon in the fifth year after Jerusalem had been burned by the Chaldeans, and next (vv. 3-14) that it was read in an assembly of King Jechonias and other Babylonian exiles upon whom it produced the most beneficial effects. The first section in the body of the book (i, 15; iii, 8) contains a twofold confession of the sins which led to the exile (i, 15—ii, 5; ii, 6-13), together with a prayer that God may at length forgive His people (ii, 14; iii, 8). While the foregoing section has much in common with the Book of Daniel (Dan., ix, 4-19), Baruch's second section (iii, 9; iv, 4) closely resembles passages in Job, xxviii, xxxviii. It is a beautiful panegyric of that Divine Wisdom which is nowhere found except in the Law given to Israel; only in the guise of the Law has Wisdom appeared on the earth and become accessible to man; let, therefore, Israel prove faithful again to the Law. The last section of the Book of Baruch extends from iv, 5 to v, 9. It is made up of four odes, each beginning with the expression, "Take courage" (iv, 5, 21, 27, 30), and of a psalm closely connected with the eleventh of the apocryphal Psalms of Solomon (iv, 36; v, 9). Chapter vi contains as an appendix to the whole book "The Epistle of Jeremias", sent by that prophet "to them that were to be led away captives into Babylon" by Nabuchodonosor. Because of their sins they were to be removed to Babylon and to remain there "for a long time, even to seven generations". In that heathen city they would witness the gorgeous worship paid to "gods of gold, and of silver, and of stone, and of wood", but should not conform to it. All such gods, it is argued in various ways, are powerless and perishable works of man's hand; they can do neither harm nor good; so that they are not gods at all.

It is certain that this sixth chapter of Baruch is truly distinct from the rest of the work. Not only its special title, "The Epistle of Jeremias", but also its style and contents clearly prove that it is a writing wholly independent of the Prophecy of Baruch. Again, while some Greek MSS. that have Baruch have not the "Epistle", others, among the best, have it separate from the Book of Baruch and immediately before the Lamentations of Jeremias. The fact that the sixth chapter of Baruch bears the title, "The Epistle of Jeremias", has been, and is still in the eyes of many, a decisive reason for holding the

time-honoured view that that great prophet is its author. It is also urged that the vivid and accurate description of the splendid, but infamous, worship of the Babylonian gods in Baruch, vi, makes for the traditional authorship, since Jer., xiii, 5, 6, probably speaks of the twofold journey of Jeremias to the Euphrates. Finally it is affirmed that a certain number of Hebraisms can be traced back to a Hebrew original point in the same direction. Over against this traditional view, most contemporary critics argue that the Greek style of Baruch, vi, proves that it was originally written not in Hebrew, but in Greek, and that consequently Jeremias is not the author of the Epistle ascribed to him. For this and for other reasons suggested by the study of the contents of Baruch, vi, they think that St. Jerome was decidedly correct when he called this writing *Ψευδερ-γραφος*, that is, inscribed with a false name. However this may be, an impartial study of the Canon of Holy Writ proves that, despite the assertions of Protestants to the contrary, Baruch, vi, has always been recognized by the Church as an inspired work.

With regard to the original language of the Book of Baruch proper (chaps. i-v), a variety of opinions prevail among contemporary scholars. Naturally enough, those who simply abide by the title which ascribes the Book to Baruch, admit that the whole work was originally written in Hebrew. On the contrary, most of those who question or reject the correctness of that title think that this writing was totally, or at least partially, composed in Greek. It is indeed true that the Greek literary features of the various sections do not point back with equal force to a Hebrew original. Yet, it can hardly be doubted that the whole of Baruch proper in its extant Greek form looks like a translation. The linguistic evidence is also confirmed by the following considerations: (1) It is highly probable that Theodotion (end of the second century of our era) translated the Book of Baruch from a Hebrew original. (2) There are some marginal notes of the Syro-Hexaplar text stating that a few words in the Greek "are not found in the Hebrew". (3) Baruch, i, 14, says that the book was meant to be read publicly in the Temple; hence it must have been composed in Hebrew for that purpose. Besides this unity as regards its original language, Baruch presents a certain unity in point of subject-matter, so that most of those who maintain that the whole work was primitively written in Hebrew admit also its unity of composition. There are, however, in the Book of Baruch many traces of the compilatory process whereby its various parts were apparently brought together. The difference in literary form between i-iii, 8, on the one hand and iii, 9-5, is very great indeed, and, taken together with the abrupt manner in which the panegyric on Wisdom is introduced at iii, 9, suggests a difference with respect to origin. The two confessions of the sins which led to the exile in i, 15; iii, 8, are put side by side without any natural transition. The literary differences between iii, 9-iv, 4, and iv, 5-v, 9, are considerable, and the beginning of the third section at iv, 5, is no less abrupt than that of the second at iii, 9. Again, the historical introduction seems to have been composed as a preface to only i, 15—ii, 5. In view of these and other such facts, contemporary critics generally think that the work is the outcome of a compilatory process, and that its unity is due to the final editor, who put together the various documents which obviously bore upon the exile. Such a literary method of composition does not necessarily conflict with the traditional authorship of the Book of Baruch. Many of the sacred writers of the Bible were compilers, and Baruch may, and, according to the Catholic scholars who admit the compilatory character of the work inscribed to him, must, be numbered among them. The grounds of Catholics

for this view are chiefly three: (1) The book is ascribed to Baruch by its title; (2) it has always been regarded as Baruch's work by tradition; (3) its contents present nothing that would be later than Baruch's time, or that should be regarded as foreign to the style and manner of that faithful disciple and secretary of Jeremias. Over against this view, non-Catholics argue: (1) That its ultimate basis is simply the title of the book; (2) that this title itself is not in harmony with the historical and literary contents of the work; and (3) that those contents, when impartially examined, point to a much later compiler than Baruch; in fact some of them go so far as to ascribe the composition of the book to a writer living after A. D. 70. Catholics easily disprove this last date for the Book of Baruch; but they do not so easily dispose of the serious difficulties that have been raised against their own ascription of the whole work to Baruch. Their answers are considered as sufficient by Catholic scholars generally. Should any one, however, judge them inadequate, and therefore consider the Book of Baruch as the work of a later editor, the inspired character of the book would still remain, provided this later editor himself be regarded as inspired in his work of compilation. That the Book of Baruch is "a sacred and canonical" writing has been defined by the Council of Trent; that it has just as much right to be held "inspired of God" as any other book of Holy Writ can readily be shown by a close study of the Canon of the Bible. Its Latin rendering in our Vulgate goes back to the old Latin version anterior to St. Jerome, and is tolerably literal from the Greek text.

II. BARUCH, the son of Zachai, who helped to rebuild the wall of Jerusalem (II Esd., iii, 20).

III. BARUCH, a priest who signed the renewed Covenant after the Exile; perhaps the same as the foregoing (II Esd., x, 6).

IV. BARUCH, one of the children of Juda who settled in Jerusalem after the Captivity (II Esd., xi, 5).

NISM.

**Basil, LITURGY OF SAINT.**—Several Oriental liturgies, or at least several anaphoras, have been attributed to the great St. Basil, Bishop of Cæsarea in Cappadocia from 370 to 379. That St. Basil composed a liturgy, or rather reformed an existing liturgy, is beyond doubt, since besides the constant tradition of the Byzantine Church there are many testimonies in ancient writings to establish the fact. In a treatise on the tradition of the Divine Liturgy attributed to St. Proclus, Patriarch of Constantinople (434-466), it is stated that when St. Basil noticed the slothfulness and degeneracy of men, how they were wearied by the length of the liturgy, he shortened it in order to cure their sloth (P. G., LXV, 849). More certain testimony to the existence of a liturgical text which went under the name of St. Basil is given in a letter of Peter the Deacon, one of the Scythian monks sent to Rome to settle certain dogmatic questions. Writing about the year 520 to the African bishops in exile in Sardinia, Peter, an Oriental, mentions a Liturgy of St. Basil, which was known and used throughout the entire East, and even quotes a passage from it: "Hence, also, Blessed Basil, Bishop of Cæsaria, in a prayer of the holy altar, with which almost the entire East is familiar, says

II.—21

among other things: Grant us, O Lord, Thy strength and protection; make the evil good and preserve the just in their righteousness. For Thou canst do all things and there is no one who may oppose Thee; for when Thou desirest, Thou savest, and no one resist Thy will." (P. L., LXV, 449.)

Leonius of Byzantium, writing about the middle of the sixth century, censures Theodore of Mopsuestia because he was not content with the liturgies handed down by the Fathers to the churches, but composed a Mass of his own, showing, thereby, no reverence either for that of the Apostles, or for that composed in the same spirit by the great St. Basil (P. G., LXXXVI, 1368). The Quinisext, or Trullan Council (692), in its thirty-second canon draws an argument from the written liturgy of the archbishop of the church of the Cæsareans, St. Basil, whose glory has spread through the whole world (Mansi, Coll. Conc., XI, 958). Finally, in the Barberini library there is a manuscript of the latter part of the eighth, or the early part of the ninth, century which contains a Greek liturgy entitled the "Liturgy of St. Basil".

It is not known precisely just what the nature of the Basilian reform was, nor what liturgy served as the basis of the saint's work. Very probably he shortened and changed somewhat the liturgy of his own diocese, which was akin to the Liturgy of St. James. In later times it underwent some development, so that with our present knowledge of its history it would be almost impossible to reconstruct it as it came from the pen of the Bishop of Cæsarea. According to the tradition of the Greek Orthodox Church, their liturgy is practically the work of St. Basil, due allowance being made for changes and amelioration in the course of time. This is older than either of the other two Byzantine liturgies, and is mentioned under the name of St. Basil in ancient times as if it were then the normal liturgy. Of the anaphoras attributed to St. Basil the Syrian and Armenian are probably derived from the Byzantine Greek with some modifications. The Abyssinian is a translation of the Coptic, while the Coptic, Arabic, and Greek Egyptian liturgies are substantially the same. These Egyptian anaphoras of St. Basil are different from the Cæsarean or Byzantine liturgy, and do not possess all the characteristics of the Alexandrian Rite, but appear rather to be modelled on the Syrian type, so they are probably an importation into Egypt. The Greek Egyptian contains several prayers (identical with those in the Byzantine liturgy) expressly ascribed to St. Basil, and from these it may derive its title.

The Cæsarean or Byzantine Liturgy is used in the countries which were evangelized from Constantinople, or which came under its influence for any considerable period. It is used, for example, by the Orthodox and Uniat Greek churches in the Orient, as well as by the Greek communities in Italy and Sicily. Translated into the Old Slavonic it is used by Orthodox and Uniat Catholics in Russia and in some parts of the Austrian Empire; translated into Georgian and Rumanian it is used respectively in Georgia and Rumania. It has also been translated into several other languages and dialects for use in the Russian dependencies and where the Russian Church has missions, as well as into Arabic for use in Syria. Since the Liturgy of St. John Chrysostom has become the normal liturgy of the Greek Church, that of St. Basil is now used only on the Sundays of Lent with the exception of Palm Sunday, on Holy Thursday and Holy Saturday, on the vigils of Christmas and of the Epiphany, and on the feast of St. Basil, which in the Greek calendar occurs on the first day of January.

The liturgy may be divided into the Mass of the catechumens and the Mass of the faithful. The first

contains the prayers of the prothesis, of the antiphons, of the little entrance, and of the trisagion, the lessons, and the prayers of the ectenes and of the catechumens. The Mass of the faithful begins with the two prayers of the faithful, and contains the prayer of the great entrance, the prayer of the Offertory, which is expressly ascribed to St. Basil, the kiss of peace, the Creed, and the Anaphora. The Anaphora proper, starting with the Eucharistic Preface followed by the Sanctus, embraces the preparatory prayers for the Consecration, the Consecration itself, the Epiclesis or invocation of the Holy Ghost, the Great Intercession for the living and the dead, the Lord's Prayer, the inclination, Elevation, Communion, thanksgiving, and dismissal.

**Basil, RULE OF SAINT.**—I. Under the name of Basilians are included all the religious who follow the Rule of St. Basil. The monasteries of such religious have never possessed the hierarchical organization which ordinarily exists in the houses of an order properly so called. Only a few houses were formerly grouped into congregations or are today so combined. St. Basil drew up his Rule for the members of the monastery he founded about 356 on the banks of the Iris in Cappadocia. Before forming this community St. Basil visited Egypt, Palestine, Coele Syria, and Mesopotamia in order to see for himself the manner of life led by the monks in these countries. St. Gregory of Nazianzus, who shared the retreat, aided Basil by his advice and experience. The Rule of Basil is divided into two parts: the "Greater Monastic Rules" (*Regulæ fusius tractatæ*, Migne, P. G., XXXI, 889-1052), and the "Lesser Rules" (*Regulæ brevius tractatæ*, *ibid*, 1051-1306). Rufinus who translated them into Latin united the two into a single Rule under the name of "*Regulæ sancti Basilii episcopi Cappadociæ ad monachos*" (P. L., CIII, 483-554); this Rule was followed by some western monasteries. For a long time the Bishop of Cæsarea was wrongly held to be the author of a work on monasticism called "*Constitutiones monasticæ*" (P. G., XXXI, 1315-1428). In his Rule St. Basil follows a catechetical method; the disciple asks a question to which the master replies. He limits himself to laying down indisputable principles which will guide the superiors and monks in their conduct. He sends his monks to the Sacred Scriptures; in his eyes the Bible is the basis of all monastic legislation, the true Rule. The questions refer generally to the virtues which the monks should practise and the vices they should avoid. The greater number of the replies contain a verse or several verses of the Bible accompanied by a comment which defines the meaning. The most striking qualities of the Basilian Rule are its prudence and its wisdom. It leaves to the superiors the care of settling the many details of local, individual, and daily life; it does not determine the material exercise of the observance or the administrative regulations of the monastery. Poverty, obedience, renunciation, and self-abnegation are the virtues which St. Basil makes the foundation of the monastic life.

As he gave it, the Rule could not suffice for anyone who wished to organize a monastery, for it takes this work as an accomplished fact. The life of the Cappadocian monks could not be reconstructed from his references to the nature and number of the meals and to the garb of the inmates. The superiors

had for guide a tradition accepted by all the monks. This tradition was enriched as time went on by the decisions of councils, by the ordinances of the Emperors of Constantinople, and by the regulations of a number of revered abbots. Thus there arose a body of law by which the monasteries were regulated. Some of these laws were accepted by all, others were observed only by the houses of some one country, while there were regulations which applied only to certain communities. In this regard Oriental monasticism bears much resemblance to that of the West; a great variety of observances is noticeable. The existence of the Rule of St. Basil formed a principle of unity.

II. **THE MONASTERIES OF THE EAST.**—The monasteries of Cappadocia were the first to accept the Rule of St. Basil; it afterwards spread gradually to all the monasteries of the East. Those of Armenia, Chaldea, and of the Syrian countries in general preferred instead of the Rule of St. Basil those observances which were known among them as the Rule of St. Anthony. Neither the ecclesiastical nor the imperial authority was exerted to make conformity to the Basilian Rule universal. It is therefore impossible to tell the epoch at which it acquired the supremacy in the religious communities of the Greek world; but the date is probably an early one. The development of monasticism was, in short, the cause of its diffusion. Protected by the emperors and patriarchs the monasteries increased rapidly in number. In 536 the Diocese of Constantinople contained no less than sixty-eight, that of Chalcedon forty, and these numbers continually increased. Although monasticism was not able to spread in all parts of the empire with equal rapidity, yet what it probably must have been may be inferred from these figures. These monks took an active part in the ecclesiastical life of their time; they had a share in all the quarrels, both theological and other, and were associated with all the works of charity. Their monasteries were places of refuge for studious men. Many of the bishops and patriarchs were chosen from their ranks. Their history is interwoven, therefore, with that of the Oriental Churches. They gave to the preaching of the Gospel its greatest apostles. As a result monastic life gained a footing at the same time as Christianity among all the races won to the Faith. The position of the monks in the empire was one of great power, and their wealth helped to increase their influence. Thus their development ran a course parallel to that of their Western brethren. The monks, as a rule, followed the theological vicissitudes of the emperors and patriarchs, and they showed no notable independence except during the iconoclastic persecution; the stand they took in this aroused the anger of the imperial controversialists. The Faith had its martyrs among them; many of them were condemned to exile, and some took advantage of this condemnation to reorganize their religious life in Italy.

Of all the monasteries of this period the most celebrated was that of St. John the Baptist of Studium, founded at Constantinople in the fifth century. It acquired its fame in the time of the iconoclastic persecution while it was under the government of the saintly *Hegumenos* (abbot) Theodore, called the Studite. Nowhere did the heretical emperors meet with more courageous resistance. At the same time the monastery was an active centre of intellectual and artistic life and a model which exercised considerable influence on monastic observances in the East. Further details may be found in "*Prescriptio constitutionis monasterii Studii*" (Migne, P. G., XCIX, 1703-20), and the monastery's "*Canones de confessione et pro peccatis satisfactione*" (*ibid*, 1721-30). Theodore attributed the observances followed by his monks to his uncle, the saintly Abbot Plato,

who first introduced them in his monastery of Saccudium. The other monasteries, one after another, adopted them, and they are still followed by the monks of Mount Athos. The monastery of Mount Athos was founded towards the close of the tenth century through the aid of the Emperor Basil the Macedonian and became the largest and most celebrated of all the monasteries of the Orient; it is in reality a monastic province. The monastery of Mount Olympus in Bithynia should also be mentioned, although it was never as important as the other. The monastery of St. Catherine on Mount Sinai, which goes back to the early days of monasticism, had a great fame and is still occupied by monks. Reference to Oriental monks must here be limited to those who have left a mark upon ecclesiastical literature: Leontius of Byzantium (d. 543), author of a treatise against the Nestorians and Eutychians; St. Sophronius, Patriarch of Jerusalem, one of the most vigorous adversaries of the Monothelite heresy (P. G., LXXXVII, 3147-4014); St. Maximus the Confessor, Abbot of Chrysopolis (d. 662), the most brilliant representative of Byzantine monasticism in the seventh century; in his writings and letters St. Maximus steadily combated the partisans of the erroneous doctrines of Monothelitism (ibid, XC and XCI); St. John Damascene, who may perhaps be included among the Basilians; St. Theodore the Studite (d. 829), the defender of the veneration of sacred images; his works include theological, ascetic, hagiographical, liturgical, and historical writings (P. G., XCIX). The Byzantine monasteries furnish a long line of historians who were also monks: John Malalas, whose "Chronographia" (P. G., XCVII, 9-190) served as a model for Eastern chroniclers; Georgius Syncellus, who wrote a "Selected Chronographia"; his friend and disciple Theophanes (d. 817), Abbot of the "Great Field" near Cyzicus, the author of another "Chronographia" (P. G., CVIII); the Patriarch Nicephorus, who wrote (815-829) an historical "Breviarium" (a Byzantine history), and an "Abridged Chronographia" (P. G., C, 879-991); George the Monk, whose Chronicle stops at A. D. 842 (P. G., CX). There were, besides, a large number of monks, hagiographers, hymnologists, and poets who had a large share in the development of the Greek Liturgy. Among the authors of hymns may be mentioned: St. Maximus the Confessor; St. Theodore the Studite; St. Romanus the Melodist; St. Andrew of Crete; St. John Damascene; Cosmas of Jerusalem, and St. Joseph the Hymnographer. Fine penmanship and the copying of manuscripts were held in honour among the Basilians. Among the monasteries which excelled in the art of copying were the Studium, Mount Athos, the monastery of the Isle of Patmos and that of Rossano in Sicily; the tradition was continued later by the monastery of Grotta Ferrata near Rome. These monasteries, and others as well, were studios of religious art where the monks toiled to produce miniatures in the manuscripts, paintings, and goldsmith work. The triumph of orthodoxy over the iconoclastic heresy infused an extraordinary enthusiasm into this branch of their labours.

From the beginning the Oriental Churches often took their patriarchs and bishops from the monasteries. Later, when the secular clergy was recruited largely from among married men, this custom became almost universal, for, as the episcopal office could not be conferred upon men who were married, it developed, in a way, into a privilege of the religious who had taken the vow of celibacy. Owing to this the monks formed a class apart, corresponding to the upper clergy of the Western Churches; this gave and still gives a preponderating influence to the monasteries themselves. In some of them theological instruction is given both to clerics and to laymen. As long as

the spirit of proselytism existed in the East the monasteries furnished the Church with all its missionaries. The names of two have been inscribed by Rome in its calendar of annual feasts, namely, St. Cyril and St. Methodius, the Apostles of the Slavs. The Byzantine schism did not change sensibly the position of the Basilian monks and monasteries. Their sufferings arose through the Mohammedan conquest. To a large number of them this conquest brought complete ruin, especially to those monasteries in what is now Turkey in Asia and the region around Constantinople. In the East the convents for women adopted the Rule of St. Basil and had constitutions copied from those of the Basilian monks.

III. SCHISMATIC BASILIANS.—The two best known monasteries of the schismatic Basilians are those of Mount Athos and of Mount Sinai. Besides these there are still many monasteries in Turkey in Asia, of which 10 are in Jerusalem alone, 1 at Bethlehem, and 4 at Jericho. They are also numerous on the islands of the Ægean Sea: Chios 3, Samos 6, Crete about 50, Cyprus 11. In Old Cairo is the monastery of St. George. In Greece where there were formerly 400 monasteries, there were, in 1832, only 82, which by 1904 had increased to 169; 9 Basilian convents for women are now in existence in Greece. In Rumania there are 22 monasteries; in Servia 44, with only about 118 monks; in Bulgaria 78, with 193 inmates. Montenegro has 11 monasteries and about 15 monks; Bosnia 3 and Herzegovina 11. In Dalmatia are 11 monasteries and in Bukowina 3. Hungary has 25 monasteries and 5 branch houses. The schismatic monks are much more numerous in Russia; in this country, besides, they have the most influence and possess the richest monasteries. Nowhere else has the monastic life been so closely interwoven with the national existence. The most celebrated monasteries are Pescherskoi at Kieff and Troitsa at Moscow; mention may also be made of the monasteries of Solovetsk, Novgorod, Pskov, Tver, and Vladimir. Russia has about 9,000 monks and 429 monasteries. There is no diocese which has not at least one religious house. The monasteries are divided into those having state subventions and monasteries which do not receive such aid.

IV. CATHOLIC BASILIANS.—A certain number of Basilian monasteries were always in communion with the Holy See. Among these were the houses founded in Sicily and Italy. The monastery of Rossano, founded by St. Nilus the Younger, remained for a long time faithful to the best literary traditions of Constantinople. The monasteries of San Salvatore of Messina and San Salvatore of Otranto may be mentioned; the monastery of Grotta Ferrata was also celebrated. The emigration of the Greeks to the West after the fall of Constantinople and the union with Rome, concluded at the Council of Florence, gave a certain prestige to these communities. Cardinal Bessarion, who was Abbot of Grotta Ferrata, sought to stimulate the intellectual life of the Basilians by means of the literary treasures which their libraries contained.

A number of Catholic communities continued to exist in the East. The Holy See caused them to be united into congregations, namely: St. Saviour, founded in 1715, which includes 8 monasteries and 21 hospices with about 250 monks; the congregation of Aleppo with 4 monasteries and 2 hospices; that of the Baladites (Valadites) with 4 monasteries and 3 hospices. These last two congregations have their houses in the district of Mount Lebanon. St. Josephat and Father Rutski, who laboured to bring back the Ruthenian Churches into Catholic unity, reformed the Basilians of Lithuania. They began with the monastery of the Holy Trinity at Vilna (1607). The monastery of Byten, founded in 1613, was the citadel of the union in Lithuania. Other houses

adopted the reform or were founded by the reformed monks. On 19 July, 1617, the reformed monasteries were organized into a congregation under a proto-archimandrite, and known as the congregation of the Holy Trinity, or of Lithuania. The congregation increased with the growth of the union itself. The number of houses had risen to thirty at the time of the general chapter of 1636. After the Council of Zamosc the monasteries outside of Lithuania which had not joined the congregation of the Holy Trinity formed themselves into a congregation bearing the title of "Patrocinium [Protection] B. M. V." (1739). Benedict XIV desired (1744) to form one congregation out of these two, giving the new organization the name of the Ruthenian Order of St. Basil and dividing it into the two provinces of Lithuania and Courland. After the suppression of the Society of Jesus these religious took charge of the Jesuit colleges. The overthrow of Poland and the persecution instituted by the Russians against the Uniat Greeks was very unfavourable to the growth of the congregation, and the number of these Basilian monasteries greatly diminished. Leo XIII, by his Encyclical "Singulare præsidium" of 12 May, 1881, ordained a reform of the Ruthenian Basilians of Galicia. This reform began in the monastery of Dabromil; its members have gradually replaced the non-reformed in the monasteries of the region. They devote themselves, in connexion with the Uniat clergy, to the various labours of the apostolate which the moral condition of the different races in this district demands.

V. LATIN BASILIANS.—In the sixteenth century the Italian monasteries of this order were in the last stages of decay. Urged by Cardinal Sirlet Pope Gregory XIII ordained (1573) their union in a congregation under the control of a superior general. Use was made of the opportunity to separate the revenues of the abbeys from those of the monasteries. The houses of the Italian Basilians were divided into the three provinces of Sicily, Calabria, and Rome. Although the monks remained faithful in principle to the Greek Liturgy they showed an inclination towards the use of the Latin Liturgy; some monasteries have adopted the latter altogether. In Spain there was a Basilian congregation which had no traditional connexion with Oriental Basilians; the members followed the Latin Liturgy. Father Bernardo de la Cruz and the hermits of Santa María de Oviedo in the Diocese of Jaen formed the nucleus of the congregation. Pope Pius VI added them to the followers of St. Basil, and they were affiliated with the monastery of Grotta Ferrata (1561). The monasteries of Turdon and of Valle de Guillos, founded by Father Mateo de la Fuente, were for a time united with this congregation but they withdrew later in order to form a separate congregation (1603) which increased very little, having only four monasteries and a hospice at Seville. The other Basilians, who followed a less rigorous observance, showed more growth; their monasteries were formed into the two provinces of Castile and Andalusia. They were governed by a vicar general and were under the control, at least nominally, of a superior general of the order. Each of their provinces had its college or scholasticate at Salamanca and Seville. They did not abstain from wine. Like their brethren in Italy they wore a cowl similar to that of the Benedictines; this led to recriminations and processes, but they were authorized by Rome to continue the use of this attire. Several writers are to be found among them, as: Alfonso Clavel, the historiographer of the order; Diego Niceno, who has left sermons and ascetic writings; Luis de los Angeles, who issued a work on "Instructions for Novices" (Seville, 1615), and also translated into Spanish Cardinal Bessarion's exposition of the Rule of St. Basil; Felipe de la Cruz, who wrote a treatise

on money loaned at interest, that was published at Madrid in 1637, and one on tithes, published at Madrid in 1634. The Spanish Basilians were suppressed with the other orders in 1833 and have not been re-established. At Annonay in France a religious community of men was formed (1822) under the Rule of St. Basil, which has a branch at Toronto, Canada. (See BASILIANS, PRIESTS OF THE COMMUNITY OF ST. BASIL.)

**Basilians (PRIESTS OF THE COMMUNITY OF ST. BASIL).**—During the French Revolution, Mgr. d'Aviau, the last Archbishop of Vienne, saw his clergy diminish so rapidly through persecution, that only about one-third of them remained, with no recruits to replace them. It was impossible to maintain a college or a seminary, so in 1800 he founded a school in the almost inaccessible little village of St. Symphorien de Mahun, in the mountains of the Vivarais. This institution was placed in the charge of Father Lapiere, who had managed to take care of the parish of St. Symphorien during this period of persecution. His assistant was Father Marie Joseph Actorie, who had been professor of philosophy in the seminary of Die before the Revolution. In spite of its humble beginning and the many dangers to which it was exposed, the school prospered. In 1802, the state of the country had improved to such an extent that concealment was no longer necessary, and Father Picansel, parish priest of Annonay, and vicar general of the diocese, succeeded in obtaining from the municipal authorities of that town the lease of a former Franciscan monastery, to which the school was transferred. For many years the school performed the work which the bishop had expected from it, but the long fight against poverty and the persecution of so-called liberals threatened at last to be too much for those in charge. Some other method had to be tried, and in 1822, the professors asked to be permitted to found a religious community, with the college at Annonay for its mother-house. The Bishop of Viviers, in whose diocese the town of Annonay was included, granted the necessary permission, and appointed a commission to draw up a rule for the new society. On 21 November, 1822, the ten members who were at the time the teaching staff of the college, made the promise which bound them temporarily to the work. They were, Fathers Lapiere, Duret, Vallon, Polly, Tourvieille, Tracol, Martinèche, Fayolle, Payan, and Pages.

In 1837 a constitution was drawn up and sent to Rome for approval. By this the members of the society were to be bound by the simple vows of poverty, obedience, chastity, and stability. The vow of poverty, however, was limited. Each member of the community could retain all his own property and his Mass intentions, and was to receive a small salary from the community. By his vow he could not accumulate and increase his possessions, but had to spend all his salary and the annual income from his property, and this included the prohibition of speculation or any other worldly moneymaking. The community was to be under the direction of a superior general, residing at Annonay, in the Diocese of Viviers, France. The aim of the society was to be the education of Catholic youth, especially of such as intended to become priests. This constitution was

signed by several French bishops, all of whom had been able to appreciate the work done by the community, and to testify to the piety and zeal of its members. The Holy See was pleased to declare the society worthy of praise, and in 1863 Pius IX confirmed this decree, granting at the same time certain privileges and imposing certain restrictions on the possessions of the community. A few years ago, the constitutions were again sent to Rome, but the Holy See wished to make some changes in the administration of the community, and these are now being tested with a view to their final approval. When the recent decree banishing religious orders from France was put in force, the Basilians had colleges in Annonay, Périgueux, Aubenas, Privas, and Vernoux, in France; Blidah and Bone in Algiers; and Plymouth in England. All these, with the exception of the last, were transferred to seculars or confiscated,

the commercial, the classical, and the philosophical. Among the more prominent of those who made their studies, either partially or entirely, at St. Michael's were the Archbishop of Toronto and the Bishops of Hamilton, Peterborough, London, and Sault Ste. Marie in Canada, and Albany and Columbus in the United States.

The American Province includes four other colleges and numerous parishes. The colleges are Assumption College, Sandwich, Canada; St. Basil's College, Waco; St. Thomas's College, Houston, and St. Mary's Seminary, La Porte, in Texas. Of the parishes in charge of the Basilians, the most important are, St. Basil's and the Holy Rosary, Toronto, Sandwich, Amherstburg, and Owen Sound in Canada, and St. Anne's, Detroit. The novitiate of the community and the scholasticate are in Toronto. The novitiate lasts for one year, after which the members remain under

INTERIOR OF SANT' APOLLINARE NUOVO, RAVENNA

and the religious obliged to scatter until more favourable times.

In 1852, Mgr. de Charbonnel, Bishop of Toronto, Canada, requested the Basilians to found a college in his diocese. Accordingly, a small number were sent there, and opened a school which has developed into the present St. Michael's College, the headquarters of the Basilians in America. It was opened in a small house, but was soon moved to a wing of the bishop's palace which had been built for the purpose. In September, 1855, the cornerstone of the present building was laid. Since then various additions have been made, and the college is now able to accommodate a large number of students. The first superior was Father Soulerin, who managed the college from 1852 to 1865, when he was elected superior general of his community. St. Michael's is federated with the University of Toronto, its president is ex officio a member of the Senate of the university and of the university council, and it also appoints two other representatives to the senate. There are three courses of study open to its students,

temporal vows for three years. As no one can enter the society who does not intend to become a priest, the final vows are not taken until the subdiaconate, so that, if at the end of three years the scholastic is not ready for Holy orders, he renews his temporal vows. St. Basil's College, Waco, Texas, was founded in 1889. The course of studies includes both the commercial and classical departments. St. Thomas's College, Houston, Texas, was founded in 1900. It is a day school. St. Mary's Seminary, La Porte, Texas, was opened in October, 1901, by the Rt. Rev. N. A. Gallagher, Bishop of Galveston. Its primary object is the education of young men for the priesthood, but there is also maintained in connexion with the seminary a college in which boys and young men are prepared for any of the learned professions. It is under the direct supervision of the Bishop of Galveston.

J. C. PLOMER.

**Basilica** (σὸν βασιλική, or βασιλεὺς) signifies a kingly, and secondarily a beautiful, hall. The name

indicates the Eastern origin of the building, but it is in the West, above all in Rome, that the finest examples of the basilica are found. Between 184 and 121 B. C. there were built in the Forum at Rome the basilicas of Porcia, Fulvia, Sempronia, and Opimia; after 46 B. C. the great Basilica Julia of Cæsar and Augustus was erected. These buildings were designed to beautify the Forum and to be of use both for market purposes and for the administration of justice. They were open to the public and were well lighted. According to Vitruvius, who in this certainly agrees with Greek authorities, the usual construction of a basilica was the following:—

The ground plan was a parallelogram in which the width was not greater than one-half of the length and not less than one-third of it. When there was more space in the length, porticoes were built on the short sides. The middle space was separated by columns from a lower ambulatory or portico; the width of the ambulatory equalled the height of the columns and measured one-third of the width of the central space. Above the columns just mentioned stood others, giving entrance to light, which were shorter and slighter, in order that, as in organic structures, a tapering effect upwards should be given (*De architectura*, V, i, or ii). A basilica erected by Vitruvius himself showed a decided variation from this plan. It had two ambulatories, one above the other. Part of the columns of the middle space was left free so that light might enter. These columns rose up to the rafters. Pilasters leaning against the columns served to carry the flat roof of the ambulatories. The length of the middle nave was double its breadth and six times the breadth of the ambulatory. One of the long sides of the parallelogram spread out into an apse where legal cases were tried, but it was separated by the width of the ambulatory from the space for merchants (the ancient exchange).

The same writer speaks (VI, viii or v) of half-public basilicas in the houses of distinguished statesmen which served as council-chambers and for the settlement of disputes by arbitration. Vitruvius compares these (VI, v or iii) with the Egyptian halls because the latter had also covered ambulatories around a middle space supported by columns and openings for light between columns above. These are the distinctive features of a basilica which we may venture to define as an oblong structure with columns, having an ambulatory of lower height, receiving light from above, and possessing a projecting addition designed to serve a particular purpose.

The form of the basilica of the early Christian Church corresponds so exactly to the shape of the basilica of the Forum or of the house that it does not seem necessary to seek another model, as for instance, the *atrium* or the cemetery cells. The dark, narrow temple was entirely unsuited for the holding of the Christian church services. These services, which began with the Last Supper, were often held in large rooms in the dwellings of prosperous Christians. When these facts are considered it cannot be a matter of surprise that as early as the time of Constantine the style and name of the basilica seem to have been in common use for the Christian place of worship. Moreover, the chief deviations from the general type of the ancient basilica, such as five aisles, pillars, angular form of the apse, omission of the portico, etc., have been used as well in the Christian basilica to which the original meaning of the word *basilica*, "the hall of the king", could now again be applied.

As a rule, the building at this time was divided into three parts by columns, the well-lighted central part rose higher than the other divisions, and there was an apse. Only, in place of the former surrounding portico, or ambulatory, there was a side aisle to the right and left. There were also basilicas

with five and seven aisles. The old construction of the basilica with an apse was well suited to the service of the altar. A transept extending more or less towards both sides was often placed between the nave and the apse both to serve practical needs and on account of its symbolism. The roofing of the

BASILICA OF CONSTANTINE, ROME

transept together with the apse and portico produced variety in the exterior of the basilica. Vaulting, in the West, was used only at times in the side aisles; nothing beyond a flat roof was ventured upon for the very broad middle nave, and often, at the beginning, the rafters of the roof were left uncovered.

It was only after the fifth century that round or square side-towers came into use. These towers were first incorporated in the main building in Syria. The early Christian basilica showed a high, yet light construction, and was roomy and well lighted. The arcades with slender columns which led up to the altar were a particularly beautiful feature. The round form of the arches, of the window-heads, and the ground plan of the basilica were the first indications of the Romanesque style. The idea of a room in which the King of Kings gave audience naturally led to rich ornamentation. The back wall of the apse and the "arch of triumph", which opened into the transept, were decorated with mosaics. The altar stood in or before, the apse under a decorated baldacchino (*ciborium*). The walls were often adorned with pictures, and the floor was made of mosaic. Much use was made in the rich churches of beautiful woven stuffs and of fine goldsmith-work. If the employment of these symbols had a tendency to inspire pride, other observances produced humility of mind, as, for example, the symbolic washing at the fountain.

G. GIETMANN.

**Basilici Libri.** See ROMAN LAW.

**Basilides**, the earliest of the Alexandrian Gnostics; he was a native of Alexandria and flourished under the Emperors Adrian and Antoninus Pius, about 120-140. St. Epiphanius's assertion that he was a disciple of Menander at Antioch and only later moved to Alexandria is unlikely in face of the statement of Eusebius and Theodoret that he was an Alexandrian by birth. Of his life we know nothing except that he had a son called Isidore, who followed in his footsteps. The remark in the Acts of Archelaus (iv) that Basilides was "a preacher amongst the Persians" is almost certainly the result of some confusion. Basilides invented prophets for himself named Barcabbas and Barceph, and claimed to have received verbal instructions from St. Matthias the Apostle and to be a disciple of Glaucias, a disciple of St. Peter.

 CENTURY BY HONORIUS III 1216

**HIS SYSTEM.**—As practically nothing of Basilides' writing is extant and as we have no contemporaneous Gnostic witnesses, we must gather the teaching of this patriarch of Gnosticism from the following early sources: (a) St. Irenæus, "Contra Hæreses", I, xxiv, written about 170; (b) Clement of Alexandria, "Stromata", I, xxi, II, vi, viii, xx, IV, xi, xii, xxv, V, i, etc., written between 208-210, and the so-called "Excerpta ex Theodoto" perhaps from the same hand; (c) Hippolytus of Rome, "Philosophumena", VII, written about 225; (d) Pseudo-Tertullian, "Against All Heresies", a little treatise usually attached to Tertullian's "De Præscriptionibus", but really by another hand, perhaps by Victorinus of Pettau, written about 240 and based upon a non-extant "Compendium" of Hippolytus; (e) Artistic remains of Gnosticism such as Abrasax gems, and literary remains like the Pistis Sophia, the latter part of which probably dates back to the end of the second century and, though not strictly Basilidian, yet illustrates early Alexandrian Gnosticism. Later sources are Epiphanius, "Adv. Hær.", xxiv, and Theodoret, "Hær. Fab. Comp.", I, iv. Unfortunately, the descriptions of the Basilidian system given by our chief informants, St. Irenæus and Hippolytus, are so strongly divergent that they seem to many quite irreconcilable. According to Irenæus, Basilides was apparently a dualist and an emanationist, and according to Hippolytus a pantheistic evolutionist.

Seen from the viewpoint of Irenæus, Basilides taught that Nous (Mind) was the first to be born from the Unborn Father; from Nous was born Logos (Reason); from Logos, Phronesis (Prudence); from Phronesis, Sophia (Wisdom) and Dynamis (Strength) and from Phronesis and Dynamis the Virtues, Principalities, and Archangels. By these angelic hosts the highest heaven was made, by their descendants the second heaven, and by the descendants again of these the third, and so on till they reached the number 365. Hence the year has as many days as there are heavens. The angels, who hold the last or visible heaven, brought about all things that are in the world and shared amongst themselves the earth and the nations upon it. The highest of these angels is the one who is thought to be the God of the Jews. And as he wished to make the other nations subject to that which was especially his own, the other angelic principalities withstood him to the utmost. Hence the aversion of all other peoples for this race. The Unborn and Nameless Father seeing their miserable plight, sent his First-born, Nous (and this is the one who is called Christ) to deliver those who should believe in him from the power of the angelic agencies who had built the world. And to men Christ seemed to be a man and to have performed miracles. It was not, however, Christ who suffered, but rather Simon of Cyrene, who was constrained to carry the cross for him, and mistakenly crucified in Christ's stead. Simon having received Jesus' form, Jesus assumed Simon's and thus stood by and laughed at them. Simon was crucified and Jesus returned to His Father. Through the Gnosis (Knowledge) of Christ the souls of men are saved, but their bodies perish.—Out of Epiphanius and Pseudo-Tertullian we can complete the description thus: the highest god, i. e. the Unborn Father, bears the mystical name Abrasax (q. v.), as origin of the 365 heavens. The Angels that made the world formed it out of Eternal Matter; but matter is the principle of all evil and hence both the contempt of the Gnostics for it and their docetic Christology. To undergo martyrdom in order to confess the Crucified is useless, for it is to die for Simon of Cyrene, not for Christ.

Hippolytus sets forth the doctrine of Basilides as follows: "There was a time when nothing existed, neither matter nor form, nor accident; neither the simple nor the compound, neither the unknowable

nor the invisible, neither man nor angel nor god nor any of those things, which are called by names or perceived by the mind or the senses. The Not-Being God (ὄνκ ὁ θεός) whom Aristotle calls Thought of thought (νόησις τῆς νοήσεως), without consciousness, without perception, without purpose, without aim, without passion, without desire, had the will to create the world. I say 'had the will' " continues Hippolytus, "only by way of speaking, because in reality he had neither will, nor ideas nor perceptions; and by the word 'world' I do not mean this actual world, which is the outcome of extension and division, but rather the Seed of the world. The seed of the world contained in itself, as a mustard seed, all things which are eventually evolved, as the roots, the branches, the leaves arise out of the seedcorn of the plant." Strange to say this World-seed or All-seed (Panspermia) is still described as Not-Being. It is a phrase of Basilides: "God is Not-Being, even He, who made the world out of what was not; Not-Being made Not-Being."—Basilides distinctly rejected both emanation and the eternity of matter. "What need is there", he said, "of emanation or why accept 'Hyle' [ἔλν, Matter]; as if God had created the world as the spider spins its thread or as mortal man fashions metal or wood. God spoke and it was; this Moses expresses thus: 'Let there be light and there was light'." This sentence has a Christian ring, but we must not forget that to Basilides God was Absolute Negation. He cannot find words enough to bring out the utter non-existence of God; God is not even "unspeakable" (ἀρηγορον), He simply is Not. Hence the popular designation of Oukontiani for people who always spoke of Oukón, Not-Being. The difficulty lies in placing the actual transition from Not-Being into Being. This was probably supposed to consist in the Sperma or Seed, which in one respect was Not-Being, and in the other, the All-seed of the manifold world. The Panspermia contained in itself a threefold Filiation, Hyiôtēs (ὕϊότης): one composed of refined elements, Leptomerēs (λεπτομερές), a second of grosser elements, Pachymerēs (παχυμερές), and a third needing purification, Apokatharseos deomonon (ἀποκαθάρσεως δεόμενον).

These three Filiations ultimately reach the Not-Being God, but each reaches him in a different way. The first Filiation rose at once and flew with the swiftness of thought to the Not-Being God. The second, remaining as yet in the Panspermia, wished to imitate the first Filiation and rise upwards; but, being too gross and heavy, it failed. Whereupon the second Filiation takes to itself wings, which are the Holy Ghost, and with this aid almost reaches the Not-Being God. But when it has come near, the Holy Ghost, of different substance from the Second Filiation, can go no further, but conducts the Second Filiation near to the First Filiation and leaves. Yet he does not return empty but, as a vessel full of ointment, he retains the sweet odour of Filiation; and he becomes the "Boundary Spirit" (Methorion Pneuma, μεθόριον πνεῦμα), between the Supermundane and the Mundane where the third Filiation is still contained in the Panspermia. Now there arose out of the Panspermia the Great Archon, or Ruler; he sped upwards until he reached the firmament, and thinking there was nothing above and beyond, and not knowing of the Third Filiation, still contained in the Panspermia, he fancied himself Lord and Master of all things. He created to himself a Son out of the heap of Panspermia; this was the Christ and being himself amazed at the beauty of his Son, who was greater than his Father, he made him sit at his right hand; and with him he created the ethereal heavens, which reach unto the Moon. The sphere where the Great Archon rules, i. e. the higher heavens, the lower boundary of which is the plane where the moon revolves, is called the Ogdoad

The same process is repeated and we have a second Archon and his Son and the sphere where they rule is the Hebdomad, beneath the Ogdoad. Lastly, the third Filiation must be raised to the Not-Being God. This took place through the Gospel. From Adam to Moses the Archon of the Ogdoad had reigned (Rom., v, 14); in Moses and the Prophets the Archon of the Hebdomad had reigned, or God of the Jews. Now in the third period the Gospel must reign. This Gospel was first made known from the First Filiation through the Holy Ghost to the Son of the Archon of the Ogdoad; the Son told his Father, who was astounded and trembled and acknowledged his pride in thinking himself the Supreme Deity. The Son of the Archon of the Ogdoad tells the Son of the Archon of the Hebdomad, and he again tells his father. Thus both spheres, including the 365 heavens and their chief Archon, Abrasax, know the truth. This knowledge is now conveyed through the Hebdomad to Jesus, the Son of Mary, who through his life and death redeemed the third Filiation, that is: what is material must return to the Chaos, what is psychic to the Hebdomad, what is spiritual to the Not-Being God. When the third Filiation is thus redeemed, the Supreme God pours out a blissful Ignorance over all that is and that shall so remain forever. This is called "The Restoration of all things".

From Clement of Alexandria we get a few glimpses into the ethical side of the system. Nominally, faith was made the beginning of the spiritual life; it was not, however, a free submission of the intellect, but a mere natural gift of understanding (Gnosis) bestowed upon the soul before its union with the body and which some possessed and others did not. But if faith is only a natural quality of some minds, what need of a Saviour, asks Clement, and Basilides would reply that faith is a latent force which only manifests its energy through the coming of the Saviour, as a ray of light will set naphtha on fire. Sin was not the result of the abuse of free will but merely the outcome of an inborn evil principle. All suffering is punishment for sin; even when a child suffers, this is the punishment of its own sin, i. e. the latent evil principle within; that this indwelling principle has had no opportunity to manifest itself, is immaterial. The persecutions Christians underwent had therefore as sole object the punishment of their sin. All human nature was thus vitiated by the sinful; when hard pressed Basilides would call even Christ a sinful man, for God alone was righteous. Viewed in another way evil was a sort of excrement on the rational soul, the result of an original disturbance and confusion. "Their whole system", says Clement, "is a confusion of the Panspermia (All-seed) with the Phylotkinesis (Difference-in-kind) and the return of things thus confused to their own places." St. Irenæus and St. Epiphanius reproach Basilides with the immorality of his system, and St. Jerome calls Basilides a master and teacher of debaucheries. It is likely, however, that Basilides was personally free from immorality and that this accusation was true neither of the master nor of some of his followers. That Basilidianism, together with the other forms of Gnosticism, eventually led to gross immorality, there can be no doubt. Clement of Alexandria and St. Epiphanius have preserved for us a passage of the writings of Basilides' son and successor, which counsels the free satisfaction of sensual desires in order that the soul may find peace in prayer. And it is remarkable that Justin the Martyr in his first Apology (xxvi), that is, as early as 150-155, suggests to the Roman emperors that possibly the Gnostics are guilty of those immoralities of which Christians are falsely accused. It is true that in this passage he mentions only Simon, Menander, and Marcion by name; but the passage is general

in tone, and elsewhere Valentinus, Basilides, and Saturninus follow in the list.

WRITINGS.—Nearly all the writings of Basilides have perished, but the names of three of his works and some fragments have come down to us. (a) *A Gospel*. Origen in his Homily on Luke, i, states that Basilides had dared to write a Gospel according to Basilides. St. Jerome and St. Ambrose adopt this statement of Origen; and St. Jerome, in the Prologue of his Commentary on St. Matthew, again speaks of an "Evangelium Basilidis". In all likelihood this "Gospel" was compiled out of our canonical Gospels, the text being curtailed and altered to suit his Gnostic tenets, a diatessaron on Gnostic lines. (b) *A Gospel Commentary* in twenty-four books. (Clement of Alexandria calls it "Exegetica"; the Acta Archelai et Manetis, "Tractatus".) Fragments of this Commentary have come down to us (in Stromata, IV, 12-81, sqq.; Acta Arch., iv; probably also in Origen, Commentary on Romans V, i). (c) *Hymns*. Origen in a note on Job, xxi, 1 sqq., speaks of "Odes" of Basilides; and the so-called Muratorian Fragment, containing a list of canonical and non-canonical books (170 or thereabouts) ends with the words: "etiam novu psalmorum librum marconi conscripserunt una cum Basilide assianum catafrycum constitutorem". This sentence, notwithstanding its obscurity, supports Origen's statement. For a collection of Basilidian fragments see Hilgenfeld, "Ketzergeschichte des Urchrist" (Leipzig, 1884), 207, 213.

SCHOOL.—Basilides never formed a school of disciples, who modified or added to the doctrines of their leader. Isidore, his son, is the only one who elaborated his father's system, especially on the anthropological side. He wrote a work on the "Psyche Prosphytes" (*περί προσφύτων ψυχῆς*), or Appendix-Soul; another work, called "Ethics" by Clement and "Pneumatics" by Epiphanius; and at least two books of "Commentaries on the Prophet Parchor". Basilidianism survived until the end of the fourth century as Epiphanius knew of Basilidians living in the Nile Delta. It was however almost exclusively limited to Egypt, though according to Sulpicius Severus it seems to have found an entrance into Spain through a certain Mark from Memphis. St. Jerome states that the Priscillianists were infected with it. Of the customs of the Basilidians, we know no more than that Basilides enjoined on his followers, like Pythagoras, a silence of five years; that they kept the anniversary of the Baptism of Jesus as a feast day and spent the eve of it in reading; that their master told them not to scruple eating things offered to idols; that they wore amulets with the word Abrasax and symbolic figures engraved on them, and, amongst other things, believed them to possess healing properties.

Although Basilides is mentioned by all the Fathers as one of the chiefs of Gnosticism, the system of Valentinus seems to have been much more popular and wider spread, as was also Marcionism. Hence, though anti-Gnostic literature is abundant, we know of only one patristic work, which had for its express purpose the refutation of Basilides, and this work is no longer extant. Eusebius (Hist. Eccl., IV, vii, 6-8) says: "There has come down to us a most powerful refutation of Basilides by Agrippa Castor, one of the most renowned writers of that day, which shows the terrible imposture of the man." With the exception of a few phrases given by Eusebius we know nothing of this Agrippa and his work. (See GNOSTICISM.)

**Basilides.**—Martyrs bearing the name of Basilides are mentioned in the old martyrologies on three different days, namely, on 10, 12, and 28 June. Under the last date is placed the long list of Alexandrian martyrs who suffered during the persecution of Septimius Severus, and among these occurs the name of a Basilides. Eusebius gives an entire chapter of his church history (VI, v) to Basilides and Potamiana. After Potamiana had been sentenced to death Basilides, an officer of the court, led her to execution. He showed himself compassionate to Potamiana and kept back the heathen rabble who would have mocked her. Potamiana thanked him and exhorted him to be consoled, for after her death she would entreat the Lord concerning him and would reward his kindness. Shortly after this Basilides was called on to take an oath. He replied that he could not swear, and openly acknowledged himself to be a Christian. When taken before the judge he made an unwavering confession and was thrown into prison. He was visited by several Christians to whom he related that, three days after her martyrdom, Potamiana had appeared to him and had set a crown on his head with the assurance that the Lord would soon take Basilides to Himself. Basilides was then baptized and the next day he was beheaded. In the present Roman martyrology his name appears on 30 June. In the so-called martyrology of St. Jerome and in the present list of Roman martyrs the name of a Basilides appears on 10 and 12 June. On each occasion the name is accompanied by a statement of the locality of the martyrdom at Rome on the Via Aurelia. The names of the companions in martyrdom of Basilides vary on the two different days. The list for 12 June is very involved; apparently the same martyr is referred to on both days and for some reason his name is repeated on 12 June. The Acts of the martyrdom of a Roman Basilides are still in existence; they have, however, no historical existence and belong to a date considerably later.

**Basilides, GOSPEL ACCORDING TO.** See BASILIDES (Gnostic).

**Basilinopolis**, a titular see of Asia Minor. Originally a small village in Bithynia Prima, it obtained the rank of a city under, or perhaps shortly before, Julian the Apostate (Mansi, VII, 305). The first known bishop, Alexander, was consecrated by St. John Chrysostom about 400. Other bishops are Gerontius (451), Cyriacus (518), Sisinnius (680), Georgius (787), and Anthimus in 878 (Lequien, Or. Chr., I, 623-625). At Chalcedon (451) the see had been the object of a sharp contest between the metropolitans of Nicomedia and Nicæa about jurisdiction. Basilinopolis was finally made by the council a suffragan of Nicomedia (Mansi, *ibid.*, 301-314); and it remained so until about 1170 under Manuel Comnenus (Hierocles, *Synecdemus*, ed. Parthey, 169). The see does not figure in a "Notitia episcopatum" of the fifteenth century, the city doubtless having been destroyed by the Osmanli. Its exact site is not known. According to W. M. Ramsay (*Hist. Geogr. of Asia Minor*, 179), it was probably situated on the western side of the Lake of Nicæa (Isnik-Ghueul), near Bazar-Keui, between Kios (Ghemlek) and Nicæa (Isnik).

LEQUIEN, *Oriens Christ.*, I, 623-626.

S. VAILLÉ.

**Basiliassa.**—Various female martyrs, attributed to different localities yet bearing the common name of Basiliassa, are referred to in all the catalogues of martyrs both of early Christianity and of the Middle Ages; their names also appear in the calendars and liturgical books of the Greek and Roman Churches. Nothing is known positively as to any one of these sufferers for the Christian Faith; the Acts of their martyrdoms, so far as such exist, are purely legendary and originated at a later date. The fact, however, that the name occurs several times in the so-called martyrology of St. Jerome and in old Greek catalogues is certain proof that a number of female martyrs named Basiliassa were actually venerated in the ancient Church. At the same time it is not impossible that the same martyr is recorded on different days. Among these saints should be mentioned: Julian and Basiliassa of Antioch; in the martyrology of St. Jerome (ed. Rossi-Duchesne, 6) they are given as martyrs under 6 January. A later legend makes Basiliassa the virgin wife of Julian and narrates that she died a natural death together with other virgins, while Julian suffered martyrdom in company with many other Christians during the Diocletian persecution. The same martyrology makes mention, under 12 March, of a female martyr Basiliassa, wife of Felicio, and states the locality "in Asia". On the next day, 13 March, occurs the name of another martyr called Basiliassa, wife of the presbyter Eustacius of Nicomedia. Later legends, which were accepted by the Greek menologies and synaxaria, speak of a virgin and martyr, Basiliassa of Nicomedia, whose feast was celebrated on 3 September; this Basiliassa is probably identical with the one just mentioned. On 22 March the names of two martyrs, Basiliassa and Callinice, are given with the statement "in Galatia". Under 16 April the old catalogues contain the names of a number of martyrs of Corinth, among whom appears a Basiliassa; according to later accounts these sufferers for the Faith were all thrown into the sea. Under the previous day, 15 April, two Roman matrons, Basiliassa and Anastasia, are recorded; they apparently died in the persecution of Nero. Another female martyr of Rome, whose name is sometimes written Basilla and sometimes Basiliassa, was venerated on 20 May. She was buried, it is stated, on the Via Salaria. The celebrated Roman martyr Basilla, who died in 304 and whose feast is entered from the year 354 under 22 September in the oldest known Roman catalogue of feasts (*Depositio martyrum*), was buried in the catacomb of Hermes on the Via Salaria Vetus. It is, therefore, a question whether the saint given under 20 May and this latter Basilla are not one and the same person; but the identity of the two cannot be positively affirmed. The present martyrology includes several of these saints; 9 January, Basiliassa of Antioch; 22 March, Basiliassa and Callinice; 15 April, Basiliassa and Anastasia; 3 September, Basiliassa of Nicomedia.

For Basiliassa of Antioch and her companions, *Acta SS.*, January, I, 570 sqq., and MOMBRIITUS, *Sanctuarium*, I, 216 sqq.; II, 45 sqq. For Basiliassa and Anastasia, *Acta SS.*, April, II, 372. For Basiliassa and Callinice, *ibid.*, March, III, 277. For Basiliassa of Nicomedia, *ibid.*, September, I, 609 sqq.

**Basiliassa (WIFE OF JULIAN).** See JULIAN AND BASILIASSA.

**Basil of Amasea (BASILEUS or BASILIUS), Bishop and Martyr.** In St. Jerome's Latin version of the Chronicle of Eusebius the statement occurs under the 275th Olympiad (A. D. 321-324) that Basileus, Bishop of Amasea in Pontus, suffered martyrdom in the reign of Licinius [ed. Schöne (Berlin, 1875), 191]. There is no reason for doubting the trustworthiness of this information. Among the signatures of the bishops who attended the Councils of Ancyra and Neo-Cæsarea (314) is to be found the name of Basileus

of Amasea (Mansi, Coll. conc., II, 534, 548). Eusebius also relates (Hist. eccl., X, viii) that in the time of Licinius Christians were treated with great cruelty, especially in Amasea and the other cities of Pontus, and that, in particular, the governor inflicted upon several bishops the ordinary punishments of evil-doers. St. Athanasius mentions the great Basileus of Pontus among the bishops of the early part of the fourth century who held firmly to the like substance of the Son with the Father; the reference is evidently to the martyr-bishop of Amasea (Athanasius, Opera, ed. Mannius, I, 122). The statement of Philostorgius [ed. Valesius; Eusebius, Hist. eccl. (Turin, 1748), III, 433], that Basileus attended the Council of Nicæa, cannot be quoted against this proof of the martyrdom of Basileus under Licinius, as there is evidently a mistake in what Philostorgius says; among the signatures at the Council of Nicæa appears that of Eutychianus as Bishop of Amasea. The Acts of the martyrdom of Basileus, supposedly written by an eye-witness, a presbyter named Johannes, are not authentic and the narrative is entirely legendary. The feast of Basileus falls on 26 April, on which date it occurs both in the Greek synaxaria and menæa and in the Roman martyrology.

J. P. KIRSCH.

**Basil of Seleucia**, Bishop and ecclesiastical writer, date of birth uncertain; d., probably, between 458 and 460; was distinguished during the period when the Eastern Church was convulsed by the Monophysite struggles, and was necessarily obliged to take sides in all those controversies. Those of his writings which have come down to us, though somewhat too rhetorical and involved, prove clearly that he was a man of great literary ability.

He was appointed Bishop of Seleucia in Isauria, between the years 432 and 447, and was one of those who took part in the Synod of Constantinople, which was summoned (448) by the Patriarch Flavian for the condemnation of the Eutychian errors and the deposition of their great champion, Dioscurus of Alexandria. Curiously enough, though Basil seems to have agreed to these measures, he attended the Latrocinium, or Robber Synod, of Ephesus, held in the next year (449), and, induced probably more by the threats and violence of the Monophysite party than by their arguments, he voted for the rehabilitation of Eutyches and for the deposition of the Patriarch of Constantinople, and was thus regarded for a time as a supporter of Monophysite opinions. Like the other prominent supporters of Dioscurus, he should have been removed from his see had he not in the meantime accepted the doctrine contained in the Dogmatic Epistle of Pope Leo to Flavian, and joined in the condemnation of Eutyches and Dioscurus. After this period he seems to have continued a zealous opponent of the Monophysite party, for we find that in the year 458 he joined with his fellow-bishops of Isauria, in an appeal to the Emperor Leo I, requesting him to use his influence in forwarding the Decrees of Chalcedon, and in securing the deposition of Timotheus Ælurus, who had intruded himself (457) into the Patriarchate of Alexandria. This is the last reference we find to Basil, and it is commonly supposed that he died shortly afterwards.

Forty-one sermons (λόγοι) on different portions of the Old Testament have come down to us under his name, and are found in Migne (P. G., LXXXV, 27-474), where is also his history of the protomartyr Thecla and of the miracles wrought at her grave (ibid., 477-618). Most of these sermons may be regarded as genuine, though some of them are now generally assigned to Nestorius. According to

Photius, Basil also dealt in verse with the life and miracles of Thecla.

**Basil the Elder, SAINT.** See BASIL THE GREAT, SAINT.

**Basil the Great, SAINT,** Bishop of Cæsarea, one of the most distinguished Doctors of the Church, b. probably 329; d. 1 January, 379. He ranks after Athanasius as a defender of the Oriental Church against the heresies of the fourth century. With his friend Gregory of Nazianzus and his brother, Gregory of Nyssa, he makes up the trio known as "The Three Cappadocians", far outclassing the other two in practical genius and actual achievement.

**LIFE.**—St. Basil the Elder, father of St. Basil the Great, was the son of a Christian of good birth and his wife, Macrina (Acta SS., January, II), both of whom suffered for the Faith during the persecution of Maximinus Galerius (305-314), spending several years of hardship in the wild mountains of Pontus. St. Basil the Elder was noted for his virtue (Acta SS. May, VII) and also won considerable reputation as a teacher in Cæsarea. He was not a priest (Cf. Cave, Hist. Lit., I, 239). He married Emmelia, the daughter of a martyr, and became the father of ten children. Three of these, Macrina, Basil, and Gregory are honoured as saints; and of the sons, Peter, Gregory, and Basil attained the dignity of the episcopate.

Under the care of his father and his grandmother, the elder Macrina, who preserved the traditions of their countryman, St. Gregory Thaumaturgus (c. 213-275) Basil was formed in habits of piety and study. He was still young when his father died and the family moved to the estate of the elder Macrina at Annesi in Pontus, on the banks of the Iris. As a boy, he was sent to school at Cæsarea, then "a metropolis of letters", and conceived a fervent admiration for the local bishop, Dianius. Later, he went to Constantinople, at that time "distinguished for its teachers of philosophy and rhetoric", and thence to Athens. Here he became the inseparable companion of Gregory of Nazianzus, who, in his famous panegyric on Basil (Or. xliii), gives a most interesting description of their academic experiences. According to him, Basil was already distinguished for brilliancy of mind and seriousness of character and associated only with the most earnest students. He was able, grave, industrious, and well advanced in rhetoric, grammar, philosophy, astronomy, geometry, and medicine. (As to his not knowing Latin, see Fialon, *Etude historique et littéraire sur St. Basile*, Paris, 1869.) We know the names of two of Basil's teachers at Athens, Proheresius, possibly a Christian, and Himerius, a pagan. It has been affirmed, though probably incorrectly, that Basil spent some time under Libanius. He tells us himself that he endeavoured without success to attach himself as a pupil to Eustathius (Ep., I). At the end of his sojourn at Athens, Basil being laden, says St. Gregory of Nazianzus, "with all the learning attainable by the nature of man", was well equipped to be a teacher. Cæsarea took possession of him gladly "as a founder and second patron" (Or. xliii), and as he tells us (ccx), he refused the splendid offers of the citizens of Neo-Cæsarea, who wished him to undertake the education of the youth of their city.

To the successful student and distinguished professor, "there now remained", says Gregory (Or. xliii), "no other need than that of spiritual perfection". Gregory of Nyssa, in his life of Macrina, gives us to understand that Basil's brilliant success both as a university student and a professor had left traces of worldliness and self-sufficiency on the soul of the

young man. Fortunately, Basil came again in contact with Dianius, Bishop of Cæsarea, the object of his boyish affection, and Dianius seems to have baptized him, and ordained him Reader soon after his return to Cæsarea. It was at this time also that he fell under the influence of that very remarkable woman, his sister Macrina, who had meanwhile founded a religious community on the family estate at Annesi. Basil himself tells us how, like a man roused from deep sleep, he turned his eyes to the marvellous truth of the Gospel, wept many tears over his miserable life, and prayed for guidance from God: "Then I read the Gospel, and saw there that a great means of reaching perfection was the selling of one's goods, the sharing of them with the poor, the giving up of all care for this life, and the refusal to allow the soul to be turned by any sympathy towards things of earth" (Ep. cccxiii). To learn the ways of perfection, Basil now visited the monasteries of Egypt, Palestine, Coele-Syria, and Mesopotamia. He returned, filled with admiration for the austerity and piety of the monks, and founded a monastery in his native Pontus, on the banks of the Iris, nearly opposite Annesi. (Cf. Ramsay, *Hist. Geog. of Asia Minor*, London, 1890, p. 326.) Eustathius of Sebaste had already introduced the eremitical life into Asia Minor; Basil added the cenobitic or community form, and the new feature was imitated by many companies of men and women. (Cf. Sozomen, *Hist. Eccl.*, VI, xxvii; Epiphanius, *Hær.*, lxxv, 1; Basil, Ep. cccxiii; Tillemont, *Mém.*, IX, Art. XXI, and note XXVI.) Basil became known as the Father of Oriental monasticism, the forerunner of St. Benedict. How well he deserved the title, how seriously and in what spirit he undertook the systematizing of the religious life, may be seen by the study of his Rule. He seems to have read Origen's writings very systematically about this time, for in union with Gregory of Nazianzus, he published a selection of them called the "Philocalia".

Basil was drawn from his retreat into the arena of theological controversy in 360 when he accompanied two delegates from Seleucia to the emperor at Constantinople, and supported his namesake of Ancyra. There is some dispute as to his courage and his perfect orthodoxy on this occasion (cf. Philostorgius, *Hist. Eccl.*, IV, xii; answered by Gregory of Nyssa, in *Eunom.*, I, and Maran, *Proleg.*, vii; Tillemont, *Mém.*, note XVII). A little later, however, both qualities seem to have been sufficiently in evidence, as Basil forsook Dianius for having signed the heretical creed of Rimini. To this time (c. 361) may be referred the "Moralia"; and a little later came the books against Eunomius (363) and some correspondence with Athanasius. It is possible, also, that Basil wrote his monastic rules in the briefer form while in Pontus, and enlarged them later at Cæsarea (Baert). There is an account of an invitation from Julian for Basil to present himself at court and of Basil's refusal, coupled with an admonition that angered the emperor and endangered Basil's safety. Both incident and correspondence however are questioned by some critics (e. g. Maran; cf. Tillemont, De Broglie, Fialon).

Basil still retained considerable influence in Cæsarea, and it is regarded as fairly probable that he had a hand in the election of the successor of Dianius who died in 362, after having been reconciled to Basil. In any case the new bishop, Eusebius, was practically placed in his office by the elder Gregory of Nazianzus. Eusebius having persuaded the reluctant Basil to be ordained priest, gave him a prominent place in the administration of the diocese (363). In ability for the management of affairs Basil so far eclipsed the bishop that ill-feeling arose between the two. "All the more eminent and wiser portion of the church was roused against the bishop" (Greg. Naz., Or. xliii; Ep. x), and to avoid trouble Basil

again withdrew into the solitude of Pontus. A little later (365) when the attempt of Valens to impose Arianism on the clergy and the people necessitated the presence of a strong personality, Basil was restored to his former position, being reconciled to the bishop by St. Gregory of Nazianzus. There seems to have been no further disagreement between Eusebius and Basil and the latter soon became the real head of the diocese. "The one", says Gregory of Nazianzus (Or. xliii), "led the people the other led their leader". During the five years spent in this most important office, Basil gave evidence of being a man of very unusual powers. He laid down the law to the leading citizens and the imperial governors, settled disputes with wisdom and finality, assisted the spiritually needy, looked after "the support of the poor, the entertainment of strangers, the care of maidens, legislation written and unwritten for the monastic life, arrangements of prayers, (liturgy?), adornment of the sanctuary" (op. cit.). In time of famine, he was the saviour of the poor.

In 370 Basil succeeded to the See of Cæsarea, being consecrated according to tradition on 14 June. Cæsarea was then a powerful and wealthy city (Soz., *Hist. Eccl.*, V, v). Its bishop was Metropolitan of Cappadocia and Exarch of Pontus which embraced more than half of Asia Minor and comprised eleven provinces. The See of Cæsarea ranked with Ephesus immediately after the patriarchal sees in the councils, and the bishop was the superior of fifty *chorepiscopi* (Baert). Basil's actual influence, says Jackson (*Prolegomena*, XXXII) covered the whole stretch of country "from the Balkans to the Mediterranean and from the Egean to the Euphrates". The need of a man like Basil in such a see as Cæsarea was most pressing, and he must have known this well. Some (e. g. Allard, De Broglie, Venables, Fialon) think that he set about procuring his own election; others (e. g. Maran, Baronius, Ceillier) say that he made no attempt in his own behalf. In any event, he became Bishop of Cæsarea largely by the influence of the elder Gregory of Nazianzus. His election, says the younger Gregory (loc. cit.), was followed by disaffection on the part of several suffragan bishops "on whose side were found the greatest scoundrels in the city". During his previous administration of the diocese Basil had so clearly defined his ideas of discipline and orthodoxy, that no one could doubt the direction and the vigour of his policy. St. Athanasius was greatly pleased at Basil's election (Ad Pallad., 953; Ad Joann. et Ant., 951); but the Arianizing Emperor Valens, displayed considerable annoyance and the defeated minority of bishops became consistently hostile to the new metropolitan. By years of tactful conduct, however, "blending his correction with consideration and his gentleness with firmness" (Greg. Naz., Or. xliii), he finally overcame most of his opponents.

Basil's letters tell the story of his tremendous and varied activity; how he worked for the exclusion of unfit candidates from the sacred ministry and the deliverance of the bishops from the temptation of simony; how he required exact discipline and the faithful observance of the canons from both laymen and clerics; how he rebuked the sinful, followed up the offending, and held out hope of pardon to the penitent. (Cf. Epp. xiv, xlv, and xlvii, the beautiful letter to a fallen virgin, as well as Epp. liii, liv, lv, clxxxviii, cxcix, cccvii, and Ep. clxix, on the strange incident of Glycerius, whose story is well filled out by Ramsay, *The Church in the Roman Empire*, New York, 1893, p. 443 sqq.) If on the one hand he strenuously defended clerical rights and immunities (Ep. civ), on the other he trained his clergy so strictly that they grew famous as the type of all that a priest should be (Epp. cii, ciii). Basil did not confine his activity to diocesan affairs, but threw himself vig-

orously into the troublesome theological disputes then rending the unity of Christendom. He drew up a summary of the orthodox faith; he attacked by word of mouth the heretics near at hand and wrote tellingly against those afar. His correspondence shows that he paid visits, sent messages, gave interviews, instructed, reprovved, rebuked, threatened, reproached, undertook the protection of nations, cities, individuals great and small. There was very little chance of opposing him successfully, for he was a cool, persistent, fearless fighter in defence both of doctrine and of principles. His bold stand against Valens parallels the meeting of Ambrose with Theodosius. The emperor was dumbfounded at the archbishop's calm indifference to his presence and his wishes. The incident, as narrated by Gregory of Nazianzus, not only tells much concerning Basil's character but throws a clear light on the type of Christian bishop with which the emperors had to deal and goes far to explain why Arianism, with the court behind it, could make so little impression on the ultimate history of Catholicism.

While assisting Eusebius in the care of his diocese, Basil had shown a marked interest in the poor and afflicted; that interest now displayed itself in the erection of a magnificent institution, the *Ptochotropheion*, or *Basileiad*, a house for the care of friendless strangers, the medical treatment of the sick poor, and the industrial training of the unskilled. Built in the suburbs, it attained such importance as to become practically the centre of a new city with the name of *ἡ καινὴ πόλις* or "Newtown". It was the mother-house of like institutions erected in other dioceses and stood as a constant reminder to the rich of their privilege of spending wealth in a truly Christian way. It may be mentioned here that the social obligations of the wealthy were so plainly and forcibly preached by St. Basil that modern socialists have ventured to claim him as one of their own, though with no more foundation than would exist in the case of any other consistent teacher of the principles of Catholic ethics. The truth is that St. Basil was a practical lover of Christian poverty, and even in his exalted position preserved that simplicity in food and clothing and that austerity of life for which he had been remarked at his first renunciation of the world (Nitti, *Catholic Socialism*, New York, 1895, iii; Villemain, *Tableau d'éloq. Chrét.*, Paris, 1891, 116 sqq.).

In the midst of his labours, Basil underwent suffering of many kinds. Athanasius died in 373 and the elder Gregory in 374, both of them leaving gaps never to be filled. In 372 began the painful estrangement from Gregory of Nazianzus. Anthimus, Bishop of Tyana, became an open enemy, Apollinaris "a cause of sorrow to the churches" (Ep. cclxiii), Eustathius of Sebaste a traitor to the Faith and a personal foe as well. Eusebius of Samosata was banished, Gregory of Nyssa condemned and deposed. When Emperor Valentinian died and the Arians recovered their influence, all Basil's efforts must have seemed in vain. His health was breaking, the Goths were at the door of the empire, Antioch was in schism, Rome doubted his sincerity, the bishops refused to be brought together as he wished. (Duchesne, *L'Eglise d'Orient*, Paris, 1881.) "The notes of the church were obscured in his part of Christendom, and he had to fare on as best he might,—admiring, courting, yet coldly treated by the Latin world, desiring the friendship of Rome, yet wounded by her reserve,—suspected of heresy by Damasus, and accused by Jerome of pride" (Newman, *The Church of the Fathers*). Had he lived a little longer and attended the Council of Constantinople (381), he would have seen the death of its first president, his friend Meletius, and the forced resignation of its second, Gregory of Nazianzus. Basil died 1 January,

379. His death was regarded as a public bereavement; Jews, pagans, and foreigners vied with his own flock in doing him honour. The earlier Latin martyrologies (Hieronymian and Bede) make no mention of a feast of St. Basil. The first mention is by Usuard and Ado who place it on 14 June, the supposed date of Basil's consecration to the episcopate. In the Greek "*Menæa*" he is commemorated on 1 January, the day of his death. In 1081, John, Patriarch of Constantinople, in consequence of a vision, established a feast in common honour of St. Basil, Gregory of Nazianzus, and John Chrysostom, to be celebrated on 30 January. The Bollandists give an account of the origin of this feast; they also record as worthy of note that no relics of St. Basil are mentioned before the twelfth century, at which time parts of his body, together with some other very extraordinary relics were reputed to have been brought to Bruges by a returning Crusader. Baronius (c. 1599) gave to the Naples Oratory a relic of St. Basil sent from Constantinople to the pope. The Bollandists and Baronius print descriptions of Basil's personal appearance and the former reproduce two icons, the older copied from a codex presented to Basil, Emperor of the East (877-886).

By common consent, Basil ranks among the greatest figures in church history and the rather extravagant panegyric by Gregory of Nazianzus has been all but equalled by a host of other eulogists. Physically delicate and occupying his exalted position but a few years, Basil did magnificent and enduring work in an age of more violent world convulsions than Christianity has since experienced. (Cf. Newman, *The Church of the Fathers*.) By personal virtue he attained distinction in an age of saints; and his purity, his monastic fervour, his stern simplicity, his friendship for the poor became traditional in the history of Christian asceticism. In fact, the impress of his genius was stamped indelibly on the Oriental conception of religious life. In his hands the great metropolitan See of Caesarea took shape as a sort of model of the Christian diocese; there was hardly any detail of episcopal activity in which he failed to mark out guiding lines and to give splendid example. Not the least of his glories is the fact that toward the officials of the State he maintained that fearless dignity and independence which later history has shown to be an indispensable condition of healthy life in the Catholic episcopate.

Some difficulty has arisen out of the correspondence of St. Basil with the Roman See. (Bossuet, "*Gallia Orthodoxa*", c. lxxv; Puller, "*Primitive Saints and the See of Rome*", London, 1900.) That he was in communion with the Western bishops and that he wrote repeatedly to Rome asking that steps be taken to assist the Eastern Church in her struggle with schismatics and heretics is undoubted; but the disappointing result of his appeals drew from him certain words which require explanation. Evidently he was deeply chagrined that Pope Damasus on the one hand hesitated to condemn Marcellus and the Eustathians, and on the other preferred Paulinus to Meletius in whose right to the See of Antioch St. Basil most firmly believed. At the best it must be admitted that St. Basil criticized the pope freely in a private letter to Eusebius of Samosata (Ep. cccxxxix) and that he was indignant as well as hurt at the failure of his attempt to obtain help from the West. Later on, however, he must have recognized that in some respects he had been hasty; in any event, his strong emphasis of the influence which the Roman See could exercise over the Eastern bishops, and his abstaining from a charge of anything like usurpation are great facts that stand out obviously in the story of the disagreement. With regard to the question of his association with the Semi-Arians, Philostorgius speaks of him as championing the Semi-Arian cause.

and Newman says he seems unavoidably to have Arianized the first thirty years of his life. The explanation of this, as well as of the disagreement with the Holy See, must be sought in a careful study of the times, with due reference to the unsettled and changeable condition of theological distinctions, the lack of anything like a final pronouncement by the Church's defining power, the "lingering imperfections of the Saints" (Newman), the substantial orthodoxy of many of the so-called Semi-Arians, and above all the great plan which Basil was steadily pursuing of effecting unity in a disturbed and divided Christendom. (Cf. De Broglie, "L'Eglise et l'Empire Romain", Paris, 1866, V, ii; Rivington, "The Primitive Church and the See of Peter", London, 1894; Newman, "The Church of the Fathers", Idem, "The Arians of the Fourth Century"; Jungmann, "Dissertationes select. in hist. eccl.", II, 13; De Smedt, "Dissertationes select. in primam statum hist. eccl.", p. 276.)

**WRITINGS.**—*Dogmatic.*—Of the five books against Eunomius (c. 364) the last two are classed as spurious by some critics. The work assails the equivalent Arianism of Eunomius and defends the Divinity of the Three Persons of the Trinity; it is well summarized by Jackson (Nicene and Post Nicene Fathers, Series II, VIII). The work "De Spiritu Sancto", or treatise on the Holy Spirit (c. 375) was evoked in part by the Macedonian denial of the Divinity of the Third Person and in part by charges that Basil himself had "slurred over the Spirit" (Gregory Naz., Ep. lviii), that he had advocated communion with all such as should admit simply that the Holy Ghost was not a creature (Basil, Ep. cxiii), and that he had sanctioned the use of a novel doxology, namely, "Glory be to the Father with the Son together with the Holy Ghost" (De Sp. S., I, i). The treatise teaches the doctrine of the Divinity of the Holy Ghost, while avoiding the phrase "God, the Holy Ghost" for prudential reasons (Greg. Naz., Or. xliii). Wulcknis and Swete affirm the necessity of some such reticence on Basil's part. (Cf. Jackson, op. cit., p. XXIII, note.) With regard to Basil's teaching on the Third Person, as expressed in his work against Eunomius (III, i), a controversy arose at the Council of Florence between the Latins and the Greeks; but strong arguments, both external and internal, availed to place Basil on the side of the "Filioque". The dogmatic writings were edited separately by Goldhorn, in his "S. Basilii Opera Dogmatica Selecta" (Leipzig, 1854). The "De Spiritu Sancto", was translated into English by Johnston (Oxford, 1892); by Lewis in the Christian Classic Series (1888); and by Jackson (op. cit.). *Exegetical.*—These include nine homilies "On the Hexaemeron" and thirteen (Maran) genuine homilies on particular Psalms. A lengthy commentary on the first sixteen chapters of Isaiah is of doubtful authenticity (Jackson), though by a contemporary hand. A commentary on Job has disappeared. "The Hexaemeron" was highly admired by Gregory of Nazianzus (Or. xliii, n. 67). It is translated entire by Jackson (op. cit.). The homilies on the Psalms are moral and hortatory rather than strictly exegetical. In interpreting the Scripture, Basil uses both the literal and the allegorical methods, but favours the literal system of Antioch. His second homily contains a denunciation of usury which has become famous. *Homiletical.*—Twenty-four sermons, doctrinal, moral, and panegyric in character, are looked upon as generally genuine, certain critical difficulties, however, remaining still unsolved. Eight of these sermons were translated into Latin by Rufinus. The discourses place Basil among the very greatest of Christian preachers and evince his special gift for preaching upon the responsibilities of wealth. The most noteworthy in the collection are the homilies on the rich (vi and vii) copied by St. Ambrose

(De Nabuthe Jes., v, 21-24), and the homily (xxii) on the study of pagan literature. The latter was edited by Fremion (Paris, 1819, with French translation), Sommer (Paris, 1894), Bach (Münster, 1900), and Maloney (New York, 1901). With regard to Basil's style and his success as a preacher much has been written. (Cf. Villemain, "Tableau d'éloq. chrét. au IV<sup>e</sup> siècle", Paris, 1891; Fialon, "Etude Litt. sur St. B.", Paris, 1861; Roux, "Etude sur la prédication de B. le Grand", Strasbourg, 1867; Croiset, "Hist. de la litt. Grecque", Paris, 1899.) *Moral and Ascetical.*—This group contains much of spurious or doubtful origin. Probably authentic are the latter two of the three prefatory treatises, and the five treatises: "Morals", "On the Judgment of God", "On Faith", "The Longer Monastic Rules", "The Shorter Monastic Rules". The twenty-four sermons on morals are a cento of extracts from the writings of Basil made by Simeon Metaphrastes. Concerning the authenticity of the Rules there has been a good deal of discussion. As is plain from these treatises and from the homilies that touch upon ascetical or moral subjects, St. Basil was particularly felicitous in the field of spiritual instruction. *Correspondence.*—The extant letters of Basil are 366 in number, two-thirds of them belonging to the period of his episcopate. The so-called "Canonical Epistles" have been assailed as spurious, but are almost surely genuine. The correspondence with Julian and with Libanius is probably apocryphal; the correspondence with Apollinaris is uncertain. All of the 366 letters are translated in the "Nicene and Post-Nicene Fathers". Some of the letters are really dogmatic treatises, and others are apologetic replies to personal attacks. In general they are very useful for their revelation of the saint's character and for the pictures of his age which they offer. *Liturgical.*—A so-called "Liturgy of St. Basil" exists in Greek and in Coptic. (See BASIL, LITURGY OF.) It goes back at least to the sixth century, but its connexion with Basil has been a matter of critical discussion (Brightman, "Liturgies, Eastern and Western", Oxford, 1896, I; Probst, "Die Liturgie des vierten Jahrhunderts und deren Reform", Münster, 1893, 377-412).

**EDITIONS OF ST. BASIL.**—The *editio princeps* of the original text of the extant works of Basil appeared at Basle, 1551, and the first complete Latin translation at Rome, 1515 (autograph manuscript in the British Museum). The best edition is that of the Maurist Benedictines, Garnier and Maran (Paris, 1721-30), republished with appendixes by Migne (P. G., XXIX-XXXII). For fragments attributed to Basil with more or less certainty, and edited by Matthæi, Mai, Pitra, and others, see Bardenheuer, "Patrologie" (Freiburg, 1901), 247. Portions of letters recently discovered in Egyptian papyri were published by H. Landwehr, "Griechische Handschriften aus Fayûm", in "Philologus", XLIII (1884).

**Basin, ECCLESIASTICAL USE OF.**—Basins were extensively used in the Jewish Ritual and were in early use in Christian churches for ablutions and to receive lamp-drippings etc. The Missal prescribes its use at the "Lavabo" of the Mass (Rit. Cel. vii, 10); the "Cæremoniale Episcoporum" provides a basin for bearing the cruets (Lib. I, xi, 10) and for the preparatory ablutions of bishops (ibid., 12). They are ordinarily of ornamented metal.

JOHN B. PETERSON.

**Baslé, AUGUSTINE FRANCIS.** See **MYSORE, DIOCESE OF.**

**Basle, COUNCIL OF,** convoked by Pope Martin V in 1431, closed at Lausanne in 1449. The position of the pope as the common Father of the Christian world had been seriously compromised by the transfer of the papal court to Avignon, and by the subsequent identification of the interests of the Church with those of a particular race. Men began to regard the papacy more as a national than a universal institution, and their feeling of religious loyalty was often nearly balanced by the promptings of national jealousy. Nor was the papacy likely to be strengthened by the events of the Great Western Schism (1378-1417), when rival claimants were seen contending for the throne of St. Peter and for the allegiance of the Christian nations. Such a spectacle was well calculated to shake men's belief in the monarchical form of government and to drive them to seek elsewhere a remedy for the evils which then afflicted the Church. It was not strange that the advocates of a general council as the final arbitrator, the ultimate court of appeal to which all, even the pope, must yield, should have secured a ready attention. The success of the Council of Constance (1414-18) in securing the withdrawal or deposition of the three rival popes had supplied a strong argument in favour of the conciliar theory. It is clear both from the speeches of some of the Fathers of Constance as well as from its decrees that such a feeling was rapidly gaining ground, and that many people had come to regard the government of the Church by general councils, convoked at regular intervals, as the one most in harmony with the needs of the time. As a result, in the 39th session of the Council of Constance (9 October, 1417) we find it decreed: that general councils should be held frequently; that the next should be convoked within five years; the following seven years later, and after this, a council should be held every ten years; that the place of convocation should be determined by the council itself, and could not be changed even by the pope unless in case of war or pestilence, and then only with the consent of at least two-thirds of the cardinals. It was in accordance with this decree that Martin V convoked the Council of Basle, and it is only by understanding the feeling underlying this decree that we can grasp the significance of the dispute waged between Eugene IV and the council. Which was to govern the Church? Was it to be the pope or the council? That was the issue really at stake.

Whether Basle is to be regarded as a general council, and if so, in what sense, has been often warmly discussed. The extreme Gallicans (e. g. Edmund Richer, *Hist. Concil. Gen.*, III, vii) contend that it should be reckoned as oecumenical from its beginning (1431) till its end in Lausanne (1449); while the moderate writers of the Gallican school

(e. g. Nat. Alexander, IX, pp. 433-599) admit that after the appearance of the Bull of Eugene IV (18 September, 1437) transferring the council to Ferrara, the proceedings at Basle can be regarded only as the work of a schismatical conventicle. On the other hand, writers like Bellarmine (*De Concil.*, I, vii), Roncaglia, and Holstein absolutely refuse to number Basle among the general councils of the Church on account of the small number of bishops in attendance at the beginning, and the subsequent rebellious attitude in face of the papal decrees of dissolution. The true opinion seems to be that put forward by Hefele (*Conciliengesch.*, 2d ed., I, 63-99) that the assembly at Basle may be regarded as oecumenical from the beginning until the Bull "Doctoris Gentium" (18 September, 1437) transferred its sessions to Ferrara, and that the decrees passed during that period regarding the extirpation of heresy, the establishment of peace among Christian nations, and the reform of the Church, if they are not prejudicial to the Apostolic See, may be considered as the decrees of a general council. In accordance with the above-mentioned decree of Constance, the Council of Pavia had been convoked by Martin V (1423), and on the appearance of the plague in that city its sessions were transferred to Sienna. Very little was done except to determine the place where the next council should be held. An Italian city was looked upon with disfavour, as likely to be too friendly to the papacy; the French bishops and the Paris University were anxious that some place in France should be selected; but finally, owing mainly to the representations of Emperor Sigismund, Basle was agreed upon by all, and this choice having been made, the council was dissolved (7 March, 1424). As the time approached for the assembling of the council Martin V was urged from all sides to place no obstacle in the way, and though knowing the tendency at the time, and fearing that the council would lead to revolution rather than reform, he finally gave his consent and appointed Cardinal Giuliano Caesarini as president (1 February, 1431).

The principal purpose of the council was to be the reformation of the Church in its "head and members", the settlement of the Hussite wars, the establishment of peace among the nations of Europe, and finally the reunion of the Western and Eastern Churches. The demands of the Roman Curia, its constant interference in the bestowal of benefices, the right of appeal on all matters to the prejudice of the local authorities, the financial burdens involved in such institutions as annates, expectancies, and reservations, not to speak of the direct papal taxation, only too common since the thirteenth century, had given just grounds for complaint to the clergy and secular powers of the different nations. These papal taxes and encroachments on the rights of the local authorities, both ecclesiastical and civil, had long been bitterly resented, especially in England and Germany, and it was because a remedy for these abuses was hoped for only from a general council that people regarded sympathetically the assembly at Basle, even at times when they did not agree with its methods. In addition to these, the question of simony, of concubinage among the clergy, of reorganization of diocesan and provincial synods, of the abuse of censures, especially of interdict, called for some reform in the discipline of the Church. But besides these disciplinary matters the teaching of Wyclif and Hus had found sympathetic supporters in England and Bohemia, and notwithstanding the condemnation at Constance the Hussites were still a powerful party in the latter country. Though the death of their leader Ziska (1424) had proved a serious loss, the different sections still continued the struggle, and Emperor

Sigismund was naturally anxious that an end should be put to the war which had already taxed his resources to the uttermost. Furthermore, the growing power of the Turks was a menace not alone to the existence of the Eastern Empire but to the whole of Europe, and made it imperative upon the Christian princes to abandon their internecine strife and unite with the Greeks in defence of their common Christianity against the power of Islam. The movement in favour of reunion had been specially favoured by Martin V and by the Emperor John VII Palæologus (1425-48).

The president of the council, Cardinal Giuliano Cæsari, appointed by Martin V and confirmed by Eugene IV, presided at the first public session, but retired immediately upon the receipt of the papal Bull dissolving the council (December, 1431). The members then nominated Bishop Philibert of Constance as president. Later on, probably at the seventh general session (6 November, 1432), Cæsari resumed the presidency and continued the guiding spirit in opposition to the pope till the extreme element under Cardinal d'Allemand of Arles began to gain the upper hand. In the general assembly (6 December, 1436) he refused to agree to the wishes of the majority that Basle, Avignon, or some city of Savoy should be selected as the meeting place of the council to be held for the reunion of the Greeks with the Western Church, but he continued to act as president till the 31st of July, 1437, when a decree was passed summoning Pope Eugene IV to appear at Basle within sixty days to answer for his disobedience. Cæsari finally left Basle after the appearance of the Bull, "Doctoris Gentium" (18 September, 1437) transferring the council to Ferrara, and joined the adherents of the pope. After his withdrawal, Cardinal d'Allemand played the leading part and on the election of the antipope, Felix V, was nominated by him as president of the assembly. The nomination however, was disregarded by the members who thereupon elected the Archbishop of Tarentaise. The other members of the council who took a prominent part in the proceedings were Capranica who had been appointed cardinal by Martin, but who as his appointment had not been published was not admitted to the conclave on the death of Martin nor recognized by Eugene; Aneas Sylvius Piccolomini, afterwards Pope Pius II; the renowned scholar Nicholas of Cusa; Cardinal Louis d'Allemand; John of Antioch; John of Ragusa, and the two canonists, Nicholas, Archbishop of Palermo, and Louis Pontanus.

Eugene IV confirmed his predecessor's appointment of Cæsari as president on the very day of his coronation (12 March), but with certain reservations which were dictated by Eugene's desire of holding a council in some city more convenient for the representatives of the Greeks. There was present at Basle on the day on which the council should have been opened (4 March) only one delegate, but by the beginning of April, three representatives arrived from the University of Paris, together with the Bishop of Chalons and the Abbot of Cîteaux. These six came together (11 April) and issued pressing letters of invitation to the cardinals, bishops, and princes of Europe. Cæsari, who up to this time had been engaged in the crusade organized against the Hussites, endeavoured to reassure the delegates and to restrain their eagerness, while the influence of Sigismund was employed in the same direction. The pope wrote to Cæsari (31 May) requesting him to settle the affair of the Hussites as quickly as possible and then to proceed to Basle for the opening of the council. On the reception of this letter the legate determined, after consultation with Sigismund, to remain with the military

forces, but at the same time to dispatch two of his companions, John of Palomar and John of Ragusa, to act as his representatives at Basle. These arrived there on 19 July and held an assembly (23 July) in the Cathedral of Basle at which the documents of authorization were read, and the council declared formally opened. Though there were not a dozen members present the assembly immediately arrogated to itself the title of a general council, and began to act as if its authority were secured.

Cæsari, after the failure of his crusade against the Hussites, arrived in Basle on the 11th of September and a few days later (17 September), in accordance with instructions received from Eugene, dispatched John Beaupère to Rome, in the capacity of delegate, to inform the pope of the proceedings. The delegate who was unfavourable to the continuance of the council represented to the pope that very few prelates had attended, that there was little hope of an increased number owing to the war between Burgundy and Austria and the general unsafety of the roads, and that even the city of Basle itself was in danger and its people unfriendly to the clergy. On the receipt of this news Eugene issued (12 November) a commission to Cæsari, signed by twelve cardinals, empowering him to dissolve the council, if he should deem it advisable, and to convoke another to meet at Bologna eighteen months after the dissolution. Meanwhile the assembly at Basle had entered into communication with the Hussites, requesting them to send representatives to the council, and, in case they complied, granting letters of safe-conduct. This was understood at Rome as indicating a desire to reopen for discussion questions of doctrine already settled at Constance and at Sienna, and as a result Eugene IV issued (18 December) a Bull dissolving the council and convoke another to meet at Bologna.

Before the arrival of this Bull Cæsari had already (14 December) held the first public session, at which were present three bishops, fourteen abbots, and a considerable body of doctors and priests. Naturally enough, the Bull of dissolution, though not entirely unexpected, gave great offence to those present, and on the 3d of January, 1432, when it was to have been read, the members absented themselves from the sitting to prevent its publication. Cæsari forwarded to Rome a strongly worded protest against the dissolution, in which he pointed out the evil consequences which would result from such a step, but at the same time in obedience to the papal Bull he resigned his position as president of the council. Sigismund, who had already appointed Duke William of Bavaria protector of the council, was also opposed to the action of Eugene IV, as he had great hopes that through this council the Hussite controversy might be terminated; on the other hand, he wished to stand well with the pope, from whom he expected the imperial crown. Hence it is that while sympathizing generally with the council, he played the rôle of mediator rather than that of defender. Delegates were dispatched from Basle to secure the withdrawal of the Bull.

Many of the princes of Europe who had hoped for useful reforms from the labours of the council expressed their disapproval of the papal action, and more especially the Duke of Milan who was personally hostile to Eugene IV. Relying on this support the second public session was held (15 February, 1432) at which were renewed the decrees of Constance declaring that a general council had its authority directly from Christ and that all, even the pope, are bound to obey it. Besides, it was decreed that the "General Council" now in session could not be transferred, prorogued, or dissolved without its own consent. Everything seemed just then to favour the council. Sigismund had a power,

ful army in Northern Italy; an Assembly of the French Clergy at Bourges (February, 1432) declared for the continuation of the council at Basle and resolved to send representatives; the Duke of Burgundy wrote that he would send the bishops of his own nation and would use his influence with the King of England to induce him to do likewise; the Dukes of Milan and Savoy were equally sympathetic, while the Paris University declared that the devil alone could have inspired the pope to adopt such a course. Thus encouraged the council held its third public session (29 April, 1432) in which the pope was commanded to withdraw the Bull of dissolution and to appear at Basle either personally or by proxy within three months. A similar summons was addressed to the cardinals, and both pope and cardinals were threatened with judicial proceedings unless they complied. In the fourth public session (20 June, 1432) it was decreed that in case the papal throne should become vacant during the time of the council, the conclave could be held only at its place of session; that in the meantime Eugene IV should appoint no cardinals except at the council, nor should he hinder any person from attending, and that all censures pronounced against it by him were null and void. They even went so far as to appoint a governor for the territory of Avignon and to forbid any papal embassy to approach Basle unless letters of safe-conduct had been previously requested and granted.

Sigismund was in constant communication with the pope and urged him to make some concessions. In the beginning Eugene IV agreed to allow a national council to be held in some German city for the reform of abuses in the Church of Germany and for the settlement of the Hussite controversy. Later on, he was willing to permit the council at Basle to continue its discussions on church reform, the Hussite controversy, and the establishment of peace among Christian nations, provided that its decisions were subject to the papal confirmation, and provided, too, that a council should be held in Bologna, or some Italian city for the reunion of the Eastern Church. Sigismund forwarded this letter to Basle (27 July) and exhorted the delegates to moderation. On the 22d of August, the plenipotentiaries of the pope were received at Basle and addressed the council at length, pointing out that the monarchical form of government was the one established by Christ, that the pope was the supreme judge in ecclesiastical affairs, and that the Bull of dissolution was not due to the pope's jealousy of a general council as such. They ended by declaring that the assembly at Basle, if it persisted in its opposition to Eugene, could be regarded only as a schismatical conventicle and was certain to lead, not to reform, but to still greater abuses. In the name of the pope they made an offer of Bologna or some city in the Papal States as the place for the future council, the pope to resign his sovereign rights over the city selected, so long as the assembly should be in session. The council replied to this communication (3 September) by reasserting the superiority of a general council over the pope in all matters appertaining to faith, discipline, or the extirpation of schism, and by an absolute rejection of the offers made by the plenipotentiaries.

In the sixth public session (6 September), at which were present four cardinals (Cæsarini, Branda, Castiglione, and Alberghati) and thirty-two bishops, it was proposed to declare Eugene and his eighteen cardinals contumacious, but this proposal was postponed, owing, mainly, to the representations of Sigismund. In October, the standing orders for the transaction of the business of the council were drawn up. Without reference to their ecclesi-

astical rank the members were divided into four committees, on which the four nations attending the council should be equally represented. The votes of the cardinals or bishops were of no more importance than those of the professors, canons, or parish priests; in this way it was secured that the inferior clergy should have the controlling voice in the decisions of the council. Each committee was to carry on its sittings in a separate hall and to communicate its decisions to the others, and it was only when practical unanimity had been secured among the committees that the matter was introduced at a public session of the whole body. This arrangement, whereby the irresponsible members had gained the upper hand, tended to bring affairs to a crisis. In the seventh public session (6 November) it was arranged that in case of Eugene's death the cardinals should appear at the council within 60 days for the holding of the conclave. Shortly afterwards, at the eighth public session (18-December), the pope was allowed a further term of sixty days to withdraw the Bull of dissolution, under threat of canonical proceedings in case he failed to comply, and, finally, at the tenth public session (19 February, 1433) this threat was enforced, and in the presence of five cardinals and forty-six bishops the pope was declared contumacious and canonical proceedings were instituted against him.

Eugene IV, afflicted with bodily suffering, deserted by many of his cardinals, and hard pressed by Italian rebels, endeavoured by every means in his power, together with the support of Philip, Duke of Milan, to bring about a settlement. He proposed (14 December, 1432) an Italian town as the place for the council, allowing the assembly at Basle four months to settle up the Hussite controversy; on the rejection of this, he agreed that it should be held in a German city provided twelve impartial bishops and the ambassadors of the different countries so wished it. Later still (1 February, 1433) he accepted a German town unconditionally, and even went so far as to agree to accept (14 February, 1433) Basle itself in case the decrees against the papal power were withdrawn, his own legate allowed to preside, and the number of bishops present at least seventy-five. These offers were rejected by the council (March, 1433), the decree about the superiority of a general council renewed (27 April), and it was with difficulty that Duke William of Bavaria prevented the opening of the process against the pope in the twelfth general session (13 July). Meanwhile Sigismund had made peace with Eugene and had received the imperial crown in Rome (31 May, 1433). He requested the council not to proceed further against the pope until he himself should be present, and on the other hand he pressed the pope to make some further concession. In response to this appeal Eugene issued (1 August, 1433) a Bull in which he declared that he was willing and content that the council should be recognized as lawfully constituted from the beginning and continued as if nothing had happened, and that he himself would assist its deliberations by every means in his power, provided, however, that his legates were admitted as real presidents, and that all decrees against himself or his cardinals were withdrawn. This declaration coincided exactly with the formula sent by Cæsarini to the emperor (18 June) except that the pope had inserted "we are willing and content" (*volumus et contentamur*) in place of the words "we decree and declare" (*decernimus et declaramus*). This change was displeasing to the council, implying, as it did, mere toleration and not the approbation which they desired; so relying upon Eugene's troubles in Italy with the Colonnas, the Duke of Milan, and others, they refused to accept even this concession. Finally, on the 15th of December, 1433,

Eugene issued a Bull in which he accepted the formula "we decree and declare" by which he withdrew all his previous manifestoes against the Council of Basle.

Thus peace was established between the two parties, but the reconciliation was more apparent than real. The papal legates were indeed admitted as presidents, but their jurisdiction was denied, their powers limited by the will of the council, they were even forced to accept the decrees of Constance which they did in their own name but not in the name of the pope (24 April, 1434), and finally, when in the eighteenth public session (26 June) the Constance decrees were solemnly renewed they refused to attend. In spite of their efforts the council continued in its opposition to the pope, claiming jurisdiction in all affairs, political and religious, and entering into negotiations with the Greeks about the reunion of the Churches. At the twentieth public session (22 January, 1435) the reform of church discipline was begun. Decrees were passed against concubinage of the clergy and the abuse of excommunications and interdicts. On the 9th of June, 1435, annates and all the customary papal taxes were abolished, although no steps were taken to provide for the financial status of the papacy. Later still the papal collectors were ordered to appear in Basle to render an account of their work, and all outstanding debts due to the pope were to be paid at Basle. The papal delegates, especially Traversari and Anton de Vito, defended the rights of Eugene, but the moderate element was gradually losing control in the assembly, and the extreme party, gathered around Cardinal Louis d'Allemand, could no longer be restrained. No legislation had any chance of being passed unless directed against the Holy See. At last, after the papal deputies, Cardinals Alberghati and Cervantes, had been received very badly at Basle (25 March, 1436), and after decrees had been passed regarding the future conclave, the papal oath, the number of cardinals, etc., Eugene IV realized that conciliation was no longer possible, and addressed a Note to the princes of Europe in which he summed up the injuries inflicted on the papacy by the council and requested the different rulers to withdraw their bishops from Basle and assist in the preparation for another general council from the deliberations of which something better might be awaited.

The council had previously opened communication with the Greeks (September, 1434) to determine where the assembly for reunion should be held. In December, 1436, it was proposed that the council should be held either at Basle itself, at Avignon, or in Savoy. Cardinal Cesarini refused to put this proposal to the meeting, but on the motion of Cardinal d'Allemand it was passed. The pope refused to consent, and the deputies of the Greek Emperor protested against it (23 February, 1437), whereupon a new embassy was dispatched to Constantinople. The Greeks refused to come either to Basle or Savoy, and the people of Avignon had shown no desire that the council should be held there. A strong minority, including the papal legates, and most of the bishops present, wished that some Italian city should be selected; the majority, led by Cardinal d'Allemand and composed mainly of the inferior clergy, were opposed to this proposal, and after a disorderly session (7 May, 1437), at which both parties published their decrees, Eugene IV confirmed that of the minority, and the Greek ambassador declared it to be the one acceptable to the emperor. The revolutionary party now completely controlled the council. Against the wishes of Cesarini, Cervantes, and Sigismund, the pope was commanded (31 July, 1437) to appear before the council to answer for his disobedience, and

on the 1st of October he was declared contumacious. Eugene IV replied to these excesses by the publication of the Bull "Doctoris gentium" (18 September), in which it was stated that unless the delegates abandoned their methods and confined themselves for a limited number of days only to the Bohemian affair the council would be transferred to Ferrara. The reply was a reassertion of the superiority of a general council (19 October). Cardinal Cesarini made one final effort to effect a reconciliation, but failed, and then, accompanied by all the cardinals except d'Allemand and by most of the bishops, he left Basle and joined the pope at Ferrara, to which place the council had been definitely transferred by a Bull of Eugene IV (30 December).

Henceforth the assembly at Basle could be regarded only as schismatical. Most of the Christian world stood loyal to the pope and to the Council of Ferrara. England, Castile and Aragon, Milan, and Bavaria disavowed the assembly at Basle, while, on the other hand, France and Germany, though recognizing Eugene IV, endeavoured to maintain a neutral position. In a meeting of the French Clergy at Bourges (May, 1438), at which were present delegates from the pope and from Basle, it was determined to remain loyal to Eugene, while at the same time many of the reforms of Basle were accepted with certain modifications. It was on this basis that the twenty-three articles of the Pragmatic Sanction of Bourges were drawn up (7 July, 1438). In Germany, after the death of Sigismund (9 December, 1437), delegates of both parties attended at Frankfort (1438) to seek the assistance of the princes, but they declared for neutrality until a king had been elected, and even after the election of Albrecht II the attitude of neutrality was maintained till at last, in Mainz (March, 1439), they followed the example of France and declared for Eugene IV as lawful pope while they accepted many of the reforms of Basle.

In Basle itself it was resolved to depose the pope and in order to prepare the way for deposition three articles were drawn up, namely: (1) that a general council is superior to a pope; (2) that the pope cannot prorogue, or dissolve such an assembly; (3) that whoever denies these is a heretic. Cardinal d'Allemand was the leading spirit in this undertaking. Against the wishes of the bishops and most of the ambassadors present, these decrees were passed (16 May, 1439), and Eugene IV was deposed as a heretic and schismatic (25 June). Immediately steps were taken to elect his successor. Cardinal Louis d'Allemand, eleven bishops, five theologians, and nine jurists and canonists formed the conclave, and on the 30th of October, 1439, Amadeus, ex-Duke of Savoy, was elected and took the name of Felix V. Since his retirement he had been living with a body of knights, which he organized as the Order of St. Maurice, on the banks of the Lake of Geneva. He was closely connected with many of the princes of Europe, and the council stood in bad need of the wealth which he was reputed to possess. He named Cardinal d'Allemand president, but the conventicle resented this act of authority and elected instead the Archbishop of Tarantaise (26 February, 1440). Steps were also taken to levy taxes on ecclesiastical benefices to provide revenue for Felix V (4 August, 1440). But the election of an antipope alienated the sympathy of the world from Basle. Henceforth they could rely only upon Switzerland and Savoy.

Disputes soon broke out between Felix V and the conventicle at Basle. It refused to allow his name to precede that of the council in the promulgation of its decrees, and he was unwilling to undergo the expense of supporting nuncios in the different countries. The sessions became less frequent, the

relations between Felix V and the council were strained until, at last, in defiance of its wishes, he left Basle and took up his residence at Lausanne (December, 1442). Disappointed in the hope of securing the support of Sforza, Aragon, or Milan, the council held its last session at Basle (16 May, 1443), and decreed that a general council should be held in Lyons after three years; that until the opening of this the Council of Basle should continue its work, and in case the city of Basle should become unsafe that it should be transferred to Lausanne. No decrees of general interest were passed after this session. But it was some time before the princes of Germany could be induced to abandon the attitude of neutrality. At different diets, Nuremberg (1438), Mainz (1441), Frankfort (1442), Nuremberg (1443, 1444), Frankfort (1445), it was proposed that a new general council should be held to settle the disputes between Basle and Eugene IV. A sentence of deposition issued by Eugene IV against the Prince-Electors of Cologne and Trier who favoured Basle roused all the princes of Germany against him, and at the Diet of Frankfort (1446) it was resolved to send an embassy to Rome to demand the convocation of a new council, and, in the meantime, the recognition of the reforms effected in Basle; else they would withdraw from their allegiance. The Emperor Frederick III. dissented from this decision and sent his secretary, Æneas Sylvius, to confer with the pope. At last, after long negotiation in Rome and Frankfort, an agreement was arrived at (February, 1447) known as the Concordat of the Princes. On their side they agreed to abandon the attitude of neutrality, while the pope restored the deposed princes and accepted with modifications certain of the reforms of Basle. In accordance with this agreement the Vienna Concordat was drawn up between the successor of Eugene IV and the Emperor Frederick III. The pope's rights in the appointment to benefices were clearly defined, and the sources of revenue to take the place of the annates, then abolished, were agreed upon. Once this had been concluded, Frederick III. forbade the city of Basle to harbour any longer the schismatical assembly, and in June, 1448, they were obliged to retire to Lausanne. Finally, after a few sessions at Lausanne, Felix V. resigned and submitted to the lawful pope, Nicholas V. The members of the assembly also elected Nicholas as pope and then decreed the dissolution of the council (25 April, 1449).

It only remains to deal with the negotiations between the Council of Basle and the Hussites. The latter were invited, as we have seen, at the very beginning of the council, but it was only in the fourth session (20 June, 1432) that the conditions proposed by the Hussites were accepted, and prayers ordered for their return to the Church. About the beginning of January, 1433, nearly three hundred of the Calixtine party arrived, and after repeated negotiations in Prague and Basle, the four articles demanded by the Hussites were agreed upon with certain modifications. These were Communion under both kinds, though their priests were to teach that Communion under one kind was equally valid; free preaching of the word of God, but subject to ecclesiastical authority; the punishment of mortal sin, but only by a lawful tribunal; the retention of their temporalities by the clerics, who were however, bound to bestow their superfluous wealth according to the canons. These formed the Compact of Prague, agreed upon the 30th of November, 1433. Many of the more extreme sects, such as the Taborites, refused to accept this treaty, but after their defeat (Lippau, 1434) a better feeling set in, and a similar compact was proclaimed at Iglau in July, 1436, and enforced by the Council of Basle (15 January, 1437).

The Council of Basle might have done much to secure reforms, then so badly needed, and to restore confidence in ecclesiastical authority. From all sides it was assured of sympathy and support as the one remedy for the abuses which existed. But under the influence of extreme theories and theorists it allowed itself to be hurried into an inglorious struggle with the pope, and the valuable time and energy which should have been given up to useful legislation were spent in useless discussions. It succeeded in fixing the eyes of the world upon the abuses, but without the pope it had not sufficient authority to carry through the necessary reforms, and as a consequence the secular rulers undertook what the ecclesiastical authority had shamefully failed to set right. It struck a terrible blow at the rights of the Holy See and shook men's faith in the pope's spiritual power at a time when his temporal sovereignty was in imminent danger. In this way it led directly in France, through the Pragmatic Sanction of Bourges, to the establishment of Gallicanism as a definite formula, while in Germany, through the long intervals of neutrality, people were prepared for the complete severance from the Holy See which was afterwards effected in the Reformation.

JAMES MACCAFFREY.

**Basle-Lugano**, DIOCESE OF, is the largest Catholic diocese of Switzerland. It is composed of the two Dioceses of Basle and Lugano which are united only by having a bishop in common.

I. THE DIOCESE OF BASLE.—This has taken the place of the old Diocese of Augst (Augusta Rauracorum); the origin of which is obscure; a Bishop of Augst was a member of a council held at Cologne in 346. When Augusta Rauracorum sank into decay during the disorders of the migrations the seat of the diocese was transferred to the present Basle (Basilea), founded in 374 by the Emperor Valentinian I. No definite information has been preserved concerning the first bishops. The most important bishop in the early period of the history of the diocese is Hatto, a Benedictine from the monastery of Reichenau, who was a friend of Charlemagne; he was Bishop of Basle from the year 805. He issued a capitulary of great importance for his diocese, resigned his position in 822, and retired to Reichenau where he died in 836. During the episcopate of Adalbert (999-1025) the foundation of the secular jurisdiction of the Bishops of Basle was laid by the grants made by King Rudolph III. of Burgundy; the king appointed the bishop administrator and protector of several religious foundations, bestowed a number of towns and territories on him, and conferred various rights, such as the right of coinage, hunting-rights, etc. Adalbert rebuilt the cathedral which had been pillaged by the Magyars and consecrated it with much pomp in 1019 in the presence of the Emperor Henry II and his wife. Adalbert's immediate successors Ulrich II (1025-40) and Dietrich (1041-53) were included among the spiritual princes of the Holy Roman Empire. In the period following Adalbert's administration the territory of the diocese was greatly increased, especially through gifts made by the Emperors Henry II, Henry III., and Conrad II.

As princes of the empire the Bishops of Basle were

drawn into the struggle between the papacy and the empire; most of the bishops took sides with the emperors against the popes. Berengar (1057-72) promoted, in opposition to Alexander II, the nomination of the Antipope Honorius at a synod held at Basle in 1061; Burkhard of Hasenburg (1071-1107) was one of the most resolute champions of the imperial claims and a faithful partisan of Henry IV whom he accompanied to Canossa. Ortlieb of Froburg (1137-64) went with the Emperor Conrad III on a crusade to Palestine and took part in the Italian campaigns of Frederick Barbarossa; Ludwig of Ortlieb was also a partisan of the emperor and of the Antipope Paschal; Alexander III, therefore, deposed him in 1179. Among the succeeding bishops the most noteworthy were: Henry II of Thun (1238-49), who built the oldest bridge across the Rhine near Basle (replaced in 1904-06 by a new one); Henry of Isny (1275-86), a Franciscan, who after 1286 was Archbishop of Mainz, as was also his successor Peter Rich of Riehenstein (1286-96), a devoted partisan of Rudolph of

WEST DOOR, CATHEDRAL OF BASLE

Hapsburg; Peter of Aspelt (1296-1306), later Archbishop of Mainz, who laboured to restore church discipline in his diocese. During the fourteenth century the prestige of the See of Basle declined; many of the bishops involved the diocese in debt in various ways; by taking part in the political quarrels, by feuds with the nobles living in Basle, and by quarrels with the city, which was rapidly growing in strength. The city of Basle bought nearly the whole of the jurisdiction over itself from the impecunious bishops and made itself almost entirely independent of episcopal secular rule. When John II of Münsingen (1335-65) was placed under the ban, along with the city of Basle, as a partisan of Louis the Bavarian, the citizens of the town threw the papal nuncio into the Rhine and forced the clergy to continue the church services or to leave the place. The earthquake of 1356 destroyed a large part of the city and also did much damage to the cathedral. John III of Vienne (1366-82) became involved in a dispute with Bern which led to a quarrel with Basle and the siege of this city by the bishop. The increased burden of debt thus caused was a source of great anxiety to the succeeding bishops, several of whom resigned their office. It was not until the episcopate of John IV of Fleckenstein (1423-36), who held two reform synods, that the see rose again to high reputation. The Council of Basle (1431-49) was held in the city of the same name during this episcopate and that of the following bishop, Frederick of the Rhine (1436-51). (See BASLE, COUNCIL OF.) The diocese suffered greatly at the time of the struggle of the Swiss confederation with Charles of Burgundy; many towns and castles were ravaged and burned during these troubles.

The Diocese of Basle attained its greatest extent in the course of the fifteenth century. The spiritual

power of the bishops, but not their secular jurisdiction, extended over the entire northwestern part of present Switzerland lying between the Rivers Aare, Rhine, and Doubs, over the southern part of the present Alsace as far as Rappoltswiler and Schlettstadt, as well as over some small districts in Baden and France. The Reformation was to rob the bishops of a large part of their flock. At the beginning of the religious agitation the diocese was under the rule of Christopher of Utenheim (1502-27), one of the most distinguished of the Prince-Bishops of Basle. He was a friend of the arts and sciences and a promoter of the new art of printing, then flourishing at Basle. In order to train and reform his clergy Bishop Christopher held in 1503 a synod at which excellent statutes were issued; he also called learned men as professors and preachers for the university that had been founded in 1460. This last measure, however, promoted the entry of the new doctrine. A number of the scholars who had been appointed, as Capito, Pellicanus, Œcolampadius, and for a time also, Erasmus and Glareanus, took sides with the Reformers and worked for the spread of the Reformation. Basle became a centre for the printing and dispatch in all directions of the writings of the Reformers. Before long the Great Council and the citizens were split into two religious parties and internal disputes were common. Bent from extreme age, Bishop Christopher, in 1527, resigned his see. Before his successor Philip of Gundelsheim (1527-53) was able to enter the city, the party advocating the new doctrine obtained control, the Catholic members of the Great Council were driven from office, the Catholic religion was declared to be abolished, the monasteries were closed, and the churches were plundered. The bishop changed his place of residence to Pruntrut (Porrentruy); the cathedral chapter went to Freiburg-in-the-Breisgau and did not return into the territory of the diocese until 1678 when it established itself at Arlesheim.

Succeeding bishops devoted themselves to repairing the severe losses which the diocese had suffered during the Reformation. The bishop who deserves the greatest credit for the restoration of the prosperity of the bishopric was Jacob Christopher Blarer von Wartensee (1575-1608). He made an alliance offensive and defensive with the Catholic cantons of Switzerland in 1580, proclaimed the decisions of the Council of Trent, held in 1581 a diocesan synod which bore good fruit, and brought back to the Church numerous subjects who had been estranged from the Catholic religion. He was ably seconded in his labours by the Jesuits whom he called in 1591 to Pruntrut and put in charge of the newly founded college. His successors followed in his footsteps, especially Joseph William Rink von Baldenstein (1608-28). In the course of the Thirty Years War the diocese suffered from invasions by the troops of Bernard of Weimar. During the episcopate of Bishop John Conrad von Roggenbach (1656-93) the cathedral chapter established itself once more in the diocese, at Arlesheim, as has been mentioned above. Bishop Conrad von Reinach (1705-37), who founded the seminary for priests and built Castle Delsberg, a residence of the prince-bishops, issued a series of ordinances in 1726 which curtailed the rights and privileges of the land. This caused a revolt that lasted into the episcopate of his successor Jacob Sigmund von Reinach (1737-43) and was only suppressed with the aid of French troops. The three leaders of the revolt were executed in 1740. An estrangement resulted that was not overcome in spite of all the efforts of the succeeding bishops, Joseph William Rink von Baldenstein (1744-62), Simon Nicholas von Froberg (1762-75), and Frederick Ludwig von Wangen-Geroldseck (1775-82).

The French Revolution put an end to the secular

jurisdiction of the bishops. The prince-bishopric was occupied by French troops in 1792 and Bishop John Sigmund von Roggenbach (1782-94) fled to Constance. His territory was turned into the Rauracian Republic which after four months was incorporated, 1793, in the French Republic. Besides the loss of secular jurisdiction the bishop had also to forego a large part of his ecclesiastical diocese, for, according to the Concordat made in 1801 between Pius VII and Napoleon, a large part of the Bishopric of Basle was given to the Diocese of Strasburg. The next bishop, Francis Xavier von Neveu (1794-1828), resided first at Constance and then at Offenburg; he ruled only a small territory in the present Cantons of Solothurn, Aargau, and Bern. It was not until 1814 that the bishop obtained again the right to ecclesiastical supervision over the larger part of the former prince-bishopric; but his efforts to bring about the restoration of the secular power were unavailing. In 1815 the Congress of Vienna gave the territory of the diocese to the Cantons of Bern and Basle, with the exception of the portion already belonging to Germany. Not long after this, however, the Diocese of Basle was enlarged. After the disorders of the Napoleonic era the Swiss confederation had been reorganized; in order to make it equally independent in Church matters the Swiss part of the Diocese of Constance was separated in 1814 from that bishopric and placed provisionally under a vicar Apostolic. Long negotiations were entered into between the cantons in the territory of which these portions of the diocese lay, and it was finally resolved to carry out the plan that had been steadily urged by the Canton of Solothurn; this was, to revive the Bishopric of Basle and to define anew its boundaries. The negotiations with Rome were concluded in 1828; the Bull of Leo XII, "Inter præcipua Nostri Apostolatus munera", issued 7 May, 1828, settled the boundaries of the new Diocese of Basle, and the Bull of 13 July, 1828, was solemnly read at Solothurn in the collegiate church of Sts. Ursus and Victor which had been elevated to a cathedral. Bishop Francis Xavier von Neveu died a few days later. The new cathedral chapter, which had been appointed, in order to bring it into existence by the pope, nominated as bishop the dean of the cathedral who had formerly been the administrator Apostolic, Anthony Salzmann (1828-54). The new Diocese of Basle, which is directly dependent on the Apostolic See, embraced at first the Cantons of Lucerne, Bern, Solothurn, and Zug; in 1829 Aargau and Thurgau were added; somewhat later Basle, for the Catholic district of Birsack; in 1841 Schaffhausen, first provisionally, and then, in 1858, definitely although without confirmation from Rome.

The germs of many conflicts lay hid in this merely provisional new arrangement and in the uncertainty as to the legal relations of the new see. However, during the episcopate of Bishop Salzmann and that of his immediate successor Charles Arnold (1854-62), the founder of a seminary for priests at Solothurn, peace was fairly well preserved. During the episcopate of Eugene Lachat (1863-85) a struggle broke out, caused by the Old-Catholic movement which won many adherents in Switzerland. The liberal cantons of the Diocese of Basle (all except Lucerne and Zug) closed the seminary for priests in April, 1870, and forbade the promulgation of the decrees of the Council of the Vatican. When in 1871 the bishop, nevertheless, proclaimed these decrees, the majority of the cantons belonging to the diocese voted his deposition, 29 January, 1873, and dissolved the cathedral chapter, 21 December, 1874, which had refused to elect a new bishop. The bishop, being forced to leave his residence, went to Lucerne which, like the canton of Zug, had protested against the action of the other cantons and had remained faith-

ful to the bishop. Here in Lucerne he continued to administer the diocese. His appeals to the federal authorities of Switzerland were rejected and the Catholic community was forbidden to have communication with him. It was not until the pontificate of Leo XIII that this unfortunate state of affairs was brought to an end and peace re-established. Bishop Lachat resigned his office in 1885 and was made titular Archbishop of Damietta and Administrator Apostolic of the newly formed Bishopric of Lugano (see below). He died in 1886. On 19 January, 1885, the Holy See appointed Frederick Fiala Bishop of Basle (1885-88). The new bishop sought to efface the traces of the late struggle and re-establish the cathedral chapter; he died 4 May, 1888. Leonard Haas (1888-1906) was appointed to the see 11 July, 1888. Bishop Haas was an eloquent preacher; he encouraged the use of congregational singing and held a diocesan synod in 1896. He was followed in 1906 by Dr. Jacob Stammeler, born 2 January, 1840, and ordained to the priesthood in 1863.

**STATISTICS.**—The present Diocese of Basle (excluding Lugano) embraces the Cantons of Basle, Bern, Lucerne, Solothurn, Aargau, Thurgau, and Schaffhausen; in 1900 it contained 444,471 Catholics and 903,400 Protestants. The majority of the inhabitants are Germans, although in the Canton of Bern some 6,000 Catholics speak French. For the spiritual direction of the Catholic community the diocese is divided into 8 deaneries, 14 rural chapters, 406 parishes, and 149 curacies and chaplaincies. The parishes in the Cantons of Zug and Schaffhausen are not united in a rural chapter. The secular priests number 660; the regular clergy (O.S.B. and O.M.C.) 85. The cathedral senate, which has the right to elect the bishop, consists of five resident canons (*canonici residentiales*) and six non-resident canons (*canonici forenses*); besides these there are seven cathedral capitulars, who do not belong to the cathedral senate. In 1907 the office of capitular was vacant. There is a collegiate church at Lucerne having an independent provost and 9 canons (in 1907 the canonries were not filled), and a collegiate church at Beromünster with 1 provost and 20 regular canons (the number of canons in 1907 was 17).

The schools for the education of the clergy are: a cantonal theological school at Lucerne with a seminary for priests, and at Zug St. Michael's boarding-school for boys. The private seminary for teachers at Zug is entirely Catholic in character. In accordance with the Swiss constitution the public schools are open to members of all denominations, consequently there are no genuine Catholic parish schools. In the Cantons of Lucerne and Zug, which are almost entirely Catholic, instruction is given in many of the schools by Catholic teaching-sisters, who are obliged to pass a state examination. The male orders and their houses in the Diocese of Basle are as follows: Capuchins, 7 houses with 73 priests, 19 clerics, and 24 lay brothers; the Hermit-Brothers of Luthern, 1 house; the Benedictines of Mariastein, who were included in the Swiss congregation of the Benedictines, were driven in 1874 from Mariastein and have gone to Dürrenberg near Salzburg; the Benedictines of Muri have gone for the same reason to Gries near Bozen, and the Cistercians of Wittengen to Meherau near Bregenz. The female orders and congregations are more largely represented in the diocese than the male orders. These institutes and their houses are as follows: Benedictine nuns, 1 house; Ursulines, 4 houses; Capuchin nuns, 4; Franciscan Sisters, 1; Cistercians, 2; Clares, 1; Sisters of St. Francis de Sales, 1 house with a boarding-school for girls attached; Sisters of Charity, 5; Sisters of the Divine Providence, 1. There are large numbers of the Sisters of the Cross of Ingenbohl, who have charge chiefly of orphan asylums and hospitals and who act as attend-

ants on the sick; also of the teaching Sisters of the Holy Cross of Menzingen, who carry on large institutes for girls at Menzingen, Baldeggen, and Cham, and conduct, besides, 250 elementary schools, and 45 institutions for the poor, orphans, and sick in different parts of Switzerland. In addition to the three Catholic schools for girls mentioned above, there are similar institutions at Solothurn and Lucerne. The most important Catholic church of the diocese is the Cathedral of Solothurn, which was built, 1762-63, in the style of the Italian Renaissance; others worthy of mention are: the collegiate church of St. Leodegar at Lucerne (built 1633-35); the church of St. Oswald at Zug; the churches of the former monasteries of Fischingen, Kreuzlingen, and Beromünster; the church of the institute at Menzingen, etc. The most frequented pilgrimages are: Mariastein near Basle, and Vorburg near Delsberg. (See SWITZERLAND.)

II. THE DIOCESE OF LUGANO.—The Diocese of Lugano was erected by a Bull of Leo XIII (7 September, 1888). It includes the Swiss Canton of Ticino, where the population is almost entirely Catholic and Italian is the common language. Before the Diocese of Lugano was founded the Canton of Ticino was under the jurisdiction, in ecclesiastical matters, of bishops who were not Swiss. The smaller, northern part belonged to the Archdiocese of Milan and, consequently, still uses the Ambrosian Rite; the other, and much larger part of the canton, belonged to the Diocese of Como. Soon after the formation of the Canton of Ticino, in 1803, efforts were made to separate it in its church relations as well as from foreign powers and to unite it in these with the rest of Switzerland. But it was several decades before the Great Council, in 1855, went thoroughly into the matter. Without consultation with the Holy See the Federal Council in 1859 declared the jurisdiction of the Bishops of Como and Milan to be abolished in the territory of Switzerland; after this negotiations were begun with Rome. No settlement of the question was reached until the pontificate of Leo XIII. By the convention of 1 September, 1884, made between the Curia and the Federal Council, Ticino was canonically separated from its former diocesan connexions and was placed, provisionally, under an administrator Apostolic, the pope appointing as administrator, Bishop Lachat of Basle (see above). After Bishop Lachat's death (1886) the new Bishopric of Ticino was formed by the Bull of circumscription "Ad universam" of Leo XIII (7 September, 1888), and united with the Diocese of Basle under the title of the Diocese of Basle-Lugano. The same year the Church of San Lorenzo was elevated to a cathedral. The union is merely a nominal one, for, although the Bishop of Basle is called the Bishop of Lugano he exercises no rights of jurisdiction in this diocese. It is, in reality, under the independent rule of an administrator Apostolic who has the rank and power of a bishop. He is appointed by the pope with the concurrence of the Bishop of Basle from among the members of the clergy of the Canton of Ticino. The first administrator Apostolic was Eugene Lachat; he was followed by Mgr. Vincent Molo (1887-1904),

and Mgr. Alfred Peri-Morosini. The latter was born 12 March, 1862, and was consecrated 17 April, 1904.

STATISTICS.—According to the Swiss census of 1900 the Diocese of Lugano includes 135,200 Catholics in a total population of 142,800 for the Canton of Ticino. For purposes of religious administration the diocese is divided into 14 episcopal vicariates, 5 rural chapters, and 248 parishes and chaplaincies; 54 parishes use the Ambrosian Rite; the other 194 parishes belong to the Latin Rite. The care of souls is exercised by 330 secular priests and 22 regular clergy. The cathedral chapter consists of an archpriest and 16 canons (10 resident and 6 non-resident). The collegiate churches are: Bellinzona, a provost and 14 canons; Agno, a provost and 7 canons; Locarno, a provost and 8 canons; Balerna, a provost and 8 canons, and Mendrisio, a provost and 8 canons. Catholic institutions of learning are: the seminary for priests at Lugano; the episcopal seminary for boys, Santa Maria near Pollegio; the papal academy at Ascona; the College Don Bosco at Bellinzona; the Institute Dante Alighieri, conducted by the Somaschi, at Bellinzona, and the institute at Olivone. The orders and congregations in the diocese and the number of their houses are as follows: Capuchins, 4 houses; the Somaschi, 1; Benedictine nuns, 1; Augustinian nuns, 1 house, which has an academy in connection with it; Capuchin nuns, 1; Sisters of Mercy of St. Vincent de Paul, 2 (hospitals at Lugano and Locarno); School-Sisters of Menzingen, 2 (college at Bellinzona); Sisters of the Holy Cross, 3 (they also conduct an asylum for the deaf and dumb at Locarno); Sisters of St. Vincent de Paul, 1; Sisters of the Childhood of Jesus, 1; and the Sisters of the Divine Providence, 1. The most noted church of the diocese is the cathedral of San Lorenzo at Lugano, which was built in the fifteenth and sixteenth centuries and has a celebrated Renaissance façade; the most frequented place of pilgrimage is the shrine Madonna del Sasso not far from Locarno, which is the national shrine of the Canton of Ticino.

JOSEPH LINS.

**Bas-relief**, a sculpture executed upon and attached to a flat surface. The usual impression produced by an artistic relief is that about one-half of the actual proportions of the object are being seen in their third dimension of depth. Strictly speaking, however, relief sculpture is subdivided into various kinds. In alto-rilievo (It. for high relief) the figures are sculptured partly or wholly in the round, that is, they project entirely, or almost entirely, from the surface of the block in which they are cut. The metopes from the Parthenon (Elgin Marbles) now in the British Museum, are among the best examples of alto-rilievo. Mezzo-rilievo (It. for semi-relief; Fr., *demi-relief*) presents figures that are rounded to half their natural proportions, but without detached parts. Basso-rilievo (It. for low-relief; Fr., *bas-relief*) is a form of surface-ornamentation in which the projection is very slight. The finest known specimen of low relief is the frieze around the cella of the Parthenon; large portions of it are to be seen in the British Museum. The lowest kind of relief is that described by the Tuscan term *rilievo-stacciato* (depressed or flattened relief). This scarcely rises from the surface upon which it is carved, and is mostly an art of fine lines and delicate indications. Donatello's Florentine Madonnas and saints are among the best examples. Finally cavo-rilievo

(It. for hollow relief; Fr., *relief-en-croix*) is a method of concave sculpture in which the highest part or outline is on a level with the surface, while the roundness is considerably below it. Cavo-rilievo was practised chiefly by the Egyptians whose hollow reliefs are known by the Greek term *Koilanaglyphs*.

Relief is the form of sculpture that comes nearest to painting, both having composition, perspective, and the play of light and shadow. Relief would seem to have much in common with drawing, though in reality less importance attaches to line than to the modelling of contour and to the true and effective rendering of *chiaroscuro*. The human form is undoubtedly the proper object of relief, which appears to be particularly suited to the representation of numerous figures in action. In the Greek and Roman classic reliefs these figures are usually in processional order, engaged in historic or military events, or in the ceremonial of worship. Relief is

existed before the introduction of sculpture in the round, or when only rude figures of the deities had been attempted. The Babylonians, Assyrians, and Hittites practised it contemporaneously with sculpture in the round. The Egyptians, though they employed a kind of low relief, especially on the interiors of buildings, made a still greater use of *Koilanaglyphs*. The Greeks, conceiving relief sculpture in its purely plastic sense, achieved the greatest mastery of the art. With them it was used both as an ornament and as an integral part of the plan when allied with architecture. Distinguishing strictly between high and low relief, they used the former between the triglyphs, and in the tympana of the temples, and the latter in friezes, tombstones, etc. Certain fixed principles governed the Greek relief: the spaces were adequately filled, the backgrounds never carved, and it was a rule that all heads should be at the same height from the base, whether the figures sat, rode, or stood (*iso-*

THE ANNUNCIATION, ANDREA DELLA ROBBIAS, HOSPITAL OF THE INNOCENTS, FLORENCE

well suited, also, to the portrayal of series of scenes, as in the bronze doors of various Italian baptisteries illustrating the Old and the New Testament. Figures and objects in relief are generally worked out in the same material as the background, though there are exceptions to this rule in Greek art, and in the decorative work of the Chinese and Japanese. In the larger reliefs marble, bronze, and terra-cotta are used exclusively; while in smaller works the precious metals and stones, ivory, stucco, enamel, wood, etc., predominate. The reliefs of the Egyptians and Assyrians, not highly plastic, were made more effective by the introduction of strong colours. The early Greeks also made use of polychromy, as instanced in the metope relief in the Museum of Palermo. In Gothic art and in the Renaissance it was the custom to tint wood, terra-cotta, and stucco, but not marble or stone. Relief is one of the earliest forms of sculpture practised, and probably originated with the stone-cutters of prehistoric days, though clay and wood are supposed to have been the earliest materials employed, owing to greater facility in moulding and carving them.

There is reason to believe that relief sculpture

*kephaleia*). In the Hellenistic period a more picturesque and dramatic form of composition prevailed, and the backgrounds were carved in pictorial style. With the Etruscans relief was applied mainly in the artistic handicrafts. In Rome it frequently degenerated into a pictorial mode in which several planes were employed, but examples are still extant that are highly classic, e. g. the groups of the Arch of Titus, the continuous winding reliefs of the Column of Trajan, imperial sarcophagi (in the Vatican), and reliefs of the Capitol Museum, Rome. The Romans no doubt owed their finest reliefs to the Greek artists they harboured and employed upon themes taken from the history of Rome.

The Christian Era inaugurated what might be mistaken for a new art, but the change was in subject more than in mode, for all the early examples show a great similarity to antique models in form, pose, and drapery. Christian relief appears mainly in the sarcophagi with their Biblical, Apostolic, or symbolic subjects: Daniel in the lions' den, Moses striking water from the rock, the adoration of the Magi, the raising of Lazarus, the Good Shepherd. Heathen myths are also used, invested with a new signifi-

cance: Orpheus is Christ, drawing the creatures of the wild by the sweet strains of his music; Ulysses attached to the mast is believed to typify the Crucifixion (O. Marucchi). Occasionally a carving on a Catacomb tombstone shows real merit, and the lamps adorned with Christian symbols are frequently artistic. As they depart from the classic tradition, however, Christian reliefs grow ruder and more imperfect. Those of the latter part of the second and the third century have little merit. The fourth century, in spite of the decline, bequeathes some specimens, now in the Lateran Museum; the sarcophagus of Junius Bassus in the vaults of St. Peter's is highly esteemed as a work of art. When the Christian basilica replaced the cubiculum the influence of imperial Constantinople had substituted mosaics for both sculpture and painting. The few reliefs of that period that have survived bear a strongly Byzantine character, which is also apparent in all early Frankish workmanship, reliefs, ivory diptychs, etc. The reliefs of Ravenna, from the time of Theodoric, show the same influence in combina-

conception. During the entire baroque period (Michelangelo being the last Italian sculptor of the late Renaissance) works of a low order of inspiration prevailed. The Danish sculptor Thorwaldsen, influenced by the study of Attic models, produced reliefs of great beauty and plasticism. The works of Canova were likewise classics, though frequently cold and feeble. Rauch in Germany and Rude in France modelled spirited reliefs. In our day at the head of the admirable French school of sculpture stands Rodin, an impressionist and psychologist, producing unfinished reliefs which nevertheless are almost Greek in their imprint of life. In Germany, Austria, and England, fine reliefs, especially decorative works, are being modelled. In Spain and Italy the younger men are forming new schools of plastic work. In America, though good work in relief is done, sculpture in the round prevails. Everywhere the tendency is to neglect the distinction between the different kinds of relief, to be independent in method and treatment, and principles sway as of old between the pictorial and the plastic.

FLORENCE.

HEAD OF ST. JOHN PRESENTED TO HEROD, DONATELLO

cation with the Teutonic spirit, as in the sixth-century sculptures of San Vitale. In figure-carving, however, there is a distinct tending from symbolism to realism. The rude Lombardic bas-reliefs of Milan and Brescia frequently border on the grotesque, but the authors went to nature for their hunting scenes and forms of animals. The bronze reliefs of the church of St. Michael, Hildesheim, Germany, are one of the legacies of the eleventh century; those of the Golden Gate, Freiburg, are considered the finest work of the late Romanesque period.

With the merging of the Romanesque into the Gothic, relief sculpture assumes a new character and a peculiar importance in its close association with architecture, and in the many uses it is put to in tympana, spandrels, etc. As a purely Christian and beautiful form of art it ranks high; numerous examples are extant, especially in the northern countries of Europe. In Italy it had small hold, for as early as 1300 Andrea Pisano, who is called a Gothic, was inaugurating a renaissance. Picturesque relief reached its fullest development in Florence, as in the baptistery doors of Ghiberti and the marble pulpit of Santa Croce by Benedetto da Majano. Donatello in his admirable high and low reliefs and the Della Robbias in their enamels return to a more plastic

**Bassein**, a town situated twenty-nine miles north of Bombay in British India, and now of much historic interest as an old settlement of the Portuguese. It is the birthplace of St. Gonsalo Garcia, the only Indian saint, who was a companion of St. Philip de las Casas, the first native of America to be canonized. These two missionaries were in the group of the first martyrs of Japan, crucified on the hill of Nagasaki, 5 February, 1597. Bassein was the most important settlement of the Portuguese in the north of India, Goa lying farther to the south. In many respects Bassein was Goa's rival in the sixteenth and seventeenth centuries, as Bombay is of Calcutta now. The city of Bassein, in the island of the same name, was founded in 1536 by Nunho de Cunha, one of those intrepid Portuguese soldiers who distinguished themselves in India as warriors, administrators, and zealous workers for the spread of the Gospel. He conquered the island from its Mohammedan ruler, Bahadur Shāli, King of Gujerat, and soon had a strong fort built in the south-western corner. The island is rich in timber, which was regarded in the sixteenth century as the best material for ship-building. Its fertility and position, together with its healthy climate, made it a commercial centre of some importance, and the home of many Portuguese noblemen.

Side by side with this early conquest and colonization the Gospel was spread by the zeal of the Franciscan missionary, Antonio do Porto, to whom is attributed the conversion of 10,156 pagans, and who is known as the "Apostle of Bassein". Father Antonio do Porto built at Agasshi in the northern

Bassein district, as early as 1535, an orphanage for the education and maintenance of forty boys, all converts from paganism, under the invocation of Nossa Senhora da Luz. This orphanage gave to the Church the first Indian martyrs known to history. In April, 1540, a Mohammedan force from Gujerat approached the orphanage, on the return from a fruitless attack on the Bassein fort. Nearly all the inmates of the orphanage had fled for shelter to the fort, but five of them had remained. These were at first urged to renounce their faith; failing in this, the Mohammedans cruelly tortured them, and locking them in a room set fire to it.

In 1542 the Jesuits came to Bassein. St. Francis Xavier visited the city of Bassein three times, once in 1544, and twice in 1548. During his last visit, in December, 1548, he founded the College of the Holy Name of God. The Jesuits on their advent divided both the missionary and educational work with the Franciscans, the latter labouring among the lower, and the former among the higher, classes. Other religious orders also found their way to Bassein, which became the centre of their missionary activity. In the college of the Jesuits in the Bassein fort St. Gonsalo Garcia was brought up from his early youth. He was born about the year 1564. At the age of sixteen he voluntarily accompanied some of the Jesuit fathers of the college, who were ordered to join the mission of Japan. He laboured with singular zeal as a catechist for eight years, having acquired the Japanese language marvellously within a short time. During that time he petitioned to join the order, but as his reception was delayed he left the Jesuits on the best of terms and became a merchant. He was blessed with an abundance of riches which he distributed largely among the poor.

Business interests often took Gonsalo to Manila, where he used to visit the Franciscan fathers and assist them as an interpreter in hearing the confessions of some Japanese Christians. On one occasion, when deep in prayer, he was inspired to seek admission into the Franciscan Order. He did so, and became an exemplary lay brother. On 21 May, 1593, he was sent back to Japan with a body of Franciscans to aid them in preaching the Gospel. The many conversions made by them caused a persecution which gave to the Church the first martyrs of Japan. They were twenty-six in number and were crucified on a hill at Nagasaki 5 February, 1597. They were beatified in 1627, and canonized in 1862.

Bassein was taken from the Portuguese by the Mahrattas in 1739, from the Mahrattas by the English in 1802, and is now a ruined town of much historic interest which no one who goes to Bombay fails to visit. The fort is perhaps the best of the ruined Portuguese fortifications in India. Bassein is a Christian oasis in the midst of the pagan and Mohammedan population of India. It has nine churches, twelve priests, and 16,119 Christians, all Catholics; a Protestant mission was opened in 1904 by the Ritualists but did not flourish and is now practically abandoned.

**Bassett, JOSHUA**, convert and controversialist, Master of Sidney Sussex College, Cambridge, England, under James II, b. about 1641, at Lynn Regis, where his father was a merchant; d. in London, in 1720. In 1657, after preliminary instruction by a Mr. Bell, he was admitted sizar of Gonville and Caius College, Cambridge, in care of a Mr. Bolt. He proceeded B. A. in 1661, M. A. in 1665, and B. D. in 1671. In 1664 he became junior fellow, and in 1673 senior fellow of his college. On the death of Dr. Richard Minshull in December, 1686, he was, by mandate of James II, elected Master of Sidney Sussex College.

He was installed without the usual oaths, and in January declared himself a Catholic. He had Mass celebrated in his private rooms, and altered some of the college statutes which stood in the way of his co-religionists. He was concerned in the famous dispute which arose when the king demanded that the university confer the degree of M. A. upon the Benedictine, Alban Francis. After the Revolution, when Bassett, having left the college in haste, desired to take away his personal belongings, he was threatened with arrest as a priest. It is thought, however, that Bassett had not been ordained. He died in extreme poverty.

The critics of Bassett admitted that he possessed learning and ability, but objected to his pride and to his interference, for religious reasons, with college regulations and routine. He forbade a chapel service on the 5th of November, disciplined a speaker who had satirized Rome, and threatened to take over the chapel for Catholic services. Craven, who was Master of Sidney Sussex College, declared in 1725 that Bassett "had so many nostrums in his religion that no part of the Roman Church could own him". Gillow believes that Bassett acted in his conversion from a thorough conviction. His known or supposed writings are: (1) "Ecclesiæ Theoria Nova Dodwelliana Exposita" (1713), the only work containing his name on the title page; (2) "Reason and Authority" (1687); (3) "Essay towards a proposal for a Catholic communion . . . by a minister of the Church of England" (1704); this was reprinted in 1879, with an introduction, in "An Eirenicon of the Eighteenth Century" by H. N. Oxenham; (4) Occasional verses in the University collections.

J. V. CROWNE.

**Bassi, MATTHEW OF**, founder and first Superior-General of the Order of Friars Minor Capuchins, the principal branch issued from the Reform of the Observance, b. in 1495, at Bascio, Diocese of Montefeltro, in the Duchy of Urbino; d. at Venice in 1552. At the age of seventeen he entered the Order of the Observants at Montefiorentino. In 1525 he was a priest and missionary, being a member of the Reformed Province of Ancona. Moved by the need of reform which was felt almost all through the Franciscan family, he resolved, in 1525, the year of the Jubilee, to begin a more austere life, choosing a form of garb more resembling that of St. Francis. Clement VII granted his request and also permitted him to preach everywhere and to have a companion. Some other members of the Observance asked and obtained permission to join him, and on the 3d of July, 1528, the pope issued the Bull "Religionis zelus", by which the new Reform was canonically approved and placed under the nominal jurisdiction of the Conventuals. The name "Capuchin", at first given by the people to the new Franciscan monks, was afterwards officially adopted. In the pontifical decrees Bassi's followers are variously styled "Capucini", "Capuciati", "Capulati", and "Fratres de Observantia Capucinatorum".

In April, 1529, the new order held its first chapter at Albacina, where Matthew of Bassi was elected vicar-general by acclamation. A code of constitutions which was to serve as a basis to the Reform was elaborated. But the humble founder did not hold his charge very long. After visiting his brethren, wishing to resume his apostolic career, and perhaps feeling powerless against the difficulties which menaced his disciples, he resigned his office. Thenceforward he took no part in the government of the order. He even decided, about 1537, to return to the obedience of the Observants, through fear of incurring some ecclesiastical censure. As it was, these last had obtained, at different times,

Bulls or Decrees against the new Reform. Bassi preached through the whole of Italy and part of Germany. He died at Venice, in the midst of his labours, and was buried in the Church of the Observants of that city in the presence of a vast concourse of people attracted by his reputation as a saint. The following eulogy by Arthur du Monstier is read in the Franciscan Martyrologium under the 3d of August: "There died at Venice, Blessed Matthew, confessor, founder of the congregation of Capuchins. His continual fastings, vigils and prayers, his most holy poverty and ardent zeal for souls, lastly his extraordinary holiness and the gift of miracles made his memory glorious".

F. CANDIDE.

**Bassianus**, Bishop of Ephesus (444-448). As a priest of Ephesus the charities of Bassianus so won the affection of the people that his bishop, Mennon, aroused to jealousy, sought his removal by promoting him to the Bishopric of Evaza. Bassianus repudiated the consecration to which he was violently forced to submit, an attitude approved by Mennon's successor, Basil. On the latter's death (444) Bassianus succeeded him and though popular enthusiasm disregarded canonical procedure his election was confirmed by Theodosius II and reluctantly by Proclus, Patriarch of Constantinople. Bassianus reigned undisturbed for four years. At the Easter celebration in 448 he was seized by a mob and imprisoned. The emperor was importuned to remove him, and the case was referred to Pope Leo I and the Bishops of Constantinople, Alexandria, and Antioch, who declared the election invalid. Stephen, whom Bassianus called the ringleader of his opponents, was elected in his stead. The Council of Chalcedon on 29 October, 451, considered the plea of Bassianus for reinstatement and was disposed to favour him, but owing to the complex irregularities of the case it was deemed advisable to declare the see vacant. Bassianus and Stephen were retired on a pension with episcopal dignity. During the process Stephen cited Pope Leo's letter deposing Bassianus, a document unfortunately lost.

JOHN B. PETERSON.

**Bastiat**, CLAUDE-FRÉDÉRIC, a French economist, b. at Mugron, a small city in the Department of Landes, 29 June, 1801; d. at Rome, 24 December, 1850. He was the son of Pierre Bastiat, whose father had founded at Bayonne a business house that prospered in consequence of the franchise granted this port by the Treaty of Versailles, but ceased to flourish under the prohibitory regime of the Empire. The widely different effects of these two economic systems upon the fortunes of his family undoubtedly gave rise to Bastiat's free-trade opinions. Left an orphan at the age of nine, he was brought up by his paternal grandfather and, after pursuing his studies at St. Sever and Sorèze, entered the business founded by his grandfather and then conducted by his uncle at Bayonne. Returning to Mugron in 1825, he inherited an extensive estate through the death of his grandfather, and subsequently devoted himself to farming. After the

Revolution of 1830 he was appointed justice of the peace at Mugron and, being deeply interested in political economy, gave himself up to it with great earnestness and constituted himself the champion of commercial liberty. In 1841 he published his first essay "Le fisc et la vigne" and, apprised of the free-trade movement that Cobden was then directing in England, joined forces with him. In 1844, his article, "L'influence des tarifs anglais et français" in the "Journal des Economistes" opened his way to fame. Then appeared successively: "Sophismes économiques", "Cobden et la ligue", and several pamphlets, one of which, "Pétition des marchands de chandelles", against the sun that interferes with the candle merchants' trade, is a little masterpiece of verve and delicate irony. Elected to the Constituent Assembly in 1848, and then to the Legislative Assembly, he became the implacable enemy of socialism, against which he wrote: "Propriété et loi", "Capital et rente", "Justice et fraternité", "Protectionisme et communisme", and other treatises. In 1849 he published "Harmonies économiques", which the illness that had already undermined his health prevented him from finishing.

Bastiat belonged to the Liberal school and enunciated its principles on the following lines: "Let men work, trade, learn, form partnerships, act and react upon one another, since according to the decrees of Providence, naught save order, harmony, and progress can spring from their intelligent spontaneity". (*Harmonies*, p. 12.) Of a sincere and generous nature he was fitted to understand and defend Catholic truth; but the prejudices in the midst of which he lived kept him aloof from the Faith until the very eve of his death. It was in Rome that his eyes were opened to the light of Catholicism, and Proudhon, his enemy, says that in his last hour Bastiat cried out with Polyeucte: "I see, I know, I believe; I am a Christian". Some time before his death he declared that if God would but grant him a new lease of life he would devote his energy to the development of Christian harmony and political economy, but he did not live to fulfil this vow. Bastiat's complete works were published by Guillaumin (Paris, 1854, 1872).

Bastiat*, in *Journal des économistes*, XXVII, 15 Feb., 1851; MACLEOD in *Dict. of Political Economy*.

STANISLAS A. LORTIE.

**Baston**, GUILLAUME-ANDRÉ-RENÉ, a French theologian, b. at Rouen, 29 November, 1741; d. at Saint-Laurent, 26 September, 1825. He studied theology at St. Sulpice in Paris and finished his studies at Angers. He was then appointed professor of theology at Rouen. During the Revolution he wrote against the Civil Constitution of the Clergy. Having refused to take the oath, he was obliged to go into exile (1792), first to London, then to Holland, and finally to Köseld in Westphalia. In 1803 he returned to Rouen, where he was appointed vicar-general and dean of the chapter by Archbishop Cambacérés. As a Gallican, he won the favour of Napoleon, who appointed him Bishop of Sées (1813) and the chapter of the cathedral accepted him as capitular vicar. Pope Pius VII failing to approve of this nomination, the cathedral chapter revoked the nomination (1814), and Baston went into retirement at Saint-Laurent near Pont-Audemer, where he died. Baston was the author of numerous works on theology, the most important being "Lectiones theologicae", written while he was professor of theology, in collaboration with Abbé Tuvache (10 vols., Rouen, 1818), and he published several polemical

works on the subject of theology: "Réponse au mémoire et à la consultation de M. Linguet, touchant l'indissolubilité du mariage" (Paris, 1772); "Les entretiens du pape Ganganelli" (Clement XIV) (Antwerp, 1777); "Voltaireimeros, ou première journée de M. de Voltaire dans l'autre monde" (Brussels, 1779). During the Revolution he wrote many pamphlets against the Civil Constitution of the Clergy and his book "Doctrines catholiques sur le mariage" (1791) was published about the same time. During his exile in Kösfeld he began his "Mémoires", edited lately by the Société d'histoire contemporaine (3 vols., Paris, 1897-99). In his last years he wrote "Réclamation pour l'Eglise de France et pour la vérité contre l'ouvrage de M. le comte de Maistre [Du Pape]" (Rouen, 1821); "Antidote contre les erreurs et la réputation de l'Essai sur l'indifférence en matière de religion" (Paris, 1823); "Concordance des lois civiles et des lois ecclésiastiques touchant le mariage" (Paris, 1824).

G. M. SAUVAGE.

**Basutoland**, PREFECTURE APOSTOLIC OF.—Basutoland, a mountainous district of South Africa, is bounded on the north and west by the Orange River Colony, on the east by Natal, and on the south by Cape Colony. It has an area of 10,293 square miles. The white population is about 700 and natives number about 309,000. The chief town is Maseru. The county is administered by native chiefs under an acting British Resident Commissioner who meets the National Assembly or "Pitso" in council once a year. Whites require special permission to settle in the country. The climate is healthful, though cold in winter, while the summer is characterized by heavy rains. The country has no railway nor roads properly so called. Basutoland was annexed to Cape Colony in 1871, and became a British Crown Colony in 1884. The inhabitants, till about 1820, were Bushmen of a low type but they have been replaced by highly intelligent Kafirs. The principal articles of export are wheat, mealies, and wool, Kafir corn, mohair, and cattle.

Basutoland, first a part of the Vicariate Apostolic of Natal, and later of the Vicariate of Kimberley, was made an independent prefecture by the Holy See on 8 May, 1894. It comprises the whole of the territory known as Basutoland. The first prefect Apostolic of the new ecclesiastical territory was the Rev. Father Monginoux, O.M.I.; he was succeeded by the Rev. Father Baudry, O.M.I., and the latter by the Rev. Father Cenez, O.M.I. The Oblates of Mary Immaculate established themselves in that portion of South Africa about 1862. Roma, the first Catholic mission in Basutoland, was founded by the Right Rev. Dr. Allard, O.M.I., in 1862. The first church was built in the same year. The second mission situated about six miles from Roma was founded in 1867 and received the name of St. Michael. Since then, several new missions have been established in different parts of the territory. The prefecture possesses at present 19 churches, chapels, and stations, 5 convents, and 9 schools. The missionary work is carried on by the Oblates of Mary Immaculate assisted by the Sisters of the Holy Family. The total number of Oblate Fathers in Basutoland is at present 19; lay brothers, 6; European Sisters, 34; native Sisters, 12; total number of Catholics, about 8,900; catechumens, 700; children attending school, about 1,200.

Undoubtedly Christianity has progressed immensely during recent years in Basutoland, and it would have spread still more speedily had the resources been more abundant. Unfortunately, there, as elsewhere in South Africa, everything seems to be

precarious. Agriculture is too often compromised by long droughts, and crops are sometimes destroyed by locusts, all of which bring on misery and famines. In addition to this the limited number of priests does not allow the evangelization of the country to be carried out on a very large scale. The population, however, is well settled, which greatly facilitates the work of the missionary, who can remain always in touch with his flock.

A. LANGAET.

**Batavia**, VICARIATE APOSTOLIC OF.—When the Portuguese took possession of the island of Java, of which Batavia is the capital, they brought the Christian religion with them; but the Dutch, having conquered Java in 1596, set about the destruction of Catholicism. Nevertheless, the memory has been preserved of a Friar Minor who was expelled from Batavia in 1721, and attempted to continue his apostolic labours in China. It was with difficulty that a priest could enter Java, and, if recognized, he was hunted out. When in 1807 Louis Napoleon became King of Holland, Pius VII divided all the Dutch territory outside of Europe into three prefectures, two in the West Indies and the third, with Batavia for its seat, in the East Indies. At this period the Dutch missionaries James Nelissen and Lambert Preffen set out for the Sunda Islands, and reached Batavia, 4 April, 1808. The Government gave them at first a ruinous Calvinist place of worship, and then added to this act of generosity sufficiently to enable them to erect a church, which was blessed, under the title of Our Lady of the Assumption, 6 November, 1829. Nelissen died 6 December, 1817, and Preffen succeeded him in this prefecture.

On the 20th of September, 1842, Gregory XVI raised the Prefecture of Batavia to a vicariate Apostolic, and Monsignor Groof, titular Bishop of Canea, and previously prefect Apostolic of Surinam, became the first vicar Apostolic. A coadjutor was given him, 4 June, 1847, in Monseigneur Pierre-Marie Vrancken, titular Bishop of Colophon, who succeeded him in 1852. The Dutch Government, however, did not leave the first missionaries in peace, and Monsignor Groof, together with Father Van den Brand, a missionary priest, was expelled. Monsignor Vrancken died in 1874, and Pius IX then entrusted the mission of Batavia to the Dutch Jesuits. The first Jesuit vicar Apostolic was Monsignor Claessens (1874-93), who was succeeded by Monsignor Staal (1894-97) and Monsignor Luyten, the present (1907) incumbent of the office. The Jesuits energetically set about the development of the mission, which then comprised the islands of Java, Sumatra, Borneo, the Sunda group, Timor, the Celebes, and the Moluccas.

In 1851 the Catholics in the vicariate numbered between 5000 and 6000; in 1879 there were 23,527, not including the Catholic members of the garrison, and 27 missionaries were labouring in different parts of the Sunda Islands. Although the whole island of Borneo and Dutch New Guinea have since been separated from the vicariate, Streit's "Atlas des missions" now gives the following statistics: Total population of the vicariate, 37,325,000; native Christians, 27,313 (in addition to 25,000 European Catholics); 720 catechumens; 54 religious in priest's orders; 40 male religious not priests; 250 Sisters of different orders; 94 catechists; 22 principal stations; 78 secondary stations; 40 churches, and 59 schools with 2482 pupils.

Pius IX had separated the British portions of the islands of Borneo and Labuan from the vicariate in 1855; in 1903 Leo XIII erected Dutch New Guinea into a new prefecture; and Pius X, in 1905, formed a prefecture out of the remainder of the island of

Borneo, again taken from the territory of the vicariate. There still remains of its territory: the island of Sumatra, 181,250 sq. m.; Java, 50,715 sq. m.; the small islands of the Sunda group (Bali, Lombok, Sumbawa, Sumba, Flores, and Timor) aggregating 36,507 sq. m.; and Celebes, 73,270 sq. m. The Moluccas have been attached to the Prefecture of Dutch New Guinea. The Vicariate of Batavia, therefore, now comprises an area of more than 340,000 sq. m., or more than the combined areas of the German Empire and Great Britain and Ireland. The principal stations are: in Sumatra, Medan, in the north-east and Padang, in the west; in Java, Batavia (residence of the vicar Apostolic), Samarang, and Surabaya; in Timor, Fialarang; in Flores, Maumeri and Larantuk; in Celebes, Macassar and Menado. The natives speak their own dialects, but in the coast towns Dutch and Malay are the languages current. The Ursulines, established at Batavia and Surabaya, furnish the largest contingent of religious women in the vicariate, amounting to 170.

#### ALBERT BATTANDIER.

**Bath Abbey.**—The first religious house in Bath was a monastery of nuns founded by King Osric, A. D. 676. This was followed by a community of Benedictine monks, who were visited and reformed by St. Dunstan. King Edgar was solemnly crowned

BATH ABBEY

in the abbey church of St. Peter in 973, and a few years later the abbot was St. Elphege, afterwards Bishop of Winchester and Archbishop of Canterbury, who was killed by the Danes in 1012. Ælfeige, who died in 1087, was the last Abbot of Bath; for in 1088 William Rufus granted the abbey and its lands to John de Villula, Bishop of Wells, and the resident superior was henceforth a cathedral prior instead of an abbot. This bishop later restored its lands to the monastery, which was endowed also by other benefactors. A great fire, in 1137, destroyed nearly the whole city, greatly damaging the abbey buildings, which were promptly rebuilt. In the following century there was a warm dispute between the monks of Bath and the canons of Wells as to their

respective rights in electing the bishop. Innocent IV decreed, in 1245, that the election should be held alternately in either city, that the bishop should have a throne in both churches and should be styled Bishop "of Bath and Wells". This arrangement continued until the Reformation, and the subsequent occupants of the see have retained the double title. Henry VIII's Commission visited Bath in August, 1535, and a report of the usual type followed. In 1539 Prior Hollowell surrendered the house and revenues (valued at £617) to the king, and the monastic life of the abbey came to an end.

The present church of St. Peter, occupying only the nave of the great Norman fabric, was begun by Prior Birde, about 1500, to replace John de Villula's church, which had fallen into decay. The new church was not finished until 1572, and is thus one of the latest specimens of Perpendicular work in England. The latest so-called restoration took place in 1874. No trace remains of the monastery, of which the last portion (probably the prior's lodgings) disappeared in 1755. Since 1679 the Catholic mission of Bath has been served by the English Benedictines.

HUNT (ed.), *Chartularies of the Priory of St. Peter at Bath* (1893); FOWLER, *The Benedictines in Bath* (1895); BRITTON, ed. PEACH, *Bath Abbey Church* (1887); *Somerset Record Society*, VII; CARTER, *Account of the Abbey of Bath* (1798); MORRIS (ed.), *British Association Handbook to Bath* (1888).

D. O. HUNTER-BLAIR.

**Bath and Wells** (BADONIENSIS ET WELLENSIS) ANCIENT DIOCESE OF (Bath, *Aquæ Solis, Bathonia, Bathensis, Bathoniensis*; Wells, *Theoradunum, Vellie, Ecclesia Fontanensis, Vellensis, Wellensis*), coextensive with the County of Somerset, England. The first Bishop of Bath and Wells, properly so described, was appointed by the pope in 1244, but the diocese has a much longer history, though its bishops used different titles; Somerset, Wells, Bath, or Bath and Glastonbury, being at different times employed. Æthelhelm (909-914), afterwards Archbishop of Canterbury, first exercised episcopal jurisdiction there, choosing the secular church of Wells as his cathedral. Henceforth, there was a certain rivalry between the secular canons of Wells and the monks of the two great abbeys, Glastonbury and Bath. The advantage, however, lay with the latter and the cathedral church at Wells maintained but a struggling existence. During the time of Edward the Confessor (1042-66), the energetic Bishop Gisa (1060-88), who on his appointment found the church small and poor, and the few canons who served it forced to beg their bread, succeeded in putting matters on a firmer foundation. He not only erected buildings in which they could live a community life, but obtained grants of lands for their support from St. Edward the Confessor, Harold, and William the Conqueror. This good work was partly undone by his successor, John de Villula (1088-1122), who removed the see to Bath, using the abbey there as his cathedral. It was not until the appointment of Bishop Robert of Lewes (1136-66), who rebuilt the cathedral at Wells and in other ways proved himself a wise and liberal administrator, that an arrangement was made by which Bath should take precedence of Wells, but that future bishops should have a throne in both churches and should be elected by the two chapters conjointly. This arrangement lasted through the administrations of Reginald de Bohun (1174-91), who brought St. Hugh of Lincoln to England; the turbulent Savaric (1192-1205), who annexed Glastonbury by force, and lastly Jocelin Trotman de Welles (1206-42), who though a native of Wells was known as Bishop of Bath and Glastonbury until 1219, when he gave up all claim to Glastonbury and styled himself Bishop of Bath. But though he omitted Wells from his title, he did more than any other bishop for the town, for he restored and enlarged the cathedral, adding the beautiful west front, increased the number of

canons from thirty-five to fifty, and founded a grammar school. On his death, the monks of Bath ignoring the chapter of Wells, elected as his successor Roger, one of their own community, for whom they obtained royal and papal confirmation, but the consequent appeal by the Wells chapter brought about the final settlement of the difficulty. The pope decided that Roger should remain bishop with the style "Bishop of Bath and Wells", and that the old arrangement as to joint election should in future be observed.

The history of the see was thenceforth tranquil, only three bishops during the next two centuries calling for special mention, Ralph of Shrewsbury (1329-63), who completed the buildings; Thomas Bekynton (1443-65), another liberal benefactor of the city; and Oliver King (1495-1503), who rebuilt Bath Abbey in the Perpendicular style. One bishop, William Bytton (1267-74), died with a reputation for sanctity and his tomb became a place of pilgrimage. In the fifteenth century there were two absentee bishops, Adrian de Castello (1504-18), during whose tenure the see was administered by the historian Polydore Vergil; and Cardinal Wolsey (1518-23), who held the see simultaneously with that of York. After the dissolution of Bath Abbey in 1538, the bishop, though retaining the old style, had his seat at Wells alone, but final ruin was impending. In 1549 the notorious William Barlow was intruded into the see, and alienated much of its property. On the accession of Mary he fled, and was succeeded by the last Catholic Bishop, Gilbert Bourne (1554-59), who held the see till he was deprived of it by Elizabeth and imprisoned in the Tower, thus becoming one of the eleven Confessor-Bishops who died in bonds. He died in 1569. Of the twin cathedrals of the diocese, Bath Abbey was rebuilt (1499-1539) in late Perpendicular style and is the last complete monastic building erected before the Reformation, while the cathedral at Wells, though small, is the most perfect example of a secular cathedral and one of the most beautiful Gothic buildings in England. Dating in the main from the early thirteenth, it was practically complete by the middle of the fourteenth century. The diocese contained three archdeaconries, Bath, Wells, and Taunton. The arms of the see were:—Azure, a saltier quarterly quartered, or and az.

EDWIN BURTON.

**Bathe**, WILLIAM, writer on music and education, b. at Dublin, Ireland, 2 April, 1564; d. at Madrid, 17 June, 1614. His parents, John Bathe and Eleanor Preston, were distinguished both by their lineage and by their loyalty to the Catholic Faith. He went to Oxford about 1583 and while a student there wrote "A Brief Introduction to the Art of Music" (London, 1584). Another treatise from his pen, "A Brief Introduction to the Skill of Song", was published at London in 1600. These writings and his skill as master of various instruments, especially the Irish harp, won him the favour of Queen Elizabeth to whom he was related through the Kildare family. His own inclinations, however, were towards the religious life. From the English court he went to Louvain where he studied theology. On 6 August, 1595 (1596) he entered the novitiate of the Society of Jesus at Tournai. His later studies were pursued at St. Omer and completed at Padua. In 1601 Bathe was selected by the father general to accompany

Father Mansoni, the Apostolic Nuncio, to Ireland. This mission led them first to the Court of Spain and while there they learned that peace had been concluded between Spain and England and that the journey to Ireland was no longer necessary. Bathe remained in Spain, living at Valladolid and later at the Irish College in Salamanca. It was here that he wrote his principal work "Janua Linguarum" (Salamanca, 1611). It was designed to facilitate the study of languages and thus to aid missionaries, confessors, and students both young and old. For this purpose, 1330 short sentences were grouped under certain headings, the Latin and Spanish on opposite pages, with an index giving the translation of the Latin words—in all about 5300. The work went through many editions in which its method was applied, by various combinations, to eleven languages, including Greek and Hebrew. It was printed at London (1615), Leipzig (1626), Milan (1628), Venice (1655), and by 1637 it had been published in Bohemian, Illyrian, and Hungarian. An English edition (London, 1617) bore the title, "The Messe of Tongues (Latin, French, English, Hispanish)". It naturally found imitators, and among these the great work by John Amos Comenius holds first rank. In the preface to his "Janua Linguarum Reserata" (1631), Comenius acknowledges his indebtedness to Bathe, while in the work itself he adopts and develops the plan which the Jesuit had originated. Bathe is also credited by some of his biographers (Alegambe, Sherlock) with a treatise on "The Mysteries of Faith" and another on the "Sacrament of Penance". Sommervogel, however, takes a different view. To his industry as a writer Bathe added an unflagging zeal for the spiritual welfare of his fellowmen, the relief of suffering, and the instruction of the poorer classes. He had just been invited by the King of Spain to give the spiritual exercises to the members of the Court when death ended his labours.

E. A. PAGE.

**Bathilde** (or **BATILDE**), SAINT, wife of Clovis II, King of France, time and place of birth unknown; d. January, 680. According to some chronicles she came from England and was a descendant of the Anglo-Saxon kings, but this is a doubtful statement. It is certain that she was a slave in the service of the wife of Erchinoald, mayor of the palace of Neustria. Her unusual qualities of mind and her virtues inspired the confidence of her master who gave many of the affairs of the household into her charge and, after the death of his wife, wished to marry her. At this the young girl fled and did not return until Erchinoald had married again. About this time Clovis II met her at the house of the mayor of the palace, and was impressed by her beauty, grace, and the good report he had of her. He freed and married her, 649. This sudden elevation did not diminish the virtues of Bathilde but gave them a new lustre. Her humility, spirit of prayer, and large-hearted generosity to the poor were particularly noticeable.

Seven years after their marriage Clovis II died, 656, leaving Bathilde with three sons, Clothaire, Childeric, and Thierry. An assembly of the leading nobles proclaimed Clothaire III, aged five, king under the regency of his mother, Bathilde. Aided by the authority and advice of Erchinoald and the saintly bishops, Eloi (Eligius) of Noyon, Ouen of Rouen, Léger of Autun, and Chrodebert of Paris, the queen was able to carry out useful reforms. She abolished the disgraceful trade in Christian slaves, and firmly repressed simony among the clergy. She also led the way in founding charitable and religious institutions.

such as hospitals and monasteries. Through her generosity the Abbey of Corbie was founded for men, and the Abbey of Chelles near Paris for women. At about this date the famous Abbeys of Jumièges, Jouarre, and Luxeuil were established, most probably in large part through Bathilde's generosity. Berthilde, the first Abbess of Chelles, who is honoured as a saint, came from Jouarre. The queen wished to renounce her position and enter the religious life, but her duties kept her at court. Erchinoald died in 659 and was succeeded by Ebroin. Notwithstanding the ambition of the new mayor of the palace, the queen was able to maintain her authority and to use it for the benefit of the kingdom. After her children were well established in their respective territories, Childeric IV in Austrasia and Thierry in Burgundy, she returned to her wish for a secluded life and withdrew to her favourite Abbey of Chelles near Paris.

On entering the abbey she laid down the insignia of royalty and desired to be the lowest in rank among the inmates. It was her pleasure to take her position after the novices and to serve the poor and infirm with her own hands. Prayer and manual toil occupied her time, nor did she wish any allusion made to the grandeur of her past position. In this manner she passed fifteen years of retirement. At the beginning of the year 680 she had a presentiment of the approach of death and made religious preparation for it. Before her own end, that of Radegonde occurred, a child whom she had held at the baptismal font and had trained in Christian virtue. She was buried in the Abbey of Chelles and was canonized by Pope Nicholas I. The Roman martyrology places her feast on 26 January; in France it is celebrated 30 January.

A. FOURNET.

**Bathurst, DIOCESE OF**, situated in New South Wales, Australia, in the ecclesiastical Province of Sydney, comprises the territory immediately west of the Dividing Range; it extends north to the Barwon River, is bounded on the west by the Macquarie River as far up as Warren and thence by a line to the Lachlan River twenty miles below Eauabolong.

**HISTORY.**—Bathurst (population in 1901, 9,223) was founded in 1824. Owing to the hostility of the aborigines and other causes, population filtered slowly into the rich Bathurst plains till the first paying goldfield was discovered in the district, in 1851. The first church in Bathurst, says Cardinal Moran, "was nothing better than a bark hut". It was superseded in 1861 by a fine new edifice (now the cathedral), which was erected at a cost of £12,000 by Dean Grant, pastor of Bathurst for nearly twenty years till his death in 1864. In 1865 Bathurst, then part of the Diocese of Sydney, was made the cathedral centre of a new diocese, which extended from the River Murray to Queensland, and from the Blue Mountains to the border of South Australia. That vast and sparsely populated territory was divided at the time into five missions, ministered to by six priests, with seven small churches and six state-aided Catholic schools, attended by 492 pupils. Its first bishop was the Right Rev. Matthew Quinn, who had taken an active part in organizing the Irish Brigade that fought for the defence of the Papal States in 1860. He was consecrated in Dublin, 14 November, 1865, and reached Bathurst 1 November, 1866, accompanied by five priests and seven pioneer Sisters of Mercy. Years of toilsome organization followed—laborious visitations; opening new missions and supplying them with clergy; church, school, and convent extension; the introduction of the (Australian) Sis-

ters of St. Joseph and the Patrician Brothers; the founding of a Catholic newspaper, the "Record"; the erection of St. Stanislaus' College, in 1873, at a cost of £15,000, and of St. Charles' Ecclesiastical Seminary eight years later. Dr. Quinn was a man of great energy, deep piety, cultivated intellect, and, says Cardinal Moran, was one of the "foremost champions of religious education in Australia". At his death, 16 January, 1885, there were in the diocese 28 priests, 56 Catholic schools, 21 convents, 192 nuns, and 5 religious brothers. Dr. Quinn was succeeded by the Right Rev. Joseph Patrick Byrne (consecrated 9 August, 1885). In 1887 the new Diocese of Wilcannia was formed out of the Bathurst Diocese. At the same time some districts from the Maitland Diocese were added to the Bathurst jurisdiction. Dr. Byrne, says Cardinal Moran, "strenuously and successfully carried on the great work of education and religion begun by his predecessor", and, like him, was "a model to his clergy in his unwearied and self-sacrificing toil". St. Stanislaus' College, which from its foundation had been under the control of secular priests, was in 1888 entrusted to the Vincentian Fathers. It is now (1907) one of the foremost educational institutions in Australia, and noted for the work done in its well-equipped physical and chemical laboratories. When pronounced to be stricken by an incurable malady, Dr. Byrne received from his priests and people, on the Epiphany, 1901, a pathetic demonstration of affection, accompanied by a money gift of £2,530. He passed away on the 12th of January, 1901. To him succeeded the Right Rev. John Dunne—builder, missionary, organizer—who was consecrated 8 September, 1901. He is to complete the architecturally fine college of St. Stanislaus, and under his administration the missionary and scholastic traditions of the diocese are well sustained. The efficiency of the Catholic schools is in no small measure due to the system of inspection inaugurated by the Rev. J. J. Brophy, D. D., LL. B. The principal lay benefactors of the diocese are Mr. James Dalton, K.S.G., and Mr. John Meagher, K.S.G.

**RELIGIOUS STATISTICS.**—In the diocese there are: 18 parochial districts; 89 churches; 29 secular priests; 7 regular priests; 7 religious brothers; 242 nuns; 1 college; 8 boarding schools for girls; 11 day high schools; 39 primary schools (with 3,496 pupils); 1 orphanage; 4,298 children in Catholic schools; and a Catholic population of about 27,000.

**Batrún, DIOCESE OF.** See GIBAIL AND BATRÚN.

**Battaglini, MARCO**, a historian of the councils, b. at Rimini, Italy, 25 March, 1645; d. at Cesena, 19 September, 1717. He studied law at Cesena, both civil and ecclesiastical, and at the age of sixteen he obtained the degree of doctor in both branches. After some years of service in the civil administration of the Papal States, he entered the priesthood, was appointed Bishop of Nocera in Umbria, 1690, and in 1716 was transferred to Cesena. He was greatly esteemed for his learning, and for his generous and frank character. His principal works are: (1) "Il legista filosofo" (Rome, 1680), or the man of law as a philosopher; (2) "Istoria universale di tutti i concilii" (Venice, 1686, 1689, 1696, 1714). The first edition contained the history of only 475 councils; in subsequent editions that of 403 more was added. A valuable supplement was the catalogue of all the ancient and contemporary episcopal sees; (3) "Annali del sacerdozio e dell'imperio intorno all'intero secolo decimo settimo" (Venice, 1701-

11; Ancona, 1742), or a history of the world during the seventeenth century in the form of annals.

FRANCIS J. SCHLEIFER.

**Batteux**, CHARLES, abbé and writer on philosophy and æsthetics, b. near Vouziers, France, 6 May, 1713; d. at Paris, 14 July, 1780. He was professor at Paris of the humanities and rhetoric, then of Greek and Roman philosophy, and was made a member of the Academy of Inscriptions and of the Académie Française. His works on Epicurus and other Greek philosophers attracted much attention. At the time of his death he was issuing a large collection of memoirs on China; the series was continued by Bréquigny and de Guignes. Of Batteux's writings those that received at once the most praise and blame were the following three works: "Beaux-arts réduits à un même principe", "Cours de belles-lettres", and "Traité de la construction oratoire". These were issued later in five volumes under the common title: "Cours des belles-lettres", and in a new edition of six volumes, in 1824, as "Principes abrégés de la littérature".

Following Aristotle, but taking at the same time a somewhat one-sided and superficial view of the philosopher's meaning, Batteux deduced art from the free imitation of nature, that is, from the free copying of nature in its beautiful forms. Utility is the aim of the mechanical arts; beauty, the end of the fine arts, and both utility and beauty the aim of the beautifying arts. Architecture and oratory belong to the last category. The arts aim to influence either sight or hearing and are divided, therefore, into two classes. Besides these the rhythmical arts, music and dancing, and, in addition, painting and poetry are closely related to one another. In these writings there is a lack of comprehensive definitions of the different arts; those given are often inexact and uncertain. Nevertheless, Batteux may be regarded as the real founder of æsthetics in France. Of his works devoted exclusively to rhetoric and poetry mention should be made of "Les quatre poétiques d'Aristote, d'Horace, de Vida, et de Boileau" in two volumes.

Critical mention of Batteux may be found in: *Nécrologe des hommes célèbres de France*, XVI; *Année littéraire*, 1780; SCHASLER, *Gesch. der Ästhetik*; ZIMMERMANN, *Gesch. der Ästhetik*.  
G. GIETMANN.

**Battista**, GIOVANNI GIUDA GIONA (his original name was JEHUDA JONA BEN-ISAAC), b. of Jewish parents at Safed in Galilee, on the 28th of October, 1583; d. at Rome, 26 May, 1668. As a Jewish rabbi he undertook an extensive journey through Europe, and it was during his stay in Poland that he was converted to Catholicism. After his conversion he was sent by the King of Poland on a mission to Constantinople, where he was arrested as a spy, and narrowly escaped with his life through the intervention of the ambassador of Venice. Later he went to Italy, where he taught Hebrew and Aramaic at the Academy of Pisa and then at the Propaganda at Rome. Among his pupils was Giulio Bartolucci, who is indebted to his learned master for the idea and plan of his famous work "Bibliotheca Magna Rabbinnica". Battista's principal work was the translation of the Gospels from Latin into Hebrew, published, with a preface by Clement IX, at Rome, 1668.

F. X. E. ALBERT.

**Battle Abbey**, founded by William the Conqueror on the site of the Battle of Senlac or Hastings (1066), nearly seven miles from the town of Hastings, in the County of Sussex, England. The building was begun in the following year, but was erected on such a great scale that it was not finished till the reign of William

Rufus. It was designed for one hundred and forty monks, though there were never more than sixty in residence at any one time. The first monks were from the Benedictine Abbey of Marmoutier in Normandy; the new foundation was dedicated to the Holy Trinity, St. Mary, and St. Martin, and was consecrated on 11 February, 1094. The king offered there his father's sword and coronation robes, and the abbey was enriched by many privileges, including the right of sanctuary, of treasure trove, of free warren, and of inquest, and the inmates and tenants were exempt from all episcopal and secular jurisdiction. It was ruled by a mitred abbot who afterwards had a seat in Parliament and who had the curious privilege of pardoning any criminal he might meet being led to execution. The monastic buildings were about a mile in circuit and formed a large quadrangle, the high altar of the church being on the spot where Harold fell. At the Abbey was kept the famous "Roll of Battle Abbey" which was a list of all those who accompanied William from Normandy. As time went on and the honour of descent from one of these Norman families was more highly thought of, unauthentic additions seem to have been made, and the present state of the text of the Roll is unsatisfactory from a critical point of view. At the time of the suppression of the Abbey (May, 1538), there were seventeen monks in residence and the income was returned as £987 which would be more than £10,000 in present value. Abbot Hammond, the last of the line of thirty-two abbots, was pensioned off and the buildings were given to Sir Antony Browne, a royal favourite, who pulled down the abbey, and built a mansion on its site. The entrance gate and considerable ruins now alone remain of the original buildings. In 1719, Lord Montagu sold Battle Abbey to Sir Thomas Webster whose descendants held it until 1858, when it was bought by Lord Harry Vane, afterwards Duke of Cleveland. On the death of the Duchess of Cleveland in 1901 it was purchased by Sir Augustus Webster, a descendant of its former owners. Through the eighteenth century a small Catholic congregation continued to exist at Battle, and now there is a Catholic church and a resident priest in the town.

LOWER (London, 1851); *Chronicon Monast. de Bello in Anglia Christiana* (London, 1846); DUGDALE, *Monasticon* (London, 1821), III, 233-259; *Customs of Battle Abbey 1283-1312* (Camden Society, 1887), New Series, XLI; DUCHESSE OF CLEVELAND, *The Battle Abbey Roll* (London, 1889), 3 vols.; CLARKE, *Catalogue of Monuments of Battle Abbey* (London, 1835), in 97 folio volumes.

EDWIN BURTON.

**Bauberger**, WILHELM, German physician, novelist, and poet, b. at Thannhausen in Swabian Bavaria, 3 March, 1809; d. at the same place, 8 February, 1883. As a physician he was greatly esteemed for his skill, but more so for his kindness of manner. His fame rests chiefly, however, on his tales. The earliest of these, "Die Beatushöhle", written at the age of nineteen, while the author was still a medical student, met with such extraordinary success among all classes of readers that Bauberger published all his subsequent tales as by the author of "Die Beatushöhle". He drew his most successful themes from history and legend. His recognized model for the spirit and tone of his stories was Christoph Schmid.

Bauberger also essayed lyrical and dramatic compositions, but with indifferent success, for, along with much that is strong and beautiful, his verse contains more that is feeble and commonplace. His fame as a writer suffered no permanent eclipse from the inferiority of his poetry, for new tales, exhibiting all the charm of his early work, constantly appeared to redeem his dramatic failures or half-successes. Bauberger's literary activity continued

BATTLE ABBEY: ENTRANCE GATE

unabated until his death. A list of his works printed during his lifetime is found in Kehrein's "Lexicon der kath. Dichter, Volks- und Jugendschriftsteller im 19ten Jahrhundert" (1872), I, 13, and a complete list of his posthumous works in the "Allgemeine deutsche Biographie", XLVI, 232 sqq.

HEINDLE, *Repertorium der Pädagogik*, I, 34.

MATTHIAS LEIMKUHLER.

**Baudeau, NICOLAS**, Regular Canon and economist, b. at Amboise, France, 25 April, 1730; d. in 1792. He became a religious of the Abbey of Chancelade, near Périgueux, and taught theology there for some time. It was there that he wrote his "Analyse de l'ouvrage du pape Benoît XIV sur les béatifications et canonisations" (Paris, 1759), which was examined and approved by the pope himself. It is found in Migne's "Theologiae Cursus Completus" (tom. III). He was called to Paris by the Archbishop de Beaumont and there he gave all his time to the study of economics. In 1765 he founded a periodical "Les Ephémérides du citoyen" in which he attacked the principles of Quesnay and of the physiocratical school. Soon after, he accepted and defended these principles and became one of their most notable supporters. In 1771 he published his most important work, "Première introduction à la philosophie économique", in which he expounds the doctrines of the physiocratical school. There are two great economic factors, nature and art; and there are three kinds of art, fecund or productive, which consists in helping nature to give the most abundant production possible (hunting, fishing, breeding, agriculture, etc.); sterile or non-productive, which gives to these productions a more useful or pleasing form (industry, commerce, etc.); social art, which gives the knowledge, protection, and means necessary for the exercise of the productive and non-productive arts (instruction, religious worship, protection, administration). Productive art is the most important.

When he died he had lost the use of his faculties. Besides the works already mentioned, he wrote "Idées d'un citoyen sur l'administration des finances du roi" (1763); "Idées d'un citoyen sur les besoins, les droits, et les devoirs des vrais pauvres" (1765); "Lettres sur les émeutes populaires" (1768); "Lettres d'un citoyen sur les vingtièmes et autres impôts" (1768); "Principes économiques de Louis XII et du Cardinal d'Amboise, de Henri IV, et du duc de Sully sur l'administration des finances" (1775); "Charles V, Louis XII, et Henri IV aux Français" (1787).

MIGNE, *Theologiae Cursus Completus*, III; ESPINAS, *Histoire des doctrines économiques*; DAIRE, *Collection des principaux économistes*.

G. M. SAUVAGE.

**Baudouin, MICHEL**, Indian missionary, b. in Quebec, Canada, 8 March, 1692, entered the Society of Jesus in France at the age of twenty-one, arrived in Louisiana (on his return to America) in 1728; d. at New Orleans in, or after, 1768. Shortly after his arrival in Louisiana, he was sent to the Choctaw Mission, where he laboured for eighteen years. When he was on the eve of deriving some fruit from his labours, he was recalled by his superior to New Orleans, owing to the disturbances excited by the English among the Indians and the dangers to which he was exposed. He was Superior-General of the Louisiana Mission from 1749 until the expulsion of the Jesuits from that colony in 1763. When that untoward event took place, Father Baudouin was not banished from the country as his fellow Jesuits were, but with a pension of three or four hundred francs was allowed to remain in the colony, a planter having offered the aged priest a home on his estate.

EDWARD P. SPILLANE.

**Baumgartner, GALLUS JACOB**, a Swiss statesman, b. 18 October, 1797, at Altstätten, Switzerland; d. 12 July, 1869, at St. Gallen. After attending the gymnasium at St. Gallen he studied law at Fribourg, Switzerland, and at Vienna. From 1817 to 1819 he was a tutor in Hungary. Returning to Vienna in 1819, he was arrested there after the murder of Kotzebue by Sand on the false suspicion of belonging to a Swiss political society and was expelled from the city in 1820. He began his political career as keeper of the archives of his native canton, St. Gallen. This position gave him the opportunity of learning the topography, history, laws, and legal relations of the canton. In 1822 he was made official secretary; in 1825 he became a member of the great council of the canton and was appointed chancellor.

On account of his knowledge of business he was selected, in 1831, for the position of *Landammann*, or chief magistrate of the canton, and held the office until 1846. During his administration he bent all his energies to making a closely united republic out of the loosely connected cantons, and to improving the Swiss roads and water-ways. Appointed a delegate, at this time, to the diet at Lucerne he endeavoured at the diet to bring about a reorganization of the confederation. He wished to create a vigorous, organically united republic similar to that of the United States, retaining at the same time a large amount of independence for the individual cantons. Baumgartner's chief opponents in carrying out this project were the Catholic clergy, for he aimed to separate the Church entirely from Rome and to place it under the control of the State. He was largely influenced by "Josephinism" and by the ideas of Wessenberg.

In 1832, at his suggestion, the Bishopric of Chur was dissolved. In 1834, at the so-called Assembly of Baden, he gave expression to his views in the motions he introduced. These were, that ecclesiastical administration of law be placed under the control of the State, that it should have direction of the education of the clergy, that the ecclesiastical right of patronage should be limited and that the privileges of the religious orders should be revoked. When his political friends in 1841 dissolved the monastic houses of Aargau by force, plundered them, and drove their inmates away, he saw to what his Church policy would lead. Soon after this he changed his opinions and came over to the side of his former opponents. On this account he had to retire from his position as *Landammann*. In 1845 he again entered the diet as representative of the Catholic Peoples' party, but after two years was forced out by the victory of the Liberals. He now urged the views of the Catholic Church in the press and in popular assemblies. He was once more a member of the Swiss federal assembly, 1857-60, and became again *Landammann* but was overthrown in 1864.

The present political organization, well-ordered administration, and material prosperity of the canton of St. Gallen are due to Baumgartner's public labours; the Catholic Church owes to him especially the founding of the Bishopric of St. Gallen. Besides all this he prepared the way for the later development of Switzerland in the outline of a new constitution for the confederation which he drew up. After his defeat in 1864, Baumgartner withdrew altogether from public life and devoted himself to the study of the history of his native canton. The results of his researches appeared in two works issued by him: "Die Schweiz in ihren Kämpfen und Umgestaltungen von 1830-1850" (4 vols., Zurich, 1853, 1866), and "Geschichte des schweizerischen Freistaats und Kantons St. Gallen" (2 vols., Zurich, 1868). A third volume of the history was prepared by his son, Alexander, from the papers Baumgartner left at his death, and issued at Einsiedeln in 1890. A biog-

raphy of Baumgartner giving full detail of his life has been published by his son under the title: "Gallus Jakob Baumgartner und die neuere Staatsentwicklung der Schweiz" (Freiburg, Baden, 1892).

PATRICIUS SCHLAGER.

**Baunard, Louis**, educator, b. at Bellegarde (Loiret), France, in 1828. He was one of the clergy of Orléans, until 1877, after which he was attached to the Catholic University of Lille, first as professor, and later as rector. No Catholic university profited more by the Law of 1875 than granted freedom of higher education. The transfer of the State University from Douai to Lille did not retard the progress of the Catholic institution. Guided by its zealous rector, and supported by the active charity of the manufacturers of Northern France, the University of Lille has graduated a great number of Catholic physicians, lawyers, and business men. Many young priests also have been prepared at Lille for the career of teaching, which they have since followed as professors in the *petits séminaires* and boarding schools. Technical courses exist for those who intend to devote themselves to manufacturing industries; a department of economics and the social sciences was established through the efforts of M. Duthoit for the development of the social principles of Catholicism; finally the "university extension", a sort of popular circulating university, provides for lectures by the university professors in all the industrial centres of Northern France.

Mgr. Baunard received the degree of Doctor of Letters, in 1860; in the two theses which he wrote he treated of the pedagogy of Plato and of Theodulphus, Bishop of Orléans in the time of Charlemagne; both works which marked the beginning of a literary activity surpassed by few. As hagiographer he wrote on St. John the Apostle (1869) and St. Ambrose (1871). He wrote the biographies of Louise de Marillac, the foundress of the Daughters of Charity (1898); of Madame Barat (1876), foundress of the Ladies of the Sacred Heart; of Vicomte Armand de Melun (1880), Cardinal Pie, Bishop of Poitiers (1886), General de Sonis (1890, his most successful work), Cardinal Lavigerie (1896), M. Ernest Lelièvre, founder of the Little Sisters of the Poor (1905), and M. Vrau, the great Christian manufacturer (1906). The French religious history of the nineteenth century was summarized by him in "Un siècle de l'Eglise de France" (1901). He contributed notable works of religious psychology in his celebrated books, "Le doute et ses victimes" (1865), in which the pages on Jouffroy were both new and surprising, and "La foi et ses victoires" (1881-83). Whatever his subject, Mgr. Baunard was always an "awakener of souls" by reason of his delicate literary conscientiousness and his admirable fecundity. His "Espérance" (1892) throws much light on the beginnings of the contemporary religious revival among intelligent Frenchmen; his "L'évangile du pauvre" (1905) appeared opportunely during a period of social unrest. As university rector, Mgr. Baunard occupies a foremost place in the history of the Catholic university movement; as author, he collected much important material for the religious history of modern France.

GEORGES GOYAU.

**Bauny, Etienne**, theologian, b. in 1564 at Mouzon, Ardennes, France; d. 3 December, 1649, at Saint Pol de Léon. He was admitted into the Society of Jesus, 20 July, 1593, and after teaching humanities and rhetoric he was promoted to the chair of moral theology which he occupied for sixteen years. He was for a time superior of the Jesuit residence at Pontoise. So high was his reputation for learning and holiness, that he had the confidence of the most

distinguished prelates of his age, especially of François Cardinal de la Rochefoucauld, who chose him as his spiritual director, and of René de Rieux, Bishop of Léon, who entrusted to him the settlement of the most delicate affairs of his episcopate. Bauny's knowledge of moral theology was singularly profound, but he was in many points too lenient. His undue indulgence excited the pharisaical indignation of the Jansenists, and it was to him that Pascal, Arnauld, and others turned, when they accused the Society of Jesus of teaching lax morality. He was a man of extraordinary severity towards himself, a skilful guide of souls, full of charity towards sinners, prudent in the management of affairs; hence we are not surprised to read that he died in the odour of sanctity, almost in the very exercise of his apostolic ministry, at the advanced age of eighty-five.

His published works are: (1) "Constitutiones Synodales diocesis Leonensis, a Renato de Rieux Episcopo Leonensi promulgatæ Paulipoli in Leonia" (Paris, 1630); (2) "Pratique du droit canonique au gouvernement de l'Eglise, correction des mœurs, et distribution des bénéfices, le tout au style et usage de France" (Paris, 1634); (3) "De Sacramentis ac Personis Sacris, earumque dignitate, obligationibus ac jure, juxta sacrarum litterarum testimonia, SS. Patrum sententias Canonum ac Conciliorum sanctiones, cum summariis, indice duplici, uno tractatum et questionum, rerum altero. Theologiæ moralis pars prima" (Paris, 1640) in fol.; (4) "Tractatus de censuris ecclesiasticis" (Paris, 1642), in fol.; (5) "Nova beneficiorum praxis . . ." (Paris, 1649). The second and third of these works are on the Index.

GUILHERMY, *Mémoires de la c. de J., Assistance de France*, II, 559; HURTER, *Nomenclator*, I, 494; SOMMERVOGEL, *Bibliothèque de la c. de J.*, I, col. 1058.

T. B. BARRETT.

**Bausset, Louis-François de**, a French cardinal, writer, and statesman, b. in 1748 at Pondichéry, where his father held an administrative position; d. in Paris, 1824. He studied in France at the Jesuit "Collège de la Flèche" and at St. Sulpice. Ordained priest, he became vicar-general at Aix in 1772; administrator of Digne, 1778; Bishop of Alais, in Languedoc, 1784. Although a prominent member of the Assembly of Notables of Languedoc in 1786 and in 1788, he was not delegated to the *Etats Généraux* of 1789. In 1791, Bausset was one of the first bishops who endorsed the "Exposition of Principles on the Civil Constitution of the Clergy". He declined to take the oath and passed to Switzerland. Returning to France in 1792, he was incarcerated, but set free when Robespierre fell (9 Thermidor). He then retired to Villemoisin, where he began his literary career. After the Concordat of 1801 Bausset cheerfully resigned his see into the hands of Pius VII. Ill health prevented his appointment to one of the newly-formed sees, but Napoleon made him a canon of St. Denis (1806) and a member of the Council of the University of France (1808). Under the Restoration, he became president of the University Council and peer of the realm (1815); Member of the French Academy (1816); Cardinal (1817), and Minister of State (1821). The valuable library and manuscripts of Bausset were bequeathed to St. Sulpice.

The career of Bausset as educator and statesman deserves no special notice; he was guided by, more than he guided, the policy of the two regimes under which he served. From his pen we have, besides several minor writings, "Exposé des principes sur le serment", with a long introduction by Emery (Paris, 1796); "Notices historiques" on Cardinal Boisgelin (Paris, 1804), on Legris-Duval (Paris, 1820), and on Talleyrand (Paris, 1821); two considerable biographies: "Histoire de Fénelon" (Versailles, 1809; Paris, 1823; ed. Migne, 1826) and "Histoire de J.-B. Bossuet évêque de Meaux" (Paris, 1814, 1819; Ver-

sailles, 1821; Besançon, 1847). The original documents concerning Fénelon he had from the Abbé Emery, Superior of Saint-Sulpice. Bossuet's manuscripts, not yet purchased by the National Library, he borrowed from Lamy, a bookseller into whose hands they had fallen. The purity of his style won for Bausset the decennial prize awarded by the Institute of France to the best biography. Still, that very purity often passes into a tiresome sameness which fails to suggest either the winning qualities of Fénelon's character or the elevation of the Eagle of Meaux. As a historian, Bausset fails in critical acumen and judicial impartiality. His "Histoire de Fénelon" is so much of a panegyric that, especially in the delicate and intricate question of the Quietist movement, it needs to be supplemented and corrected by such works as those of Griveau and of Croulé. It is said that the "Histoire de Bossuet" was written as an offset against the partiality which Bausset had shown to Fénelon; if so, Bausset had a strange way of rehabilitating the subject of his second biography, praising Bossuet's Gallicanism as Bossuet himself, tormented in his last years by the "Defensio cleri gallicani" would not have wished it praised. Brunetière calls Bausset's "Histoire de Bossuet" "la plus franchement gallicane de toutes".

J. F. SOLLIER.

**Bautain, Louis-Eugène-Marie**, philosopher and theologian, b. at Paris, 17 February, 1796; d. there, 15 October, 1867. After a course at the Ecole Normale, where he was influenced by Cousin and Jouffroy, he became (1819) professor of philosophy at Strasbourg. Three years later he took up the study of medicine and finally that of theology and was ordained priest (1828). As director of the seminary at Strasbourg, he at first won distinction by his work in apologetics, especially against atheism and materialism. He was chiefly interested, however, in the problem of the relations between faith and reason, concerning which he accepted the views of Fideism and Traditionalism, and reduced to a minimum the function of reason. Divine revelation, he claimed, is the only source of knowledge and certitude. He was consequently obliged to sign (18 November, 1835) six propositions containing the Catholic doctrine on faith and reason. After the examination at Rome of his work, "Philosophie du christianisme" (Paris, 1835), Bautain signed (8 September, 1840) six other propositions differing but slightly from those of 1835. Finally, in obedience to the Congregation of Bishops and Regulars, he promised (26 April, 1844) not to teach that the existence of God, the spirituality and immortality of the soul, the principles of metaphysics, and the motives which make revelation credible are beyond the reach of unaided reason. Bautain was appointed Vicar-General of Paris (1850) and taught at the Sorbonne (1853-62). His works include: "De l'enseignement de la philosophie au 19<sup>me</sup> siècle" (Strasbourg, 1833); "Psychologie expérimentale" (ib., 1839); "Philosophie morale" (ib., 1842); "La religion et la liberté" (Paris, 1848); "La morale de l'Evangile" (ib., 1855); "La philosophie des lois" (ib., 1860); "La Conscience" (ib., 1868).

E. A. PACE.

**Bautista, Fray Juan**, b. at Mexico, 1555; date of death unknown, but probably between 1606 and 1615. He joined the Franciscans in his native city, and taught theology and metaphysics at the convent of St. Francis of Mexico. He was also a definitor

of the province, and became Guardian of Tescuco twice (1595 and 1606), of Tlatelolco (1600), and of Tacuba in 1605. Although born at Mexico, he did not at first care to familiarize himself with the language of the Mexican Indians who formed the main part of the population among which he had been born and raised. He looked with indifference on the Nahuatl, the language of the so-called Aztecs. But after joining the Franciscans and becoming acquainted with the educational work going on through the Church among the Indians he willingly listened to the representations of older members of the order, and soon acquired a thorough knowledge of the idiom. A number of his works are known by title only. Ten of these were written in the Nahuatl language, previous to 1607; several were printed at Mexico.

**Bavaria, THE KINGDOM OF.—I. Political Constitution, Area, Population, etc.**—The present Kingdom of Bavaria—named after the German tribe called Boiarii—has formed, since 1871, a constituent part of the German Empire. It is an independent State of the confederation with special rights; its rulers belong to the Wittelsbach dynasty, the head of the Government in 1907 being Prince-Regent Luitpold. In time of peace the king or his representative is the head of the army; in time of war the emperor, as head of all the forces, has, by agreement, the control. As the second state (in size) of the empire Bavaria has six representatives in the Federal Council and forty-eight in the Imperial Parliament (Reichstag), the latter deputies being chosen by direct vote. In its present form Bavaria consists of two parts of unequal size, geographically some distance from each other, on either side of the Rhine. It has an area of 29,283 square miles, and a population (census of 1 December, 1905) of 6,254,372 persons. According to individual declaration of belief 4,608,469 persons, or 70 per cent of the population, belong to the Catholic Church; 1,843,123 persons, or 28.3 per cent of the population, are adherents of the Lutheran and Calvinist confessions; while other religious bodies (Old-Catholics, Irvingites, Mennonites, Methodists, etc.) have but a small following. There are in Bavaria 56,000 Jews, living chiefly at Munich, Nuremberg, and Fürth, who are engaged principally in commercial and industrial pursuits; they form a large proportion of the physicians, lawyers, and judges of the country. The German population of Bavaria is made up as follows: descendants of the Boiarii, living in Upper and Lower Bavaria and in the greater part of the Upper Palatinate; Franconians, a mixture of Rhine Franks, Thuringians, and Slavs, found in the region of the Main and the Redwitz; Swabians, living in the province bearing their name; and the inhabitants of the Palatinate, a mixed race of Roman and German blood having their home on the left bank of the Rhine. The difference of stock is evidenced by the variety of dialects and provincial characteristics. Naturally these distinctions are not so marked in the cities.

Outside the Rhenish Palatinate Bavaria is an elevated, hilly country. It is bounded on the south by the Alps, on the east by the mountains called the Bohemian Forest (Böhmerwald), and on the north by the range called the Franconian Forest (Frankenwald), while the various ranges called Fichtelgebirge, Spessart, and Rhöngebirge represent isolated districts of larger or smaller extent. The Rhine Palati-

nate is divided by spurs of the Vosges into an easterly and a westerly half, both parts having a fruitful soil. The chief rivers are the Danube and the Rhine. The former enters the country at Ulm and leaves it at Passau. Under ordinary conditions it is navigable for large craft below Ratisbon. Its tributaries in Bavaria from the south are the Iller, a stream rich in fish, the Lech, the Isar, and the Inn; from the north its tributaries are the Wörnitz, the Altmühl, the Regen, and the Vils. For a distance of about fifty-three miles the Rhine forms the boundary between the Rhenish Palatinate and Baden. The three Franconian provinces lie in the valley of the Main, a stream bordered by vineyards and much used for commerce beyond Bamberg. Three flourishing Bavarian cities are situated on its banks: Schweinfurt, Würzburg, and Aschaffenburg. The southern tributaries of the Main, which leave Bavarian territory near Ostheim, are the Regnitz and the Tauber; the northern are the Rodach and the Saale. Only a small part of Lake Constance belongs to Bavaria, but there are numerous lakes in Swabia and a still larger number in Upper Bavaria. Many of these bodies of water are noted for their picturesque scenery, such as the Ammersee, Alpsee, Würmsee, Tegernsee, Königssee, and especially Chiemsee, known as the "Lake of Bavaria". It also contains much mineral wealth: iron, coal, granite, basalt, and salt, of which last there is a large yield of excellent quality. There are numbers of mineral springs, some of which are known throughout the world. Farming in lower Bavaria and cattle-breeding in Swabia, Upper Bavaria, and Middle Franconia are the chief occupations, while the wines of Franconia and the Palatinate and the fruit and vegetables of Bamberg have a high reputation. Industrial life centres in Nuremberg, Fürth, Augsburg, and Ludwigshafen. As a centre of art Munich holds, without question, the highest rank in Germany. The railway lines have a length of about 3,700 miles, to which additions are constantly being made.

No expense is spared in advancing education. In 1903-04 the common schools cost over \$7,500,000. The Bavarian troops are equipped with the same arms as the other divisions of the Imperial German army but wear a different uniform. They are commanded by native generals and consist of three army corps which are divided as follows: 23 infantry regiments, 11 cavalry regiments, 14 artillery regiments, 2 *chasseur* regiments, 3 battalions of pioneers, 3 transportation battalions, and 1 railway battalion. Including all the reserves the Bavarian army numbers over 200,000 men. The annual cost of the army is \$20,000,000.

II. *Early History.*—The early history of Bavaria varies according to the province in question; the races that now live peacefully together under the rule of the Wittelsbach dynasty were once constantly engaged in bloody feuds. A thousand years ago the Bavarian domain included what is now Upper and Lower Austria and the Alpine provinces of the Tyrol and Styria. (See *AUSTRO-HUNGARIAN MONARCHY*.) The Palatinate was united with Bavaria proper through its rulers; on the extinction (1778) of the younger (Bavarian) branch of the Wittelsbach line the elder (Palatinate) branch became the reigning house of electoral Bavaria. Before the changes caused by the French Revolution and the disappearance of the Holy Roman Empire (1803 and 1819) those parts of Franconia and Swabia which now belong to Bavaria enjoyed a more or less independent existence, such as Ansbach-Bayreuth, the Archbishoprics of Würzburg, Bamberg, Eichstätt, Augsburg, etc., the free cities of Augsburg, Nuremberg, Schweinfurt, Kempten, etc., the principalities of Castell and Oettingen, the possessions of the Counts of Ortenburg, Giech, etc. Only the most important

periods in the history of the Duchy and, later, Electorate of Bavaria can be touched on in this article.

The Boiarii, apparently, were either related to the Marcomanni or else identical with that people who, after the Romans had been driven out of the region in the fifth century, began to spread from the right bank of the Danube and gradually extended their control as far as the River Lech and deep into the Alpine region. The chiefs of the Boiarii belonged to the family of the Agilolfings who chose Ratisbon at an early date as their capital. Duke Garibald I, who lived in the middle of the sixth century, seems to have had the power of a sovereign. His daughter, Theodelinda, became Queen of the Langobardi. Her brother, Tassilo I, was, however, obliged to acknowledge the supremacy of the Franks which his son, Garibald II, was able to throw off for a time (about 630). But this independence was of short duration. The Franks under Charles Martel again subdued his descendants. When Tassilo II, who had done much to further the spread of Christianity and civilization in the direction of Eastern Europe, sought to regain his lost independence he was deposed and sent to a monastery.

Bavaria now became a Frankish province ruled by representatives of the Frankish king (794). It came into greater prominence when Louis the German, who had received the eastern part of the Frankish kingdom by the Treaty of Verdun (843), made his residence in Bavaria. His grandson Arnulf, Duke of Carinthia, was crowned emperor in 896. One of his relatives, Margrave Luitpold, who fell in a battle (906) against the Magyars, is regarded as the first of the line of Scheuren-Wittelsbach. Upon the extinction of the Carolingian dynasty Arnulf, son of Leopold, claimed the position of a sovereign prince. This involved him in war with Henry I the Saxon, King of Germany, whose partly successful attempt to conquer Arnulf was completed by Otto I. After the deposition of Eberhard I, the elder son of Duke Arnulf (939), Bavaria no longer had native-born rulers but Saxons, Franconians, and members of the Welf family who ruled as vassals of the king with the title of duke. Not until Emperor Frederick I, in 1180, rewarded Otto of Wittelsbach for his courage by granting him Bavaria did a genuine Bavarian ascend the throne of his fathers. Otto and his energetic successors laid the foundation of the future importance of Bavaria.

In 1214 the Rhine Palatinate was united to Bavaria. Louis II (1253-94) was succeeded by his son Louis III (known as Emperor Louis IV of the Holy Roman Empire) who, by an agreement in 1329 at Pavia, took Bavaria proper, leaving to Rudolph, his brother, the Rhine Palatinate. The large possessions which Louis III secured for his family (Holland, Brandenburg, the Tyrol, etc.) were lost to his successors by discord and successive partitions. Albert IV, however, reunited the country into one domain and secured it against further division by his law of 1506. His son William IV (1508-50) and his grandson Albert V (1550-79) prevented Lutheran and Anabaptist doctrines from entering Bavarian territory. During the reign of William V (1579-98) and still more during the reign of Maximilian I (1598-1651), Bavaria stood at the head of the counter-Reformation and the Catholic League. To these two rulers it was due that the progress of the Reformation was checked, and that some of the territory which had been affected by it was restored to the Church. The Emperor Ferdinand II granted Duke Maximilian of Bavaria for his loyalty the electoral dignity (1623). Bavaria paid a bitter price for its new position in the devastations of the Thirty Years' War. Ferdinand Maria (1651-79) sought to restore the prosperity of the country, but affairs were thrown into confusion during the reigns

of his son, Maximilian Emanuel (1679-1726), conqueror of the Turks, and of his grandson Charles Albert (1726-45) by the wars of the Spanish and Austrian successions. It was not until the reign of the Elector Maximilian (Joseph) III (1745-77) that order was again restored. During this reign the Jesuits were suppressed (1773).

Maximilian was the last of the younger branch of the Wittelsbach line. After his death the elder (Palatinate) branch of the family succeeded to the throne in the person of the art-loving Charles Theodore (1778-99), under whom a papal nunciature was established at Munich (1785). The last years of Charles Theodore were embittered by many misfortunes. The young French Republic took from him the territory on the other side of the Rhine and he had to endure many humiliations from his subjects. Up to this time Bavaria had been entirely a Catholic country. New conditions arose when Maximilian IV (Joseph) ascended the throne (1799). This ruler was twice married to Protestants; non-Catholics were granted the same political rights as Catholics, and Lutheran services allowed at the capital. The Government proceeded with severity against all forms of Catholic religious life. The number of churches which were dismantled or profaned at this time is hardly credible; treasures of art of earlier days were sold for a mere pittance or shamefully treated; whole wagonloads of books and documents were burned or thrown into the river; professorial positions filled by avowed opponents of all religions; and an extravagant and frivolous luxury became the fashion at Court. In 1805 Bavaria entered into an alliance with Napoleon against Austria and Russia. In return for this the victorious Corsican made Bavaria a kingdom (1 January, 1806). As a member of the Rhenish Confederation Maximilian (Joseph) IV fought against Prussia in 1806, against Austria in 1809, and against Russia in 1812. Thirty thousand Bavarian troops died in Russia, victims of the climate or of encounters with the Cossacks. After the battle of Leipzig Bavaria joined the Allies at the right moment, so that it was able to retain the greater part of its territory. After the chancellor, Count von Montgelas, had retired from office (2 February, 1817) efforts were made to restore former conditions and that same year a Concordat, which is still operative, was made with the Roman Curia; the next year the king granted a constitution which has produced good results in every respect.

During the reign of the King Louis I (1825-48) the Church prospered greatly; old cathedrals were restored; new churches and monasteries founded; and painters and sculptors came in large numbers to Munich where they found profitable employment. The colossal figure of Bavaria, the Hall of Fame, the Walhalla, the Hall of Freedom, and the basilica of St. Boniface keep alive the memory of Louis I, the greatest ruler in the history of Bavaria. The revolutionary movement of 1848 compelled Louis to abdicate. His son, Maximilian II (1848-64), a well-meaning but weak ruler, did much to further learning, especially in the domain of history; he was not fortunate, however, in the men he selected to fill professorships and on this account lost popularity with his Catholic subjects. His successor, the visionary Louis II (1864-86), ascended the throne at the age of eighteen. The civil war of 1866 obliged Bavaria to make great sacrifices. Four years later the Bavarian army took an honourable part in the Franco-German war, and in 1871 Bavaria became a member of the new German Empire. During the reign of Louis II special encouragement was given to architecture and industrial art. The growing insanity of the king necessitated the appointment of Prince Leopold as "regent of the kingdom", and not long after Louis met his death, in a manner

never clearly explained, in the Starnbergersee. As his brother Otto was mentally incapable of ruling, Luitpold (b. 12 March, 1821) continued in his office of regent. Bavaria has prospered greatly under his wise rule; his great-grandson Luitpold, assures the succession in his line.

III. *Introduction of Christianity.*—The Christian faith was probably first introduced into Bavaria, both on the Danube and on the Rhine, by Roman soldiers and merchants. [Of. Huber, "Geschichte der Einführung und Verbreitung des Christenthums in Südosten Deutschlands" (Salzburg, 1874-75), 4 vols.; Hefele, "Geschichte der Einführung des Christenthums im südwestlichen Deutschland" (Tübingen, 1837).] In the earliest ages of the Church Augusta Vindelicorum (Augsburg) was famous on account of the martyrdom of St. Afra and her companions; Ratisbon had also its confessors and the same may be said of Speyer. But it was not until the end of the German migrations and the establishment of more orderly conditions in the Merovingian-Carolingian Empire that Christianity took firm root. As is well known, at first Irish, and later Frankish and Anglo-Saxon missionaries sowed the seed of the Gospel in the hearts of the rude warriors whose life until then had been given to fighting, hunting, gambling, and drinking. Among these missionaries were: St. Kilian and his pupils Colonat (Coloman) and Totnan at Würzburg; in the Alpgau region St. Magnus; at Ratisbon and Freising St. Rupert, St. Emmeram, and St. Corbinian. Stricter regulations were introduced by Winfrid (St. Boniface) who is in truth entitled to the name of the "Apostle of the Germans". The Dioceses of Freising, Ratisbon, Passau, Würzburg, and Eichstätt were either established or reorganized, while the founding of monasteries made it possible to train the priesthood properly and to raise the spiritual and moral level of the laity. When Boniface was created Archbishop of Mainz (747) Augsburg and Constance became his suffragans, having previously belonged, respectively, to Aquileia and Besançon. After Charlemagne had overthrown the native ruling family, the Agilolfings, Pope Leo III erected (798) the new province of Salzburg to which Ratisbon, Freising, Passau, and Seben (Brixen) in what is now the Tyrol, were attached. But the first mentioned dioceses together with Neuburg, which in a short time disappeared, were left dependent on Mainz. With some changes of names and boundaries these are still in existence. The Diocese of Bamberg, later formed from the existing provinces, was not a suffragan of Mainz but was directly dependent on the Apostolic See. The small Diocese of Chiemsee, founded in 1206, was always dependent on Salzburg; it was suppressed at the beginning of the nineteenth century.

IV. *Ecclesiastical Divisions.*—The present ecclesiastical divisions of Bavaria rest upon the Bull of Circumscription issued by Pope Pius VII, 1 April, 1818, and made public, 23 September, 1821. According to this Bavaria is divided into the two church provinces of Munich-Freising and Bamberg; the first archdiocese has for suffragans Augsburg, Passau, and Ratisbon; the suffragans of the second are Würzburg, Speyer, and Eichstätt. The Ministry of the Interior for Worship and Education has charge of the interests of the Crown and State in their relations to the Catholic Church of the country; this ministry is the chief State guardian of the various religious and charitable endowments and is aided therein by the civil authorities of the governmental districts. A court of administration has been in existence since 1878 which has control over various matters relating to religious societies (among others, the religious training of children). Cf. Silbernagl, "Verfassung und Verwaltung sämtlicher Religionsgenossenschaften in Bayern" (4th ed. Ratisbon, 1900); Schlecht,

\*Bayerns Kirchenprovinzen, ein Ueberblick über Geschichte und gegenwärtigen Bestand der katholischen Kirche im Königreich Bayern" (Munich, 1902).

The boundaries of the dioceses do not agree with the boundaries of the political divisions except in the case of Würzburg (Lower Franconia) and of Speyer (Rhine Palatinate). The Archdiocese of Bamberg extends across Bavaria from Württemberg to Bohemia and Saxony; the territory of the suffragan Diocese of Würzburg stretches beyond the boundaries of the country. Eichstätt includes parts of Middle Franconia, the Upper Palatinate, Upper Bavaria, and Swabia. Ratisbon is the largest diocese; it includes not only the greater part of the Upper Palatinate but also parts of Upper and Lower Bavaria, as well as Upper Franconia. The Archdiocese of Munich-Freising embraces besides the greater part of Upper Bavaria a part of Lower Bavaria, chiefly included in the suffragan Diocese of Passau. The Diocese of Augsburg includes the whole of Swabia and the western judicial districts of Upper Bavaria; in the north it extends well into Middle Franconia.

V. *Church Statistics*.—According to the "Zeitschrift des königlichen bayerischen statistischen Bureau" (1906, nos. 2 and 3) the Catholic population of the various districts was as follows:—

Upper Bavaria . . . . .	1,299,372
Lower Bavaria . . . . .	700,118
Rhine Palatinate . . . . .	391,200
Upper Palatinate and Ratisbon . . . . .	525,933
Upper Franconia . . . . .	316,545
Middle Franconia . . . . .	227,119
Lower Franconia . . . . .	546,962
Swabia and Neuburg . . . . .	646,220
	<hr/>
	4,653,469

In the Rhine Palatinate, Upper Franconia, and especially in Middle Franconia the non-Catholic population is decidedly in the majority, namely: Rhine Palatinate, 479,694; Upper Franconia, 362,519; Middle Franconia, 623,546. In Upper Bavaria, Lower Franconia, and Swabia the Protestants number over 100,000 persons, while in the Upper Palatinate the figures are hardly half as large. In Lower Bavaria there are not over 10,000 non-Catholics. Rapid growth is reported in the Catholic parishes of Nuremberg (90,000), Augsburg (70,000), Erlangen, Schweinfurt, and Memmingen; the Protestant parishes have increased in population in Munich (80,000), Würzburg (15,000), Aschaffenburg, Ingolstadt, and Forchheim; while in the Catholic provinces Protestant churches and chapels are rapidly springing up. The same can hardly be said of Catholic churches in the Protestant districts, although more has been done in this direction lately than in former years and a few parishes like Wunsiedel, Hof, and Weissenburg here and there possess creditable churches. The establishment of the Boniface Verein might have proved very helpful in this respect and would have counteracted the efforts of the Gustavus-Adolphus Verein; but a false respect for King Louis I (founder of the Ludwig-Mission Verein, which is exclusively Bavarian) has, in spite of all efforts, prevented its establishment in the kingdom.

Every diocese has a cathedral chapter which, according to the Concordat, besides choir-service acts as a council for the bishop. These chapters include a provost, dean, a number of canons, and curates. In Munich, besides the chapter there is a collegiate foundation of court preachers (St. Cajetan) similarly organized. At the close of 1904 there were 3,022 parishes served by 3,144 parish priests or curates, and 2,578 vicars and chaplains; there were also 1,985 regular clergy (Benedictines, Franciscans, Carmelites, Capuchins) living in 86 monasteries and hospices. The orders for women had at that date 12,586 mem-

bers in 79 houses and 1,087 dependencies. With a few exceptions the female religious devote themselves to teaching and nursing. There are in Bavaria over 1,000 Protestant parishes with 1,400 pastors and assistant preachers. In 1903 the Catholic Church funds, including real estate, amounted to about \$42,500,000; the funds of the Protestant denominations to \$5,000,000. As the revenues from the church funds are often not sufficient to keep the church buildings, etc., in repair, a number of cities have decided to impose a church tax, which so far has been moderate. [Cf. Geiger, "Taschenkalender für den katholischen Klerus" (Ratisbon, 1907), as to the salaries, pensions, and ranking of the clergy.]

VI. *Education and Charitable Institutions*.—The school system consists of public schools, continuation and technical schools, gymnasias with classical courses, *Realgymnasias* (no Greek), *Realschulen* (high-schools without Latin and Greek), *Oberrealschulen* (gymnasias with no Latin or Greek, which prepare for the technical schools), commercial schools, seminaries for teachers, lyceums, 3 universities, a technical high-school, etc. Except in rare cases the primary schools are chiefly denominational. The middle and high-schools are used by all denominations. Religious instruction is provided for these schools as well as for the primary ones. The universities at Munich and Würzburg have Catholic theological faculties. There is at Munich a seminary for the training of priests called the Georgianum and the the provinces have similar institutions, generally in connexion with lyceums. Following the directions of the Council of Trent there are in all the dioceses seminaries for boys (*petits séminaires*) which are intended to prepare youths without means to study in the gymnasias. In Munich the total number of university instructors is 250; in Würzburg, 158; in Erlangen, 100; in the technical high-school, 100. In the other institutions the number of teachers is correspondingly smaller.

The attendance of students at Munich is between 5,000 and 6,000; at Würzburg, 1,400. The students at the technical high-school number about 3,000; the academy of fine arts and the academy of music have each 300 students. In 1904 the lyceums had about 1,000 matriculated students. Some of the gymnasias, such as that of St. Stephen at Augsburg and those at Metten and Münnerstadt, are in charge of members of the regular orders (Benedictines and Augustinians). The majority of the professors are, however, laymen. In Bavaria for various reasons relatively more Protestants than Catholics study the higher branches, consequently the non-Catholic professors nearly everywhere equal in number those of the Catholic Faith. This condition of affairs has been somewhat changed by the labours of the Albertus-Magnus Verein as well as by the work of the associations and leagues of Catholic students. Efforts have also been made to increase the number of *progymnasias* (without higher classes) in certain Catholic districts; the Protestant districts are better equipped with such schools.

Bavaria is well supplied with institutions for the care of the sick, the crippled, children, and old people. Many of these foundations are largely endowed and date back to the earlier centuries. In the Catholic benevolent institutions members of the religious orders of both sexes are active; the Protestant institutions are served by deaconesses. There are also institutions in which both faiths are represented, as the hospital at Augsburg, where patients of both denominations are cared for by Catholic and Protestant sisters. At Munich there are only sisters of the Society of St. Vincent de Paul, and at Nuremberg deaconesses, although in both places the percentage of patients of other faiths is large. The clergy of the different faiths exercise their office

undisturbed in the hospitals of both cities. Of the other humanitarian associations mention should be made of the *Gesellenverein* which gives travelling journeymen-mechanics an opportunity for further education. In nearly all the larger towns it has lodging-houses and in a few places large, well-equipped homes. Workingmen's Unions endeavour to counteract the tendencies of the Social Democrats; citizens' and voters' associations strive to send to the Bavarian as well as to the Imperial Parliament representatives of pronouncedly Christian principles.

*Civil Status of the Church.*—The relations of Church and State are settled in all important points by the Concordat and the Constitution [cf. Silbernagl, op. cit.; Idem, "Lehrbuch des katholischen Kirchenrechts" (Ratisbon, 1903), 4 vols.; Girón y Arcas, "La situación jurídica de la Iglesia en los diversos estados de Europa y de América" (Madrid, 1905)]. Although the promises made the Holy See were not kept in all particulars, for instance in the early seventies of the nineteenth century, yet, taken altogether, conditions are satisfactory; this is owing largely to the strong religious feeling of the reigning dynasty, once more thoroughly Catholic. The Catholic Church has, however, no special privileges. It is on the same footing as the Lutheran, the Reformed, and the Greek schismatics.

Parishes under the jurisdiction of monasteries, as in Austria, are not known in Bavaria. Where members of the religious orders assume pastoral functions, it is only by way of substitution; in these cases they receive the same governmental support as do the secular clergy. The funds of the Church are liable to taxation as other funds. No concession or mitigation is granted. Priests are not obliged to sit as lay assessors, nor to act as jurors, nor to be guardians of minors. Military service is not obligatory on theological students, at least, if when the army is mobilized, they have been ordained subdeacons. In this case they are employed as nurses. The civil code has limited ecclesiastical jurisdiction in matters of marriage, but Catholics still respect the teaching of the Church, especially that death alone can dissolve marriage. A serious question is the great increase of mixed marriages, especially in the large cities, and the consequent Protestant education of children. Owing to various considerations, the evil has not been combated as vigorously as it should be. Prisons and reformatories are, as a rule, visited by clergymen of all faiths, but full provision is made for the pastoral supervision of Catholic prisoners. Prisoners condemned to death are accompanied by priests to the scaffold. Gifts and testamentary bequests for religious and benevolent objects are frequent. They are made under the regulations of the civil code by which any association that has given proper notification to the authorities is regarded as a person in the sense of the law. In the cities the cemeteries belong, as a rule, to the civil community, but nearly everywhere in the country they are part of the parish and are used in common by the Christian confessions. Cremation is not permitted in Bavaria although there is an agitation in its favour.

PIUS WITTMANN.

**Bawden** (or **Baldwin**), **WILLIAM**, an English Jesuit, b. at Cornwall, 1563; d. at St.-Omer, 28 September, 1632. Father Bawden studied for five years at Oxford and later spent some time at Douay College, from whence he went to Reims, arriving at the latter institution 31 December, 1582. Leaving Reims, he went, 13 August, 1583, to Rome and in the English College at that city he completed his studies for the priesthood and was ordained priest 16 April, 1586. After his ordination he served one year as English penitentiary at St. Peter's, when his health failed. He next went to Belgium and in 1590, on joining the Jesuits, he became professor of theology at Louvain. His health failing again, he went to Brussels, where he resided for eleven years. His next change was to Germany, where he was arrested and sent to England for an alleged connexion with the Gunpowder Plot. He was incarcerated in the Tower for eight years and was tortured in the hope of extracting a confession from him. His innocence being established, he was liberated, but at the same time banished. In 1621 he was appointed rector of Louvain and the next year was transferred to the rectorship of St.-Omer's College, where he remained until his death.

THOMAS GAFFNEY TAAFFE.

**Bayer**, **ADELE**, *née* Parmentier, eldest daughter of Andrew Parmentier, b. in Belgium, 4 July, 1814, and d. in Brooklyn, New York, 22 January, 1892. Andrew Parmentier, a horticulturist and civil engineer, was b. at Enghien, Belgium, 3 July, 1780, and d. in Brooklyn, New York, 26 November, 1830. His father, Andrew Joseph Parmentier, was a wealthy linen merchant, and his eldest brother Joseph had a European reputation as a horticulturist and landscape gardener. Trained by the latter, Andrew emigrated to New York in 1824, on his way to the West Indies, taking with him his share of the family estate. He was persuaded by friends to remain in New York as a place where his abilities and scientific training would meet with recognition. He purchased a tract of land near Brooklyn which he laid out as a horticultural park. It became famous in a short time and his services as an expert in designing pleasure grounds were sought for in many places North and South. He is said to have exercised a more potent influence in landscape gardening in the United States than any other person of his profession up to that time. He was the first to introduce into the United States the black beech tree and several varieties of shrubs, vegetables, and vines. He was one of the founders and trustees of St. James's, the first Catholic church in the present Diocese of Brooklyn, and was at the height of his influence and reputation when he died in Brooklyn, 26 November, 1830. After his death his daughter Adèle and her mother (Sylvia M., b. at Louvain, Belgium, 1793; d. in Brooklyn, New York, 27 April, 1882), carried on his Botanical and Horticultural Gardens until 1832, when they were sold. Thereafter they devoted most of their time and income to works of charity, aided substantially the Indian missions of Father De Smet, S.J., the estab-

fishment in Indiana of the Sisters of Providence from Brittany, the Little Sisters of the Poor in Brooklyn, and other good works. Adèle was married, 8 Sept., 1841, to Edward Bayer, a German Catholic merchant (d. 3 Feb., 1894), at the first nuptial Mass celebrated in Brooklyn. During the Civil War Madame Bayer began caring for the spiritual and temporal wants of the sailors at the Brooklyn Navy Yard, a work to which she devoted the remainder of her life. For thirty years she toiled unostentatiously at this voluntary task and was known and revered as a guardian and friend by seamen all over the world.

THOMAS F. MEEHAN.

**Bayeu y Subias, FRANCISCO**, b. at Saragossa, 9 March, 1734; d. Madrid, 4 August, 1795, a distinguished religious and historical painter. He first studied at Tarragona with José Luzán Martínez, and gaining the first prize at the Academy there, he received a pension to go to Madrid, where he entered the San Fernando Academy and had for his master Antonio Gonzalez Velasquez. While there he attracted the attention of Raphael Mengs, then court painter to Carlos III. After returning to Saragossa, he was recalled, on the suggestion of Mengs, by that monarch, who put him to work on the country palaces of El Pardo and Aranjuez and on the new Royal Palace at Madrid. He also painted pictures for several churches in Madrid. Painting with, and presumably partly under the direction of, Mengs he became devoted to his style and is classed with his school. Don Pedro de Madrazo in the Prado catalogue speaks of him as a mannered painter only to be appreciated as a frescoist. In 1765 Bayeu y Subias was chosen a member of the San Fernando Academy, and became, twenty-three years later, its director and painter to the court. In the palace at Madrid are his frescoes, "The Fall of the Giants", "The Apotheosis of Hercules", and "The Conquest of Granada". He decorated the royal chapel at Aranjuez, and pictured scenes from the life of St. Bruno at the convent of the Carthusians in Madrid. He painted many frescoes in the churches of Toledo and Saragossa, being assisted on the latter by his brother and pupil, Ramón, b. Saragossa, 1746; d. Aranjuez, 1793. His subjects at the Toledo cathedral are scenes from the life of St. Eugenio. There are fifteen works by the painter in the Museum of the Prado at Madrid. Among them are "The Coronation of the Virgin", "The Ascension", "The Evangelist St. Matthew", "The Evangelist St. Mark", "The Evangelist St. Luke", "The Evangelist St. John", "Olympus"—all studies for more important works—"St. Francis de Sales Founding the Order of the Visitation", the last being attributed by some to Ramón Bayeu y Subias, "View of the Canal of Manzanares", "View of the Paseo de las Delicias in Madrid", "Luncheon in the Country", a scene in a Manzanares orchard, and four sketches of sacred allegories for arch panels at the college of San Ildefonso. Don Francisco was an etcher as well as a painter, and executed a small number of plates.

AUGUSTUS VAN CLEEF.

**Bayeux (BAJOCE)**, DIOCESE OF, coextensive with the Department of Calvados, is suffragan to the Archbishopric of Rouen. At the time of the Concordat (1802) the ancient Diocese of Lisieux was united to that of Bayeux. A pontifical Brief, in 1854, authorized the Bishop of Bayeux to call himself Bishop of Bayeux and Lisieux.

THE SEE OF BAYEUX.—A local legend, found in

the breviaries of the fifteenth century, makes St. Exuperius, first Bishop of Bayeux, an immediate disciple of St. Clement, and his see a foundation of the first century. St. Regnobertus, the same legend tells us, was the successor of St. Exuperius. But the Bollandists and M. Jules Lair have shown how little ground there is for this legend; it was only towards the middle of the fourth century that St. Exuperius founded the See of Bayeux; after him the priest St. Reverendus did much for the propagation of the Faith in these parts. A certain number of the successors of St. Exuperius were saints: Rufinianus; Lupus (about 465); Vigor (beginning of the sixth century), who destroyed a pagan temple, then still frequented; Regnobertus (about 629), who founded many churches, and whom the legend, owing to an anachronism, made first successor to Exuperius; and Hugues (d. 730), simultaneously bishop of two other sees, Paris and Rouen. We may also mention Odon of Conteville (1050-97), brother of William the Conqueror, who built the cathedral, was present at the Battle of Hastings, intrigued for the tiara on the death of Gregory VII (1085), and died a crusader in Sicily; Cardinal Trivulce (1531-48), papal legate in the Roman Campagna during the siege and pillage of Rome by the Constable de Bourbon; Cardinal d'Ossat (1602-04), an illustrious diplomatist prominently identified with the conversion of Henry IV. Claude Fauchet, who after being court preacher to Louis XVI, became one of the "conquerors" of the Bastille, was chosen Constitutional Bishop of Bayeux in 1791, and was beheaded 31 October, 1793. Mgr. Amette, coadjutor, with right of succession to the Cardinal Archbishop of Paris was, until 1905, Bishop of Bayeux. In the municipal Musée Archéologique is preserved the famous "Bayeux Tapestry", one of the most remarkable relics of medieval textile art. Its contemporary embroideries reproduce scenes from the Norman Conquest of England (1066) and are valuable as illustrations of eleventh-century costume and life.

THE SEE OF LISIEUX.—The first known Bishop of Lisieux is Theudibaudes, mentioned in connexion with a council held in 538. The most celebrated among his successors were Freculfus (d. 850), a pupil of the palace school founded by Charlemagne, and author of a universal history; Arnoul (1141-81), statesman and writer; Nicole Oresme (1378-82), philosopher, mathematician, and tutor to Charles V; Pierre Cauchon (1432-42), concerned in the condemnation of Joan of Arc; Thomas Basin (1447-74), the historian of Charles VII, and one of the promoters of the rehabilitation of Joan of Arc; Guillaume du Vair (1618-21), the well-known philosopher who left the bench for the Church.

In the Middle Ages both sees were very important. The Bishop of Bayeux was senior among the Norman bishops, and the chapter was one of the richest in France. The See of Lisieux maintained the Collège de Lisieux at Paris for poor students of the diocese. Important councils were held within this diocese, at Caen, in 1042 and 1061; in the latter was proclaimed "the Truce of God". The statutes of a synod held at Bayeux about 1300, furnish a very fair idea of the discipline of the time.

Among the abbeys of the Diocese of Bayeux should be mentioned those of St. Stephen (Abbaye-aux-Hommes) and of the Trinity (Abbaye-aux-Dames), both founded at Caen by William the Conqueror (1029-87) and his wife Matilda, in expiation of their unlawful marriage. The former of these abbeys was governed by the celebrated Lanfranc, afterwards Archbishop of Canterbury. Other abbeys were those of Troarn of which Durand, the successful opponent of Berengarius, was abbot in the eleventh century, and the Abbaye du Val, of which Rancé was abbot in 1661, prior to his reform of La Trappe. The Abbey

CATHEDRAL OF NOTRE DAME, BAYEUX

of St. Evroul (Ebrulphus) in the Diocese of Lisieux, founded about 560 by St. Evroul, a native of Bayeux, is famous as the home of Ordericus Vitalis, the chronicler (1075-1141). Venerable Jean Eudes founded in 1641 in Caen the congregation of Notre Dame de Charité du Refuge, which is devoted to the protection of girls and includes 33 monasteries in France and elsewhere. At Tilly, in the Diocese of Bayeux, Michel Vingtras established, in 1839, the politico-religious society known as *La Miséricorde*, in connexion with the survivors of *La Petite Eglise*, which was condemned in 1843 by Gregory XVI. Daniel Huet, the famous savant (1630-1721) and Bishop of Avranches, was a native of Caen.

The cathedral of Bayeux (twelfth to fourteenth centuries) and of Lisieux (twelfth and thirteenth centuries) are inferior in point of interest to the church of St. Etienne at Caen, which is one of the most beautiful architectural monuments of Normandy (eleventh and twelfth centuries). The church of Notre-Dame de la Délivrande (the devotion to Our Lady of Deliverance dates back to the seventh century) is visited by the Bishops of Bayeux even before they enter their own cathedral.

At the close of the year 1905 the Diocese of Bayeux included a population of 410,178, 73 pastorates, 640 mission churches, and 120 curacies remunerated by the State. According to the latest statistics (1907) obtainable, the Diocese of Bayeux has 2 infant asylums, 16 infant schools, 1 deaf-mute institute, 1 orphanage where farming is taught, 9 girls' orphanages, 4 industrial schools, 2 trades schools, 1 refuge for young women, 6 hospitals and hospices, 1 dispensary, 4 communities for the care of the sick in their homes, 3 private hospitals, 1 private insane asylum, 9 homes for the aged, all conducted by sisters; and 1 orphanage where farming is taught, conducted by brothers.

In 1900 the following congregations were represented in the diocese: the Franciscans at Caen and the Premonstratensians, who have an abbey at Juaye-Mondaye. Among the local congregations are the diocesan missionaries, stationed at the basilica of Notre Dame de la Délivrande, directors of several educational institutions throughout the diocese. In this diocese also was founded the congregation of Our Lady of Charity and Refuge established at Caen in 1641 by Venerable Jean Eudes for the preservation of young girls. This congregation has 33 monasteries in France and other countries.

GEORGES GOYAU.

Bayle, PIERRE. See RATIONALISM.

Bayley, JAMES ROOSEVELT, first Bishop of Newark, New Jersey, U. S. A.; eighth Archbishop of Baltimore, Maryland; b. at Rye, New York, 23 August, 1814; d. at Newark, 3 October, 1877. His Dutch and English non-Catholic ancestors were locally notable. His father was the son of Dr. Richard Bayley, professor of anatomy in Columbia College, New York, and inaugurated the New York quarantine system. Mother Seton, foundress of the Sisters of Charity in the United States, was his aunt. He was named after his maternal grandfather, James Roosevelt, a merchant of large fortune, who made him his heir, but altered the will when Bayley became a Catholic priest, under the mistaken idea that priests could not possess property. A large part of the money went to build the Roosevelt Hospital in New York. Bayley's early school days were spent at Amherst College, where he once thought of going to sea and obtained a commission of midshipman in the navy. He abandoned the plan, however, and continuing his

studies, entered Trinity College, Hartford, Connecticut, to prepare for the Episcopalian ministry. He graduated here in 1835 and after receiving orders was appointed rector of St. Peter's church, Harlem, New York. He resigned this charge in 1841 and went to Rome, where on 28 April, 1842, he was baptized and received into the Catholic church in the room of St. Ignatius by Father Esmond, S.J. He then entered the seminary of St. Sulpice at Paris for his theological studies. Returning to New York, he was ordained priest by Bishop Hughes, 2 March, 1844, and made a professor and the vice-president of the seminary at Fordham. He was acting president there in 1846 and was next given charge of the parish at the Quarantine Station on Staten Island, so long the residence of his grandfather, Dr. Bayley. Bishop Hughes then appointed him his private secretary, an office he held for several years and in which his administrative ability was specially manifested. He devoted some of his leisure to the collection and preservation of local historical data, much of which would otherwise have been lost. Part of this material he published in a small volume "A Brief Sketch of the Early History of the Catholic Church on the Island of New York" (New York, 1853; 2nd ed., 1870).

When the Diocese of Newark was established he was named its first bishop and consecrated 30 October, 1853, in St. Patrick's Cathedral, New York, by Archbishop Bedini, the Apostolic Nuncio to Brazil, who was then *en route* to Rome. The Bishops of Brooklyn and Burlington were consecrated at the same time, the first occurrence of such an elaborate ceremony in the United States. Bishop Bayley's work of organizing the new diocese was not easy. He had more than 40,000 Catholics, mainly of Irish and German extraction, with only twenty-five priests to minister to them. There was not a single diocesan institution, no funds, and poverty on all sides. He therefore applied for help to the Association of the Propagation of the Faith of Lyons, France, and to the Leopoldine Association of Vienna and from both received material assistance. In a letter he wrote 10 April, 1865, reviewing the condition of the diocese after his first ten years there he says: "I find that while the Catholic population has increased a third, the churches and priests have doubled in number. In 1854 there was no religious community. Now we have a monastery of Benedictines, another of Passionists, a mother-house of Sisters of Charity, conducting seventeen different establishments; two convents of Benedictine nuns, two others of German Sisters of Notre Dame and two others of the Sisters of the Poor of St. Francis. In 1854 there was no institution of learning; to-day we have a flourishing college and a diocesan seminary, an academy for young ladies, a boarding school for boys, and parish schools attached to almost all the parishes." In addition to these he introduced the Jesuits and the Sisters of St. Joseph and of St. Dominic into the diocese, and was one of the strongest upholders of the temperance movement of the seventies. He made several journeys to Rome and the Holy Land, attending the canonization of the Japanese martyrs at Rome in 1862; the centenary of the Apostles in 1867; and the Ecumenical Council in 1869.

At the death of Archbishop Spalding of Baltimore he was promoted, on 30 July, 1872, to succeed that prelate. He left Newark with much reluctance. In 1875 as Apostolic Delegate he imposed the cardinal's biretta on Archbishop McCloskey of New York. In May, 1876, he consecrated the Baltimore cathedral, having freed it from debt. Convening the Eighth Provincial Synod of the clergy, August, 1875, he enacted many salutary regulations, particularly with regard to clerical dress, mixed marriages, and church music. Illness obliged him to ask for a coadjutor and Bishop Gibbons of Richmond was appointed to

that position 29 May, 1877. The archbishop then went abroad to seek for relief, but in vain. He returned to his former home in Newark in August, 1877, and after lingering for two months, died in his old room, where he had laboured so long. At his own request he was buried beside his aunt, Mother Seton, at the convent at Emmitsburg, Maryland. He was a noble model of a Christian bishop. He seemed animated with the spirit of St. Francis de Sales, full of zeal in the episcopal office and of kindness and charity to all mankind. In conversation he once told Bishop Corrigan that before his conversion he thought of becoming a Jesuit, and before his consecration a Redemptorist, but from both intentions his director dissuaded him. In addition to the volume on the Church in New York he wrote the "Memoirs of Simon Gabriel Bruté, First Bishop of Vincennes" (New York, 1855).

FLYNN, *The Catholic Church in New Jersey* (Morristown, 1904); SREA, *History of the Cath. Ch. in the U. S.* (New York, 1889-92); *Cathedral Records* (Baltimore, 1906); REURS, *Biog. Cycl. of the Cath. Hierarchy of the U. S.* (Milwaukee, 1898).

THOMAS F. MEEHAN.

**Bayma, JOSEPH**, a Jesuit mathematician and scientist, b. in Piedmont, Italy, 9 November, 1816; d. at Santa Clara, California, U. S. A. 7 February, 1892. He entered the Society of Jesus, 5 February, 1832, and distinguished himself in literature, mathematics, and physics. He was in charge of the episcopal seminary of Bertinoro when the troubles of 1860 forced him and many of his brethren to seek shelter in England. Hitherto he had given no special attention to philosophy, but at Stonyhurst he took it up and taught it for some seven years. His powerful and original mind soon produced three volumes of "Realis Philosophia", which were printed for private circulation. No sooner were they out than he introduced numerous corrections; thus the printed volumes cannot be relied upon as evidence of his mature opinions. In 1868 Father Bayma left for California, where he was Rector of Saint Ignatius' College, San Francisco, for three years, but afterwards resided at Santa Clara, teaching elementary mathematics there till his death. At his death he left behind, in manuscript, an elaborate new edition of the "Realis Philosophia" which never saw the light. His published works are "Molecular Mechanics" (Cambridge, 1866); "The Love of Religious Perfection", originally written in Italian, in the style of "The Imitation of Christ" (published in English, Dublin, 1863); articles in "The Catholic World", XVII-XXI (1873-75), the best printed account of his philosophy; two articles in the "Am. Cath. Q. Rev.", II (1877); and "A Discussion with an Infidel", being a review of Büchner's "Force and Matter" (New York, London, and Leamington, 1901). His elementary works on mathematics, all published at San Francisco, are: "Algebra" (1890), "Geometry" (1895), "Analytical Geometry" (1887), "Plane and Spherical Trigonometry" (1886), "Infinitesimal Calculus" (1889).

Father Bayma took the Venerable Bede for his model, and loved to refer to the old Breviary Lesson, which used to be read in England on St. Bede's day. It ran: "Bede [and Bayma too] was handsome of stature, grave of gait, rich and sonorous of voice, eloquent of speech, noble of countenance, a blend of affability with severity. He was affable to the good and devout, formidable to the proud and negligent. He was always reading, always writing, always teaching, always praying." Only the young men who sat under him could know his fascination as a teacher. To posterity he must be known by his "Molecular Mechanics", a metaphysical and mathematical work treating of the constitution of matter. With Roger Bosovich, Bayma reduces all matter to unextended points, centres of force acting

in the inverse square of the distance. Thus acting upon one another, but of course not touching, for Bayma abhorred continuous matter and upheld *actio in distans*, these points were bound up into molecules, and molecules into bodies. Bosovich made his points, or elements, attractive at molar distances, repulsive at molecular. Bayma divides elements into attractive and repulsive, the former always attracting, the latter always repelling; the attractive elements preponderating in the nucleus of the molecule, the repulsive in the envelope. The work drew attention at Cambridge, and at Trinity College, Dublin. The author was advised to test his theories by ten years of experiments in chemistry and electricity. Unhappily, this was never done. One of his proofs certainly lies open to grave objection, but Bayma's main theory does not stand or fall with that proposition. The gravest objection against the theory is its alleged failure to account for inertia. Father Bayma ever professed the utmost reverence for St. Thomas. His saying was: "the metaphysics of St. Thomas, with modern physics".

JOSEPH RICKABY.

**Bayonne (LAPURDUM)**, DIOCESE OF, comprises the Department of Basses-Pyrénées. Reorganized in 1802, it included, besides certain parishes of the Dioceses of Dax and Tarbes, the Dioceses of Oloron and Lescar. It was suffragan to the Archiepiscopal See of Toulouse from 1802 to 1822, thereafter to that of Auch.

*Diocese of Bayonne*.—Local tradition maintains that St. Leo, the martyr, with whose memory is associated a miraculous fountain, was the first Bishop of Bayonne. No bishop is historically known prior to the sixth century, although some think that Bayonne, designated as *civitas* in the Treaty of Andelot (587), must have had a bishop at that time, whilst others couple the foundation of the See of Bayonne with the establishment of the Kingdom of Aquitaine (778). Until 1566, the Diocese of Bayonne included much Spanish territory, i. e. the four Archpresbyteries of Bastan, Lérin, Cinco Villas in Navarre, and Fontarabia in Guipuzcoa, a remnant of Charlemagne's conquests beyond the Pyrenees. Christophe de Beaumont, afterwards Archbishop of Paris, occupied the See of Bayonne from 1741 to 1745 and Astros occupied it from 1820 to 1830.

*Sees of Lescar and Oloron*.—A local legend recorded in the great "Bréviaire de Lescar" of 1541, and patterned after the Limousin legend of St. Martial, holds that St. Julian, sent from Bordeaux by St. Leontius, was the first Bishop of Lescar; but according to history, St. Galactorius, martyred perhaps by the Visigoths after their defeat at Vouillé, and St. Gratus, both mentioned in the Council of Agde (506), were respectively the first incumbents of the See of Lescar and the See of Oloron known to history. Until 1789 the Bishops of Lescar presided by right over the Assembly of the States of Béarn. Amongst those who occupied the See of Oloron was Roussel, the Dominican (1536-50), protégé of Margaret of Navarre and a convert to Calvinism.

Sponde (Spondanus, 1568-1643), Bishop of Pamiers, who carried on the work of Baronius; Duvergier de Hauranne (1581-1643), Abbé de St. Cyran, the second founder of Jansenism, and Cardinal Lavigerie were born in territory now included in the Diocese of Bayonne. Bétharram is celebrated as a place of pilgrimage as also are Notre Dame de Piétat, at Paradies, and Notre Dame de Sarrance, visited by King Louis XI. In 1899 the following institutions were to be found in the diocese: 1 infant asylum, 38 infant schools, 2 orphanages where farming is taught, 10 girls' orphanages, 5 gratuitous industrial schools, 2 houses of refuge for young girls, 2 *patronages*, 1 temporary home for servants, 4 hospitals or hospices,

1 insane asylum, 6 homes for the aged, and 1 private hospital, all conducted by Sisters, and 2 orphanages where farming is taught, conducted by Brothers, and 4 *patronages* for young people conducted either by priests or brothers. At the close of 1905 the Diocese of Bayonne contained 426,347 inhabitants, 43 pastorates, 449 *succursales* or mission churches, and 91 curacies.

In 1900 the following religious orders were represented in the diocese: the Jesuits and Franciscans at Pau, and the Capuchins at Bayonne. Among the local congregations are: the Auxiliary Priests of the Sacred Heart of Jesus, devoted to teaching and missionary work, founded at Bétharram in 1841. They have missions at Bethlehem, Buenos Ayres, and Montevideo. The Servants of Mary, who teach and serve in hospitals; their mother-house is at Anglet. The Bernardines, with mother-house also at Anglet, were founded in 1846; they keep perpetual silence and divide their time between prayer and the work of sewing and embroidery.

*Gallia Christiana (nova)* (1715), I, 1261-1324; *instrumenta*, 197-202; DURARAT, *Études de l'histoire locale et religieuse* (Pau, 1899-92); IDEM, *Le bréviaire de Lescar de 1541* (Pau, 1891); DURARAT AND HARISTOV, *Études historiques et religieuses du diocèse de Bayonne* (1892); DUCHESNE, *Fastes épiscopaux*, II; CHEVALIER, *Topobibliographie*, s. v.

GEORGES GOYAU.

**Baysio** (BAISIO), GUIDO DE, an Italian canonist, b. about the middle of the thirteenth century of a noble Ghibelline family; d. at Avignon, 10 August, 1313. The probable place of his birth is Reggio, where he also studied law under Guido de Suzaria. Here he became, successively, doctor and professor of canon law and also obtained an ecclesiastical benefice as canon. Gerhard, Bishop of Parma, attached him to himself and remained his patron also as Cardinal-Archbishop of Sabina (d. 1302). To this patron Baysio dedicated his chief work, a commentary on the "Decretum" of Gratian, which he wrote about the year 1300 and entitled "Rosarium". It is an excellent collection of older glossaries, not contained in the "Glossa Ordinaria", and principally compiled from Huguccio. Many additions to the glossary which are found in the editions published since 1505 (Paris), are taken from the "Rosarium" of Baysio and appear over his name.

In 1296 Pope Boniface VIII appointed Baysio Archdeacon of Bologna and chancellor of the celebrated university in that city. Here he at first taught canon law privately and later on became a public professor, which position he held for three years. Called to Avignon in 1304 he retained the dignity of archdeacon, held the office of papal chaplain, and also served in the Apostolic chancery until his death. His stay at Avignon was marked by several literary productions. Here he wrote an accurate and complete, but rather diffuse, commentary on the *Liber Sextus* and also a "Tractatus super hæresi et aliis criminibus in causâ Templariorum et D. Bonifacii". This latter work was written in connexion with the condemnation of the Templars at the Council of Vienne. The second part of the work constitutes a defence of the orthodoxy of Boniface VIII, and is published in Mansi, "Coll. Sac. Concil.", XXV (Venice, 1782), 415-426. Having held the position of archdeacon, Baysio is often known by the name of Archidiaconus and thus quoted (see Ferraris, *Bibliotheca*, Rome, 1892), VIII, 271. His chief work, the "Rosarium", has gone through many editions: Strasburg, 1472; Rome, 1477; Venice, 1480; 1513; 1601, etc. The "Apparatus ad Sextum", Milan, 1480; Venice, 1577.

LEO GANS.

**Basin, JOHN STEPHEN**, third Bishop of Vincennes

(now the Diocese of Indianapolis), b. at Duerné, near Lyons, France, 15 Oct., 1796; d. at Vincennes, Indiana, U. S. A., 23 April, 1848. He was educated in his native country and ordained in the Cathedral of Lyons, 22 July, 1822. In 1830 he came to America and began his labours among the Catholics of Mobile, Alabama, where for seventeen years he toiled zealously for the religious instruction of the young, organizing the Sunday schools and establishing the Catholic Orphan Asylum Society. He was also the vicar-general of the diocese. In 1846 at the request of Bishop Portier, Father Basin went to France to secure the services of the Society of Jesus for the College of Spring Hill, Alabama, and of the Brothers of the Christian Schools for the Boys' Orphan Asylum. In both efforts he was successful. When the Right Rev. Célestine de la Hailandière, Bishop of Vincennes, resigned his see in 1847, Father Basin was consecrated his successor on the 24th of October of that year. His episcopal career, which promised to be one of great usefulness to the Church, was cut short by his untimely death.

EDWARD P. SPILLANE.

**Beads**, USE OF, AT PRAYERS.—Beads variously strung together, according to the kind, order, and number of prayers in certain forms of devotion, are in common use among Catholics as an expedient to ensure a right count of the parts occurring in more or less frequent repetition. Made of materials ranging from common wood or natural berries to costly metals and precious stones, they may be blessed, as they are in most cases, with prayer and holy water, thereby becoming sacramentals. In this character they are prescribed by the rules of most religious orders, both of men and women, to be kept for personal use or to be worn as part of the religious garb. They are now mostly found in the form of the Dominican Rosary, or Marian Psalter (see ROSARY); but Catholics are also familiar with the Brigittine beads, the Dolour beads, the Immaculate Conception beads, the Crown of Our Saviour, the Chaplet of the Five Wounds, the Crozier beads, and others. In all these devotions, due to individual zeal or fostered by particular religious bodies, the beads serve one and the same purpose of distinguishing and numbering the constituent prayers.

Rationalistic criticism generally ascribes an Oriental origin to prayer beads; but man's natural tendency to iteration, especially of prayers, and the spirit and training of the early Christians may still safely be assumed to have spontaneously suggested fingers, pebbles, knotted cords, and strings of beads or berries as a means of counting, when it was desired to say a specific number of prayers. The earliest historical indications of the use of beads at prayer by Christians show, in this as in other things, a natural growth and development. Beads strung together or ranged on chains are an obvious improvement over the well-known primitive method instanced, for example, in the life of the Egyptian Abbot Paul (d. A. D. 341), who used to take three hundred pebbles into his lap as counters and to drop one as he finished each of the corresponding number of prayers it was his wont to say daily. In the eighth century the penitentials, or rule books relating to penitents, prescribed various penances of twenty, fifty, or more, paters. The strings of beads, with the aid of which such penances were accurately said, gradually came to be known as paternosters. Archaeological records mention fragments of prayer beads found in the tomb of the holy abbess Gertrude of Nivelles (d. 659); also similar devices discovered in the tombs of St. Norbert and of St. Rosalia, both of

the twelfth century. The Bollandists quote William of Malmesbury (*De Gest. Pont. Angl.*, IV, 4) as stating that the Countess Godiva, who founded a religious house at Coventry in 1040, donated, when she was about to die, a circlet or string of costly precious stones on which she used to say her prayers, to be placed on a statue of the Blessed Virgin. In the course of the eleventh, twelfth, and thirteenth centuries, such paternosters came into extensive use especially in the religious orders. At certain times corresponding to the canonical hours, lay brothers and lay sisters were obliged to say a certain number of Our Fathers as an equivalent of the clerical obligation of the Divine Office. The military orders likewise, notably the Knights of St. John, adopted the paternoster beads as a part of the equipment of lay members. In the fifteenth century, wearing the beads at one's girdle was a distinctive sign of membership in a religious confraternity or third order. If a certain worldliness in the use of beads as ornaments in those days had to be checked, as it was by various capitulary ordinances prohibiting monks and friars, for instance, from having beads of coral, crystal, amber, etc., and nuns from wearing beads around the neck, evidence is not wanting that paternosters were also openly carried as a sign of penance, especially by bands of pilgrims processionalily visiting the shrines, churches, and other holy places of Rome. From their purpose, too, it is natural that prayer beads were prized as gifts of friendship. They were especially valued if they had been worn by a person of known sanctity or if they had touched the relics of any saint, in which cases they were often piously believed to be the instruments of miraculous power and healing virtue.

Beads were generally strung either on a straight thread, or cord, or so as to form a circlet, or loop. At the present time chained beads have almost entirely taken the place of the corded ones. To facilitate the counting or to mark off certain divisions of a devotion, sets of beads, usually decades, are separated from each other by a larger bead or sometimes by a medal or metal cross. The number of beads on a chaplet, or Rosary, depends on the number of prayers making up each particular form of devotion. A full Rosary consists of one hundred and fifty Hail Marys, fifteen Our Fathers, and three or four beads corresponding to introductory versicles and the "Glory be to the Father", etc. Such a "pair of beads" is generally worn by religious. Lay people commonly have beads representing a third part of the Rosary. The Brigittine beads number seven pateris in honour of the sorrows and joys of the Blessed Virgin, and sixty-three aves to commemorate the years of her life. Another Crown of Our Lady, in use among the Franciscans, has seventy-two aves, based on another tradition of the Blessed Virgin's age. The devotion of the Crown of Our Lord consists of thirty-three pateris in honour of the years of Our Lord on earth and five aves in honour of His sacred wounds. In the church Latin of the Middle Ages, many names were applied to prayer beads as: *devotiones, signacula, oracula, precaria, patrilogium, sarta, precula, numeralia, computum, calculi*, and others. An old English form, *bedes*, or *bedys*, meant primarily prayers. From the end of the fifteenth century and in the beginning of the sixteenth, the name paternoster beads fell into disuse and was replaced by the names *ave beads* and *Rosary, chaplet, or crown*.

The use of beads among pagans is undoubtedly of greater antiquity than their Christian use; but there is no evidence to show that the latter is derived from the former, any more than there is to establish a relation between Christian devotions and pagan forms of prayer. One sect in India used a chaplet consisting generally of one hundred and eight beads

made of the wood of the sacred Tulai shrub, to tell the names of Vishnu; another accomplished its invocations of Siva by means of a string of thirty-two or sixty-four berries of the Rudraksha tree. These or other species of seeds and berries were chosen as the material for these chaplets on account of some traditional association with the deities, as recorded in sacred legends. Some of the ascetics had their beads made of the teeth of dead bodies. Among some sects, especially the votaries of Vishnu, a string of beads is placed on the neck of children when, at the age of six or seven, they are about to be initiated and to be instructed in the use of the sacred formulae. Most Hindus continue to wear the beads both for ornament and for use at prayers. Among the Buddhists, whose religion is of Brahminic origin, various prayer-formulas are said or repeated with the aid of beads made of wood, berries, coral, amber, or precious metals and stones. A string of beads cut from the bones of some holy lama is especially valued. The number of beads is usually one hundred and eight; but strings of thirty or forty are in use among the poorer classes. Buddhism in Burma, Tibet, China, and Japan alike employs a number of more or less complicated forms of devotion, but the frequently recurring conclusion, a form of salutation, is mostly the same, and contains the mystic word *OM*, supposed to have reference to the Buddhist trinity. It is not uncommon to find keys and trinkets attached to a Buddhist's prayer beads, and generally each string is provided with two little cords of special counters, ten in number, in the form of beads or metal disks. At the end of one of these cords is found a miniature thunderbolt; the other terminates in a tiny bell. With the aid of this device the devotee can count a hundred repetitions of his beads or 108x10x10 formulas in all. Among the Japanese, especially elaborate systems of counting exist. One apparatus is described as capable of registering 36,736 prayers or repetitions.

The Mohammedans use a string of ninety-nine (or one hundred) beads called the *subha* or *tasbeih*, on which they recite the "beautiful" names or attributes of Allah. It is divided into three equal parts either by a bead of special shape or size, or by a tassel of gold or silk thread. The use of these Islamic beads appears to have been established as early as the ninth century independently of Buddhist influences. Some critics have thought the Mohammedan chaplet is kindred to a Jewish form of one hundred blessings. The beads in general use are said to be often made of the sacred clay of Mecca or Medina. Among travellers' records of prayer beads is the famous instance, by Marco Polo, of the King of Malabar, who wore a fine silk thread strung with one hundred and four large pearls and rubies, on which he was wont to pray to his idols. Alexander Von Humboldt is also quoted as finding prayer beads, called *Quipos*, among the native Peruvians.

JOHN R. VOLZ.

**Beard.**—Among the Jews, as among most Oriental peoples, the beard was especially cherished as a symbol of virility; to cut off another man's beard was an outrage (II Kings, x, 4); to shave or to pluck one's own beard was a sign of mourning (Jer., xli, 5; xlviii, 37); to allow the beard to be defiled constituted a presumption of madness (I Kings, xxi, 13). Certain ceremonial cuttings of the beard which probably imitated pagan superstition were strictly forbidden (Lev., xix, 27; xxi, 5). On the other hand, the leper was commanded to shave (Lev., xiv, 9). These usages which we learn from

the Bible are confirmed by the testimony of the monuments, both Egyptian and Assyrian, in which the Jews are invariably depicted as bearded. The Egyptians themselves commonly shaved, and we are told that Joseph, on being taken from his prison, was made to shave before appearing in the presence of the king (Gen., xli, 14).

Similarly in Greece and in Rome, shortly before the time of Christ, it was the fashion to shave, but from the accession of Hadrian onwards, as we may see from the existing statues of the Roman emperors, beards once more became the order of the day. With regard to the Christian clergy, no clear evidence is available for the early centuries. The Apostles, in our most ancient monuments, are for the most part represented as bearded, but not uniformly so. (See Weiss-Liebersdorff, *Christus- und Apostelbilder*, Freiburg, 1902.) St. Jerome seems to censure the practice of wearing long beards, but no very definite conclusion can be drawn from his allusions or from those of his contemporary, St. Augustine. The earliest positive legislation on the subject for clerics appears to be Canon xlv of the so-called Fourth Council of Carthage, which in reality represents the synodal decrees of some council in Southern Gaul in the time of St. Caesarius of Arles (c. 503). There it is enjoined that a cleric is to allow neither hair nor beard to grow freely (*Clericus nec comam nutriat nec barbam*), though this prohibition is very probably directed only against beards of excessive length. Still this canon, which was widely quoted and is included in the "Corpus juris", had great influence in creating a precedent. (See for example the "Penitential" of Halitgar and the so-called "Excerptions" attributed to Egbert of York.) So far as concerns England in particular it was certainly regarded throughout the Middle Ages as uncanonical to allow the beard to grow. A cleric was known as a shorn man (*bescoren man*, Laws of Wiltred, A. D. 696), and if it should seem that this might refer to the tonsure, we have a law of King Alfred: "If a man shave off another's beard let him make amends with xx shillings. If he bind him first and then shave him like a priest (*hine to preoste bescore*) let him make amends with lx shillings." And under King Edgar we find the canon: "Let no man in holy orders conceal his tonsure, nor let himself be misshaven nor keep his beard for any time, if he will have God's blessing and St. Peter's and ours." A similar practice obtained generally throughout the West and it was one of the great subjects of reproach on the part of the Greek Church, from the time of Photius onwards, that the Roman clergy systematically cut off their beards. But as Ratramnus of Corbie protested, it was foolish to make an outcry about a matter which concerned salvation so little as this *barba detonsio aut conservatio*.

The legislation requiring the beard to be shaved seems to have remained in force throughout the Middle Ages. Thus an ordinance of the Council of Toulouse, in 1119, threatened with excommunication the cleric who "like a layman allowed hair and beard to grow", and Pope Alexander III ordained that clerics who nourished their hair and beard were to be shorn by their archdeacon, by force if necessary. This last decree was incorporated in the text of the canon law (Decretals of Gregory IX, III, tit. i, cap. vii). Durandus, finding mystical reasons for everything, according to his wont, tells us that "length of hair is symbolical of the multitude of sins. Hence clerics are directed to shave their beards; for the cutting of the hair of the beard, which is said to be nourished by the superfluous humours of the stomach, denotes that we ought to cut away the vices and sins which are a superfluous growth in us. Hence we shave our beards that we may seem purified by innocence and humility and that we may

be like the angels who remain always in the bloom of youth." (Rationale, II, lib. XXXII.)

In spite of this, the phrase *barbam nutrire* which was classical in the matter, and was still used by the Fifth Council of Lateran (1512), always remained somewhat ambiguous. Consequently usage in the sixteenth century began to interpret the prohibition as not inconsistent with a short beard. There are still many ordinances of episcopal synods which deal with the subject, but the point upon which stress is laid is that the clergy "should not seem to be aping the fashions of military folk" or wearing flowing beards like goats (*hircorum et caprarum more*), or allowing the hair on their upper lip to impede their drinking of the chalice. This last has always been accounted a solid reason in favour of the practice of shaving. To judge by the portraits of the popes, it was with Clement VII (1523) that a distinct beard began to be worn, and many among his successors, for example Paul III, allowed the beard to grow to considerable length. St. Charles Borromeo attempted to check the spread of the new fashion, and in 1576 he addressed to his clergy a pastoral "De barbâ radendâ" exhorting them to observe the canons. Still, though the length of clerical beards decreased during the seventeenth century, it was not until its close that the example of the French court and the influence of Cardinal Orsini, Archbishop of Benevento, contributed to bring about a return to the earlier usage. For the last 200 years there has been no change, and an attempt made by some of the clergy of Bavaria in 1865 to introduce the wearing of beards was rebuked by the Holy See.

As already noted, in Eastern lands a smooth face carries with it the suggestion of effeminacy. For this reason the clergy, whether Uniat or Schismatic, of the Oriental churches have always worn their beards. The same consideration, together with a regard for practical difficulties, has influenced the Roman authorities in according a similar privilege to missionaries, not only in the East but in other barbarous countries where the conveniences of civilization cannot be found. In the case of religious orders like the Capuchins and the Camaldolese Hermits the wearing of a beard is prescribed in their constitutions as a mark of austerity and penance. Individual priests who for medical or other reasons desire to exempt themselves from the law require the permission of their bishop.

HERBERT THURSTON.

**Beardsley**, AUBREY, English artist, b. at Brighton, 1872; d. at Mentone, France, 16 March, 1898. It has been cleverly said that Beardsley was "a boy who never grew up", and the statement has a considerable amount of truth in it. He was a wonderfully precocious boy all his life, with the frank merriment, enthusiasm, and exuberance of a lad. He was unable to withstand the desire to do clever, mischievous things and to shock people of narrow opinions, and his ignoble and vicious works were more the result of his Puck-like mischief and eccentricity of habit than of any evil disposition. His earliest published work was a programme for an entertainment in 1888 at Brighton Grammar School, where he was a pupil, and his next in the "Bee Magazine", Blackburn, 1891.

Young Beardsley commenced work as a clerk in the Guardian Fire Office, but at the earnest persuasions of Aymer Vallance and Pennell he entered Fred Brown's studio at Westminster and devoted his

attention to illustration. While still a lad he attracted the attention of Sir E. Burne-Jones and Puvis de Chavannes, and it said much for his genius that it received encouragement from men so different in their aims and practice. When nineteen he accepted the tremendous task of illustrating the "Morte D'Arthur", and carried it through. The famous article upon him in the "Studio" appeared in April, 1893, and from that moment his work was in great demand. In April, 1894, he became art editor of the "Yellow Book", the first numbers of which caused a great sensation. He was responsible for the first four volumes and then, with Arthur Symons, started the "Savoy", to which he contributed a series of drawings. During his short life he carried the art of black and white further than any man since Albrecht Dürer. His special qualities were described by Hammerton as of "extreme economy of means the perfection of discipline, of self-control, and of thoughtful deliberation at the very moment of invention".

Beardsley had a marvellous knowledge of the quality of line, a real and powerful sense of beauty, coupled with a constant desire to be quaint, fanciful, or bizarre. He possessed a vigour, inventiveness, and daintiness almost unapproachable in the work of any other man. Hammerton speaks of the "serene surety of his drawing", of his "superb sense of style"; but Beardsley's love of mischief, which he deeply regretted, led him into serious faults and caused him to be often misunderstood. By those who knew him he was regarded as the most original, brilliant, witty, and lovable man they ever met. His illustrations of "Salome", "The Rape of the Lock", "Mademoiselle de Maupin" and "Volpone" are amongst his greatest works. From boyhood he had bad health and suffered from frequent attacks of hemorrhage. He was always a man of deep religious feeling and became a Catholic at the close of his life (31 March, 1895).

SYMONS, *Life of Beardsley* (London, 1898); *The Studio* (1893); *The Magazine of Art* (1893-94); ROSE, *Eulogy of Beardsley in Volpone* (London, 1898); GALLATIN, *Bibliog. of his drawings and of magazine articles* (New York, 1900).

GEORGE CHARLES WILLIAMSON.

**Beatific Vision**, the immediate knowledge of God which the angelic spirits and the souls of the just enjoy in Heaven. It is called "vision" to distinguish it from the mediate knowledge of God which the human mind may attain in the present life. And since in beholding God face to face the created intelligence finds perfect happiness, the vision is termed "beatific". For further explanation of the subject, see HEAVEN.

E. A. PACE.

**Beatification and Canonization.**—1. HISTORY.—According to some writers the origin of beatification and canonization in the Catholic Church is to be traced back to the ancient pagan apotheosis. (See APOTHEOSIS.) In his classic work on the subject (*De Servorum Dei Beatificatione et Beatorum Canonizatione*) Benedict XIV examines at the very outset and refutes this view. He shows so well the substantial differences between them that no right-thinking person need henceforth confound the two institutions or derive one from the other. It is a matter of history who were elevated to the honour of apotheosis, on what grounds, and by whose authority; no less clear is the meaning that was attached to it. Often the decree was due to the statement of a single person (possibly bribed or enticed by promises, and with a view to fix the fraud more securely in the minds of an already superstitious people) that while the body of the new god was being burned, an eagle, in the case of the emperors, or a peacock (Juno's sacred bird), in the case of their consorts, was seen to carry heavenward the spirit of the departed (Livy, *Hist. Rome*, I, xvi; Herodian, *Hist. Rome*, IV, ii, iii). Apotheosis was awarded to most

members of the imperial family, of which family it was the exclusive privilege. No regard was had to virtues or remarkable achievements. Recourse was frequently had to this form of deification to escape popular hatred by distracting attention from the cruelty of imperial rulers. It is said that Romulus was deified by the senators who slew him; Poppea owed her apotheosis to her imperial paramour, Nero, after he had kicked her to death; Geta had the honour from his brother Caracalla, who had got rid of him through jealousy. Canonization in the Catholic Church is quite another thing. The Catholic Church canonizes or beatifies only those whose lives have been marked by the exercise of heroic virtue, and only after this has been proved by common repute for sanctity and by conclusive arguments. The chief difference, however, lies in the meaning of the term *canonization*, the Church seeing in the saints nothing more than friends and servants of God whose holy lives have made them worthy of His special love. She does not pretend to make gods (cf. Eusebius Emisenus, *Serm. de S. Rom. M.*; Augustine, *De Civitate Dei*, XXII, x; Cyrill. Alexandr., *Contra Jul.*, lib. VI; Cyprian, *De Exhortat. martyr.*; Conc. Nic., II, act. 3).

The true origin of canonization and beatification must be sought in the Catholic doctrine of the worship (*cultus*), invocation, and intercession of the saints. As was taught by St. Augustine (*Quest. in Heptateuch.*, lib. II, n. 94; *contra Faustum*, lib. XX, xxi), Catholics, while giving to God alone adoration strictly so-called, honour the saints because of the Divine supernatural gifts which have earned them eternal life, and through which they reign with God in the heavenly fatherland as His chosen friends and faithful servants. In other words, Catholics honour God in His saints as the loving distributor of supernatural gifts. The worship of *latría* (*λατρεία*), or strict adoration, is given to God alone; the worship of *dulia* (*δουλεία*), or honour and humble reverence, is paid the saints; the worship of hyperdulia (*ὑπερδουλεία*), a higher form of *dulia*, belongs, on account of her greater excellence, to the Blessed Virgin Mary. The Church (Aug., *Contr. Faustum*, XX, xxi 21; cf. *De Civit. Dei*, XXII, x) erects her altars to God alone, though in honour and memory of the saints and martyrs. There is Scriptural warrant for such worship in the passages where we are bidden to venerate angels (Ex., xxiii, 20 sqq.; Jos., v, 13 sqq.; Dan., viii, 15 sqq.; x, 4 sqq.; Luke, ii, 9 sqq.; Acts, xii, 7 sqq.; Apoc., v, 11 sqq.; vii, 1 sqq.; Matt., xviii, 10; etc.), whom holy men are not unlike, as sharers of the friendship of God. And if St. Paul beseeches the brethren (Rom., xv, 30; II Cor., i, 11; Col., iv, 3; Ephes., vi, 18, 19) to help him by their prayers for him to God, we must with even greater reason maintain that we can be helped by the prayers of the saints, and ask their intercession with humility. If we may beseech those who still live on earth, why not those who live in heaven? It is objected that the invocation of saints is opposed to the unique mediatorship of Christ Jesus. There is indeed "one mediator of God and man, the man Christ Jesus". But He is our mediator in His quality of our common Redeemer; He is not our sole intercessor nor advocate, nor our sole mediator by way of supplication. In the eleventh session of the Council of Chalcedon (451) we find the Fathers exclaiming, "Flavianus lives after death! May the Martyr pray for us!" If we accept this doctrine of the worship of the saints, of which there are innumerable evidences in the writings of the Fathers and the liturgies of the Eastern and Western Churches, we shall not wonder at the loving care with which the Church committed to writing the sufferings of the early martyrs, sent these accounts from one gathering of the faithful to another, and promoted the veneration

of the martyrs. Let one instance suffice. In the circular epistle of the Church of Smyrna (Eus., Hist. Eccl., IV, xxiii) we find mention of the religious celebration of the day on which St. Polycarp suffered martyrdom (23 February, 155); and the words of the passage exactly express the main purpose which the Church has in the celebration of such anniversaries: "We have at last gathered his bones, which are dearer to us than priceless gems and purer than gold, and laid them to rest where it was befitting they should lie. And if it be possible for us to assemble again, may God grant us to celebrate the birthday of his martyrdom with gladness, thus to recall the memory of those who fought in the glorious combat, and to teach and strengthen, by his example, those who shall come after us." This anniversary celebration and veneration of the martyrs was a service of thanksgiving and congratulation, a token and an evidence of the joy of those who engaged in it (Muratori, de Paradiso, x), and its general diffusion explains why Tertullian, though asserting with the Chiliasts that the departed just would obtain eternal glory only after the general resurrection of the body, admitted an exception for the martyrs (de Resurrectione Carnis, xliii).

It must be obvious, however, that, while private moral certainty of their sanctity and possession of heavenly glory may suffice for private veneration of the saints, it cannot suffice for public and common acts of that kind. No member of a social body may, independently of its authority, perform an act proper to that body. It follows naturally that for the public veneration of the saints the ecclesiastical authority of the pastors and rulers of the Church was constantly required. The Church had at heart, indeed, the honour of the martyrs, but she did not therefore grant liturgical honours indiscriminately to all those who had died for the Faith. St. Optatus of Mileve, writing at the end of the fourth century, tells us (De Schism. Donat., I, xvi, in P. L., XI, 916-917) of a certain noble lady, Lucilla, who was reprehended by Cæcilianus, Archdeacon of Carthage, for having kissed before Holy Communion the bones of one who either was not a martyr or whose right to the title was unproved. The decision as to the martyr having died for his faith in Christ, and the consequent permission of worship, lay originally with the bishop of the place in which he had borne his testimony. The bishop inquired into the motive of his death and, finding he had died a martyr, sent his name with an account of his martyrdom to other churches, especially neighbouring ones, so that, in the event of approval by their respective bishops, the cultus of the martyr might extend to their churches also, and that the faithful, as we read of St. Ignatius in the "Acts" of his martyrdom (Ruinart, Acta Sincera Martyrum, 19), "might hold communion with the generous martyr of Christ" (*generoso Christi martyri communicarent*). Martyrs whose cause, so to speak, had been discussed, and the fame of whose martyrdom had been confirmed, were known as proved (*vindicati*) martyrs. As far as the word is concerned it may probably not antedate the fourth century, when it was introduced in the Church of Carthage; but the fact is certainly older. In the earlier ages, therefore, this worship of the saints was entirely local and passed from one church to another with the permission of their bishops. This is clear from the fact that in none of the ancient Christian cemeteries are there found paintings of martyrs other than those who had suffered in that neighbourhood. It explains, also, the almost universal veneration very quickly paid to some martyrs, e. g. St. Lawrence, St. Cyprian of Carthage, Pope St. Sixtus of Rome [Duchesne, Origines du culte chrétien (Paris, 1903), 284].

The worship of confessors—of those, that is, who

died peacefully after a life of heroic virtue—is not as ancient as that of the martyrs. The word itself takes on a different meaning after the early Christian periods. In the beginning it was given to those who confessed Christ when examined in the presence of enemies of the Faith (Baronius, in his notes to Ro. Mart., 2 January, D), or, as Benedict XIV explains (op. cit., II, c. ii, n. 6), to those who died peacefully after having confessed the Faith before tyrants or other enemies of the Christian religion, and undergone tortures or suffered other punishments of whatever nature. Later on, confessors were those who had lived a holy life and closed it by a holy death in Christian peace. It is in this sense that we now treat of the worship paid to confessors.

It was in the fourth century, as is commonly held, that confessors were first given public ecclesiastical honour, though occasionally praised in ardent terms by earlier Fathers, and though an abundant reward (*multiplex corona*) is declared by St. Cyprian to be theirs (De Zelo et Livore, col. 509; cf. Innoc. III, De Myst. Miss., III, x; Benedict XIV, op. cit., I, v, n° 3 sqq; Bellarmine, De Missa, II, xx, n° 5). Still Bellarmine thinks it uncertain when confessors began to be objects of cultus, and asserts that it was not before 800, when the feasts of Sts. Martin and Remigius are found in the catalogue of feasts drawn up by the Council of Mainz. This opinion of Innocent III and Benedict XIV is confirmed by the implicit approval of St. Gregory the Great (Dial., I, xiv, and III, xv) and by well attested facts: in the East, for example, Hilarion (Sozomen, III, xiv, and VIII, xix), Ephrem (Greg. Nyss., Orat. in laud. S. Ephrem), and other confessors were publicly honoured in the fourth century; and, in the West, St. Martin of Tours, as is gathered plainly from the oldest Breviaries and the Mozarabic Missal (Bona, Rer. Lit., II, xii, n° 3), and St. Hilary of Poitiers, as can be shown from the very ancient Mass-book known as "Missale Francorum" (Thomassin, "Traité des fêtes de l'église", in the second volume of his "Traité historique et dogmatique", Paris, 1683), were objects of a like cultus in the same century (Martigny, Dictionnaire des antiquités chrétiennes, s. v. Confesseurs). The reason of this veneration lies, doubtless, in the resemblance of the confessors' self-denying and heroically virtuous lives to the sufferings of the martyrs; such lives could truly be called prolonged martyrdoms. Naturally, therefore, such honour was first paid to ascetics (Duchesne, op. cit., 284) and only afterwards to those who resembled in their lives the very penitential and extraordinary existence of the ascetics. So true is this that the confessors themselves are frequently called martyrs. St. Gregory Nazianzen calls St. Basil a martyr (Orat. de laud., P. L., XXXVI, 602); St. Chrysostom applies the same title to Eustachius of Antioch (Opp. II, 606); St. Paulinus of Nola writes of St. Felix of Nola that he won heavenly honours, *sine sanguine martyr* ("a bloodless martyr"—Poem., XIV, Carm. III, v, 4); St. Gregory the Great styles Zeno of Verona a martyr (Dial. III, xix), and Metronius gives to St. Roterius (Acta SS., II, May 11, 306) the same title. Later on, the names of confessors were inserted in the diptychs, and due reverence was paid them. Their tombs were honoured (Martigny, loc. cit.) with the same title (*martyria*) as those of the martyrs. It remained true, however, at all times that it was unlawful to venerate confessors without permission of the ecclesiastical authority as it had been so to venerate martyrs (Bened. XIV, loc. cit., vi).

We have seen that for several centuries the bishops, in some places only the primates and patriarchs (August., Brevic. Collat. cum Donatistis, III, xiii n° 25 in P. L., XLIII, 628), could grant to martyrs and confessors public ecclesiastical honour; such honour, however, was always decreed only for the local

territory over which the grantors held jurisdiction. Still, it was only the Bishop of Rome's acceptance of the cultus that made it universal, since he alone could permit or command in the Universal Church [Gonzalez Tellez, *Comm. Perpet. in singulos textus libr. Decr. (III, xlv)*, in cap. i, *De reliquiis et vener. Sanct.*]. Abuses, however, crept into this form of discipline, due as well to indiscretions of popular fervour as to the carelessness of some bishops in inquiring into the lives of those whom they permitted to be honoured as saints. Towards the close of the eleventh century the popes found it necessary to restrict episcopal authority on this point, and decreed that the virtues and miracles of persons proposed for public veneration should be examined in councils, more particularly in general councils. Urban II, Calixtus II, and Eugenius III followed this line of action. It happened, even after these decrees, that "some, following the ways of the pagans and deceived by the fraud of the evil one, venerated as a saint a man who had been killed while intoxicated". Alexander III (1159-81) took occasion to prohibit his veneration in these words: "For the future you will not presume to pay him reverence, as, even though miracles were worked through him, it would not allow you to revere him as a saint unless with the authority of the Roman Church" (c. i, tit. cit., X, III, xlv). Theologians do not agree as to the full import of this decretal. Either a new law was made (Bellarmine, *De Eccles. Triumph.*, I, viii), in which case the pope then for the first time reserved the right of beatification, or a pre-existing law was confirmed. As the decretal did not put an end to all controversy, and some bishops did not obey it in as far as it regarded beatification (which right they had certainly possessed hitherto), Urban VII published, in 1634, a Bull which put an end to all discussion by reserving to the Holy See exclusively not only its immemorial right of canonization, but also that of beatification.

**NATURE OF BEATIFICATION AND CANONIZATION.**—Before dealing with the actual procedure in causes of beatification and canonization, it is proper to define these terms precisely and briefly in view of the preceding considerations. Canonization, generally speaking, is a decree regarding the public ecclesiastical veneration of an individual. Such veneration, however, may be permissive or preceptive, may be universal or local. If the decree contains a precept, and is universal in the sense that it binds the whole Church, it is a decree of canonization; if it only permits such worship, or if it binds under precept, but not with regard to the whole Church, it is a decree of beatification. In the ancient discipline of the Church, probably even as late as Alexander III, bishops could in their several dioceses allow public veneration to be paid to saints, and such episcopal decrees were not merely permissive, but, in my opinion, preceptive. Such decrees, however, could not prescribe universal honour; the effect of an episcopal act of this kind, was equivalent to our modern beatification. In such cases there was, properly speaking, no canonization, unless with the consent of the pope extending the cultus in question, implicitly or explicitly, and imposing it by way of precept upon the Church at large. In the more recent discipline beatification is a permission to venerate, granted by the Roman Pontiffs with restriction to certain places and to certain liturgical exercises. Thus it is unlawful to pay to the person known as Blessed (i. e. the *Beatus*, Beatified), public reverence outside of the place for which the permission is granted, or to recite an office in his honour, or to celebrate Mass with prayers referring to him, unless special indult be had; similarly, other methods of honour have been interdicted. Canonization is a precept of the Roman pontiff commanding public

veneration to be paid an individual by the Universal Church. To sum up, beatification, in the present discipline, differs from canonization in this: that the former implies (1) a locally restricted, not a universal, permission to venerate, which is (2) a mere permission, and no precept; while canonization implies a universal precept. In exceptional cases one or other element of this distinction may be lacking: thus, Alexander III not only allowed but ordered the public cultus of Bl. William of Malavalle in the Diocese of Grosseto, and his action was confirmed by Innocent III; Leo X acted similarly with regard to Bl. Hosanna for the city and district of Mantua; Clement IX with regard to Bl. Rose of Lima, when he selected her as principal patron of Lima and of Peru; and Clement X, by making her patron of all America, the Philippines, and the Indies. Clement X also chose Bl. Stanislaus Kostka as patron of Poland, Lithuania, and the allied provinces. Again, in respect to universality, Sixtus IV permitted the cultus of Bl. John Boni for the Universal Church. In all these instances there was only beatification. The cultus of Bl. Rose of Lima, it is true, was general and obligatory for America, but, lacking complete preceptive universality, was not strictly speaking canonization (Benedict XIV, op. cit., I, xxxix).

Canonization, therefore, creates a cultus which is universal and obligatory. But in imposing this obligation the pope may, and does, use one of two methods, each constituting a new species of canonization, i. e. formal canonization and equivalent canonization. Formal canonization occurs when the cultus is prescribed in an explicit and definitive decision, after due judicial process and the ceremonies usual in such cases. Equivalent canonization occurs when the pope, omitting the judicial process and the ceremonies, orders some servant of God to be venerated in the Universal Church; this happens when such a saint has been from a remote period the object of veneration, when his heroic virtues (or martyrdom) and miracles are related by reliable historians, and the fame of his miraculous intercession is uninterrupted. Many examples of such canonization are to be found in Benedict XIV: e. g. Saints Romuald, Norbert, Bruno, Peter Nolasco, Raymond Nonnatus, John of Matha, Felix of Valois, Queen Margaret of Scotland, King Stephen of Hungary, Wenceslaus Duke of Bohemia, and Gregory VII. Such instances afford a good proof of the caution with which the Roman Church proceeds in these equivalent canonizations. St. Romuald was not canonized until 439 years after his death, and the honour came to him sooner than to any of the others mentioned. We may add that this equivalent canonization consists usually in the ordering of an Office and Mass by the pope in honour of the saint, and that mere enrolment in the Roman Martyrology does not by any means imply this honour (Bened. XIV, l. c., xliii, n° 14).

**PAPAL INFALLIBILITY AND CANONIZATION.**—Is the pope infallible in issuing a decree of canonization? Most theologians answer in the affirmative. It is the opinion of St. Antoninus, Melchior Cano, Suarez, Bellarmine, Bafiez, Vasquez, and, among the canonists, of Gonzales Tellez, Fagnanus, Schmalzgrüber, Barbosa, Reiffenstül, Covarruvias (*Variar. resol.*, I, x, n° 13), Albitius (*De Inconstantia in fide*, xl, n° 205), Petra (*Comm. in Const. Apost.*, I, in notes to Const. I, Alex., III, n° 17 sqq.), Joannes a S. Thomá (on II-II, Q. I, disp. 9, a. 2), Silvester (*Summa*, s. v. Canonizatio), Del Bene (*De Officio Inquisit. II*, dub. 253), and many others. In Quodlib. IX, a. 16, St. Thomas says: "Since the honour we pay the saints is in a certain sense a profession of faith, i. e. a belief in the glory of the Saints [*quod sanctorum gloriam credimus*] we must piously believe that in this matter also the judgment of the Church is not liable to error".

These words of St. Thomas, as is evident from the authorities just cited, all favouring a positive infallibility, have been interpreted by his school in favour of papal infallibility in the matter of canonization, and this interpretation is supported by several other passages in the same *Quodlibet*. This infallibility, however, according to the holy doctor, is only a point of pious belief. Theologians generally agree as to the fact of papal infallibility in this matter of canonization, but disagree as to the quality of certitude due to a papal decree in such matter. In the opinion of some it is of faith (Arriaga, *De fide*, disp. 9, § 5, n° 27); others hold that to refuse assent to such a judgment of the Holy See would be both impious and rash, as Suarez (*De fide*, disp. 5, § 8, n° 8); many more (and this is the general view) hold such a pronouncement to be theologically certain, not being of Divine Faith as its purport has not been immediately revealed, nor of ecclesiastical Faith as having thus far not been defined by the Church.

What is the object of this infallible judgment of the pope? Does he define that the person canonized is in heaven or only that he has practised Christian virtues in an heroic degree? I have never seen this question discussed; my own opinion is that nothing else is defined than that the person canonized is in heaven. The formula used in the act of canonization has nothing more than this: "In honour of . . . we decree and define that Blessed N. is a Saint, and we inscribe his name in the catalogue of saints, and order that his memory be devoutly and piously celebrated yearly on the . . . day of . . . his feast." (Ad honorem . . . beatum N. Sanctum esse decernimus et definimus ac sanctorum catalogo adscribimus statuente ab ecclesiâ universali illius memoriam quolibet anno, die ejus natali . . . piâ devotione recolere debere.) There is no question of heroic virtue in this formula; on the other hand, sanctity does not necessarily imply the exercise of heroic virtue, since one who had not hitherto practised heroic virtue would, by the one transient heroic act in which he yielded up his life for Christ, have justly deserved to be considered a saint. This view seems all the more certain if we reflect that all the arguments of theologians for papal infallibility in the canonization of saints are based on the fact that on such occasions the popes believe and assert that the decision which they publish is infallible (Pesch, *Præl. Dogm.*, I, 552).

This general agreement of theologians as to papal infallibility in canonization must not be extended to beatification, notwithstanding the contrary teaching of the canonical commentary known as "*Glossa*" [in cap. un. de reliquiis et venerat. SS. (III, 22) in 6; Innocent., *Comm. in quinque Decretalium libros*, tit. de reliquiis, etc., n° 4; Osiensis in eumd. tit. n° 10; Felini, cap. lii, *De testibus*, etc., X (II, 20); Caietani, tract. De indulgentiis adversus Lutherum ad Julium Mediceum; Augustini de Ancona, seu Triumpho, De potestate eccl., Q. xiv, a. 4]. Canonists and theologians generally deny the infallible character of decrees of beatification, whether formal or equivalent, since it is always a permission, not a command; while it leads to canonization, it is not the last step. Moreover, in most cases, the cultus permitted by beatification is restricted to a determined province, city, or religious body (Benedict XIV, op. cit., I, xlii). Some, however, have thought otherwise (Arriaga, *Theol.*, V, disp. 7, § 6; Amicus, *Theol.*, IV, disp. 7, § 4, n° 98; Turrianus on II-II, V, disp. 17, n° 6; Del Bene, *De S. Inquisit.* II, dub. 254).

**PRESENT PROCEDURE IN CAUSES OF BEATIFICATION AND CANONIZATION.**—We must first distinguish causes of martyrs from those of confessors or virgins, since the method followed is not entirely identical in both cases.

(a) *The Beatification of Confessors.*—In order to

secure beatification (the most important and difficult step in the process of canonization) the regular procedure is as follows:

(1) Choosing of a vice-postulator by the postulator-general of the cause, to promote all the judicial inquiries necessary in places outside of Rome. Such inquiries are instituted by the local episcopal authority.

(2) The preparation of the inquiries (*processus*), all of which are carried on by the ordinary episcopal authority. They are of three kinds: *Informative* inquiries regard the reputation for sanctity and miracles of the servants of God, not only in general, but also in particular instances; there may be several such inquiries if the witnesses to be examined belong to different dioceses. *Processes de non cultu* are instituted to prove that the decrees of Urban VIII regarding the prohibition of public worship of servants of God before their beatification have been obeyed; they are generally conducted by the bishop of the place where the relics of the servant of God are preserved. Other inquiries are known as *Processuli diligentiarum* and have for their object the writings attributed to the person whose beatification is in question; they vary in number according to the dioceses where such writings are found, or are thought likely to be found, and may not be judicially executed before an "Instruction" is obtained from the promoter of the Faith by the postulator-general and by him sent to the bishop in question.

(3) The results of all these inquiries are sent to Rome, to the Congregation of Rites, in charge of a messenger (*portitor*) chosen by the judges, or by some other secure way, in case a rescript of the congregation dispenses from the obligation of sending a messenger.

(4) They are opened, translated if necessary into Italian, a public copy is made, and a cardinal is deputed by the pope as *relator* or *ponens* of the cause, for all which steps rescripts of the congregation, confirmed by the pope, must be obtained.

(5) The writings of the servant of God are next revised by theologians appointed by the cardinal relator himself, authorized to so act by a special rescript. Meantime, the advocate and the procurator of the cause, chosen by the postulator-general, have prepared all the documents that concern the introduction of the cause (*positio super introductione causæ*). These consist of (a) a summary of the informative processes, (b) an information, (c) answers to the observations or difficulties of the promoter of the Faith sent by him to the postulator.

(6) This collection of documents (*positio*) is printed and distributed to the cardinals of the Congregation of Rites forty days before the date assigned for their discussion.

(7) If nothing contrary to faith and morals is found in the writings of the servant of God, a decree is published authorizing further action (*quod in causâ procedi possit ad ulteriora*), i. e. the discussion of the matter (*dubium*) of appointment or non-appointment of a commission for the introduction of the cause.

(8) At the time fixed by the Congregation of Rites an ordinary meeting (*congregatio*) is held in which this appointment is debated by the cardinals of the aforesaid congregation and its officials, but without the vote or participation of the consultors, though this privilege is always granted them by rescript.

(9) If in this meeting the cardinals favour the appointment of the aforesaid commission, a decree to that effect is promulgated, and the pope signs it, but, according to custom, with his baptismal name, not with that of his pontificate. Thenceforward the servant of God is judicially given the title of Venerable.

(10) A petition is then presented asking memorial letters for bishops in *partibus* (outside of Rome),

authorizing them to set on foot by Apostolic authority, the inquiry (*processus*) with regard to the fame of sanctity and miracles in general. This permission is granted by rescript, and such remissorial letters are prepared and sent to the bishops by the postulator-general. In case the eyewitnesses be of advanced age, other remissorial letters are usually granted for the purpose of opening a process known as "inchoative," concerning the particular virtues and miracles of the person in question. This is done in order that the proofs may not be lost (*ne pereant probationes*), and such inchoative process precedes that upon the miracles and virtues in general.

(11) While the Apostolic process concerning the reputation of sanctity is under way outside of Rome, documents are being prepared by the procurator of the cause for the discussion *de non cultu*, or absence of cultus, and at the appointed time an ordinary meeting (*congregatio*) is held in which the matter is investigated; if it be found that the decree of Urban VIII has been complied with, another decree provides that further steps may be taken.

(12) When the inquiry concerning the reputation of sanctity (*super famâ*) has arrived in Rome, it is opened (as already described in speaking of the ordinary processes, and with the same formalities in regard to rescripts), then translated into Italian, summarized, and declared valid. The documents *super famâ* in general are prepared by the advocate, and at the proper time, in an ordinary meeting of the cardinals of the Congregation of Rites, the question is discussed: whether there is evidence of a general repute for sanctity and miracles of this servant of God. If the answer is favourable, a decree embodying this result is published.

(13) New remissorial letters are then sent to the bishops *in partibus* for Apostolic processes with regard to the reputation for sanctity and miracles in particular. These processes must be finished within eighteen months and when they are received in Rome are opened, as above described, and by virtue of an equal number of rescripts, by the cardinal prefect, translated into Italian, and their summary authenticated by the Chancellor of the Congregation of Rites.

(14) The advocate of the cause next prepares the documents (*positio*) which have reference to the discussion of the validity of all the preceding processes, informative and Apostolic.

(15) This discussion is held in the meeting called *congregatio rotalis* from the fact that it is only judges of the Rota who vote. If the difficulties of the promotor of the Faith are satisfactorily answered, the decree establishing the validity of the inquiries or processes is published.

(16) Meanwhile all necessary preparation is made for the discussion of the question (*dubium*): Is there evidence that the venerable servant of God practised virtues both theological and cardinal, and in an heroic degree? (*An constet de virtutibus Ven. servi Dei, tam theologicis quam cardinalibus, in heroico gradu?*) In the causes of confessors this step is of primary importance. The point is discussed in three meetings or congregations called respectively, ante-preparatory, preparatory, and general. The first of these meetings is held in the palace of the cardinal relator (reporter) of the cause, and in it only consultors of the Congregation of Sacred Rites are allowed to vote; the second takes place in the Vatican, and again only the aforesaid consultors vote, though on this occasion in presence of the Cardinals of the Congregation of Rites, and with their chairman, or prefect, presiding; the third is also held in the Vatican, and at it the pope presides, and both cardinals and consultors vote. For each of these congregations the advocate of the cause prepares and prints official reports (*positiones*), called respectively *report*, *new report*,

*final report*, concerning the virtues, etc.,—*positio*, *positio nova*, *positio novissima*, *super virtutibus*. In each case, before proceeding to the subsequent meeting, a majority of the consultors must decide that the difficulties of the promotor of the Faith have been satisfactorily solved.

(17) When the Congregation of Rites in the above described general meeting has decided favourably, the pope is asked to sign the solemn decree which asserts that there exists evidence of the heroic virtues of the servant of God. This decree is not published until after the pope, having commended the matter to God in prayer, gives a final consent and confirms by his supreme sentence the decision of the congregation.

(18) The miracles now remain to be proved, of which two of the first class are required in case the practice of virtues in the heroic degree has been proved, in both ordinary and Apostolic inquiries or processes, by eyewitnesses—three, if the eyewitnesses were found only in the ordinary processes; four, if the virtues were proven only by hearsay (*de auditu*) witnesses. If the miracles have been sufficiently proven in the Apostolic processes (*super virtutibus*) already declared valid, steps are taken at once to prepare the documents with regard to miracles (*super miraculis*). If in the Apostolic processes only general mention has been made of the miracles, new Apostolic processes must be opened, and conducted after the manner already described for proving the practice of virtues in an heroic degree.

(19) The discussion of the particular miracles proceeds in exactly the same way and in the same order as that of the virtues. If the decisions be favourable, the general meeting of the congregation is followed by a decree, confirmed by the pope, in which it is announced that there is proof of miracles. It must be noted here that in the *positio* for the ante-preparatory congregation there are required, and are printed, opinions of two physicians, one of whom has been chosen by the postulator, the other by the Congregation of Rites. Of the three reports (*positiones*) above mentioned, and which are now also required, the first is prepared in the usual way; the second consists of an exposition of the heroic virtues of the servant of God, an information, and a reply to later observations of the promotor of the Faith; the last consists only of an answer to his final observations.

(20) When the miracles have been proved, another meeting of the Congregation of Rites is held in which it is debated once, and only once, whether or not, given the approbation of the virtues and miracles, it be safe to proceed with the solemnities of beatification. If a majority of the consultors be favourable, a decree to this effect is issued by the pope, and at the time appointed by him the solemn beatification of the servant of God takes place in the Vatican Basilica, on which occasion a pontifical Brief is issued permitting the public cultus and veneration of the beatified person now known as Blessed (*Beatus*).

#### (b) The Beatification of Martyrs.

(1) The causes of martyrs are conducted in the same way as those of confessors as far as the informative processes and those *de non cultu* and *ad introductionem causæ* are concerned. But when once the commission of introduction has been appointed they advance much more rapidly.

(2) No remissorial letters are granted for Apostolic processes concerning the general reputation for martyrdom and miracles; the letters sent call for an immediate investigation into the fact of martyrdom, its motive, and the particular miracles alleged. There is no longer a discussion of the general reputation for martyrdom or miracles.

(3) The miracles are not discussed, as formerly, in separate meetings, but in the same meetings that deal with the fact and the motive of the martyrdom.

(4) The miracles (*signa*) required are not those of the first class; those of the second class suffice, nor is their number determined. On some occasions the decision as to miracles has been entirely dispensed with.

(5) The discussion as to martyrdom and miracles, formerly held in three meetings or congregations, viz. the ante-preparatory, preparatory, and general, is now usually conducted, through a dispensation to be had in each instance from the sovereign pontiff, in a single congregation known as *particularis*, or special. It consists of six or seven cardinals of the Congregation of Rites and four or five prelates especially deputed by the pope. There is but one *positio* prepared in the usual way; if there be an affirmative majority a decree is issued concerning the proof of martyrdom, the cause of martyrdom, and miracles. (*Constare de Martyrio, causâ Martyrii et signis.*)

(6) The final stage is a discussion of the security (*super tuto*) with which advance to beatification may be made, as in the case of confessors; the solemn beatification then follows. This procedure is followed in all cases of formal beatification in causes of both confessors and martyrs proposed in the ordinary way (*per viam non cultus*). Those proposed as coming under the definition of cases excepted (*casus excepti*) by Urban VIII are treated in another way. In such cases it must be proved that an immemorial public veneration (at least for 100 years before the promulgation, in 1640, of the decrees of Urban VIII) has been paid the servant of God, whether confessor or martyr. Such cause is proposed under the title of "confirmation of veneration" (*de confirmatione cultus*); it is dealt with in an ordinary meeting of the Congregation of Rites. When the difficulties of the promotor of the Faith have been satisfied, a pontifical decree confirming the cultus is promulgated. Beatification of this kind is called equivalent or virtual.

(c) *The Canonization of Confessors or Martyrs.*—The canonization of confessors or martyrs may be taken up as soon as two miracles are reported to have been worked at their intercession, after the pontifical permission of public veneration as described above. At this stage it is only required that the two miracles worked after the permission awarding a public cultus be discussed in three meetings of the congregation. The discussion proceeds in the ordinary way; if the miracles be confirmed another meeting (*super tuto*) is held. The pope then issues a Bull of Canonization in which he not only permits, but commands, the public cultus, or veneration, of the saint.

It is with the utmost possible brevity that I have described the elements of a process of beatification or canonization. It may be easily conjectured that considerable time must elapse before any cause of beatification or canonization can be conducted, from the first steps of the information, inquiry, or process, to the issuing of the decree *super tuto*. This is especially true at present, when a great number of causes, new and old, are proposed for discussion before the Sacred Congregation of Rites (see "Catalogus ac Status Causarum Beatificationis", Rome, 1901). According to the constitution of this Congregation, more than one important discussion (*dubia majora*) cannot be proposed at the same time. It must be remembered (a) that the same cardinals and consultors must vote in all discussions; (b) that there is but one promotor of the Faith and one sub-promotor, who alone have charge of all observations to be made with regard to the *dubia*; (c) that these cardinals and consultors have to treat questions of ritual as well as processes of canonization and beatification. To execute all this business there is but one weekly meeting (*congressus*), a kind of minor

congregation in which only the cardinal prefect and the major officials vote; in it less important and practical questions are settled regarding rites as well as causes, and answers are given, and rescripts which the pope afterwards verbally approves. The other meetings of the congregation (ordinary, rotal, and "upon virtues and miracles") may be as few as sixteen in the course of the year. Some other cause must therefore be found for the slow progress of causes of beatification or canonization than a lack of good will or activity on the part of the Congregation of Rites.

**EXPENSES.**—It will not be out of place to give succinctly the ordinary actual expenses of canonization and beatification. Of these expenses some are necessary others merely discretionary, i. e. some are specified (e. g. the expenses incurred in obtaining the different rescripts) others, though necessary, are not specified. Such are the expenses of the solemnity in the Vatican Basilica, and for paintings representing the newly beatified which are afterwards presented to the pope, the cardinals, officials, and consultors of the Congregation of Rites. The limits of this class of expenses depend on the postulator of the cause. If he chooses to spend a moderate sum the entire cause from the first process to the solemn beatification will not cost him less than \$20,000. The expenses of the process from beatification to canonization will easily exceed \$30,000. In illustration of this we subjoin the final account of the expenses of the public solemnities in the Vatican Basilica for the canonization, by Leo XIII, of Saints Anthony Maria Zaccaria and Peter Fourier, as published by the Most Rev. Diomede Panici, titular Archbishop of Laodicea, then Secretary of the Congregation of Rites.

CAMILLUS BECCARI.

**Beatitudes, MOUNT OF.**—This name is given to the place where Our Saviour delivered the "Sermon on the Mount", beginning with the Beatitudes. The scene of this discourse is traditionally located on Karn Hattin (or Kurun Hattin), the *Horns* of Hattin, a mountain which receives its name from the little village at its northern base and from the two cones or horns which crown its summit. Karn Hattin is in Galilee, within easy distance of Nazareth, Cana, and Mt. Tabor to the south-west, of Tiberias and Lake Genesareth (the Sea of Galilee) to the east, and of Capharnaum to the north-east, in the centre, therefore, of much of the ministry of Jesus. It lies 1,816 feet above the lake and 1,135 feet above the sea level (according to Bædeker, Palestine and Syria, Leipzig, 1898, pp. 285, 288, which has the high au-

thority of Socin and Bensinger). This mountain, rising above the hills that skirt the lake, is the only height to the west that can be seen from its shores. It consists of a low ridge about one-quarter of a mile long, extending east and west, and rising at each extremity into a cone or horn. The eastern horn, which is the taller, is only sixty feet above the ridge. Between the horns lies an uneven platform which could easily accommodate the crowd that followed Jesus; but it is believed that the spot on which the discourse was given is lower down, on a level place on the southern side of the mountain, corresponding with St. Luke's description (*τοῦ πεδίου*), vi, 17, which may mean a level place, as well as a "plain". From the eastern slope of the hill there is a beautiful view, to the east, of the lake with the Jôlan (Gaulanitis) mountains beyond, to the south the plateau of Ard el-Hamma and Mt. Tabor, and to the north the snowy height of Mt. Hermon. The tradition that there was a village on the mountain top, if true (the only proof being the remains of a wall which served as defence to a camp), might lend point to the reference in the sermon to the city which was seated on a hill and could not be hid (Matt., v, 14); and the beautiful flowers that abound there might include the unidentified "lilies of the field" (vi, 28). Bishop Le Camus (*Notre Voyage aux Pays Bibliques*, II, pp. 220-222) thought he never saw elsewhere and never imagined so lovely a variety and harmony in the beauty of flowers; other travellers are scarcely so enthusiastic, but all agree the spot has a charm of its own. The Horns of Hattin are mentioned by a feeble and late tradition as the site of the second multiplication of loaves. The Jews of the locality point out here also the tomb of Jethro, father-in-law of Moses. During the Crusades the plain below was the scene of the battle in which Saladin dealt the death-blow to French power in Palestine (3-4 July, 1187).

The tradition regarding the scene of the Sermon on the Mount, though usually received with a certain degree of favour by Scriptural scholars, apparently does not go back beyond the crusaders. St. Jerome, the best informed man of his day on points of this nature, knew of no such tradition and merely conjectured that the scene was on Mt. Tabor or some other high mountain of Galilee (Comm. in Ev. S. Matt. in Cap. v). The Gospels, in fact, afford but little help in determining the site. Matt., v, 1, locates the sermon on *the mountain* (*τὸ ὄρος*), and Luke, vi, 12, uses the same expression for the spot from which Our Lord descended before He preached on the "level place", vi, 17. The expression most naturally "suggests that the sermon had long been traditionally connected with a mountain and seems to mean the mountain on which the sermon was delivered" (Allen, *St. Matthew*, New York, 1907). Some scholars even see in the definite article the indication of a particular mountain which the Evangelists suppose known to the reader; but popular curiosity concerning the scene of particular Gospel events is a growth of later date. Some interpret it as "the mountain that was at hand". Others refuse to see in the mountain a reference to any particular mountain at all, but interpret the word as meaning "the tableland, the mountainous district". *Τὸ ὄρος* is used in this sense in the Septuagint translation of Gen., xix, 17, 19, 30, xxxi, 23, 25, xxxvi, 8, 9, and appears to have the same meaning in Matt., xiv, 23, xv, 29, Mark, vi, 46, Luke, ix, 28, John, vi, 3. Possibly the word is to be thus interpreted here also, but St. Luke more probably refers (vi, 12) to a particular mountain on which Our Lord spent the night in prayer and from which He descended to the level place or tableland to preach the discourse.

According to another opinion recently put forth by certain critics, the mountain is purely ideal in Matthew, while in Luke a plain is the place on which the Beatitudes were spoken. The author of the First Gospel, in the opinion of Loisy (*Le Discours sur la Montagne*) "desires to have for the publication of the New Law, a setting analogous to that which is described in Exodus (xx, 18-22) for the Old Law. The mountain of Matthew is the Sinai of the Gospel where Jesus speaks as prince of the kingdom of God and shows Himself greater than Moses. . . . To seek an exact geographical determination here is no more expedient than in the case of the mountain of the temptation", which was purely ideal, being represented as high enough to afford a view of all the kingdoms of the world. There is most probably an element of truth in this opinion; nearly all the Fathers seek a symbolic meaning in the mountain (v. St. Thomas Aquinas, *Catena Aurea*, loc. cit.) and are probably right in attributing it to Matthew. But his account and that of St. Luke have too matter-of-fact an air to allow us to believe that either intended the mountain to be regarded as purely ideal. Matthew believed, then, that the New Law, just as the Old, was really given on a mountain. We are assuming here, of course, that the Sermon on the Mount was a genuine discourse by Our Lord, not a mere rearrangement of His sayings made by Matthew.

If we seek to determine the particular mountain to which the Evangelists allude, we cannot advance with anything like certainty beyond the ancient opinion of St. Jerome (Comm. in Ev. Matt.) that the events before and after the discourse show that it was given on some mountain of Galilee. It is not unlikely that the locality was not far distant from Capharnaum, into which Our Lord entered after finishing His discourse (Matt., viii, 5; Luke, vii, 1); but the Evangelists do not say how soon after the discourse He entered Capharnaum. We know from their literary methods that it may have been a day, a week, or even more, for they had little interest in the chronological sequence of events, and the attempt to press details of this sort only results in interminable contradictions. Besides, the site of Capharnaum itself is uncertain. Neither Evangelist gives us a hint as to what vicinity Jesus set out from to ascend the mountain, except that it was somewhere in Galilee; how then can the mountain be determined? It is true many (e. g. Stanley) assume it must have been from the lakeside or its neighbourhood; but no word in the Gospels warrants the assumption, though it is the most likely one.

In favour of Karn Hattin, it is said, is the fact that it is accessible from all sides, which is thought to be demanded by the narratives of Matthew (iv, 25, v, 1) and Luke (vi, 17). But this argument, although it is accepted by Dean Stanley (*Sinai and Palestine*, London, 1883, p. 369) who is usually quite rigorous in requiring proof, has little force, since the multitude did not flock to the mountain from all sides, but, according to Matthew, at least, first gathered together and followed Jesus up the mountainside. (Cf. iv, 25, v, 1, with vii, 28, where the multitude, not merely the disciples, are found on the spot where the sermon was delivered.) There is little but negative evidence in favour of Karn Hattin; Edersheim (*Life and Times of Jesus*, New York, 1896) says there are several reasons which make it unsuitable, but gives none. It is near the scenes of Our Lord's greatest activity and fulfils all the requirements of the narrative. We must add, however, that so great an authority as Robinson (*Biblical Researches in Palestine*, III, 487) says there are a number of hills to the west of the lake equally as suitable as Karn Hattin; but this hardly gives its proper force to the word, *the mountain*.

which seems to mark the place as distinct from the hills of almost uniform height in the vicinity.

JOHN F. FENLON.

**Beatitudes**, THE EIGHT, the solemn blessings (*beatitudines, benedictiones*) which mark the opening of the Sermon on the Mount, the very first of Our Lord's sermons in the Gospel of St. Matthew (v, 3-10). Four of them occur again in a slightly different form in the Gospel of St. Luke (vi, 22), likewise at the beginning of a sermon, and running parallel to Matthew, 5-7, if not another version of the same. And here they are illustrated by the opposition of the four curses (24-26). The fuller account and the more prominent place given the Beatitudes in St. Matthew are quite in accordance with the scope and the tendency of the First Gospel, in which the spiritual character of the Messianic kingdom—the paramount idea of the Beatitudes—is consistently put forward, in sharp contrast with Jewish prejudices. The very peculiar form in which Our Lord proposed His blessings makes them, perhaps, the only example of His sayings that may be styled poetical—the parallelism of thought and expression, which is the most striking feature of Biblical poetry, being unmistakably clear.

The text of St. Matthew runs as follows:—

3. Blessed are the poor in spirit: for theirs is the kingdom of heaven.
4. Blessed are the meek: for they shall possess the land.
5. Blessed are they that mourn: for they shall be comforted.
6. Blessed are they that hunger and thirst after justice: for they shall have their fill.
7. Blessed are the merciful: for they shall obtain mercy.
8. Blessed are the clean of heart: for they shall see God.
9. Blessed are the peacemakers: for they shall be called the children of God.
10. Blessed are they that suffer persecution for justice' sake, for theirs is the kingdom of heaven.

**TEXTUAL CRITICISM.**—As regards textual criticism, the passage offers no serious difficulty. Only in verse 9, the Vulgate and many other ancient authorities omit the pronoun *atrol, ipsi*; probably a merely accidental omission. There is room, too, for serious critical doubt, whether verse 5 should not be placed before verse 4. Only the etymological connexion, which in the original is supposed to have existed between the "poor" and the "meek", makes us prefer the order of the Vulgate.

**First Beatitude.**—The word "poor" seems to represent an Aramaic *ānyā* (Hebr. *ānī*), bent down, afflicted, miserable, poor; while "meek" is rather a synonym from the same root, *ānuwān* (Hebr. *ānaw*), bending oneself down, humble, meek, gentle. Some scholars would attach to the former word also the sense of humility; others think of "beggars before God" humbly acknowledging their need of Divine help. But the opposition of "rich" (Luke, vi, 24) points especially to the common and obvious meaning, which, however, ought not to be confined to economical need and distress, but may comprehend the whole of the painful condition of the poor: their low estate, their social dependence, their defenceless exposure to injustice from the rich and the mighty. Besides the Lord's blessing, the promise of the heavenly kingdom is not bestowed on the actual

external condition of such poverty. The blessed ones are the poor "in spirit", who by their free will are ready to bear for God's sake this painful and humble condition, even though at present they be actually rich and happy; while on the other hand, the really poor man may fall short of this poverty "in spirit".

**Second Beatitude.**—Inasmuch as poverty is a state of humble subjection, the "poor in spirit" come near to the "meek", the subject of the second blessing. The *ānuwīm*, they who humbly and meekly bend themselves down before God and man, shall "inherit the land" and possess their inheritance in peace. This is a phrase taken from Ps., xxxvi (Hebr., xxxvii), 11, where it refers to the Promised Land of Israel, but here, in the words of Christ, it is of course but a symbol of the Kingdom of Heaven, the spiritual realm of the Messiah. Not a few interpreters, however, understand "the earth". But they overlook the original meaning of Ps., xxxvi, 11, and unless, by a far-fetched expedient, they take the earth also to be a symbol of the Messianic kingdom, it will be hard to explain the possession of the earth in a satisfactory way.

**Third Beatitude.**—The "mourning" in the Third Beatitude is in Luke (vi, 25) opposed to laughter and similar frivolous worldly joy. Motives of mourning are not to be drawn from the miseries of a life of poverty, abjection, and subjection, which are the very blessings of verse 3, but rather from those miseries from which the pious man is suffering in himself and in others, and most of all the tremendous might of evil throughout the world. To such mourners the Lord Jesus carries the comfort of the heavenly kingdom, "the consolation of Israel" (Luke, ii, 25) foretold by the prophets, and especially by the Book of Consolation of Isaias (xl-lxvi). Even the later Jews knew the Messiah by the name of *Menāhhēm*, Consoler. These three blessings, poverty, abjection, and subjection, are a commendation of what nowadays are called the passive virtues: abstinence and endurance, and the Eighth Beatitude (verse 10) leads us back again to the same teaching.

**Fourth Beatitude.**—The others, however, demand a more active behaviour. First of all, "hunger and thirst" after justice; a strong and continuous desire of progress in religious and moral perfection, the reward of which will be the very fulfilment of the desire, the continuous growth in holiness.

**Fifth Beatitude.**—From this interior desire a further step should be taken to acting; to the works of "mercy", corporal and spiritual. Through these the merciful will obtain the Divine mercy of the Messianic kingdom, in this life and in the final judgment. The wonderful fertility of the Church in works and institutions of corporal and spiritual mercy of every kind shows the prophetic sense, not to say the creative power, of this simple word of the Divine Teacher.

**Sixth Beatitude.**—According to Biblical terminology "cleanness of heart" (verse 8) cannot exclusively be found in interior chastity, nor even, as many scholars propose, in a general purity of conscience, as opposed to the Levitical, or legal, purity required by the Scribes and Pharisees. At least the proper place of such a blessing does not seem to be between mercy (verse 7) and peacemaking (verse 9), nor after the apparently more far-reaching virtue of hunger and thirst after justice. But frequently in the Old and New Testaments [Gen., xx, 5; Job, xxxiii, 3; Pss., xxiii (Hebr., xxiv), 4; lxxii (Hebr., lxxiii), 1; I Tim., i, 5; II Tim., ii, 22] the "pure heart" is the simple and sincere good intention, the "single eye" of Matt., vi, 22, and thus opposed to the unwavering by-ends of the Pharisees (Matt., vi, 1-6, 16-18; vii, 15; xxiii, 5-7, 14). This "single eye" or "pure heart" is most of all required in the works of mercy (verse 7)

and zeal (verse 9) in behalf of one's neighbour. And it stands to reason that the blessing, promised to this continuous looking for God's glory, should consist of the supernatural "seeing" of God Himself, the last aim and end of the heavenly kingdom in its completion.

*Seventh Beatitude.*—The "peacemakers" (verse 9) are those who not only live in peace with others but moreover do their best to preserve peace and friendship among mankind and between God and man, and to restore it when it has been disturbed. It is on account of this godly work, "an imitating of God's love of man" as St. Gregory of Nyssa styles it, that they shall be called the sons of God, "children of your Father who is in heaven" (Matt., v. 45).

*Eighth Beatitude.*—When after all this the pious disciples of Christ are repaid with ingratitude and even "persecution" (verse 10) it will be but a new blessing, "for theirs is the kingdom of heaven".

So by an inclusion, not uncommon in Biblical poetry, the last blessing goes back to the first and the second. The pious, whose sentiments and desires, whose works and sufferings are held up before us, shall be blessed and happy by their share in the Messianic kingdom, here and hereafter. And viewed in this light the different kinds of blessing enumerated in the intermediate verses seem to express, in partial images of the one endless beatitude, the same possession of the Messianic salvation. The eight conditions required constitute the fundamental law of the kingdom, the very pith and marrow of Christian perfection. For its depth and breadth of thought, and its practical bearing on Christian life, the passage may be put on a level with the Decalogue in the Old, and the Lord's Prayer in the New Testament, and it surpasses both in its poetical beauty of structure.

Besides the commentaries on St. Matthew and St. Luke, and the monographs on the Sermon on the Mount, the Beatitudes are treated in eight homilies of St. GREGORY OF NYSSA, *P. G.*, XLIV, 1193-1302, and in one of St. CHROMATIUS, *P. L.*, XX, 323-328. Different patristical sermons on single beatitudes are noticed in *P. L.*, CXXI (Index IV), 23 sqq.

JOHN P. VAN KASTEREN.

**Beaton** (or **BETHUNE**), **DAVID**, Cardinal, Archbishop of St. Andrews, b. 1494; d. 29 May, 1546. He was of an honourable Scottish family on both sides, being a younger son of John Beaton of Balfour, Fife, by Isabel, daughter of David Monypenny of Pitmilny, also in Fife. Educated first at St. Andrews, he went in his seventeenth year to Glasgow, where his uncle, James Beaton, was then archbishop, and where his name appears in the list of students of the university, in 1511. He completed his education in Paris, and in 1519 was appointed by James V Scottish resident at the French court. His first ecclesiastical preferment was to the rectories of Campsie and Cambuslang, to which he was presented by his uncle, the Archbishop of Glasgow, and when the latter was translated to the primatial see in 1522, he resigned to his nephew the commendatory Abbey of Arbroath, obtaining for him from Pope Adrian IV a dispensation from wearing the monastic habit. Beaton returned from France in 1525, took his seat in Parliament as Abbot of Arbroath, and was soon created by the young king Lord Privy Seal, in succession to Bishop Crichton of Dunkeld. James dispatched him to Paris in 1533, with Sir Thomas Erskine, in order to renew the Scottish alliance with Francis I, and to negotiate for the marriage of James with Magdalen, only daughter of the French king. Beaton was present at the marriage of the royal pair at Notre-Dame on 1 January, 1537, and returned with them to Scotland in May; but the young queen died of consumption two months later. We next find Beaton on a mission in England, negotiating about certain difficulties which had arisen on the Border. The Queen-Mother (Margaret) wrote specially commending the Abbot of Arbroath

to her brother, Henry VIII, mentioning that he was "gret wyth the Kyng" (of Scots). A few months later he was again in Paris, arranging for the marriage of his widowed king with Mary of Guise. After the ceremony (by proxy) in the French capital, Beaton conducted the bride to Scotland, assisted

at the solemnization of the marriage in St. Andrews Cathedral, and was afterwards sponsor (together with the Archbishop of Glasgow) to the first child that was born of the union. His elevation to the episcopate took place during this second embassy to the French court. King Francis nominated him to the Bishopric of Mirepoix (a suffragan see of Toulouse, with an

annual revenue of 10,000 livres), and he received the papal confirmation on 5 December, 1537. Two months later he assisted at the coronation of James and Mary at Holyrood, himself crowning the queen. In 1538 the Kings of France and Scotland showed their appreciation of Beaton's services by petitioning Pope Paul III to advance him to the cardinalate. James in making this request (15 August, 1538) protested his own firm attachment to the Holy See, and urged the necessity of some ecclesiastic being invested with a dignity which would enable him to represent the majesty of the Church in Scotland, and better withstand the "insane errors" of the time. The king repeated his request a month later, and on 20 December, 1538, Beaton was created Cardinal-Priest of the Title of St. Stephen on the Coelian Hill. This had been the title of Cardinal John de Salerno, who had presided at the meeting of Scottish bishops at Perth in the reign of William the Lion; but the only Scottish cardinal before Beaton had been William Wardlaw, Bishop of Glasgow, who died in 1387. Early in 1539 Archbishop James Beaton of St. Andrews died, and his nephew the cardinal (who had six months before been appointed his coadjutor with right of succession) was promoted to the primacy of Scotland. A year later, at his request, William Gibson, Titular Bishop of Libaria, was nominated his coadjutor, with an annual income of £200, paid out of the revenues of the archiepiscopal see.

Beaton, whose commanding ability had now raised him to the highest position attainable in Scotland by a subject, was to have that ability fully tested in the growing unrest of the times, and in the relations, becoming rapidly more and more strained, between James V and his uncle, Henry VIII of England. The latter, in his designs to detach Scotland from its allegiance to the Holy See and bring it into subjection to himself, was supported by the Douglasses and other powerful nobles, and by the sympathy of his sister, the Queen-Mother Margaret. James, on the other hand, was backed by the zeal, wealth, influence, and talent of the whole clergy of the realm, and by many loyal Scottish lords; he had the sympathy of France and of the Emperor of Germany, the strong support of the Holy See, and the warm adherence of the great mass of his subjects. Henry in vain tried to shake his nephew's confidence in Beaton by sending two successive embassies to

DAVID CARDINAL BEATON  
(Original in Holyrood Palace)

Scotland, in order to urge James to follow his example in usurping the supremacy of the Church in his dominions. The King of Scots refused to be drawn into Henry's net, maintained his unshaken trust in Beaton's statesmanship and patriotism, and declined to leave his kingdom for a personal interview with his uncle. His intrigues being baffled, Henry had recourse to force; and hostilities broke out between the two kingdoms in 1542. The Scotch, successful in the first engagement, were hopelessly defeated by the English forces on Solway Moss, and James died broken-hearted at Falkland soon afterwards, leaving a daughter (Mary) a week old, to inherit the crown. Beaton produced a document in which he, with three nobles, was appointed regent by the late monarch's will; but the nobles assembled in Edinburgh refused to act on this, declared the Earl of Arran (heir-presumptive to the throne) regent during the queen's minority, and imprisoned the cardinal on a false charge of conspiring with the Duke of Guise against Arran's authority. Henry now commenced negotiations with the Scottish regent and Parliament with the object of arranging a marriage between the infant queen and his own heir (afterwards Edward VI), of getting the Scottish fortresses and the government of the country committed into his hands, and the person of Mary entrusted to his custody. Arran and the Parliament agreed to the project of marriage, but were resolute against the rest of Henry's schemes. Meanwhile the unjust imprisonment of the cardinal-primate had been followed by the proclamation of an interdict throughout the kingdom; and so deep was the feeling aroused among the still Catholic people by the closing of the churches and the suspension of the sacraments that it was thought prudent at once to release Beaton. The undaunted primate instantly summoned the bishops and clergy to St. Andrews; and the assembly, fully alive to the imminent danger (menacing both Church and State) of Henry's insolent demands, spontaneously voted a large sum, taxed on their own benefices, in defence of the national rights. Beaton by his patriotic ardour awakened similar sentiments in the people at large; the person of the baby queen was safeguarded, and a number of the nobles, including the regent himself (who about this time abjured the new doctrines and submitted to the Catholic Church), abandoned their unnatural alliance with the enemies of Scotland, and ranged themselves on the cardinal's side.

In October, 1543, Marco Grimani, Patriarch of Aquileia, came from Rome as nuncio to the Scottish court; and it was during his sojourn in Scotland that the high dignity of legate *a latere* was (in January, 1544) bestowed on Beaton by the pope. About the same time the cardinal was invested with the office of chancellor of the kingdom; the Parliament annulled the treaty of marriage between the queen and Prince Edward, on the ground of the duplicity and bad faith of Henry VIII.; vigorous measures were taken against the "English party" among the Scottish nobles; and the bishops were desired to take equally stern measures for the suppression of heretical doctrines. Furious at the frustration of his schemes, Henry now connived at, and indeed openly encouraged, a plot for the removal from his path of the able and patriotic man who had been the chief instrument in foiling his ambitious plans. George Wishart (whose identity, long disputed, with the Wishart afterwards put to death as a heretic has been conclusively proved by the published State Papers of the time) was employed to negotiate between Crichton of Brunston and Beaton's English enemies, on the subject of the assassination of the cardinal. Nearly three years were devoted to the intrigues and correspondence connected with this dark scheme; and, meanwhile, the primate never relaxed his zeal

and diligence in the performance of his high functions. He summoned another convention of the clergy in Edinburgh in January, 1546, when further large sums were voted in support of the defence of the realm against the invading armies of England; and two months later he convoked a provincial council at St. Andrews. The great general council was already sitting at Trent, but no Scottish prelate was able to attend it, the cardinal himself seeking dispensation from Pope Paul III., on the ground of the overwhelming nature of his duties in Scotland. The council at St. Andrews was interrupted by the apprehension and trial, for preaching heretical doctrines, of George Wishart. The trial took place in St. Andrews Cathedral, in presence of the two archbishops and other prelates; the articles of accusation were read and duly proved; and Wishart, remaining obdurate in his errors, was condemned to death, and suffered (being first strangled and afterwards burned) at St. Andrews on 28 March, 1546.

The profound impression caused throughout Scotland by Wishart's execution induced Beaton's enemies to hurry on their murderous designs; and two months later a pretext was found for the consummation of the long-cherished plot in a dispute which had arisen, on a question of property, between the cardinal and Norman Leslie, Master of Rothes. The latter, with his uncle John Leslie, Kirkaldy of Grange, and James Melville, undertook the work of butchery; and at daybreak on 29 May, 1546, they obtained admission into the castle of St. Andrews, and dispatched the cardinal with repeated blows of their swords. Thus perished, in the forty-fifth year of his age, one to whom (as his most recent, and far from partial, biographer, Professor Herkless, declares) "historic truth must give a place among Scotland's greatest statesmen and patriots". No student of his life and of the history of his times can deny the justice of this tribute; and it may fairly be added that he proved himself not less vigilant in the discharge of the spiritual functions of his office, in watching over the interests of the Scottish Church, and protecting her by every means at his command from the inroads of heresy and schism. As to the charge of persecution brought against him, account must be taken of the age in which he lived, and the prevailing sentiments of the time. Seven persons in all are said to have suffered death under him; and Hosack, comparing this number with the hundreds of lives sacrificed under some of his contemporaries, concludes that Beaton deserves rather to be commended for his moderation than denounced for his barbarity. With regard to his moral character, it has been violently attacked by his enemies, and no less warmly defended by his friends. The charges of immorality against him, never raised until after his death, are in many cases absurd and contradictory; and Leslie, Winzet, and others who strenuously denied them, are fully as worthy of credit as those who maintained them. The evidence from contemporary history is indeed insufficient to decide the truth or falsity of these charges; and Lyon, the historian of St. Andrews, prudently concludes that the accusations and the denials may be considered as neutralizing one another.

There are two well-known portraits of Beaton, one (formerly in the Scots College at Rome, now at Blairs College, Aberdeenshire), depicting him in his doctor's cap, with slightly silvered brown hair, clear-cut features, and a noble and commanding air. In the other portrait, which hangs in Holyrood Palace, he is represented in a black dress, with white bands, and wearing the red skull-cap of a cardinal.

D. O. HUNTER-BLAIR.

**Beaton** (or BETHUNE), JAMES, a Scottish Archbishop; b. c. 1473; d. at St. Andrews, 1539, was the sixth and youngest son of John Beaton of Balfour, in Fife. He graduated as Master of Arts at St. Andrews University in 1493, four years later was Precentor of Dornoch Cathedral (Diocese of Caithness), and in 1503 Provost of the Collegiate Church of Bothwell. Next year he became Prior of Whithorn and Abbot of Dunfermline, and in 1505 was made Treasurer of the Kingdom. In 1508 he was elected to the See of Galloway, in succession to George Vaus, but before his consecration he was chosen to succeed Robert Blackader (who had died, whilst on a pilgrimage to the Holy Land, in July, 1508) as Archbishop of Glasgow, and was consecrated at Stirling, 15 April, 1509. With the archbishopric he held the commendatory Abbeys of Arbroath and Kilwinning, and in 1515 he became Chancellor of Scotland. King James V, whose father had fallen at Flodden in 1513, was at this time a child of three, and Beaton, as one of the Council of Regency, without whose consent the queen-mother could not act, was one of the most important personages in the realm during the minority of the young king. The country was at this time distracted by the feuds between two of the regents, Angus and Arran, and Beaton, who was connected with the latter (for Arran had married as his third wife a daughter of Sir James Beaton of Creich), naturally espoused his kinsman's side. A well-known story tells how Bishop Gavin Douglas of Dunkeld came to Glasgow to urge the archbishop to allay the strife within the council, and how Beaton, striking his breast as he declared upon his conscience that he was powerless in the matter, caused the coat of mail which he wore under his ecclesiastical habit to rattle. "Alas, my Lord", said his brother bishop at this strange sound, "I fear your conscience clatters!" In 1522 Beaton was translated to St. Andrews, vacant by the death of Archbishop Foreman. As primate he threw all his powerful influence into the scale against the intrigues of Henry VIII to obtain predominance in Scotland; and it was greatly owing to his statesmanship that the old league with France was maintained, and that the young king chose for his bride Magdalen of France instead of Mary of England. Albany's jealousy had deprived Beaton of the chancellorship some years previously, and he was never reappointed, though he enjoyed the full favour of the king. A few months after the second marriage of James (to Mary of Guise) the primate got his nephew, David Cardinal Beaton, appointed his coadjutor with right of succession and he died in the autumn of 1539 in his castle at St. Andrews.

The stormy period in which Beaton's public life was cast, with France and England both intriguing for the alliance of Scotland, and the independence of the kingdom trembling in the balance, has made him, perhaps inevitably, appear to posterity more prominent as a statesman (in which quality there is no room for doubt as to his ability or his patriotism) than as a churchman and a prelate. There is, however, evidence that during both his thirteen years' tenure of the See of Glasgow and the seventeen years during which he held the primacy, he concerned himself closely with both the material and spiritual interests of the two dioceses, and in particular with the advancement of learning. In Glasgow he added and endowed altars in his cathedral, made additions also to the episcopal palace, which he encircled with a wall, and he erected stone bridges in various parts of the diocese. He was, moreover, as sedulous as his

predecessors had been in safeguarding the ancient privileges of the archiepiscopal see. On his translation to St. Andrews he proved himself a constant benefactor to the university of that city, and he founded there a new college (St. Mary's) for the study of divinity, civil and canon law, medicine, and other subjects. The new college was confirmed by Pope Paul III in February, 1538, and was extended and completed by Beaton's successor, Archbishop Hamilton, sixteen years later. It still exists as the divinity college of the university. Finally, Beaton showed himself ever zealous for the preservation of the unity of the Faith in Scotland. Under the direct orders of the pope (Clement VII) and unhesitatingly supported by the king, he caused many of those engaged in propagating the new doctrines to be arrested, prosecuted, and in some cases put to death. Modern humanity condemns the cruel manner of their execution; but such severities were the result of the spirit of the age, for which Archbishop Beaton cannot be held responsible. There is no reason to doubt that his motive in sanctioning the capital punishment of notorious heretics was simply to avert the miseries which religious schism could not but entail on a hitherto united people.

D. O. HUNTER-BLAIR.

**Beaton** (or BETHUNE), JAMES, Archbishop of Glasgow, b. 1517; d. 24 April, 1603; the son of James Beaton of Balfarg (a younger son of John Beaton of Balfour) and nephew to Cardinal David Beaton. He was elected to the archbishopric in 1551, on the resignation of the archbishop-elect Andrew Gordon, and not being yet in priest's orders was ordained in Rome, and consecrated there on the 28th of August, 1552. For eight troublous years he administered the affairs of his diocese and stood faithfully by the queen-regent, Mary of Guise, in her dealings with the disaffected Scottish nobles, who were plotting the destruction of the ancient Church in order to enrich themselves with the spoils. In March, 1559, we find him assisting at the provincial council at Edinburgh summoned by the primate, Archbishop Hamilton—the last assembly of the kind which was to meet in Scotland for three hundred and twenty-six years. The events of 1560, the treaty of alliance with England against France, the commencement of the work of destruction of cathedrals and monasteries, and, finally, the death of the queen-regent, no doubt actuated Beaton in his resolve to quit the distracted kingdom. He repaired to Paris, taking with him a great mass of the muniments and registers of his diocese, and much church plate and other treasures, which he deposited in the Scots College.

Queen Mary immediately appointed him her ambassador at the French Court, and he remained, both up to her forced abdication in 1567, and during the rest of her life, her most faithful friend and adviser. He did not hesitate, after the murder of Darnley, to inform her frankly of the dark suspicions attaching to her, and the necessity of the assassins being punished. On the 15th of February, 1574, Beaton's name appears at the head of the list of the Catholic prelates and clergy declared outlaws and rebels by the Scottish Privy Council; but he nevertheless continued to enjoy in his exile the favour of the young king (James VI) who, about 1586, appointed him, as the late sovereign had done, ambassador at Paris. Beaton held several benefices in France, including the income of the Abbey De la Sie, in Poitou, and the treasurership of St. Hilary of Poitiers. His intimate association with the House of Guise had naturally led him to join

with the League against Henry IV, and on its dissolution he was threatened with banishment; but by the intervention of Cardinal Bourbon and Sully and of the king himself, he was allowed to remain in France, where he was regarded with the greatest esteem. Perhaps the most remarkable testimony to the respect felt for his character in Scotland is to be found in the fact that in 1598, nearly forty years after the overthrow of the ancient Church, the archbishop was formally restored, by an act of the Scottish Parliament, to all his "heritages, honours, dignities, and benefices, notwithstanding that he has never acknowledged the religion professed within the realm". He survived to witness, a month before his death, the union of the English and Scottish crowns under King James. On the 24th of April, 1603, when James was actually on his way to London to take possession of his new kingdom, the archbishop died in Paris, in the eighty-sixth year of his age, and half a century after his episcopal consecration.

Beaton had lived in Paris for forty-three years, and had been Scottish ambassador to five successive kings of France. He was buried in the church of St. John Lateran at Paris, his funeral being attended by a great gathering of prelates, nobles, and common people. The poetical inscription on his tomb eulogizes him, in the exaggerated language of the times, as the greatest bishop and preacher of his age in the whole world. A sounder estimate of his worth is that of his Protestant successor in the See of Glasgow, Spottiswoode, who describes him as "a man honourably disposed, faithful to his queen while she lived and to the king her son; a lover of his country, and liberal to all his countrymen". No breath of scandal, in a scandalous age, ever attached to the honour of his name or the purity of his private life. Beaton left his property, including the archives of the Diocese of Glasgow, and a great mass of important correspondence, to the Scots College in Paris. Some of these documents had already been deposited by him in the Carthusian monastery in the same city. In the stress of the French Revolution many of these valuable manuscripts were packed in barrels and sent to St. Omers. These have unfortunately disappeared, but the papers left in the college were afterwards brought safely to Scotland, and are now preserved at Blairs College, the Catholic seminary near Aberdeen.

D. O. HUNTER-BLAIR.

**Beatrix** (or BEATRICE).—The name Beatrix has been borne by a certain number of holy persons, but no one of them has attained to any very eminent renown of sanctity.

I. BEATRIX, SAINT, a Roman virgin and martyr, inscribed in the Roman Martyrologium on 29 July. She is believed to have been the sister of the martyrs Simplicius and Faustinus whom she buried in the Via Portuensi. The legend says that she was then denounced as a Christian by Lucretius to whom she was betrothed, and was strangled by her own servants. Lucretius shortly afterwards died suddenly by the visitation of God.

II. BEATRIX D'ESTE, SAINT, d. 1262. Custom seems to warrant the giving the title Saint to one of the two holy nuns named Beatrix d'Este. She belonged to the family of the Norman Dukes of Apulia and was herself the daughter of the Marquess of Ferrara. She was betrothed to Galeazzo Manfredi of Vicenza, but he died of his wounds, after a battle, just before the wedding day, and his bride refused to return home, but attended by some of her maidens, devoted herself to the service of God, following the

Benedictine Rule, at San Lazzaro just outside Ferrara. Her cultus was approved by Clement XIV, and Pius VI allowed her festival to be kept on 19 January.

III. BEATRIX seems also to have been accepted as the Latin name of a noble lady of Bohemia, called in Bohemian Bozena, who lived at the end of the twelfth century and became a nun. Her brother was the famous St. Hrosmata, one of the patrons of the Kingdom of Bohemia. From the Bollandist life of Hrosmata (Acta SS., 4 July) it would seem that his sister Beatrix was honoured on 13 November.

IV. BEATRIX D'ESTE, aunt of the saint of that name, who is generally known as Blessed Beatrix, seems to have died in 1226 or perhaps in 1246. She was born in the castle of Este, became a nun in the convent of Santa Margherita at Solarolo, but not finding herself sufficiently secluded from the world, she founded another religious house in a deserted monastery at Gemmola. Her body after death was translated to the church of Santa Sophia at Padua and it was a tradition that when anything important was about to befall the family of Este she turned in her grave so that the noise was audible throughout the church. An account of her is given in the Acta SS. under 10 May.

V. BEATRIX, BLESSED, a Cistercian nun, first prioress of the convent called Nazareth near Lier in Brabant; d. 1269. She came of a wealthy family, but wishing to consecrate herself to God, at the age of seven she went to live with the Béguines. She afterwards joined the Cistercian nuns at Vallis Florida whence she was sent to commence the new foundation at Nazareth. She practised very severe austerities, wearing a girdle of thorns and compressing her body with cords. Our Lord is said to have appeared to her and to have pierced her heart with a fiery dart. After Nazareth was abandoned in a time of disturbance, the body of Blessed Beatrix is believed to have been translated by angels to Lier. Her day is 29 July, and a short life of her is included by Henriquez in his "Lilia".

VI. BEATRIX OF ORNACIEUX, BLESSED, d. about 1306, a Carthusian nun who founded a settlement of the order at Eymieux in the department of Drome. She was specially devout to the Passion of Christ and is said to have driven a nail through her left hand to help herself to realize the sufferings of the Crucifixion. Her cultus was confirmed by Pius IX in 1869. (See "Anal. jur. pont.", 1869, XI, 264.) There are modern lives by Bellanger and Chapuis and a full account in Lecoulteux, "Ann. Ord. Cath." (V, 5). Her feast is on 13 February.

VII. BEATRIX DA SILVA, BLESSED, a Portuguese nun, d. 1 September, 1490. In Portuguese she is known as Blessed Brites. She was a member of the house of Portalegre and descended from the royal family of Portugal. She accompanied the Portuguese Princess Isabel to Spain, when she married John II of Castile. There Beatrix seems to have aroused the jealousy of her royal mistress and was imprisoned for three days without food. After a vision of Our Blessed Lady, whom she saw attired in the blue mantle and white dress of the Conception Order which she was afterwards to found, Beatrix was allowed to retire to Toledo where she entered the Dominican Order. There she lived forty years, being specially honoured and frequently visited by Queen Isabel the Catholic. The latter aided her to found an order in honour of the Immaculate Conception, which adopted the Franciscan Rule. It was approved by Innocent VIII in 1489 and with some modifications by Julius II in 1511. Beatrix died ten days before the solemn inauguration of her new order. She is much honoured in Spain, and there is a life of her by Bivar. (See also the "Anal. jur. pont.", III, 549.)

A fuller notice of all the above will be found in *DUNBAR, Dictionary of Saintly Women* (London, 1904), I, 107-110. Several of them also are noticed with more or less fullness in the *Acta SS.* on their respective days. Cf. CHEVALIER, *Rép. des sources hist.*, *Bio-Bibl.* (2d ed., 1905).

HERBERT THURSTON.

**Beaufort, LADY MARGARET**, Countess of Richmond and Derby, b. 1441; d. 1509, daughter and heiress of John Beaufort, first Duke of Somerset. Her father, the grandson of John of Gaunt, Duke of Lancaster, and great-grandson of Edward III, having died when she was three years old, she was brought up by her mother with the greatest care and devotion. Married while a mere child to John de la Pole, son of the Duke of Suffolk, whose ward she was, she refused to ratify the union on attaining the years of discretion and was then given in marriage to Edmund ap Meredith ap Tudor, Earl of Richmond and brother of Henry VI, of whom, with his brother Jasper, she became the ward on Suffolk's attainder. Edmund died (1456) a few months after the marriage, his posthumous son Henry, Earl of Richmond (afterwards Henry VII), being born 28 January, 1456. In 1459 Margaret married Lord Henry Stafford, her cousin on both her father's and mother's side, who traced his descent from Henry III. He died in 1482. Her third husband was Thomas, Lord Stanley, afterwards created Earl of Derby. She was instrumental in bringing to an end the disastrous Wars of the Roses; her son, the head of the Lancastrian party, who, as a result of the victory of Bosworth (1485) became King Henry VII, took in marriage Elizabeth of York, daughter of Edward IV.

Lady Margaret Beaufort was an exceedingly religious woman—"to God and to the Church full obedient and tractable sechying his honour and plesure full besyly" (*Mornyng Remembraunce*),—and a model of piety and devotion. Blessed John Fisher, who became her chaplain in 1502 and who had singular opportunities of understanding the nobleness of her character both as her spiritual director and as the instrument of her princely benefactions, bears testimony to her virtues and good works in the funeral oration preached at her Month's Mind. All England, he says, had cause to mourn her death. The poor would miss her bounteous alms: the students of both universities, "to whom she was as a moder", and the learned her patronage. The virtuous and devout lost in her a loving sister; religious and priests and clerks a powerful defender. Divine service "dayly was kept in her chapel with grate nombre of preests clerkes and children to her grate charge and cost". She was used to recite the Divine Office, as well as the Office of Our Lady, and to assist at many Masses daily. She made a public vow of chastity before Fisher and was enrolled as a "sister" in many monastic houses, among others in those of the Charterhouse, Croyland, Durham, and Westminster. In her own establishment she provided for the education of numbers of young men at her own cost, for many of whom she used her influence with great wisdom and discernment in the matter of ecclesiastical preferment.

Besides her private works of charity and of benevolence, and her benefactions to religious houses, she was a munificent patron of learning, establishing Readerships (now Professorships) in Divinity at Oxford and Cambridge (Royal Licenses, 1496, 1497: *Characters*, 8 September, 1503); and, in 1504, she made provision for a preacher to deliver six yearly sermons "to the praise and honour of the Holy Name of Jesus and the Annunciation of the Blessed Virgin Mary". By her liberality God's House at Cambridge was refounded as Christ's College (Royal License, 1505) for a master, twelve fellows, and forty-seven scholars. St. John's College, Cambridge, was also established, in the place of the ancient founda-

tion of St. John's Hospital, by provision made in her will, in a codicil to which she states her intention of founding and suitably endowing a college for a master and fifty scholars. She had a tender devotion to the Real Presence and translated into English and caused to be printed the fourth book of the "Imitation of Christ", which treats of the Blessed Sacrament. The "*Mornyng Remembraunce*" refers to the burning faith with which she received the Body of the Lord upon her death-bed. She also herself translated "*The Mirroure of Golde for the sinful soule*". Historians agree in extolling her many signal qualities and virtues, criticizing, if anything the "devotion those days afforded", the "errors of the age she lived in". The Catholic sees the important part she played in the civil and political history of her time, but perceives in her as well a singularly high example of a Christian life, in which a robust and sturdy faith bore its natural and wholesome fruits in deeds of liberality and benevolence.

FRANCIS AVELING.

**Beaulieu Abbey** (*abbatia quæ vocatur Bellus Locus*) was a Cistercian house in Hampshire, one of the three monasteries founded by King John (c. 1204) and peopled by thirty monks from Cîteaux. The founder granted it a rich, if miscellaneous, endowment, including land in the New Forest, corn, money, one hundred and twenty cows, twelve bulls, a golden chalice, and an annual tun of wine. The buildings were dedicated in 1246, in the presence of Henry III and his queen, Richard Earl of Cornwall, and many prelates and nobles. Pope Innocent III constituted Beaulieu an "exempt abbey", with the right of sanctuary; and this was sought in 1471 by Ann Neville, wife of Warwick the King-maker, the day before the battle of Barnet. Twenty-six years later Perkin Warbeck fled to Beaulieu from the pursuing armies of Henry VII. Shortly before the suppression of the monastery in 1539, the Visitors' report mentioned that "thirty-two sanctuary-men, who were here for debt, felony, or murder", were living within the monastic precincts with their wives and families.

The first Abbot of Beaulieu was Hugh, and the last Thomas Stephens, elected in 1535. In the following year the abbey, with its annual revenue of £326, was granted to Thomas Wriothesley, afterwards Earl of Southampton. It passed later through the Dukes of Montagu to the Dukes of Buccleuch; and Lord Montagu of Beaulieu, the Duke of Buccleuch's nephew, now (1907) owns it. He resides in the old gatehouse of the abbey, which has been carefully restored. Little else remains of the domestic buildings, except the fine early English refectory, used as the parish church. The cloisters are in ruins, but the guest-house dormitory still exists, and has been restored. Not a stone is left of the beautiful church, 335 feet long, with a nave of nine bays, transepts, tower, and double-aisled choir with circular apse, of a purely Continental type most unusual in England. The late Duke of Buccleuch had the foundations of the church, with every column and buttress, carefully traced out and marked in sand. Netley Abbey, on the other side of Southampton Water, was founded from Beaulieu in 1239, by Henry III.

D. O. HUNTER-BLAIR.

**Beaune, RENAUD DE**, a French Bishop, b. in 1527,

at Tours; d. 1606 in Paris. Before entering the ecclesiastical state he held secular positions such as Councillor of Parliament and Chancellor of Francis of Valois, Duke of Touraine. The royal court greatly favoured him and appointed him to numerous ecclesiastical offices. In 1568, he became Bishop of Mende and in 1581, Archbishop of Bourges. King Henry IV of France named him his grand almoner in 1591 and appointed him to the Archbishopric of Sens in 1595; but the pope did not confirm the appointment until 1602. He was a member of the commission instituted by Henry IV in 1600 to reform the University of Paris. By his contemporaries, Renaud de Beaune was considered one of the greatest orators of the time. Posterity rated his work for the pacification of France higher than his oratorical talent. It was his influence that led to the successful issue of the conference of Suresnes, near Paris, in 1593. He promised the conversion of Henry IV and brought about peace between the latter and the "League". He received the abjuration of the king, and, although the absolution of an excommunicated prince was reserved to the pope, absolved him, July, 1593, on condition, however, that the approval of the Roman authorities should be obtained. In spite of this condition the absolution was invalid, and the action of the archbishop caused, at least partly, the delay in obtaining the papal confirmation of his nomination to the See of Sens. The principal works of de Beaune are: (1) Some discourses, among them funeral orations on Mary, Queen of Scots (1587), and on Queen Catharine de Medici (1589); (2) translation of the Psalms of David into French (Paris, 1575, 1637); (3) "La réformation de l'université de Paris (1605, 1667).

CHALMEL, *Histoire de Touraine* (Paris, 1828), IV, 29-32; GAUTIER in *Grande Encyc.*, V, 1054.

N. A. WEBER.

**Beauregard, JEAN-NICOLAS**, celebrated French pulpit orator, b. at Metz in Lorraine, 4 Dec., 1733; d. at the castle of Gröningen in Southern Germany, 27 July, 1804. He entered the Society of Jesus at Nancy, 30 Sept., 1749. After his noviceship and higher studies, he taught classics and rhetoric with distinction for six years at the colleges of the Society in Nancy, Verdun, Strasburg, and Pont-à-Mousson. His theological studies, which followed, were made in Strasburg, and after the year of third probation Father Beauregard was back at Nancy for the year 1766-67 as perfect of studies. The next year he was assigned to the task of preaching, which thenceforth became the work of his life. Having gained a wonderful reputation in the lesser towns of France, he was summoned to Paris, where his success was even more phenomenal. Especially noteworthy was the course of sermons preached before the Court during the Lent of 1789, in which Father Beauregard is said to have clearly foretold the evils that were about to engulf France. Father Beauregard escaped the first terrors of the Revolution, but was forced to flee to London in 1794. Later on he established himself at Maastricht, then at Cologne, while his declining years were spent at the castle of the Princess Sophie of Hohenlohe-Bartenstein. His works, which for the most part are still only in manuscript, consist of sermons and letters. A collection of his sermons, made by one of his hearers, was first printed at Paris in 1820, often reprinted, and later embodied in Migne's "Orateurs Sacrés", vol. LXXI.

JOHN F. X. MURPHY.

**Beauregard, PIERRE GUSTAVE TOUTANT**, soldier, b. near New Orleans, Louisiana, U. S. A., 28 May, 1818; d. there 20 February, 1893. He was appointed to the U. S. Military Academy at West Point and

graduated in 1838. Assigned first to an artillery regiment, he passed to the engineers and served thereafter in that corps. During the war with Mexico he was engaged in the siege operations at Vera Cruz, Cerro Gordo, Contreras, Chapultepec, and the city of Mexico, being wounded twice in the last-mentioned battle (13, 14 September, 1847), and was brevetted major. After fourteen years of continuous service he was made Captain of Engineers, 3 March, 1853. The war over, he was given supervision of the construction work along the Gulf coast, and on 23 January, 1861, was detailed as superintendent of the Military Academy at West Point. He almost immediately resigned, however, on 20 February, 1861, and threw in his lot with the seceding States of the Southern Confederacy. He was placed in command at Charleston, South Carolina, and began the Civil War by the attack on Fort Sumter. When the fort was evacuated he was sent to Virginia and was in charge of the Confederate forces in the battle of Bull Run, 21 July. He was then sent to Tennessee, was second in command to A. S. Johnson at the battle of Shiloh; succeeding Johnson, when the latter was killed, he nearly routed the Union army in the first day's fight. Reinforcements arriving for his adversary, Gen. Grant, he was forced to retreat on the next day. Beauregard's failing health compelled him to take a leave of absence for three months, when, with a promotion to a general's rank, he was again placed in command at Charleston, where he successfully resisted for a year and a half the siege operations of Gen. Gilmore and his naval assistants. In May, 1864, he joined Lee in Virginia and held Petersburg against the Union advance. In October of the same year he was made commander of the military division of the West and sent to Georgia, and then to North Carolina where he united with Gen. J. E. Johnson to resist the march of Gen. Sherman. The attempt was futile and they surrendered, April, 1865. After the war he became president of the New Orleans, Jackson and Mississippi Railroad, and Adjutant-General of the State of Louisiana. In 1866 he refused the offer of the chief command of the Rumanian army, and in 1869 that of the army of the Khedive of Egypt. He lent his name to the Louisiana Lottery and as its salaried manager was for several years one of its chief supporters. He was the author of "Principles and Maxims of the Art of War" (Charleston, 1863) and "Report of the Defence of Charleston" (Richmond, 1864).

THOMAS F. MEEHAN.

**Beauvais (Bellovacum)**, DIOCESE OF, a suffragan of the archiepiscopal See of Reims. The Dioceses of Beauvais, Noyon, and Senlis having been suppressed by the Concordat of 1802 for the benefit of Amiens, a see was re-established at Beauvais in 1822, having within its jurisdiction the former Diocese of Beauvais and a large portion of the ancient Dioceses of Noyon and Senlis. A pontifical Brief of 1851 authorizes the incumbents of the See of Beauvais to call themselves Bishops of Beauvais, Noyon, and Senlis.

*Diocese of Beauvais*.—Tradition looks upon St. Lucianus, sent to Beauvais by Pope Fabianus and martyred, about 275, with his companions Maxianus and Julianus, as the founder of Christianity in that place. The martyrdom of St. Romana under Diocletian, of St. Just during the atrocious persecution by the legendary Rictiovarus (about 410), of St. Maxentia, daughter of the King of Scotland, who, about 450, preferred to die rather than follow her fiancé, render the primitive Church of Beauvais illustrious. The exact date of the foundation of the episcopal see is obscure, but we know that the bishop who occupied it from 632 to 660 was the thirteenth

incumbent. Among its bishops Beauvais counts Odo (860-881), charged by Nicholas I in 867 to answer with Hincmar the grievances of Photius; Gui (1063-85), who founded St. Quentin of Beauvais, the great school of theology; Pierre Cauchon (1420-32), identified with the condemnation of Joan of Arc; Jean Juvenal des Ursins (1433-44), author of the Chronicle of Charles VI; Cardinal Odet de Châtillon (1535-62), nephew of Coligny, who turned Protestant at

MAIN ENTRANCE, CATHEDRAL OF BEAUVAIS

the Reformation; François-Joseph de la Rochefoucauld (1772-92), martyred in the Carmelite prison in 1792; and Feutrier (1825-30), minister of ecclesiastical affairs in the Martignac cabinet.

**Diocese of Senlis.**—The Church founded at Senlis by St. Rieul (Regulus) about 300, had its ninth bishop, St. Levangius, in 511. Saints Sanctinus, Agmarus, and Autbertus were bishops in the sixth and seventh centuries.

**Diocese of Noyon.**—The headquarters of the city of the Veromandui, who undoubtedly had a bishop from the beginning of the fourth century, having been destroyed by the barbarians, the bishops were without a residence until St. Médard (530-545), fourteenth bishop, installed himself at Noyon. This city counted among its bishops the goldsmith St. Eloi (Eligius, 640-659), Dagobert's prime minister; St. Mummolenus (second half of seventh century), and St. Eunutius (eighth century). The Belgian See of Tournai was cut off from Noyon in 1146.

These sees played an important part in the history of France during the Carolingian, and at the beginning of the Capetian, period. A council convoked at Beauvais by Charles the Bald, in 845, elected Hincmar Archbishop of Reims. At Compiègne where, next to his hunting-lodge, Charles the Bald had built the great Abbey of Notre Dame, placing therein the bodies of Sts. Cornelius and Cyprian, and where Kings Louis the Stammerer and Eudes were crowned and buried, there were held, in the course of the ninth century, numerous councils which regulated the political and religious questions of the time. A council at Compiègne in 1092 forced

the heretic Roscelin to retire, and one at Senlis in 1310, condemned nine Templars. Being Count of Beauvais from 1013, and Peer of France from the twelfth century, the Bishop of Beauvais bore the royal mantle at the coronation of the Kings of France; it was he, who, with the Bishop of Langres, was wont to raise the king from his throne to present him to his people. The Bishop of Noyon was both duke and peer. The monastic life was established in this region by St. Evrost in the sixth, and St. Germer in the seventh, century.

The medieval Cathedrals of Beauvais and Senlis are inferior in point of interest to that of Noyon, which is one of the most beautiful monuments of the twelfth century. During the Middle Ages, on each recurring 14th of January, the Feast of Asses was celebrated in the Beauvais Cathedral, in commemoration of the flight of the Virgin into Egypt (see ASSES, FEAST OF), and every year, on 27 June, there is a religious procession through the streets of Beauvais to perpetuate Jeanne Hachette's opposition to Charles the Bold in 1472. John Calvin was a native of Noyon, and Cardinal Pierre d'Ailly was born in Compiègne. The places of pilgrimage are: Notre Dame de Bon Secours at Compiègne, a shrine erected in 1637 as an expression of gratitude for the raising of the siege of the city by the Spaniards; Notre Dame de Bon Secours at Gannes; Notre Dame de Bon Secours at Feuquières; Notre Dame du Hamel at L'Hamel Notre-Dame; Notre Dame de Bon Secours at Montméliant; Notre Dame de Senlis at Senlis; Notre Dame des Fleurs at Ville-en-Braye.

In 1899 the following institutions were found in the diocese: 6 infant asylums, 44 infant schools, 14 girls' orphanages, 1 free industrial school, 2 *patronages*, 2 charity kitchens, 9 hospitals and hospices, 1 house of retreat, 12 homes for the aged, 9 communities devoted to care for the sick in their homes, all conducted by nuns; and 2 *patronages* under the care of the Brothers of the Christian Schools. In 1900 there were the following religious orders for men: Marists at Senlis, Redemptorists at Thury in Valois, and Fathers of the Holy Ghost at Beauvais. Among the orders for women there were no congregations belonging exclusively to the diocese. At the close of 1905 the Diocese of Beauvais had 407,808 inhabitants, 39 pastorates, 501 succursal parishes (mission churches), and 10 curacies.

GEORGES GOYAU.

**Beauvais, GILLES-FRANÇOIS-DE**, Jesuit writer and preacher, b. at Mans, France, 7 July, 1693; d. probably at Paris about 1773. He entered the Society of Jesus 16 August, 1709, and taught belles-lettres, rhetoric, and philosophy. After ordination he was assigned to preach and gave the Advent course at Court in 1774, during which year he published his "Life of the Ven. Ignatius Azevedo, S. J.", and in 1746 that of Ven. John de Britto, S. J., the latter of which has been translated into English by Father Faber of the Oratory (Richardson, London, 1851). He wrote a number of other works of devotion and for spiritual reading.

SOMMERVOGEL, *Bibl. de la c. de J.*, IX, 1080-82.

MARK J. MCNEAL.

**Beauvais, JEAN-BAPTISTE-CHARLES-MARIE DE**, a French bishop, b. at Cherbourg, 17 October, 1731; d. at Paris, 4 April, 1790. The sermons he preached before the court during Advent, 1768, and Lent, 1773, raised his reputation as a pulpit orator to such a height that he was promoted to the See of Senez. He distinguished himself on all occasions by his de

votion to the Church and is considered one of the best preachers of the eighteenth century. In 1783 he resigned his bishopric and settled at Paris. In 1789 he was made a member of the States-General. His sermons were printed at Paris in 1806, prefaced by an interesting account, written by the Abbé Boulogne, of the preacher and his discourses. The most celebrated of his funeral orations is the one on Louis XV; this discourse, however, failed to please the courtiers. The best of his panegyrics are one on St. Augustine, delivered before the Assembly of the Clergy of France, and one on St. Louis, before the Académie Française.

DE FELLER, *Biographie universelle* (Paris, 1847); BERNARD, *La chaire française au dix-huitième siècle* (Paris, 1901).

JOS. N. GIGNAC.

**Beauvan, RENÉ-FRANÇOIS DE.** See TOULOUSE.

**Beaven, THOMAS.** See SPRINGFIELD, DIOCESE OF.

**Bébian, ROCH-AMBOISE-AUGUSTE**, b. 4 August, 1789 at Pointe-à-Pitre, Guadeloupe; d. there 24 February, 1839. His father sent him to France, where he was committed to the care of his godfather, the Abbé Sicard, the well-known educator of the deaf and dumb. The latter put him under the direction of Abbé Jauffret then exhibiting a great interest in the education of deaf-mutes. After a brilliant course at the Lycée Charlemagne in Paris, Bébian devoted himself to the study of the system of education of the deaf and dumb. He followed the courses of instruction given by Abbé Sicard and gave special attention to Laurent Clerc, a deaf-mute who afterwards became president of an institution for the deaf and dumb at Hartford, Connecticut, U. S. A. As prefect of studies in the institution for the deaf and dumb at Paris, he directed all his efforts to finding the signs best adapted, in precision and extension of meaning, to the expression of the ideas of the deaf and dumb.

Bébian published the result of his studies in his first book, "*Essai sur les sourds-muets et sur le langage naturel*" (1817). His principal works, under the titles "*Mimographie*" (1822) and "*Manuel d'enseignement pratique des sourds-muets*" (1822), laid down the principles used in the institution for the deaf and dumb in Paris. After leaving this school, he published several other works, the most important being "*L'éducation des sourds-muets mise à la portée des instituteurs primaires et de tous les parents*". Having refused the direction of the schools for the deaf and dumb of St. Petersburg and New York he founded a similar institution at Paris on the boulevard Montparnasse; later he became director of the school of Rouen and finally went back to Guadeloupe, where he founded a school for the negroes. He had already written, in 1819, "*Eloge historique de l'abbé de l'Épée*", which was awarded the prize offered by the Academy of Sciences.

G. M. SAUVAGE.

**Bec, ABBEY OF.**—The Benedictine Abbey of Bec, or Le Bec, in Normandy, was founded in the earlier part of the eleventh century by Herluin, a Norman knight, who about 1031 left the court of Count Gilbert of Brionne to devote himself to a life of religion. The abbey itself is now in ruins, but the modern name of the place, Bec-Hellouin, preserves the memory of its founder. There is some difference in reckoning the date of the foundation, for Herluin's religious family was twice moved to new quarters, and any one of the three dates may be regarded as the beginning of the famous abbey. Herluin's first foundation was at Bonneville, or Burneville, where a monastery was built in 1034, and here in 1037, Herluin was consecrated abbot. But in a few years it was decided to move to a more suitable site, two miles away, by the banks of the Bec (Danish, *Bæk*, a brook) which gave its name to the abbey. This removal took place about 1040. About two years after this, Lanfranc,

who had already become famous for his lectures at Avranches, left the scene of his triumphs and came to bury himself in this humble home of piety. At first his retreat was unknown to the world without, while his new brethren seem to have been unaware of his worth. But within a few years from his arrival at Bec, he had opened a new school, and scholars were flocking from all parts to listen to his lectures. The abbey grew and prospered, and the good work begun by the simple piety of Herluin was crowned by the learning of Lanfranc. Before long it was necessary to build a larger and more lasting monastery. As the site first chosen had proved to be unsatisfactory, the new foundations were laid in another spot, higher up the valley of the Bec and further away from the water. This important change was really the work of Lanfranc, who was now the prior and the right hand of the aged abbot. As the first change of site was closely followed by the arrival of one great teacher, this second foundation was almost coincident with the coming of a yet greater glory of the abbey, St. Anselm of Canterbury.

The future archbishop and Doctor of the Church first came to Bec in 1060 while the work of building was in progress, and the year before the monks were able to move into their new home. In 1062, Lanfranc was appointed Abbot of Caen, and Anselm, in spite of the fact that he had been such a short time at Bec, was chosen to take his place as prior. In the school also the famous master was succeeded by his yet more illustrious disciple. When the new abbey church at Bec, which had taken some fifteen years to build, was finished in 1077, it was appropriately consecrated by Lanfranc, who was now Archbishop of Canterbury. Abbot Herluin, the founder, died in the following year, and Anselm succeeded him as second Abbot of Bec. Only six years later Abbot Anselm was called to take the place of his old master, Lanfranc, as Archbishop of Canterbury. The abbey continued in existence down to the French Revolution. The long list of abbots from the eleventh to the eighteenth century, given in "*Gallia Christiana*" (XI, 222-239), contains many of the most illustrious French names, and shows that even in its later years Bec was a place of some importance. It had suffered much in the Hundred Years War with England, and still more in the Huguenot troubles. But after these days of desolation it was restored to something of its former state by the Congregation of St. Maur. Thus the chief house of medieval learning was renewed by the fathers of modern historical scholarship. This restoration was too soon undone by the forces of revolution; but the Maurists rendered a more enduring service to the abbey by their admirable editions of Lanfranc, Anselm, and the "*Chronicon Beccense*". Of the old abbey whose erection is recorded in that chronicle, some ruins still remain. The later buildings now serve as a military station. This transformation is a curious counterpart to the happier change effected at Fort Augustus.

In its later years the Abbey of Bec was but one among many religious houses doing good work for learning and religion, but in the golden age of Lanfranc and Anselm it held a unique position, and exerted a far-reaching influence on the course of church history and the advancement of theological learning. In its early days the abbey gave three archbishops to the See of Canterbury: Lanfranc, Anselm, and Theobald the fifth abbot. Among other prelates who came from this famous school, it will be enough to mention Pope Alexander II, William, Archbishop of Rouen, Arnost, Gundulf, and Ernulf, Bishops of Rochester, Ivo of Chartres, Fulk of Beauvais, and Gilbert Crispin, Abbot of Westminster. Of the influence of Lanfranc's work at Bec John Richard Green says very truly: "His teaching raised Bec in a few years into the most famous school of

Christendom. It was in fact the first wave of the intellectual movement which was spreading from Italy to the ruder countries of the West. The whole mental activity of the time seemed concentrated in the group of scholars who gathered around him; the fabric of the canon law and of medieval scholasticism with the philosophical scepticism which first awoke under its influence, all trace their origin to Bec" (A Short History of the English People, I, ii, 3). When we remember how deep and far-reaching has been the influence of its greatest scholar, Anselm, on later theology, we cannot but feel that though the old Abbey may be in ruins the school of Bec still lives on, and all may sit at the feet of its famous masters.

*Chronicon Beccensis* (1034-1468), ed. d'ACHÉRY in *Lanfranci Cant. Op.* (Paris, 1648), app. 1-32 (an excerpt from an old history of the abbey carrying the story to 1591); also in *P. L.*, CL; GILBERT CRISPIN, *Life of Herluin* in *P. L.*, CL, 696 sqq.; MILO CRISPIN, *Vita Lanfr. et al. abb. in d'Achéry*, op. cit., 1 sqq.; 311 sqq. (containing lives of the next four abbots). Cf. also lives and letters of Anselm and Lanfranc; RULE, *The Life and Times of St. Anselm* (London, 1883); RAGEY, *Histoire de Saint Anselme* (Paris, 1899), the last two containing full and graphic accounts of the foundation and early history of Bec; FORÉ, *L'Abbaye du Bec au dix-huitième siècle* (Evreux, 1901).

W. H. KENT.

**Becan** (VERBRUCK, VAN DER BRECK), MARTIN, controversialist, b. at Hilvarenbeek, Brabant, Holland, 6 January, 1563; d. at Vienna, 24 January, 1624. He entered the Society of Jesus, 22 March, 1583, taught theology for twenty-two years at Würzburg, Mainz, and Vienna, and was confessor to Emperor Ferdinand II from 1620 until the time of his death. He possessed a style clear and dignified, and noticeably free from the bitterness which marked the polemical literature of the day. His writings were directed principally against Calvin, Luther, and the Anabaptists; of these his "Manuale Controversiarum", Mainz, 1623, treating of predestination, free will, the Eucharist, and the infallibility of the Church, passed through several editions. For a complete list see Sommervogel, "Bibliothèque de la compagnie de Jésus" (I, col. 1091-1111), wherein are mentioned by title forty-six volumes. His chief theological work, "Summa Theologiae Scholasticae" (4 vols. 4to, Mainz, 1612) is in great part a compendium of Suarez's Commentary on St. Thomas Aquinas. By a decree of the Congregation of the Index, 3 January, 1613, his book "Controversia Anglicana de potestate regis et pontificis" was put on the Index *donec corrigatur*, not so much to condemn certain exaggerations it contained as to prevent the faculty of theology of Paris from condemning it and at the same time adding some declarations against papal authority. The "Controversia" was corrected and published somewhat later with a dedication to Pope Paul V. Becan, in 1608, published at Mainz, "Aphorismi doctrinae Calvinistarum ex eorum libris, dictis et factis collecti", in reply to Calvin's "Aphorismi doctrinae Jesuitarum". Aphorismus XV, "Jesuitae vero qui se maxime nobis opponunt, aut necandi aut si id commodum fieri non potest, ejiciendi, aut certe mendaciis ac calumniis opprimendi sunt" (The Jesuits, our chief adversaries, ought to be put to death, or, if that cannot be easily done, they ought to be banished, or, at any rate, overwhelmed with lies and calumnies), has been misconstrued so as to make it appear that Becan wished to say that Aphorismus XV contained the very words of Calvin. That such was not Becan's intention is clear from the title of the book "Aphorismi ex eorum libris dictis et factis collecti" and the development shows that the author was only drawing what he considered a logical conclusion from the action of the Calvinists of the time. A lengthy discussion about this aphorism was carried on by A. Sabatier in the "Journal de Genève" (26 January, 1896; 10 May, 1896) and the "Revue Chrétienne",

(1 March, 1896; 1 June, 1896), and by J. Brucker in the "Etudes" (15 April, and 15 July, 1896).

FRANCIS D. O'LAUGHLIN.

**Beccarelli, GIUSEPPE.** See QUINTISM.

**Beccus** (Gr. ΒΕΚΚΟΣ), JOHN, Patriarch of Constantinople in the second half of the thirteenth century, one of the few Greek ecclesiastics who were sincerely in favour of reunion with the Church of Rome. He was born in the early part of the thirteenth century in Constantinople, where he joined the ranks of the clergy. His ability, learning, and moral qualities marked him for advancement, and he was soon promoted to the office of *chartophylax*. The Patriarch Arsenius (1255-66) held him in high esteem, and defended him against the emperor's displeasure which he had incurred by suspending a priest who blessed a marriage in the church of an imperial palace without permission. Beccus, however, recovered the imperial favour, and gradually gained the confidence of Michael Palaeologus (1259-82). He was selected repeatedly to conduct delicate or difficult negotiations with foreign potentates. His sentiments towards the Christians of Western Europe, or the Latins, were not at all friendly at the beginning. When, after the destruction of the Latin Empire in Constantinople, the Emperor Michael Palaeologus conceived the plan of reuniting the Greek and the Latin Churches, the Patriarch Joseph (1268-75) and his *chartophylax*, John Beccus, were strongly opposed to it. In a meeting of the ecclesiastics of Constantinople held about the year 1273, Beccus declared in the presence of the emperor that the Latins were in reality heretics, although they were not called thus. His audacity was punished with imprisonment. In his enforced retirement Beccus found leisure to study the points of difference between the Greeks and Latins. The emperor, anxious to win him over, sent such writings to him as were favourable to the views of the Latin Church, among them the works of Nicephorus Blemmida or Blemmydes. From the works of Athanasius, Cyril of Alexandria, Maximus the Confessor, and others he learned that the Greek and the Latin Fathers substantially agreed on matters of Christian faith. The only difference was, that while the Latin writers considered the Holy Ghost to proceed from Father and Son, the Greeks preferred to state that He proceeds from the Father through the Son. Once satisfied on this subject, he became actively interested in the work of reunion, and retained these sentiments to the end. Meanwhile the union was happily concluded in the council held at Lyons (1274) and proclaimed at Constantinople (January, 1275). The Patriarch Joseph could not be induced to accept it, and was removed from his office according to a previous understanding. John Beccus was elected in his place. On the 2d of June, Pentecost Sunday, 1275, he received the episcopal consecration.

After his elevation to the patriarchal see one of his main objects was to convince of the lawfulness of the union those of the Greeks who were either partisans of the schism or else had renounced it only in a half-hearted way. In April, 1277, a synod was held in Constantinople, where the union was again approved; a letter was also written to Pope John XXI (1276-77), which acknowledged the papal primacy and the orthodoxy of the Latin doctrine on the Procession of the Holy Ghost. When a faction of the schismatics rebelled against the emperor, John Beccus excommunicated them (July, 1277), while Michael Palaeologus defeated their armies. In 1279, Beccus assured the legates of Pope Nicholas III (1277-80), then in Constantinople.

that the Greek Church entirely agreed with Rome in matters of doctrine. Several synods were held shortly afterwards, all with the same object in view; and in one of them it was discovered that a certain Penteclesiota had tampered with a passage of St. Gregory of Nyssa, where testimony was rendered to the procession of the Holy Ghost from Father and Son. Finally, he tried also to defend in writing the doctrines of the Latin Church, although at first he had resolved not to notice the many pamphlets of the schismatics, lest he should make the dissensions even greater.

The intercourse of Beccus with the emperor was not always pleasant. The patriarch pleaded much with his imperial master for the needy and for those unjustly condemned by the officers of the law. But the emperor grew weary of these importunities and restricted the patriarch's liberty of access to him. Matters were aggravated by the enemies of the union, who purposely calumniated Beccus, as if his conduct were immoral, as if he misused the treasures of the Church, and insulted or even cursed the emperor. Such accusations were not altogether unwelcome; and the emperor, to show his indignation, curtailed the patriarch's jurisdiction over all the sacred places that were outside of Constantinople. Thereupon Beccus grew tired of his office, resigned, and withdrew to a monastery in March, 1279. But as the papal legates arrived soon after, he was induced to resume his duties and to treat with the representatives of the pope, which he did as related before. After the death of Michael Palæologus, which occurred 11 December, 1282, the union with Rome was at once denounced by the new Emperor Andronicus (1282-1283); and Beccus was forced to resign. In a synod held in 1283, he was forced to sign his name to a creed prepared by his enemies, and to abdicate the patriarchal office, after which he was banished to the city of Prusa in Bithynia. In 1284, he was again summoned to a synod in Constantinople; but he defended energetically the doctrines of the Western Church, for which he was confined to the fortress of St. Gregory on the Black Sea, where he underwent many privations. Nothing, however, could induce him to sacrifice his convictions. He still continued to write in favour of the Latin Church. Death brought an end to his sufferings about the year 1298.

The principal works of John Beccus (in P. G., CXLi) are the following: "Concerning the Union and Peace of the Churches of Ancient and New Rome"; "The Epigraphæ", a collection of passages from the Fathers; "On the Procession of the Holy Ghost"; the polemical works against Photius, Andronicus Camateros, and Gregory of Cyprus; the works addressed to his friends Theodore, Bishop of Sugdæa in Moesia, and a certain Constantine; a letter to Agallianos Alexios, a deacon of Constantinople; several orations and an "Apologia"; his "Testamentum" written while in prison. In all of these writings there is a sincere conviction of the truth defended by him, and great enthusiasm for the peace of the Church through union with Rome, among whose Greek adherents Beccus holds easily the first place.

FRANCIS J. SCHAEFER.

**Beche, JOHN** (alias THOMAS MARSHALL), BLESSED, English Benedictine abbot and martyr; date of birth unknown; d. at Colchester, England, 1 December, 1539. Educated at Oxford (probably at Gloucester Hall, now Worcester College), he took his degree of Doctor of Divinity in 1515, and within the next

fifteen years ruled the Abbey of St. Werburgh, Chester, his name appearing as twenty-sixth on the roll of abbots of that foundation. He was elected Abbot of St. John's, Colchester, 10 June, 1530, and, with sixteen of his monks, took Henry VIII's Oath of Supremacy, 7 July, 1534. The year 1535 brought the martyrdoms of the three Carthusian priors (4 May), of Bl. John Fisher (22 June), and of St. Thomas More (6 July), all five for the Divine right of the Roman Church to universal supremacy in spirituals. Beche was so deeply affected by these examples that his unguarded expressions of reverence and veneration for the martyrs, reported by spies, drew down upon him the resentment of the schismatical king. In November, 1538, the Abbot of St. John's further exasperated Henry and his ministers by denying the legal right of a royal commission to confiscate his abbey. Within a year of this he was committed to the Tower on a charge of treason, was discharged from custody, and rearrested some time before the 1st of November, 1539. Witnesses were found to testify how the abbot had said that God would "take vengeance for the putting down of these houses of religion", that Fisher and More "died like good men and it was pity of their deaths", and that the reason for the king's revolt from Catholic unity was the king's desire to marry Anne Boleyn. In his own examination the abbot yielded to human weakness and tried to explain away his former assertions of Catholic truth. In spite of these lapses he eventually received the crown of martyrdom. Tried at Colchester, by a special commission, in November, 1539, he no longer pleaded against the charge of contumacy to the newly established order of things. He was convicted and executed. An anonymous contemporary partisan of Henry's schism, quoted by Dom Bede Camm in "Engl. Martyrs", I, 400, says of Abbot Beche and others who died at that time for the same offences, "It is not to be as these trusty traitors have so valiantly jeopardized a joint for the Bishop of Rome's sake . . . his Holiness will look upon their pains as upon Thomas Becket's, seeing it is for like matter". The decree of Pope Leo XIII by which Abbot John Beche received beatification bears date 13 May, 1895.

Martyrs* (London, 1904), I; GASQUET, *Henry VIII and the English Monasteries* (London, 1899), I, 398 and II, 373; GAIRDNER, *Preface to Calendar of Papers and Domestic* (London, 1895); MOORE ed., *Cartularium Monasterii S. Joannis de Colcestria* (London, 1897); *Record Office: Crumwell Correspondence*, VI, 145.

E. MACPHERSON.

**Beckedorff, GEORG PHILIPP LUDOLF VON**, b. at Hanover, 14 April, 1778; d. at Grünhof, 27 February, 1858. He first studied theology at Jena, then medicine at Göttingen, where he obtained the degree of doctor in 1799. In 1810 he gave up the medical profession and accepted the office of tutor to the crown-prince of Anhalt-Bernburg. For seven years he lived at Ballenstedt. In the movement for the reunion of the churches, then agitating the various religious sects, he took an active part by able and timely publications. An appeal "To Young Men of Germany over the body of the murdered Kotzebue" brought him into a wider field of action. The Prussian Government secured his services, and he became a member, first of the High Privy Council, then of the Ministry of Public Worship, and later on, supervisor of the public school system. In this capacity he contributed largely, in co-operation with Nicolovius, to the uplifting of popular education and published in nine volumes the "Year Book of the Prussian Schools". The State recognized his efficiency by appointing him attorney-general for the University of Berlin. His official duties and inclinations kept Beckedorff in close touch with the religious union movement and while studying the history and claims of the various sects, his conviction became stronger

that the Catholic Church was the true Apostolic Church. It was not an easy step for one in his position to follow up his conviction; but the death of a beloved child decided him and he informed the king of his resolve. The kindly crown-prince advised a consultation with Bishop Sailer of Ratisbon, and a few days' intercourse with this prelate sufficed to prepare Beckedorff for abjuration, Holy Communion, and Confirmation in June, 1827. His dismissal from public office quickly followed and he withdrew with his family from the capital to Grünhof in Pomerania.

Beckedorff now devoted himself to the management of his estate and the education of his children, but his abilities were too marked to suffer this retirement for long. In spite of repeated refusals of the Government to ratify his election, his admiring countrymen chose him again as their deputy. It was not until the accession of King Frederick William, however, that his rights and merits were recognized. In reparation for the injustice done, the king raised him to the nobility and made him president of the state agricultural department. Two volumes on agricultural economy attest his competence in an entirely new office and his zeal in the service of his country. With the still higher aim of furthering religious union and peace he published several works on the mutual relations of family, school, State, and Church. His work, "The Catholic Truth, Words of Peace", went through three editions and still ranks as an excellent popular manual of apologetics. Nowhere was Beckedorff's influence felt more than at Grünhof and in its neighbourhood. Having learned that some Catholics were scattered throughout the district, he built a church for them and maintained the resident priest in his own house. He founded also a school and home for poor children and entrusted them to the Sisters of Charity; both of these institutions began to flourish during his lifetime.

ROSENTHAL, *Convertitenbilder aus dem XIX. Jahrhundert* (Ratisbon, 1889), I, i, 481 sqq.

CHARLES B. SCHRANTZ.

**Becker, THOMAS ANDREW**, sixth Bishop of Savannah, Georgia, U. S. A., b. at Pittsburg, Pennsylvania, 20 December, 1832; d. at Washington, Georgia, 29 July, 1899. His parents were German Protestants and he became a convert in early manhood. He made his theological course at the College of Propaganda, Rome, where he was ordained 18 July, 1859. Returning to the United States, he was given charge of a mission at Martinsburg, West Virginia, whence he went to Mount St. Mary's College, Emmitsburg, to act as one of the professors. Archbishop Spalding then made him his secretary. Later he was sent to St. Peter's Church, Richmond, Virginia, and while there was appointed, 3 March, 1868, first Bishop of the new Diocese of Wilmington, Delaware, for which he was consecrated by Archbishop Spalding at Baltimore, 16 August, 1868. He ruled this diocese until, on the promotion (1 February, 1885) of Bishop William H. Gross from Savannah to the Archbishopric of Oregon City, Bishop Becker was transferred to the See of Savannah, 26 March, 1886. He was regarded as one of the most accomplished bishops of his day, and was noted for his ability as a linguist. He was one of the secretaries of the Fourth Plenary Council of Baltimore, and contributed frequently to current reviews and periodicals. A series of articles in the "American Catholic Quarterly Review" on the idea of a true university attracted wide attention. He was devoted always to the cause of temperance, and by a clause in his will left \$15,000 in trust for twenty-five years for the education of worthy and deserving young men, on condition that they be American born, total abstainers, and willing to devote their energies to the service of the Diocese of Savannah.

**Becket, THOMAS.** See THOMAS BECKET, ST.

**Beckx, PIERRE-JEAN**, twenty-second General of the Society of Jesus, b. at Sichen, Belgium, 8 February, 1795; d. at Rome, 4 March, 1887. Father Beckx was ordained priest, 7 March, 1819, and appointed to a little parish near Brussels; eight months afterwards he resigned this office and entered the Society of Jesus at Hildesheim, Germany. Having learned the German language, he was soon able to preach, hear confessions, and give retreats in German. The Duke and Duchess of Anhalt-Köthen were converted to the Catholic Faith in 1825 and asked for a Jesuit chaplain; Father Beckx was appointed to this duty and went to live in Köthen. He found only twenty Catholics there; in four years he had 200 converts. In 1830 he went to live in Vienna, where he was the only Jesuit for many years. From time to time he was called to Rome and sent on important missions to Lombardy, Hungary, and Bavaria. In 1852, he was made Provincial of Austria and brought back the Fathers of the Society to Innsbruck, Linz, and Lemberg. The next year, on the death of Father Roothaan, he was chosen General of the Society by the unanimous vote of delegates from all parts of the world. The new father-general brought to his office a deep spirit of faith; a profound knowledge of the human heart; firmness and dignity; serenity of mind in extreme trial; faultless manners; and a remarkable soundness of judgment.

During the thirty-four years that Father Beckx governed the society its membership was doubled, new provinces were established in Ireland, France, Spain, Portugal, and America; new missions were begun in different parts of the world; the education of youth was continued with success; new colleges were opened in every province. During his term of office eighty Jesuits were raised to the honours of the altar; all but three of these were missionaries or martyrs. The society was expelled from Italy in 1860, from Spain in 1868, from Germany in 1873, from France and the French colonies in 1880. In 1873 Father Beckx went to live at Fiesole near Florence, where he remained until the election of Father Anderledy as Vicar-General, in 1883; then he went back to Rome, abdicating his charge entirely. There, four years later, he died at the advanced age of ninety-two years. Father Beckx was the author of "Der Monat Maria", Vienna, 1838, which passed through thirty editions in German, and was translated into English, French, Italian, Dutch, Polish, Armenian, and Arabic.

PATRICK H. KELLY.

**Becquerel, ANTOINE-CÉSAR**, French physicist, b. at Chatillon-sur-Loing (Loiret), 7 March, 1788; d. at Paris, 18 January, 1878. In 1806 he entered the Polytechnic School after having studied at the Central School of Fontainebleau under Billy, and later at the Collège Henri IV with Cauchy. In 1808 he was sent to the military school (*d'application*) at Metz, which he left the following year with the rank of second lieutenant. During two and a half years, he fought under General Suchet in the Spanish campaign, distinguishing himself at several of the important sieges. Ill health obliged him to ask for a leave of absence. He was raised to the rank of captain, made Chevalier of the Legion of Honour, and nominated to the new position of assistant-inspector of studies at the Polytechnic School. During

the invasion of 1814 he resumed military service for a time, but was soon retired with the rank of *chef de bataillon*.

A change of career then became necessary. After some hesitation, he settled down to the real work of his life, the study and advancement of the science of electricity. Becquerel's achievements are numerous and important.

He combated Volta's contact theory of the electromotive force in a cell and showed that the real source of voltaic electricity is to be found in chemical action. That in fact, the generation of electricity in any case is possible only where there is chemical action, frictional work, or difference of temperature. He observed the diamagnetic properties of the metal antimony

ANTOINE-CÉSAR BECQUEREL

before Faraday, and constructed a constant cell with two liquids which was the forerunner of the well-known "Daniell cell". His differential galvanometer increased the accuracy to be attained in the measurement of electrical resistances. He applied the results of his study of thermo-electricity to the construction of an electric thermometer and measured with it the temperature of the interior of animals, of the soil at different depths, of the atmosphere at different heights. He was also very much interested in questions of meteorology, climate, and agriculture.

Becquerel's work in electro-chemistry brought him, in 1837, the award of the Copley medal of the Royal Society of London. He was a member of the Academy of Sciences (1829), professor-administrator of the Museum of Natural History, and Commander of the Legion of Honour. His character seems best described by the chemist Dumas: "Becquerel loved his country, his science, his family." Fizeau ends his funeral oration with these words: "He died with the serenity of a sage and the tranquillity of a good man, with confidence in God and the immortal hopes of a Christian".

More than 500 papers were published in the "Comptes Rendus" in Vols. I-LXXXV, and in the "Annales de Chimie et Physique", series II-V. The following are some of his more important works: (1) *Traité expérimental de l'électricité et du magnétisme et de leurs phénomènes naturels* (Paris, 1834-40, 7 vols.; 1855, 2 vols.); (2) *La physique considérée dans ses rapports avec la chimie et les sciences naturelles* (1844, 2 vols.); (3) *Éléments de physique terrestre et de météorologie* (1847, with his son Edmond); (4) *Résumé de l'histoire de l'électricité et du magnétisme* (1858); (5) *Des forces physico-chimiques, de leur intervention dans la production des phénomènes naturels* (with plates, Paris, 1873). The title of this book "On the Physico-chemical forces and their intervention in the production of natural phenomena" would appear to indicate a materialistic philosophy. This impression is entirely removed by his explicit statement that "we must admit the existence of a creative Power which manifests itself at

certain times', especially in order to explain the appearance of organic life.

WILLIAM FOX.

**Bédard, PIERRE**, a French-Canadian lawyer and member of the Assembly of Lower Canada, b. at Charlesbourg near Quebec, 13 November, 1762; d. at Three Rivers, 26 April, 1829. He was the son of Pierre-Stanislas Bédard and Marie-Josephine Thibault. After he had completed the course of studies at the seminary of Quebec, where he proved himself an excellent pupil, he studied law and was admitted to the bar. In 1792 Bédard was elected member of the Assembly for Northumberland and continued a member of the Assembly until 1812. During these years he represented successively Northumberland, the lower town of Quebec, and Surrey, and gave proof of his sterling qualities. He devoted himself, however, chiefly to the study of constitutional questions of which many of the government officials seemed to have but an imperfect conception. When the newspaper, "Le Canadien" was founded in 1806, he became a regular contributor and expressed his views concerning the constitutional government of the province of Quebec with such warmth that the governor, Sir James Craig, in the spring of 1810 suppressed "Le Canadien" and threw Bédard into prison. Here Bédard remained some twelve months, although the governor offered him his freedom several times, so that he could take the seat in the Assembly to which he had been elected during his imprisonment. Bédard, however, demanded a regular trial, which the authorities were not willing to grant. Finally for the sake of peace Bédard left the prison. After Craig had resigned his position and gone to England, the new governor, Sir George Prevost, appointed Bédard a judge of the superior court at Three Rivers as compensation for what he had endured. Bédard filled this position from 11 December, 1813, until March, 1827, when illness obliged him to absent himself from his duties for some months. After this his health failed steadily until his death. He was buried in the parish church at Three Rivers. Bédard had four children one of whom, Elzevir, became a distinguished judge.

N. E. DIONNE.

**Bede** (or BEAD, whence *Bede-house*, *Bedesman*, *Bederoll*).—The old English word *bede* (Anglo-Saxon *béd*) means a prayer, though the derivative form, *gebed*, was more common in this sense in Anglo-Saxon literature. When, in the course of the twelfth and thirteenth centuries, the use of little perforated globes of bone, wood, or amber, threaded upon a string, came into fashion for the purpose of counting the repetitions of the Our Father or Hail Mary, these objects themselves became known as *bedes* (i. e. prayers), and our modern word *bead*, as applied to small globular ornaments of glass, coral, etc., has no other derivation. In middle English the word *bedes* was used both in the sense of prayer and rosary. Thus Shakespeare could still write (Rich. III, iii, 7)

When holy and devout religious men  
Are at their beads [prayers], 'tis much to draw  
them thence,

So sweet is zealous contemplation.

While of Chaucer's Prioress we are told

Of smal coral aboute hire arm she bar

A peire of bedes, gauded all with grene.

The gauds, or gaudys, were the ornaments or larger beads used to divide the decades. The phrase *pair of beads* (i. e. set of beads—cf. pair of stairs), which may still be heard on the lips of old-fashioned English and Irish Catholics, is consequently of venerable antiquity. With such speakers a pair of beads means the round of the beads, i. e. the chaplet of

five decades, as opposed to the whole rosary of fifteen. Again, to "bid beads" originally meant only to say prayers, but the phrase "bidding the beads", by a series of misconceptions explained in the "Historical English Dictionary", came to be attached to certain public devotions analogous to the prayers which precede the kissing of the Cross in the Good Friday Service. The prayers referred to used to be recited in the vernacular at the Sunday Mass in medieval England, and the distinctive feature of them was that the subject of each was announced in a formula read to the congregation beforehand. This was called "bidding the bedes". From this the idea was derived that the word "bidding" meant commanding or giving out, and hence a certain survival of these prayers, still retained in the Anglican "Book of Canons", and recited before the sermon, is known as the "bidding prayer".

The words *bedesman* and *bedeswoman*, which date back to Anglo-Saxon times, also recall the original meaning of the word. *Bedesman* was at first the term applied to one whose duty it was to pray for others, and thus it sometimes denoted the chaplain of a guild. But in later English a *bedesman* is simply the recipient of any form of bounty; for example, a poor man who obtains free quarters in an almshouse, and who is supposed to be bound in gratitude to pray for his benefactors. Similarly, *bedehouse*, which originally meant a place of prayer or an oratory, came at a later date to be used of any charitable institution like an almshouse. It has now practically disappeared from literary English, but survives provincially and in a number of Welsh place-names in the form *betws*, e. g. *Betws y Coed*. Finally, *bede-roll*, as its etymology suggests, meant the roll of those to be prayed for, and in some sense corresponded to the diptychs of the early Church. The word is of tolerably frequent occurrence in connexion with the early English guilds. In these associations a list was invariably kept of departed members who had a claim on their prayers. This was the *bede-roll*.

For beads in the sense of rosary, see **ROSARY**.

HERBERT THURSTON.

**Bede, THE VENERABLE**, historian and Doctor of the Church, b. 672 or 673; d. 735. In the last chapter of his great work on the "Ecclesiastical History of the English People" Bede has told us something of his own life, and it is, practically speaking, all that we know. His words, written in 731, when death was not far off, not only show a simplicity and piety characteristic of the man, but they throw a light upon the composition of the work through which he is best remembered by the world at large.

"Thus much", he says, "concerning the ecclesiastical history of Britain, and especially of the race of the English, I, Bæda, a servant of Christ and priest of the monastery of the blessed apostles St. Peter and St. Paul, which is at Wearmouth and at Jarrow (in Northumberland), have with the Lord's help composed so far as I could gather it either from ancient documents or from the traditions of the elders, or from my own knowledge. I was born in the territory of the said monastery, and at the age of seven I was, by the care of my relations, given to the most reverend Abbot Benedict [St. Benedict Biscop], and afterwards to Ceolfrid, to be educated. From that time I have spent the whole of my life within that monastery, devoting all my pains to the study of the Scriptures, and amid the observance of monastic discipline and the daily charge of singing in the Church, it has been ever my delight to learn or teach or write. In my nineteenth year I was admitted to the dia-

conate, in my thirtieth to the priesthood, both by the hands of the most reverend Bishop John [St. John of Beverley], and at the bidding of Abbot Ceolfrid. From the time of my admission to the priesthood to my present fifty-ninth year, I have endeavoured for my own use and that of my brethren, to make brief notes upon the holy Scripture, either out of the works of the venerable Fathers or in conformity with their meaning and interpretation." After this Bede inserts a list or *Indiculus*, of his previous writings and finally concludes his great work with the following words: "And I pray thee, loving Jesus, that as Thou hast graciously given me to drink in with delight the words of Thy knowledge, so Thou wouldst mercifully grant me to attain one day to Thee, the fountain of all wisdom and to appear for ever before Thy face."

It is plain from Bede's letter to Bishop Egbert that the historian occasionally visited his friends for a few days, away from his own monastery of Jarrow, but with such rare exceptions his life seems to have been one peaceful round of study and prayer passed in the midst of his own community. How much he was beloved by them is made manifest by the touch-

PAGE FROM BEDE'S ECCLESIASTICAL HISTORY  
(VIII Century)

ing account of the saint's last sickness and death left us by Cuthbert, one of his disciples. Their studious pursuits were not given up on account of his illness and they read aloud by his bedside, but constantly the reading was interrupted by their tears. "I can with truth declare", writes Cuthbert of his beloved master, "that I never saw with my eyes or heard with my ears anyone return thanks so unceasingly to the living God." Even on the day of his death (the vigil of the Ascension, 735) the saint was still busy dictating a translation of the Gospel of St. John. In the evening the boy Wilbert, who was writing it, said to him: "There is still one sentence, dear master, which is not written down." And when this had been supplied, and the boy had told him it was finished, "Thou hast spoken truth", Bede

answered, 'it is finished. Take my head in thy hands for it much delights me to sit opposite any holy place where I used to pray, that so sitting I may call upon my Father.' And thus upon the floor of his cell singing, 'Glory be to the Father and to the Son and to the Holy Ghost' and the rest, he peacefully breathed his last breath."

The title *Venerabilis* seems to have been associated with the name of Bede within two generations after his death. There is of course no early authority for the legend repeated by Fuller of the "dunce monk" who in composing an epitaph on Bede was at a loss to complete the line: *Hac sunt in fossa Bedæ . . . ossa* and who next morning found that the angels had filled the gap with the word *venerabilis*. The title is used by Alcuin, Amalarius, and seemingly Paul the Deacon, and the important Council of Aachen in 835 describes him as *venerabilis et modernis temporibus doctor admirabilis Beda*. This decree was specially referred to in the petition which Cardinal Wiseman and the English bishops addressed to the Holy See in 1859 praying that Bede might be declared a Doctor of the Church. The question had already been debated even before the time of Benedict XIV, but it was only on 13 November, 1899, that Leo XIII decreed that the feast of Venerable Bede with the title of *Doctor Ecclesiæ* should be celebrated throughout the Church each year on 27 May. A local cultus of St. Bede had been maintained at York and in the North of England throughout the Middle Ages, but his feast was not so generally observed in the South, where the Sarum Rite was followed.

Bede's influence both upon English and foreign scholarship was very great, and it would probably have been greater still but for the devastation inflicted upon the northern monasteries by the inroads of the Danes less than a century after his death. In numberless ways, but especially in his moderation, gentleness, and breadth of view, Bede stands out from his contemporaries. In point of scholarship he was undoubtedly the most learned man of his time. A very remarkable trait, noticed by Plummer (I, p. xxiii), is his sense of literary property, an extraordinary thing in that age. He himself scrupulously noted in his writings the passages he had borrowed from others and he even begs the copyists of his works to preserve the references, a recommendation to which they, alas, have paid but little attention. High, however, as was the general level of Bede's culture, he repeatedly makes it clear that all his studies were subordinated to the interpretation of Scripture. In his "De Schematibus" he says in so many words: "Holy Scripture is above all other books not only by its authority because it is Divine, or by its utility because it leads to eternal life, but also by its antiquity and by its literary form" (*positione dicendi*). It is perhaps the highest tribute to Bede's genius that with so uncompromising and evidently sincere a conviction of the inferiority of human learning, he should have acquired so much real culture. Though Latin was to him a still living tongue, and though he does not seem to have consciously looked back to the Augustan Age of Roman Literature as preserving purer models of style than the time of Fortunatus or St. Augustine, still whether through native genius or through contact with the classics, he is remarkable for the relative purity of his language, as also for his lucidity and his sobriety, more especially in matters of historical criticism. In all these respects he presents a marked contrast to St. Aldhelm who approaches more nearly to the Celtic type.

WRITINGS AND EDITIONS.—No adequate edition founded upon a careful collation of manuscripts has ever been published of Bede's works as a whole. The text printed by Giles in 1844 and reproduced in

Migne (XC-XCIV) shows little if any advance on the Basle edition of 1563 or the Cologne edition of 1688. It is of course as an historian that Bede is chiefly remembered. His great work, the "Historia Ecclesiastica Gentis Anglorum", giving an account of Christianity in England from the beginning until his own day, is the foundation of all our knowledge of early British history and a masterpiece eulogized by the scholars of every age. Of this work, together with the "Historia Abbatum", and the "Letter to Egbert", Plummer has produced an edition which may fairly be called final (2 vols., Oxford, 1896). Bede's remarkable industry in collecting materials and his critical use of them have been admirably illustrated in Plummer's Introduction (pp. xliii-xlvii). The "History of the Abbots" (of the twin monasteries of Wearmouth and Jarrow), the "Letter to Egbert", the metrical and prose lives of St. Cuthbert, and the other smaller pieces are also of great value for the light they shed upon the state of Christianity in Northumbria in Bede's own day. The "Ecclesiastical History" was translated into Anglo-Saxon at the instance of King Alfred. It has often been translated since, notably by T. Stapleton who printed it (1565) at Antwerp as a controversial weapon against the Reformation divines in the reign of Elizabeth. The Latin text first appeared in Germany in 1475; it is noteworthy that no edition even of the Latin was printed in England before 1643. Smith's more accurate text saw the light in 1742.

Bede's chronological treatises "De temporibus liber" and "De temporum ratione" also contain summaries of the general history of the world from the Creation to 725 and 703, respectively. These historical portions have been satisfactorily edited by Mommsen in the "Monumenta Germaniæ historica" (4to series, 1898). They may be counted among the earliest specimens of this type of general chronicle and were largely copied and imitated. The topographical work "De locis sanctis" is a description of Jerusalem and the holy places based upon Adamnan and Arculfus. Bede's work was edited in 1898 by Geyer in the "Itinera Hierosolymitana" for the Vienna "Corpus Scriptorum". That Bede compiled a Martyrologium we know from his own statement. But the work attributed to him in extant manuscripts has been so much interpolated and supplemented that his share in it is quite uncertain.

Bede's exegetical writings both in his own idea and in that of his contemporaries stood supreme in importance amongst his works, but the list is long and cannot be fully given here. They included a commentary upon the Pentateuch as a whole as well as on selected portions, and there are also commentaries on the Books of Kings, Esdras, Tobias, the Canticles, etc. In the New Testament he has certainly interpreted St. Mark, St. Luke, the Acts, the Canonical Epistles, and the Apocalypse. But the authenticity of the commentary on St. Matthew printed under his name is more than doubtful. (Plaine in "Revue Anglo-Romaine", 1896, III, 61.) The homilies of Bede take the form of commentaries upon the Gospel. The collection of fifty, divided into two books, which are attributed to him by Giles (and in Migne) are for the most part authentic, but the genuineness of a few is open to suspicion. (Morin in "Revue Bénédictine", IX, 1892, 316.)

Various didactic works are mentioned by Bede in the list which he has left us of his own writings. Most of these are still preserved and there is no reason to doubt that the texts we possess are authentic. The grammatical treatises "De arte metrica" and "De orthographia" have been adequately edited in modern times by Keil in his "Grammatici Latini" (Leipzig, 1880), VII, and the "De Schematibus et Tropis" by Halm in his "Rhetores Latini minores" (Leipzig, 1863). But the larger works "De natura

rerum", "De temporibus", "De temporum ratione", dealing with science as it was then understood and especially with chronology, are only accessible in the unsatisfactory texts of the earlier editors and Giles. Beyond the metrical life of St. Cuthbert and some verses incorporated in the "Ecclesiastical History" we do not possess much poetry that can be assigned to Bede with confidence, but, like other scholars of his age, he certainly wrote a good deal of verse. He himself mentions his "book of hymns" composed in different metres or rhythms. So Alouin says of him: *Plurima versifico cecinit quoque carmina plectro*. It is possible that the shorter of the two metrical calendars printed among his works is genuine. The Penitential ascribed to Bede, though accepted as genuine by Haddan and Stubbs and Wasserschleben, is probably not his (Plummer, I, 157).

Venerable Bede is the earliest witness of pure Gregorian tradition in England. His works "Musica theoretica" and "De arte Metrica" (Migne, XC) are found especially valuable by present-day scholars engaged in the study of the primitive form of the chant.

#### HERBERT THURSTON.

**Bedford**, GUNNING S., medical writer and teacher, b. at Baltimore, Maryland, U. S. A., of a distinguished family in 1806; d. in New York, 5 September, 1870. He was a nephew and namesake of Gunning Bedford, first Attorney-General of Delaware and one of the framers of the Constitution of the United States, who was aide-de-camp to General Washington and was appointed by him U. S. Judge for the District of Delaware. Dr. Bedford graduated in 1825 at Mount St. Mary's College, Emmitsburg, Maryland, and took his degree in medicine from Rutgers College, New York. He spent two years in foreign study and in 1833, when only twenty-six years of age, became professor of obstetrics in Charleston Medical College. From here he accepted a professorship in the Albany Medical College. He went to New York in 1836 and four years later founded the University Medical College, which became a great success. In connexion with it he established an obstetrical clinic for those too poor to pay a doctor's fee. This was the first of its kind in the country and was of great service to the poor and to medical science. Dr. Bedford continued to teach until his health broke down in 1862 and he died in 1870. His funeral panegyric was preached by Archbishop McCloskey who had been his fellow student at Mount St. Mary's. Two books written by him, "Diseases of Women" and "Practice of Obstetrics" went through many editions, were translated into French and German, and were adopted as textbooks in American schools.

#### JAMES J. WALSH.

**Bedford**, HENRY, writer, educator, b. in London 1 October, 1816; d. in Dublin, Ireland, 21 May, 1903. With the intention of becoming a clergyman of the Church of England, to which his family belonged, he entered Cambridge University in 1835 and after a distinguished course received the degree of M. A.

He made his theological studies and after ordination was given charge of a church in London where he became noted in High Church circles as a popular writer and preacher. A very advanced "Puseyite" sermon during the Tractarian excitement brought him in conflict with the Bishop of London and led to his conversion to Catholicism in 1851. He wished to take Holy orders, but a natural defect in his right hand was a canonical obstacle to ordination. In 1852 he accepted an invitation to join the staff of All Hallows Missionary College, Drumcondra, near Dublin, Ireland, and there lived a long life of active, effective work as professor of natural science, treasurer, and one of the college directors. He also did much in furtherance of the Catholic movement then at its height in England and was a constant contributor to Catholic periodicals and a public lecturer on Catholic topics. His writings on a variety of subjects, embracing travels, archæology, art, science, music and the general treatment of past periods of English literature were frequent features of "The Month", "The Irish Monthly", and "The Irish Ecclesiastical Record". Some of them were later reprinted for private circulation in pamphlet form, notably his "Vacation Rambles", which were issued in a series (1874-75-76-78-79) subsequent to their appearance in "The Month".

#### THOMAS F. MEEHAN.

**Bedingfeld**, FRANCES (alias LONG) superioress of the English Institute of Mary, b. 1616 of a gentle family of Norfolk, England; d. at Munich, Germany, 1704. She and her eleven sisters entered religious life. Sent abroad to finish her education, she entered the English Institute of Mary at Munich and was professed in 1633. This society, founded at St. Omer in 1603, had been transferred in 1629 to Liège and then to Munich. Frances's sister Winefred, the first superioress, died 26th December, 1666. In 1669, Frances, who had become head of the Munich house, was induced by Catherine of Braganza, wife of Charles II, to establish a house in London. With a group of the English members she set up a school for young women, first at St. Martin's Lane, then at Hammersmith. In England, she wore a secular garb, and was known as Mrs. Long. Summoned before a magistrate, she was liberated through family influence, but warned against harbouring priests or instructing youth. Though disregarding this injunction, she was not again molested. In 1677, with the aid of Sir Thomas Gascoigne, she established a community in the north, in a house on the site of the present convent, outside Micklegate Bar, York. From 1677 to 1686 she divided her time between her two English communities, but after 1686, having transferred the care of the Hammersmith house to Mrs. Cicely Cornwallis, she remained at York. In her seventy-eighth year, after her house had been repeatedly searched and threatened with destruction, she, with her niece, Mother Dorothy Paston Bedingfeld, was summoned before the Mayor of York and committed to Ousebridge Gaol. Released soon afterwards, she was again attacked, and in 1695 her house barely escaped destruction. In 1699, resigning in favour of her niece, Mother Bedingfeld returned to Munich and died there, one year after the rule of her institute had been approved by Clement XI.

**Bedingfeld**, SIR HENRY, Knight, b. 1509; d. 1583. He was the grandson of Sir Edmund Bedingfeld who had served in the Wars of the Roses, and to whom were granted by Edward IV for his faithful service letters patent authorizing him "to build towers.

walls, and such other fortifications as he pleased in his manors of Oxburgh, together with a market there weekly and a court of pye-powder". Sir Henry was mainly instrumental, together with Sir Henry Jerningham, in placing Mary Tudor on the throne. He proclaimed her at Norwich, and for his loyalty received an annual pension of £100 out of the forfeited estates of Sir Thomas Wyatt. Ultimately he became Lieutenant of the Tower of London and Captain of the Yeomen of the Guard. As "jailer" of the Princess Elizabeth, who was suspected of complicity in Wyatt's rebellion, he has been persistently misrepresented by Foxe and others, but the whole history of his custodianship of Elizabeth is contained in a series of letters addressed to the Queen and the Privy Council, and in their replies. This correspondence, which has been published by the Norfolk and Norwich Archaeological Society, completely exonerates Sir Henry from either cruelty or want of courtesy in his treatment of the royal captive. On Elizabeth's accession he retired to Oxburgh and was called upon in a letter, in which the Queen addressed him as "trusty and well-beloved", to furnish a horse and man armed, as his contribution to the defence of the country against an expected invasion of the French.

When, however, the penal laws against Catholics were enforced with extreme severity, Sir Henry Bedingfield was not spared. He was required to pay heavy monthly fines for non-attendance at the parish church, while his house was searched for priests and church-furniture, and his servants dismissed for refusing to conform to the new state religion. Together with his fellow-Catholics, he was a prisoner within five miles of his own house and might pass that boundary only by a written authorization of the Privy Council. He was buried in the Bedingfield chantry at Oxburgh. He married Katharine, daughter of Sir Roger Townshend, ancestor of the present Marquess Townshend, by whom he had numerous issue.

J. M. STONE, —

**Bedingfield, THOMAS.** See DOWNES, THOMAS.

**Bedini, CAJETAN**, Italian Cardinal and diplomat, b. at Sinigaglia, Italy, 15 May, 1806; d. at Viterbo, 6 Sept., 1864. He was appointed in 1849, by Pope Pius IX, Commissary Extraordinary at Bologna, one of the four Papal Provinces then recently in revolt and in which the Government of the Holy See was being maintained with the aid of the military power of Austria. He retired from this office in 1852 and after serving in various diplomatic posts was promoted to be titular Archbishop of Thebes. In 1853, upon his appointment as Apostolic Nuncio to the Court of Brazil, he was commissioned by the Holy Father to visit the United States to examine into the state of ecclesiastical affairs and, incidentally, to call on the President and present to him the compliments and good wishes of the pope. Arriving in New York in June, 1853, he at once visited Washington and called upon President Franklin Pierce, by whom he was received with great courtesy and to whom he presented an autograph letter of the Holy Father. This visit, purely one of courtesy, was afterwards distorted into an attempt to gain official recognition of himself as the diplomatic representative of the pope in the United States. His arrival in this country was the signal for a series of anti-Catholic demonstrations against him lasting throughout his tour. In New York the colony of Italian revolutionists who had fled to this country, urged on by the apostate priest Gavazzi, and aided by the Know-nothing element, held a mass meeting and denounced the nuncio. A plot to assassinate him was formed, but was defeated

through a warning given by one of the conspirators, Sassi, who himself was stabbed to death by one of his associates in New York City a day or two after.

Monsignor Bedini travelled extensively throughout the country and participated in many public religious ceremonies. In many of the larger cities, notably Pittsburgh, Louisville, and Cincinnati, his visit excited hostile comment and demonstration, chiefly by the adherents of Know-nothingism, which was then rampant. In Cincinnati, particularly, this element, co-operating with some German infidel revolutionary exiles, plotted to do violence to him and to attack the cathedral where he was to officiate, but this design was frustrated by the vigilance of the city authorities, not, however, without bloodshed and rioting in which a number of the rioters lost their lives. He remained in this country until January, 1854, when he returned to Rome. So apprehensive of personal violence had he become, that when about to depart from New York, he left the city secretly and journeyed to Staten Island, five miles distant, where a tug carried him to the outgoing steamer. Later, he was elevated to the rank of cardinal and received the appointment to the See of Viterbo and Toscanella.

PETER CONDON.

**Bedlam** (an English abbreviation of BETHLEHEM), a London hospital originally intended for the poor suffering from any ailment and for such as might have no other lodging, hence its name, *Bethlehem*, in Hebrew, the "house of bread." During the fourteenth century it began to be used partly as an asylum for the insane, for there is a report of a Royal Commission, in 1405, as to the state of lunatics confined there. The word *Bethlehem* became shortened to *Bedlam* in popular speech, and the confinement of lunatics there gave rise to the use of this word to mean a house of confusion. Bedlam was founded in 1247 as a priory in Bishopsgate Street, for the order of St. Mary of Bethlehem, by Simon Fitz Mary, an Alderman and Sheriff of London. This site is now occupied by the Liverpool Street railway station. In the next century it is mentioned as a hospital in a license granted (1330) to collect alms in England, Ireland, and Wales. In 1375 Bedlam became a royal hospital, taken by the crown on the pretext that it was an alien priory. It seems afterwards to have reverted to the city. At the beginning of the sixteenth century the word *Bedlam* was used by Tyndale to mean a madman, so that it would seem as though the hospital were now used as a lunatic asylum exclusively. In January, 1547, King Henry VIII formally granted St. Bartholomew's hospital and Bedlam, or Bethlehem, to the city of London, on condition that the city spend a certain amount on new buildings in connexion with St. Bartholomew's. In 1674, the old premises having become untenable, it was decided to build another hospital, and this was erected in what is now Finsbury Circus. This came to be known as old Bedlam, after the erection of a new building in St. George's Fields, which was opened August, 1815, on the site of the notorious tavern called the Dog and the Duck.

The attitude of successive generations of Englishmen towards the insane can be traced interestingly at Bedlam. Originally, it was founded and kept by religious. Every effort seems to have been made to bring patients to such a state of mental health as would enable them to leave the asylum. An old English word, "a Bedlam" signifies one discharged and licensed to beg. Such persons wore a tin plate on their arm as a badge and were known as Bedlamers, Bedlamites, or Bedlam Beggars. Whenever outside inspection was not regularly maintained,

abuses crept into the management of Bedlam, and in every century there were several commissions of investigation. Evelyn in his *Diary*, 21 April, 1656, notes that he saw several poor creatures in Bedlam in chains. In the next century it became the custom for the idle classes to visit Bedlam and observe the antics of the insane patients as a novel form of amusement. This was done even by the nobility and their friends. One penny was charged for admission into the hospital, and there is a tradition that an annual income of four hundred pounds was thus realized. This would mean that nearly 100,000 persons visited the hospital in the course of a year. Hogarth's famous picture represents two fashionable ladies visiting the hospital as a show place, while his "Rake", at the end of the "Progress", is being fettered by a keeper. After an investigation in 1851, the hospital came under regular government inspection and has since been noted for its model care of the insane. It accommodates about three hundred, with over sixty attendants. Its convalescent home at Witely is an important feature. The management is so good that each year more than one-half of the patients are returned as cured.

JAMES J. WALSH.

**Beelen**, IAN THEODOR, exegete and Orientalist, b. at Amsterdam, 12 January, 1807; d. at Louvain, 31 March, 1884. After a brilliant course of studies at Rome, crowned by the Doctorate of Theology, he was in 1836 appointed Professor of Sacred Scripture and Oriental languages in the recently reorganized Catholic University of Louvain. This position he held till 1876, when he resigned his place to his pupil, Prof. T. J. Lamy. He was the author of the following Biblical works, among which his commentary on the Epistle to the Romans is especially esteemed: "Disseratio theologica quæ sententiam . . . esse S. Scripturæ multiplicem interdum sensum litteralem, nullo fundamento satis firmo niti demonstrare conatur" (Louvain, 1845); "Interpretatio ep. S. Pauli ad Philip." (ib., 1849; 2nd ed., ib., 1852, entitled: *Commentarius in ep. S. Pauli ad Philip.*); "Commentarius in Acta Apost.", with Greek and Latin text (2 vols., ib., 1850-55; 2nd ed., without Greek and Latin texts, ib., 1864); "Commentarius in ep. S. Pauli ad Rom." (ib., 1854); "Grammatica græcitat N. T." (ib., 1857); and in Dutch, "Rules for a new Translation of the N. T." (Louvain, 1858); a translation of the N. T. made in accordance with these rules (3 vols., ib., 1859-69); "The Epistles and Gospels of the Ecclesiastical Year", with annotations (ib., 1870); translation of the Psalms, with annotations (2 vols., ib., 1877-78); translation of Proverbs and of Ecclesiasticus (ib., 1879). He also published two works in the field of Oriental scholarship: "Chrestomathia rabbinica et chaldaica (3 vols., Louvain, 1841-43); and "Clementis Rom. epistolæ binæ de Virginitate, syriace" (ib., 1856), in which he defends the genuineness of these two letters. Beelen also deserves the credit of reviving Oriental studies in Belgium, and of introducing into that country Oriental printing by means of a complete font of Hebrew, Syriac, Arabic, and Ethiopic type, which he purchased. In recognition of his merits as a scholar he was made domestic prelate of the pope, consultor of the Congregation of the Index, honorary canon of Liège, and Knight of the Order of Leopold.

HURTER, *Nomenclator*, III, 1290; REY in VIG., *Dict. de la Bible*; *The Tablet* (London, 1884), I, XII, 641.

F. BECHTEL.

**Beelphegor** (בְּעֵל פִּגְוֹר, *Beelphegor*), or **Baalpeor**, was the *baal* of Mt. Phogor, or Peor, a mountain of Moab. The exact idea of *baal* seems to be "the possessor", the one who holds the real domination

(Lagrange, *Religions Sémitiques*, 83, 84); so Beelphegor was the Moabite divinity who ruled over Phogor. Some identify him with Chamos (Chemosh), the national god of Moab, but this is not at all certain, as many localities had their local deities, apparently distinct to the popular mind. To the *baal* was generally ascribed the fertility of the soil and the increase of flocks; he was worshipped by offerings of the products he gave and often by unchaste practices done in his honour at his sanctuary. One of the great works of the prophets was to stamp out this immoral cult on the soil of Palestine.

Israel came in contact with Beelphegor at Settim, on the plains of Moab, their last station before entering the land of Canaan. Here many men of Israel, as a sequel to their immoral intercourse with the women of Moab, took part in the sacrificial banquets in honour of Beelphegor, for which crimes they were punished by death (Num., xxv). It is commonly held, in view of the occurrences at Settim and of the general nature of baal-worship, that immoral rites were part of the worship of this god; while the text does not make this certain, the large number of persons involved and the fact that "the affair of Phogor" is ascribed to the instigation of the seer Balaam, seem to indicate that it had relation to the cult of Beelphegor (xxxi, 16). Marucchi believes the survival of the cult till the middle of the second century is attested by an inscription dedicated by some soldiers from Arabia (?) to Jupiter Beellepharus, whom he identifies with Beelphegor. The proof is slight, nothing more than the resemblance in name. The terrible chastisement inflicted on Israel for the sin at Settim is mentioned several times in the Bible, and St. Paul (I Cor., x, 8) uses it to point a moral.

GRAY, *Comm. on Numbers* (New York, 1903); MARUCCHI in VIG., *Dict. de la Bible* (Paris, 1894); LAGRANGE, *Religions Sémitiques* (Paris, 1905), 83 sqq.; SMITH, *Religion of the Semites* (London, 1894); Article *Baal* in *Encyc. Biblica* and in HARTINGS, *Dict. of the Bible*.

JOHN F. FENLON.

**Beelzebub** (בְּעֵל זְבֻב, or **Baalzebub**, (1) the Philistine god of Accaron (Ekron), scarcely 25 miles west of Jerusalem, whose oracle King Ochozias (Ahaziah) attempted to consult in his last illness, IV (II) Kings, i, 2. It is only as an oracle that the god is known to us; no other mention of him occurs in the Old Testament. The name is commonly translated "the lord of the flies", and the god is supposed to be so called either because as a sun god he brings the flies, though the Ba'al was probably not a sun god, or more likely because he is invoked to drive away the flies from the sacrifice, like the Zeus Apomyios, who drove them from Olympia, or the hero Myiagros in Arcadia. Halévy and Winckler interpret the name, according to the analogy of very many names compounded with *baal*, as "the lord of Zebub", supposed to be a locality in Accaron; there is no proof, however, for the existence of such a locality, and besides Beelzebub is called the god of Accaron. Cheyne thinks the original form of the name is Ba'al Zebul, "the lord of the mansion", or high house, which would refer to the god's temple or to the mountain on which the gods dwelt, or rather, in his opinion, to both. But the textual evidence, as Lagrange objects, is entirely in favour of *Zebub*. Cheyne, admitting this, holds that the title "lord of the high house", which would suggest to the writer of Kings a reference to Jehovah's temple or to His heavenly dwelling place, would be considered offensive, and would induce him, in contempt, to change it to *Ba'al Zebub*, the lord of flies. The tradition of the true name, lingering on, accounts for its presence in the Gospels (Zeboul). This conjecture, which has a certain plausibility, leaves unexplained why the contempt should lead to the particular form, *Baal Zebub*, a name without parallel in Semitic religions. It seems more reasonable, then, to regard

*Baalzebub* as the original form and to interpret it as "lord of the flies".

(2) In the New Testament, there is question of an evil spirit, *Beelzeboul*. On account of the great similarity of names, he is usually identified with *Baalzebub*, *beel* being the Aramaic form of *baal*, and the change from the final *b* to *l* such as might easily occur. But there were numberless names for demons at that time, and this one may have been newly invented, having no relation to the other; the fact that one element of the compound is Aramaic and the other Hebrew would not disprove this. The meaning of the term is "lord of the mansion" or dwelling, and it would be supposed by the Jews of this time to refer to the nether regions, and so be an appropriate name for the prince of that realm. *Beelzeboul* (*Beelzebub*) is used, then, merely as another name for Satan (Matt., xii, 24-29; Luke, xi, 15-22), by whom the enemies of Our Lord accused Him of being possessed and by whom they claimed He cast out demons. Their charge seems to have been that the good Our Lord did was wrought by the Evil One in order to deceive, which Jesus showed to be absurd and a wilful blindness. If the New Testament name be considered a transformation of the old, the question arises as to how the god of the little town of Accaron came to give a name to the Prince of Darkness. The mission on which Ochozias sent his followers seems to show that *Beelzebub* already had a wide renown in Palestine. The narrative (IV Kings, i) was a very striking one, well known to the contemporaries of Our Lord (Luke, ix, 54); from it might easily be derived the idea of *Beelzebub* as the special adversary of God, and the change in the final letter of the name which took place (*ex hypothesi*) would lead the Jews to regard it as designating the prince of the lower regions. With him was naturally connected the idea of demoniacal possession; and there is no need of Cheyne's conjecture that *Beelzebub*'s "name naturally rose to Jewish lips when demoniacal possession was spoken of, because of the demoniacal origin assumed for heathen oracles". How can we account for the idea of *Beelzeboul* exorcizing the demons? On the assumption that he is to be identified with the Philistine god, Lagrange thinks the idea is derived from the special prerogative of *Beelzebub* as fly-chaser (*chasse-mouche*). In the Babylonian epic of the deluge, "the gods gather over the sacrificer like flies" (see Driver, *Genesis*, 105). It was easy for the heathen Semites, according to Lagrange, to come to conceive of the flies troubling the sacrifice as images of spirits hovering around with no right to be there; and so *Beelzebub*, the god who drove away the flies, became the prince of demons in whose name the devils were exorcized from the bodies of the possessed. Others think the idea naturally arose that the lord of the demons had power to command them to leave the possessed. It seems much more reasonable, however, to regard this faculty of *Beelzebub* not as a tradition, but simply as a charge invented by Our Lord's enemies to throw discredit on His exorcisms. His other miracles were probably accounted for by ascribing them to *Beelzebub* and so these likewise. Allen (*Comm. on Matt.*, 107, 134) has endeavoured to simplify the problem by the use of higher criticism. According to him, the rôle of *Beelzebub* as arch-demon and exorcist was not a Palestinian belief; in Mark's Gospel, *Beelzebub* is simply the demon said to possess Our Lord. Matthew and Luke by mistake fuse together two independent clauses of Mark, iii, 22 and identify *Beelzebub* with Satan, to whom the faculty of exorcism is ascribed. The fusion, however, seems to be justified by the next verse of Mark, which is more naturally interpreted in the sense of Matthew and Luke, though Allen's interpretation may be admitted as possible. *Beelzebub* does not appear

in the Jewish literature of the period; there we usually find *Beliar* (*Belial*) as an alternative name for Satan. LAGRANGE, *Religions Sémitiques* (Paris, 1905); CHEYNE in *Encyc. Bibl.* (New York, 1899), s. v. *Baalzebub*, *Beelzeboul*; ALLEN, *Commentary on St. Matthew* (New York, 1907); LESBETH in *Vig., Dict. de la Bible* (Paris, 1895), s. v. *Beelzebub*; HOLTSMANN, *Life of Jesus* (London, 1904).

JOHN F. FENLON.

**Beesley** (or **Bisley**), GEORGE, VENERABLE, martyr, b. at The Hill in Goosnargh parish, Lancaster, England, of an ancient Catholic family; d. 2 July, 1591. He was ordained priest at the English College at Reims, 14 March, 1587, and left for England, 2 November, 1588. A man of singular courage, young, strong, and robust, he was captured by Topcliffe late in 1590, and was by his tortures reduced to a skeleton. He endured all with invincible courage and could not be induced to betray his fellow Catholics. He suffered by the statute of 27 Eliz., merely for being a priest, in Fleet Street, London. His last words were "Absit mihi gloriari nisi in Cruce Domini Nostri Jesu Christi" and, after a pause, "Good people, I beseech God to send all felicity".

**Begin**, LOUIS NAZAIRE. See QUEBEC, ARCHDIOCESE OF.

**Begnudelli-Basso**, FRANCESCO ANTONIO, a canonist who lived at the end of the seventeenth century; d. at Freising, 9 October, 1713. From 1675 he was Vicar-General of Trent, his native place. In 1679, however, he held a canonry in the Cathedral of Freising, where also he became in 1696 vicar-general of the diocese, and where he died. His "*Bibliotheca juris canonico-civilis practica seu repertorium questionum magis practicarum in utroque foro*" ranked him among the best canonists of his day. His canonical acumen is especially noteworthy, while he speaks in the clearest terms of papal infallibility. The work was published in Freising in 1712, four vols. in folio; Geneva, 1747; Modena and Venice, 1758. It has, however, lost its practical usefulness owing to the later editions of Lucius Ferraris's "*Bibliotheca*", which is vastly superior to the work of Begnudelli. KRAUTZWALD in *Kirchenlex.*; WERNZ, *Jus Decretalium* (Rome, 1898), I, no. 324, p. 418; HURTER, *Nomenclator*, II, 867.

ANDREW B. MEEHAN.

**Beguines; Beghards.**—The etymology of the names *Beghard* and *Beguine* can only be conjectured. Most likely they are derived from the old Flemish word *beghen*, in the sense of "to pray", not "to beg", for neither of these communities were at any time mendicant orders; maybe from *Bega*, the patron saint of Nivelles, where, according to a doubtful tradition the first Beguinage was established; maybe, again, from Lambert le Bègue, a priest of Liège who died in 1180, after having expended a fortune in founding in his native town a cloister and church for the widows and orphans of crusaders.

As early as the commencement of the twelfth century there were women in the Netherlands who lived alone, and without taking vows devoted themselves to prayer and good works. At first there were not many of them, but as the century grew older their numbers increased; it was the age of the Crusades, and the land teemed with desolate women—the raw material for a host of neophytes. These solitaires made their homes not in the forest, where the true hermit loves to dwell, but on the fringes of the town, where their work lay, for they served Christ in His poor. About the beginning of the thirteenth century some of them grouped their cabins together, and the community thus formed was the first Beguinage.

The Beguine could hardly be called a nun; she took no vows, could return to the world and wed if she would, and did not renounce her property. If she

was without means she neither asked nor accepted alms, but supported herself by manual labour, or by teaching the children of burghers. During the time of her novitiate she lived with "the Grand Mistress" of her cloister, but afterwards she had her own dwelling, and, if she could afford it, was attended by her own servants. The same aim in life, kindred pursuits, and community of worship were the ties which bound her to her companions. There was no mother-house, nor common rule, nor common general of the order; every community was complete in itself and fixed its own order of living, though later on many adopted the rule of the Third Order of Saint Francis. These communities were no less varied as to the social status of their members; some of them only admitted ladies of high degree; others were exclusively reserved for persons in humble circumstances; others again opened their doors wide to women of every condition, and these were the most densely peopled. Several, like the Great Beguinage of Ghent, numbered their inhabitants by thousands. Such was this semi-monastic institution. Admirably adapted to the spiritual and social needs of the age which produced it, it spread rapidly throughout the land and soon began to exercise a profound influence on the religious life of the people. Each of these institutions was an ardent centre of mysticism, and it was not the monks, who mostly dwelt on the country side, nor even the secular clergy, but the Beguines, the Beghards, and the sons of Saint Francis who moulded the thought of the urban population of the Netherlands. There was a Beguinage at Mechlin as early as 1207, at Brussels in 1245, at Louvain in 1234, at Bruges in 1244, and by the close of the century there was hardly a commune in the Netherlands without its Beguinage, whilst several of the great cities had two or three or even more. Most of these institutions were suppressed during the religious troubles of the fifteenth century or during the stormy years which closed the eighteenth century, but a few convents of Beguines still exist in various parts of Belgium. The most notable are those of Bruges, Mechlin, Louvain, and Ghent, which last numbers nearly a thousand members.

The widespread religious revival of which the Beguinage was the outcome brought forth also about the same time several kindred societies for men. Of these the Beghards were the most widespread and the most important. The Beghards were all of them laymen, and, like the Beguines, they were not bound by vows, the rule of life which they observed was not uniform, and the members of each community were subject only to their own local superiors; but, unlike them, they had no private property; the brethren of each cloister had a common purse, dwelt together under one roof, and ate at the same board. They were for the most part, though not always, men of humble origin—weavers, dyers, fullers, and so forth—and thus they were intimately connected with the city craft-guilds. Indeed, no man could be admitted to the Beghards' convent at Brussels unless he were a member of the Weavers' Company, and this was in all probability not a unique case. The Beghards were often men to whom fortune had not been kind—men who had outlived their friends, or whose family ties had been broken by some untoward event, and who, by reason of failing health or advancing years, or perhaps on account of some accident, were unable to stand alone. If, as a recent writer has it, "the medieval towns of the Netherlands found in the Beguinage a solution of their feminine question", the establishment of these communities afforded them at least a partial solution of another problem which pressed for an answer: the difficult problem of how to deal with the worn-out workman. Albeit the main object of all these institutions was not a temporal but a spiritual one:

they had banded together in the first place to build up the inner man. Nor whilst working out their own salvation were they unmindful of their neighbours in the world, and thanks to their intimate connexion with the craft-guilds, they were able to largely influence the religious life, and to a great extent to mould the religious opinion of the cities and towns of the Netherlands, at all events in the case of the proletariat, during more than two hundred years.

Bearing in mind the wretched and down-trodden class from which the Beghards were generally recruited, and the fact that they were so little trammelled by ecclesiastical control, it is not surprising that the mysticism of some of them presently became a sort of mystical pantheism, or that some of them gradually developed opinions not in harmony with the Catholic Faith, opinions, indeed, if we may trust John Ruysbroek, which seem to have differed little from the religious and political opinions professed by anarchists to-day. The heretical tendencies of the Beghards and Beguines necessitated disciplinary measures, sometimes severe, on the part of ecclesiastical authority. Various restrictions were placed upon them by the Synods of Fritzlar (1259), Mainz (1261), Eichstätt (1282); and they were forbidden as "having no approbation" by the Synod of Béziers (1299). They were condemned by the Council of Vienne (1312), but this sentence was mitigated by John XXII (1321), who permitted the Beguines, as they had mended their ways, to resume their mode of life. The Beghards were more obstinate. During the fourteenth century they were repeatedly condemned by the Holy See, the bishops (notably in Germany), and the Inquisition. It should be noted, on the other hand, that in spite of widespread abuses, men of faith and piety were found among the Beghards. In their behalf Gregory XI (1374-77) and Boniface IX (1394) addressed Bulls to the bishops of Germany and the Netherlands. An echo of the theological errors into which the Beghards fell is found in the doctrine of Quietism.

Nor did the Beghard communities of the Netherlands escape the fate which sooner or later overtakes all human institutions: before the close of the Middle Ages most of them were in full decadence. Not, as so often happens, that their life was crushed out by the weight of gold; though, as time went on, they acquired endowments, they were never rich; they waned with the waning of the cloth trade, and, when that industry died, gradually dwindled away. Their crazy ships were sorely tried by the storm of the fifteen-hundreds; some of them went to the bottom, some weathered its fury, but were so battered that they afterwards sank in still water; a few, somehow or other, managed to keep afloat till the hurricane of the French Revolution at last dashed them to pieces. The highest number of these medieval foundations in Belgium was 94. They were reduced (1734) to 34 and (1856) to 20. Their membership in 1631 was 2,487; in 1828, 1,010; in 1856, about 1,600.

**Behaim, ALBERT VON** (known also as **ALBERTUS BOHEMUS**); b. c. 1180, probably at Böhmeim, in the Diocese of Passau; d. at Passau, 1260; a partisan of the popes in their struggle with the Emperor Frederick II (1215-50). In 1205 he went to Rome, where he was employed at the papal court as an expert in law. In 1237 he went to Germany, and through his efforts a league was formed against Frederick II between Otto of Bavaria, Wenceslaus of Bohemia, and

came to an end in 1253. From that time he lived in Passau, where he had been dean of the chapter since 1246. He laboured with zeal and credit to himself, but not without many conflicts, until his death. He left two diaries, known as the first and second *Misibuch*. Fragments of the first were edited by Osefele, in "Rerum Boicarum Scriptores", vol. I; the second by Höfler in "Bibliothek des litterarischen Vereins" (Stuttgart, 1847).

MARTIN BEHAIM'S GLOBE

Frederick of Austria. When excommunication was pronounced against the emperor in 1239, Behaim was made a permanent delegate and commissioned to make the sentence effective. For that purpose he appealed to the bishops of Germany (1240), and when they proved themselves negligent he excommunicated a number of ecclesiastics and laymen of prominence. At the same time, he worked for the election of a new king. However, his excessive severity had no effect, and he was forced to leave the country. In 1245 he was at the Council of Lyons, where Frederick was again excommunicated, and he worked as before against the emperor. His office of papal delegate

**Behaim, MARTIN** (MARTINUS DE BOHEMIA), a German cartographer and navigator, b. at Nuremberg in 1459; d. at the German hospice of St. Bartholomew in Lisbon, Portugal, 29 July, 1507. Behaim came from a wealthy merchant family which settled in Nuremberg about 1300 and which is still in existence. He received the usual education but,

according to his own statement, had among his teachers the celebrated mathematician and astronomer Regiomontanus. Behaim entered business life at an early age and became an agent at Antwerp. In 1481 or 1482 he went to Lisbon on business. Here his reputation as a pupil of Regiomontanus led to his appointment by King John (João) II as a member of a commission, the "junta dos mathematicos", which was to find some improved method for determining latitude. Behaim furnished them with the so-called Jacob's-staff, or cross-staff, and the astronomical tables necessary for ascertaining the declination of the sun. Having in this way become favourably known, Behaim was offered the opportunity of accompanying Diego Cam (Cão) on a voyage of discovery along the west coast of Africa. In the course of his explorations Cam discovered the mouth of the Congo and went as far as Walfisch Bay. After his return Behaim was made a Knight of the Portuguese Order of Christ in 1486, and married a daughter of Jobst von Hurter, hereditary governor of the islands of Fayal and Pico of the Azores group. In 1492, while he was at Nuremberg, Behaim made the well-known globe, probably with the scientific help of Hartmann Schedel, the Nuremberg humanist.

His influence on the great discoverers of his time was formerly much overestimated; at present it is questioned whether he had any such influence at all. It cannot be proved either that Columbus was stimulated by him or that Magellan (Magalhães) in his search for a southern passage made use of a chart of the world drawn by Behaim, as was once believed. It has even been questioned of late years whether Behaim had any right to call himself a pupil of Regiomontanus or whether he had taken part in the discoveries of Cam. Nevertheless his "apple", the oldest of all existing globes, ensures his lasting fame. The globe is about twenty-one inches in diameter and has no network to mark longitudes and latitudes. It is provided merely with the equator, one meridian, the tropics and the constellations of the zodiac, and is a unique example of miniature painting. There is an unmistakable connexion between Behaim's manner of representing the world and the geographical views of Toscanelli whose chart is usually reconstructed with the aid of Behaim's globe. Unfortunately the reproductions of Behaim's globe, so far made, are not satisfactory. The first copy was published by Doppelmayer in his "Historie von den Nürnberger Mathematicis" (1730) and was reproduced by Nordenskjöld in his "Facsimile Atlas to the Early History of Cartography" (1889). Another was drawn in 1847 for Jomard by Jean Müller who gave Dr. Ghillany a copy which the latter used in his biography of Behaim. This drawing is also to be found in Ruge, "Geschichte des Zeitalters der Entdeckungen" (1881), in Günther's biography of Behaim, and in Kretschmer, "Die Entdeckung Amerikas" (1892).

OTTO HARTIG.

**Beiderlinden, BERNARD.** See POONA, DIOCESE OF.

**Beirut**, in Phœnicia, a titular Latin see, and the residential see of several prelates of Oriental rites. The earliest form was likely *Beeroth* "springs", not

*Beroth* (II Kings, viii, 8) or *Berotha* (Ezech., xlvii, 16), probably situated near Baalbek in Coele-Syria. It is difficult to explain the more usual form, *Berytos*, but it probably comes from *Berāthi*, the Phœnician name of a fish-goddess related to the god of Gebal or Byblos, two towns of the Giblites, a Chanaanite tribe. *Berytos* was the birthplace of Sanchoniathon, an early Phœnician author, and seems to have been unimportant in remote times. It is mentioned by the Greeks before Alexander, but is not spoken of in connexion with the expeditions of this conqueror. After the time of Antiochus IV, Epiphanes (175-164 B. C.), *Berytos* was known as *Laodicea* of Chanaan, a name which it kept until the reign of Alexander II, Zabinas (129-123 B. C.); see J. Rouvier, in "Revue de numismatique" (1896), and "Revue biblique", VII, 272-275. According to Strabo (XVI, ii, 9) it was destroyed by King Tryphon (137-134 B. C.). If this be true, it must have been rebuilt after a short time, for there are records for the complete series of the coins of *Berytos* from 123 to 14 B. C. It is certain that the Romans enlarged and embellished it; that it was garrisoned by two legions, the Leg. V Macedonica and Leg. VIII Augusta, and that in the year 14 B. C. it became a Roman colony with the name *Colonia Julia Augusta Felix Berytus*, so called after Julia, the daughter of Augustus (Mommson, *Res gestæ divi Augusti*, II, 119). The Jewish kings Herod the Great, Herod Agrippa I, and Herod Agrippa II built sumptuous monuments at *Berytos* and gave gladiatorial combats there (Josephus, *Bell. Jud.*, I, xxi, 11; *Antiq.*, XVI, xi, 2; *XVII*, x, 9; *XIX*, vii, 5; *XX*, ix, 4); Titus also, after the siege of Jerusalem, gave gladiatorial games at *Berytos*, in which the combatants were Jews. (Josephus, *Bell. Jud.*, VII, iii, 1.) From that time dates the magnificent aqueduct, the remains of which are yet visible, which carried to the city the waters of the River Magoras, now Nahr Beiruth. About the middle of the third century *Berytos* became the seat of the most renowned law school in the Eastern Roman Empire. Many celebrated jurists were among its teachers (Montreuil, *Hist. du droit byzantin*, I, 264-273, 279-283). This school was spared by Justinian when he closed all similar schools in favour of Constantinople. The town had suffered much from an earthquake in 529, and when taken by the Arabs about 635 it had fallen into decay.

*Berytos* became a Christian see at an early date, and was a suffragan of Tyre in Phœnicia Prima, a province of the Patriarchate of Antioch. In antiquity its most famous bishop was Eusebius, afterwards Bishop of Nicomedia, the courtier-prelate and strong supporter of Arianism in the fourth century. Lequien (II, 815-820) gives a list of thirteen Greek bishops reaching to 1673, rectified and completed by Cyril Charon, a Greek Catholic priest (in *Al-Mashriq*, Beirut, 1 March, 1905). In 450 Beirut obtained from Theodosius II the title of metropolis, with jurisdiction over six sees taken from Tyre; but in 451 the Council of Chalcedon restored these to Tyre, leaving, however, to Beirut its rank of metropolis (Mansi, VII, 85-98). Thus, from 451 Beirut was an exempt metropolis depending directly on the Patriarch of Antioch. The city was captured on 27 April, 1111, by Baldwin I, King of Jerusalem, and with the exception of short intervals was held by the Franks till 1241. At an early date they established there a Latin see subject to Tyre and, with the provinces of Arabia and Phœnicia Prima, erroneously comprised in the Patriarchate of Jerusalem. Lists of its Latin bishops are available (Lequien, III, 1325-27; Gams, 434; Eubel, I, 137; II, 117; *Revue bénédictine*, 1904, 133-34).

Owing to the fertility of the soil and the security of the harbour, Beirut soon became one of the most active commercial cities in the East. The Druse

Ameer Fakhr ed-Din (1595-1634) improved the city and made it better known in Europe. He was a ruler of genius, and succeeded in creating a principality all but independent of the Porte. Beirut was his residence, and the environs his gardens. He planted near the city the beautiful pine wood which is still its finest walk. He had relations with the Venetians and with the Medici at Florence; in 1633 he embraced Catholicism, and in the following year suffered martyrdom for his faith. The fact is undeniable, for the letters of the Capuchin who was the means of his conversion have just been published (de Barenton, O. M. C., "La France catholique en Orient", 158-164). In the course of the seventeenth and eighteenth centuries the Turkish Government succeeded in reducing the power of several native families that had forced themselves upon Beirut; at the present time Turkish authority is supreme. The city was shelled in 1840 by the English and in 1860 occupied by the French after the frightful slaughter of Christians in Syria; since that date it has been steadily thriving. Ships of the heaviest tonnage visit its harbour; railroads connect it with Damascus by way of Lebanon, and with Tripoli; carriage-roads connect it with the inland and seaboard towns. The country is well watered and cultivated, and the view from the city is beautiful. Beirut is the capital of a homonymous vilayet. The population, which is about 150,000, shows a steady increase. There are 40,000 Mussulmans, besides the small garrison; 40,000 Maronites, 35,000 Greeks, 12,000 Catholic or Melchite Greeks, 2,000 Latins, 2,000 Protestants, 2,000 Jews, Druses, and Gregorian Armenians, 1,000 Catholic Syrians and Armenians.

Apart from its interest as a Latin titular bishopric, it may be noted that Beirut is: (1) a Greek metropolitan see with about 70,000 believers and many elementary schools; in the city of Beirut are 5 schools for girls conducted by 23 teachers in the pay of the Russian Government; (2) a metropolitan see for Catholic Greeks or Melchites, who number about 15,000 and have a large college at Beirut; (3) a Maronite see, with 50,000 subjects; 50 churches and chapels, 30 priests, and a seminary and college located in the city; (4) a Syrian Catholic see, with about 1,000 faithful, the residence of the Syrian patriarch having been transferred from Mardin to Beirut. The Latin Vicar-Apostolic of Syria, who is also the Apostolic delegate for Oriental rites, has been stationed since 1890 at Beirut (previously at Aleppo), with about 6,000 under his spiritual rule.

In Beirut are many Maronite and Greek Catholic monasteries of Baladites, Aleppines, and Salvatorians, who unaided would be unable to compete with the Protestant propaganda which has taken Beirut as a centre whence it spreads over the whole of Syria. Since 1866 the German mission has had charge of the Hospital of the Knights of St. John, an orphan asylum, and a school for girls conducted by deaconesses. The Jewish mission of the Church of Scotland since 1864 has conducted two schools for boys and girls. Miss Taylor's "St. George's Institute" has charge of Mussulman or Druse girls. Since 1860 the British Syrian Mission has had a parish, 10 schools, and a normal school for women. Since 1825 the Presbyterian Church of New York has maintained at Beirut a church, a printing-house, its Bible agency, and a school for girls. At a later period it built there the American university, which includes an intermediate college, a medical school, and a theological school for the training of native preachers and clergymen. It also publishes a newspaper and a review; and maintains outside of Beirut 130 primary schools with 109 teachers and 8,000 pupils. In spite of so much effort and expense the Protestant missions have gained in the last 80 years only about 5,000 adherents in all Syria.

The Catholic opposition to their propaganda is supported chiefly by French missionaries. The Capuchins, Franciscans, and Lazarists each have a monastery and a school; the Christian Brothers, schools and a college; the Sisters of Charity, priory schools, a boarding-school, an orphan asylum, and an industrial school for orphan girls; they also have charge of the hospital at the Catholic University. The Sisters of St. Joseph and the Dames de Nazareth have a boarding-school; the Sisters of the Holy Family, a school; the Mariamets, native nuns, their principal house. The most imposing institutions are those of the Jesuits. They maintain and direct outside of Beirut 192 schools for boys and girls, with 294 teachers and 12,000 pupils. There is in the city a faculty of medicine (120 students) founded in 1881 with the help of the French Government; its examinations are conducted before French and Ottoman physicians, and its diplomas are recognized by both France and Turkey. They conduct, moreover, St. Joseph's Catholic University, the title of which was granted by Leo XIII, 25 February, 1881. This university includes: (1) a seminary (60 students) for natives of all rites, which up to 1902 had sent out 228 students, including 3 patriarchs, 15 bishops, 115 priests, and 83 friars; (2) a faculty of philosophy and theology (30 students), which grants the same degrees as the Gregorian University in Rome; (3) a faculty of Oriental languages and sciences, founded in 1902, which teaches the literary and conversational use of Arabic, Hebrew, Syriac, Coptic, and Ethiopic; the comparative grammar of Semitic languages, the history and geography of the Orient; Oriental archaeology; Græco-Roman epigraphy and antiquities; (4) a classical and modern tuition college (400 pupils); (5) 3 primary schools (600 pupils). A printing-house, inaugurated in 1853, is now famous as the foremost Arabic printing-house. Since 1871 the Jesuits have published "Al-Bashir", a weekly Arabic newspaper, and since 1898 a fortnightly Arabic review, "Al-Mashriq", the editors of which took rank at once among the best Orientalists. In 1906 they began a collection of philological papers, "Mélanges de la Faculté orientale de l'Université Saint-Joseph". Finally, they contribute to many scientific periodicals and publish, chiefly in Arabic, works of great value. We may mention here another precious collection: "Documents inédits pour servir à l'histoire du christianisme en Orient", the first volume of which appeared at Paris in 1905. These missionaries are the strongest bulwark of Catholicism in Syria.

S. VAILHÉ.

**Beja** (BEIENSIS), DIOCESE OF, in Portugal, suffragan of Evora. It was created 10 June, 1770, and numbers 175,000 Catholics, with 115 parishes, 120 priests, and 197 churches. It is the capital of the district of Baixo Alemtejo. The city is supposed to be the *Pax Julia*, or *Paca*, of the Romans, and is still surrounded by remains of old Roman walls, which, however, were partly restored during the Middle Ages. Beja was taken from the Moors in 1162 by Afonso Henriques. It stands on the summit of a high hill surrounded by beautiful and fertile valleys under cultivation, as the district is rich in agricultural products, mainly cereals, olive oil, and wine. The best example of mediæval architecture still extant in Portugal is the castle built in Beja by King Dom Diniz. It is a square, massive structure 120 feet high,

from the top of which the whole of the Alemtejo country and the Cintra mountains may be seen. The walls of the castle are covered with hieroglyphics. Beja was in its early days an episcopal city, but at the time of the invasion by the Moors lost its dignity. The Cathedral of Beja is an old temple, though so much modernized as to make it impossible to determine with any degree of certainty its original date. Other famous churches are those of Our Lady of the Conception, St. Iago, or Santiago, and Santa Maria de la Feira, said to have been an old Moorish mosque. The College of St. Sissenando, which belonged to the Jesuits, and was built principally at the expense of Donna Maria Sophia, in 1695, stands in the street where the saint was born. Part of this building is now occupied by the episcopal palace. The city has about 8,000 inhabitants, modern improvements, schools, banks, libraries, etc. It is said to be the richest in Roman remains of all the cities in Portugal, except Evora, which now possesses a large collection of Roman antiquities collected in Beja.

**Bejarano, FERNANDO.** See **MJES.**

**Belasyse, JOHN, BARON BELASYSE**, b. about 1614; d. 1689, a loyal Catholic English nobleman, second son of Thomas first Lord Fauconberg. His mother was Barbara, daughter of Sir Henry Cholmondeley of Roxby, Yorkshire. John Belasyse, who represented Thirsk in both the Short and Long Parliaments, but was "disabled" as a Royalist to sit, played a conspicuous part in the civil war, commanding a "Tertia" on the Royalist side. He raised six regiments of horse and foot at his own expense, took part in the battles of Edgehill, Newbury, and Naseby, as well as the sieges of Reading and Bristol, and was subsequently made Lieutenant-General of the King's forces in the North of England and Governor of York. He was wounded several times and in January, 1645, was raised to the peerage by the King at Oxford under the title of Baron Belasyse of Worlaby, Lincolnshire. During the Commonwealth Lord Belasyse acted as a sort of Royalist agent in England and was in frequent communication with Charles II and his supporters in the Netherlands. After the Restoration he was made Lord-Lieutenant of the East Riding of Yorkshire (1661-73) and Governor of Hull, while from 1664 to 1666 he held the post of Captain-General of the forces in Africa and Governor of Tangier. Somewhat later, however, upon the passing of the Test Act (1673) he found himself as a Catholic unable to take the necessary oath and resigned all his appointments. At the time of the Oates plot, Belasyse, along with four other Catholic peers, the Lords Arundell of Wardour, Stafford, Powys, and Petre, was denounced as a conspirator and formally impeached in Parliament. Belasyse in particular was said to have been designated Commander-in-Chief of the Popish army, but Charles II, according to Von Ranke, ridiculed the idea on the ground that the man could then hardly stand on his feet with gout. Nevertheless, Lord Belasyse lived on for another ten years. The impeached Catholic peers, though they endured a long imprisonment in the Tower, were never brought to trial, and at the accession of James II Belasyse was again received into high favour. His appointment in 1687 as First Lord Commissioner of the Treasury was a step which roused strong religious feeling against James's government. Lord Belasyse died in 1689, the year of the accession of William of Orange. He was three times married, and left five children, but the title became extinct upon the death of his grandson Henry, third Baron Belasyse of Worlaby.

HERBERT THURSTON.

**Belchiam, THOMAS, VENERABLE**, a Franciscan martyr in the reign of Henry VIII, date of birth uncertain; d. 3 August, 1537. He boldly opposed the king's first divorce, and denounced the tyrant as a heretic. He wrote a book addressed to his brethren, beginning with the text: "They that wear soft clothing are in kings' houses", in which he rebuked the faithless bishops, who were afraid to tell the king the truth. The book seems to be lost, but one copy got into Henry's hands, and he is said to have been moved to tears by reading it, though he soon repented of this weakness. Belchiam and some thirty of the Observant Franciscans were thrown into prison, where they perished of hunger.

BEDE CAMM.

**Belem do Pará, ARCHDIOCESE** of, in South America, formerly (after 4 March, 1719) a suffragan diocese of Bahia (San Salvador), but raised to metropolitan rank 3 May, 1906. The city of Belem is the capital of the Brazilian State of Pará, and is situated on the Bay of Guajara, in the richest rubber and coffee section of the Republic. Santa Maria de Nazareth do Pará, to give the city its full name, was founded in 1615, but has reached its present importance as one of the largest shipping ports of northern Brazil only during the last twenty years. Not only is it the most northerly port of any importance in South America, and as such the nearest to the great shipping centres of North America and Europe, but it is also the great outlet for the natural products of the State of Pará. It has a population of 100,000, an export trade of about \$25,000,000, and an import trade of about \$12,000,000 annually. The mean temperature is about 80° Fahrenheit.

Among the churches of this cathedral city is that of Santa Maria de Nazareth in the pretty suburb of Nazareth. The old convent and chapel of the Carmelite Order have been converted into a seminary, while the old Jesuit College is now occupied by the episcopal palace and another seminary. The city has all modern improvements, and what are considered the best museum and botanical gardens in Brazil. The Amparo Orphan Asylum is ranked among the leading charitable institutions of the State and the city.

In 1903 the *Praelatura Nullius* of Santarem was made from the Diocese of Belem; and again, in 1904, a new delimitation of the same quasi-episcopal territory took place. The Catholic population of the Archdiocese of Belem is now about 480,000. There are about 500 Protestants. In this vast territory, which before the above-mentioned division included 1,176,100 square miles, the parishes are 77 in number, with 29 filial churches. There are 47 secular, and 13 religious, priests, and 21 Brothers.

FRANCISCO J. YANES.

**Belfast.** See **DOWN and CONNOR.**

**Belfry.**—The upper part of the tower or steeple of a church, for the reception of the bells; or a detached tower containing bells, as the campanile of the Italians. The term is sometimes applied to the timber frame by which the bells are supported; also to the room or loft in the tower of a church, from which the bells are rung. Originally it denoted a tower in which sentinels were placed to ring bells.

and thus give notice of the approach of the enemy, or a tower used in besieging a fortified place; it was of wood and movable. In England the bell-tower usually forms a part of the church, but it is sometimes detached from it, as at Evesham, Worcestershire, and Berkeley, Gloucestershire; Chichester cathedral, Sussex, etc. At Pembridge, in Herefordshire, there is a detached belfry built entirely of wood, the frame in which the bells are hung arising from the ground, with merely a casing of boards.

In Belgium, one of the earliest architectural expressions of the newly acquired independence (12th century) was the erection of a belfry. The right of possessing a bell was one of the first privileges in all old charters, not only as a symbol of power, but as a means of calling the community together. The tower, too, in which the bell was hung was a symbol of power in the Middle Ages; the first care of every enfranchised community was to erect a "tower of pride" proportionate to its importance. The tower was generally the record-office of the city. All these uses have passed away, and most of the belfries have either fallen into neglect or been appropriated to other purposes. Of those remaining the oldest seems to be that of Tournay, a fine tower, though it is a good deal altered and its effect destroyed by modern additions. The belfry at Ghent was commenced in 1183, but the stone-work was only completed in 1337. In 1376 a wooden spire was placed upon it, making the height 237 feet. This spire was recently taken down in order to complete the tower according to the original design, which, like that of most of the unfinished buildings of Belgium, has been carefully preserved. When finished it will be about 300 feet in height, and one of the finest belfries in the country.

THOMAS H. POOLE.

**Belgium.**—I. THE NAPOLEONIC ERA.—The victory of Fleurus, gained by the French army over the Austrian forces, 26 June, 1794, gave to revolutionary France all the territories which constitute Belgium of to-day: the Austrian Netherlands, the ecclesiastical principality of Liège, the little monastic principality of Stavelot-Malmedy, and the Duchy of Bouillon. The French, who professed to have entered the country to deliver the Belgians from the yoke of tyranny and to liberate them, in reality gave themselves up to such pillaging and extortion that, as a Brussels magistrate said, they left the inhabitants nothing but their eyes to weep with. After this, in alleged compliance with the express wish of the Belgians, who as a matter of fact had not been consulted, a decree of the Convention, dated 1 October, 1795, proclaimed the annexation of the Belgian provinces to France.

At the beginning of the French rule, which was to last twenty years (1794-1814), religious conditions were not identical in the annexed countries. Religion was deeply rooted in what had formerly been the Austrian Netherlands. They had revolted in 1789 against the reforms of Joseph II, which were inspired by the spirit of sophistry. Jansenism, Febronianism, and Josephinism had gained but few partisans there; the University of Louvain was a bulwark of Catholic orthodoxy; even the Vonckist party, which in 1789 had been clamouring for political reforms, showed great respect for religion and had taken as its motto *Pro aris et focis*. On the other hand, in the ancient principality of Liège, which, since the fourteenth century had shown the deepest sympathy with France, public sentiment was gallophile, revolutionary, and even somewhat Voltairean; the predominant desire was to throw off the yoke of

the priests, and the principality had literally cast itself into the arms of France through hatred of the theocracy. But the French Government soon caused these local differences to be lost sight of in the common hatred of the foreign oppressor.

The Directory began by enforcing, one after another, the French revolutionary laws concerning monastic orders and public worship in Belgium. Religious houses, except those devoted to teaching or to the care of the sick, were suppressed; it was forbidden to wear an ecclesiastical garb; the clergy were forced to publish a declaration recognizing the people of France as the sovereign authority, and promising submission and obedience to the laws of the Republic; the communes were forbidden to contribute to the expenses of public worship and every external symbol of religion was prohibited. The Belgians stood firm, and the elections of the fifth year having shown an undeniable reaction of public opinion against the revolutionary spirit, the clergy appealed to the Five Hundred (*Cinq Cents*) to demand a suspension of the declaration until a papal decision should be received settling the question of its licitness. In the meanwhile, the priests who had not made the declaration continued to exercise their priestly functions in the Belgian provinces, and the tribunal of La Dyle acquitted those who were brought before it. At this juncture, Camille Jordan made a favourable report to the *Cinq Cents* on the clergy's request, and thus the Belgians had the honour of changing the current of French legislation for the better.

The *coup d'état* of the fifth Fructidor, however, carried out by the revolutionary members of the Directory, destroyed all hope. The victorious conspirators dismissed many Belgians who had been elected, and the elections of the sixth year, conducted under the violent pressure of republican deputies, gave the Government the wished-for results. Then persecution began again. The observance of the *decadi*, or the last day of the republican decade (week of ten days), was made obligatory and the Sunday rest was forbidden; for the second time, the wearing of any ecclesiastical garb was prohibited; in the suppression of religious orders no exception was made for nursing and teaching orders; seminaries and secular chapters were likewise abolished. The University of Louvain was closed on the ground of not having "the kind of public instruction conformable to Republican principles". As if the "declaration" had not sufficiently overtaxed consciences, priests were compelled to take an oath of hatred for royalty. On the refusal of the great majority, they were banished *en masse* and a decree issued, closing all churches served by recalcitrant priests. The officials of many communes ignored this order, and in more than one respect, it became a source of trouble. The interdicted priests continued to exercise their functions in the woods, or in private houses which afforded them places of retreat; in many places the faithful, deprived of the clergy, assembled in churches or in barns, to celebrate "blind Masses", as they were called, viz. Masses without consecration, or any services at the altar. The French deputies daily devised new methods of persecution in revenge for the opposition of public opinion, all the more unconquerable by reason of its silence and its tranquillity.

Things did not rest here. The spark that started the conflagration was the enforcing (1798) in the Belgian provinces of the French conscription laws requiring the enlistment of young men in the armies of the Republic. Rather than shed their blood for masters whom they hated, they rose in revolt, first in Waesland and in Campine, then in Flanders and in German Luxemburg. The Walloon provinces took part in the movement, but with much less energy. This was "the peasants' war" called in Luxemburg, "the war of the cudgels" (*Kluppelkrieg*). There was

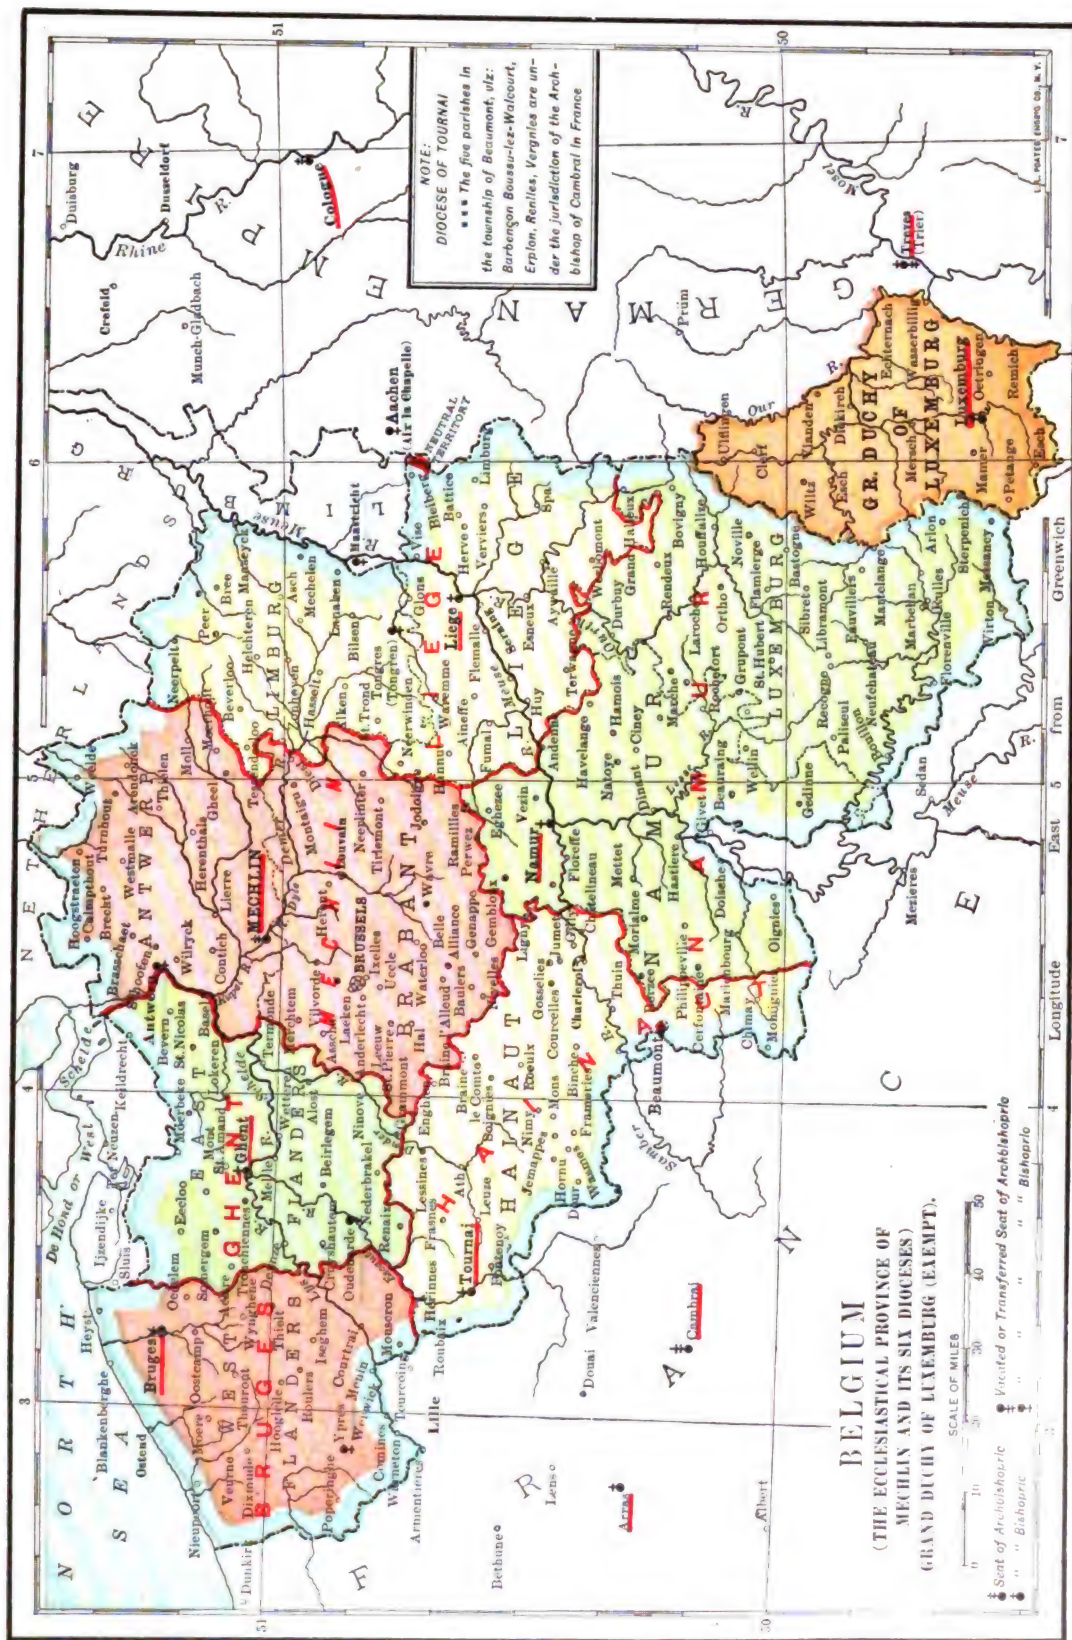

no lack of courage and devotion among the combatants, and some among them afforded admirable examples of heroism. However, they were poorly armed, had inefficient commanders, and were totally lacking in discipline and military organization; they were deprived of the support of the nobility and of the middle class, who remained absolutely inactive, and they were abandoned even by the Austrian Government which had every reason to stir up a Belgian insurrection. Consequently they could offer no serious resistance to the French troops. They fell back every time they met the enemy in open field; those who did not die in battle were later shot.

After this rising had been quelled, the persecution of the clergy was resumed; 7,500 priests were illegally condemned to be deported. The great majority escaped, only four or five hundred being arrested. Of this number, the oldest and those who were ill were detained in Belgium and in France; about three hundred were sent to Rochefort with Guiana as their ultimate destination, and, in the interval, were held at the Ile de Ré and the Ile d'Oléron where they had much to undergo from ill treatment. It was the darkest hour during the French domination, and was terminated by the *coup d'état* of 18 Brumaire, 1799. The new Government did not persecute on principle, but only in so far as it was believed necessary to enforce the revolutionary laws, to maintain the interests of the party in power. A solution of difficulties was supposed to have been discovered when the clergy were required to take merely an oath of "fidelity to the Republic as resting on the sovereignty of the people". The Belgian bishops who were refugees in England condemned this oath because the doctrine of the sovereignty of the people seemed to them heretical. They also refused to sanction the promise of fidelity to the Constitution of the seventh year, which the Government exacted of the clergy before permitting them to exercise the duties of their ministry, because the Constitution rested on false bases and contained articles deserving of condemnation. The leader of this opposition was a priest named Corneille Stevens (1747-1828), who, appointed administrator of the Diocese of Namur (1799) by Cardinal Frankenberg, Archbishop of Mechlin, forbade the clergy to promise fidelity to the Constitution, and who, in a series of pamphlets appearing under the pseudonym of Lemaigre, continued to advocate resistance. Finally, the Concordat of 15 August, 1801, brought, if not final peace, at least a truce. At the pope's request, the four Belgian bishops who had survived the persecutions tendered their resignations and of the nine episcopal sees into which Belgium had been divided since 1559, five only were retained: Mechlin, Tournai, Ghent, Namur, and Liège. The bishoprics of Antwerp, Bruges, Ypres, and Ruremonde were suppressed. This organization of 1801 is still effective with this difference, however, that the See of Bruges was re-established in 1834, and that of Ruremonde in 1840.

Great was the rejoicing in the Belgian provinces when, on Pentecost day, 1802 (6 June), Catholic worship was solemnly re-established throughout the country. For some years, the name of Bonaparte, the First Consul, was most popular, and it even seemed as if the "new Cyrus", by the great boon which he had granted Belgium, had gained the support of the Belgians for a foreign government. The bishops appointed by Napoleon fostered in the people sentiments of personal devotion to him, and to such an extent that to-day they cannot be acquitted of the charge of exceeding all bounds in their adulation and servility. There were, it is true, protests against the new regime. The "non-communicants", as they were styled, refused to recognize the Concordat, contending that it had been forced upon the pope, and they formed a schismatical group, termed

the "little church" (*la petite église*), which, though continually falling off in numbers, has preserved its existence, until very recent times. The members have often been erroneously designated as Stevensists. Stevens did not oppose the Concordat. The champion of a rigorous and uncompromising orthodoxy, he recognized the authority of the bishops of the Concordat, but mercilessly condemned their cringing attitude towards the civil authorities, against whose religious policy he never ceased protesting. From the recesses of his retreat he sent forth brochures, training his guns upon "Saint Napoleon", whose feast day had been fixed by the Government as the 15th of August. He also attacked bitterly the imperial catechism of 1806 already adopted by the greater part of the French clergy, which contained a special chapter upon the duties of the faithful toward the emperor. This uninterrupted propaganda struck a responsive chord in the national consciousness and was doubtless responsible for the courage displayed by the Belgian episcopacy in refusing to accept the imperial catechism, which was adopted only in the Diocese of Mechlin. Stevens was perhaps the most unbending adversary Napoleon ever encountered, and their contest was extremely interesting. Although the emperor offered thirty thousand francs to anyone who would deliver Father Stevens into his hands, the priest was never seized; nor was he silenced as long as the Empire lasted. When Napoleon fell (1814) he came out of his retreat, entered the jurisdiction of the Bishop of Namur, and submitted all his writings to the judgment of the Holy See, which, however, never pronounced upon them.

The Belgian bishops were wearied with the exactions of the Government, which went so far as to require every year special pastoral letters impressing upon the people their military duty on the occasion of each call for conscripts, and they, as well as the body of the people, had already lost confidence in Napoleon, when, in 1809, he made the tremendous mistake of suppressing the temporal power of the pope and of annexing the States of the Church to the Empire. From that day, he was regarded by the Belgians as a persecutor. Count de Mérode-Westerloo, a Belgian, and Prince Corsini, an Italian, alone dared to express publicly in the Senate their disapproval of this usurpation, and thus prevented it from receiving a unanimous ratification. The more anti-religious the policy of the emperor, the more energetic became the resistance of the Belgians, and the more spirited the conduct of their bishops, who discarded the language of the courtier for that of the pastor. While the Bishops of Mechlin and Liège, recently appointed by the emperor, denounced their own clergy, at Ghent, Tournai, and Namur, Bishops de Broglie, Hirn, and Pisani de la Gaude, respectively gave examples of noble firmness. Named Chevalier of the Legion of Honour, Bishop de Broglie declined on the plea of being unable in conscience to take the oath to maintain the territorial integrity of the Empire which thenceforth would comprise the States of the Church. "Your conscience is a fool", said the Emperor, turning his back. At the famous council of 1811, convoked by Napoleon without the authorization of the imprisoned pope, the attitude of de Broglie and of Hirn was no less courageous; they, together with the Bishop of Troyes, succeeded in inducing the council to defeat the imperial decree limiting the pope's right of institution. The very next day, the council was dissolved by imperial command, and the three bishops were arrested and thrown into prison, not to be released until they had been forced to tender their resignations. Their successors appointed by Napoleon were not recognized in their respective dioceses, in which the clergy and the faithful were a unit in their resistance. More and more incensed, the emperor fell to striking blindly; numbers of priests were

imprisoned, and all the seminarists of Ghent were drafted into the army and dispatched to Wesel on the Rhine, where forty-nine of them succumbed to contagious diseases (1813). Such was the end of a regime which had been acclaimed by the Belgians with universal joy. The fall of Napoleon was greeted with no less satisfaction, and many Belgian volunteers took up arms against him in the campaigns of 1814 and 1815. In this nation of loyal Catholics, it was Napoleon's blundering religious policy which alienated his subjects.

II. THE KINGDOM OF THE NETHERLANDS (1814-30).—Soon after the victory of the Allied Powers, who became masters of Belgium, they established there a provisional government under the Duke of Beaufort (11 June, 1814). The new governing powers promptly proclaimed to the Belgians that, in conformity with the intentions of the Allied Powers, "they would maintain inviolable the spiritual and the civil authority in their respective spheres, as determined by the canonical laws of the Church and by the old constitutional laws of the country". These declarations roused hopes which, however, were destined to be disappointed; for by the secret treaty of Chaumont (1 March, 1814), confirmed by Article 6 of the Treaty of Paris (30 May, 1814), it had even then been decided that Holland should receive an addition of territory, and that this addition should be Belgium. The secret Treaty of London (23 June, 1814) furthermore provided that the union of the two countries was to be internal and thorough, so that they "would form one and the same State governed by the constitution already established in Holland, which would be modified by mutual consent to accord with new conditions". The new State took the name of the Kingdom of the Netherlands, and was placed under the sovereignty of William I of Orange-Nassau.

The object of the Powers in creating the Kingdom of the Netherlands was to give France on her northern frontier a neighbour strong enough to serve as a barrier against her, and with this aim in view they disposed of the Belgian provinces without consulting them. The State resulting from this union seemed to offer numerous guarantees of prosperity from the standpoint of economics. Unfortunately, however, the two peoples, after being separated for more than two centuries, had conflicting temperaments; the Dutch were Calvinists, the Belgians Catholics, and the former, although greatly in the minority, 2,000,000 as against 3,500,000 Belgians, expected to rule the Belgians and to treat them as subjects. These differences could have been lessened by a sovereign who would take the duty on himself; they were, however, aggravated by the policy adopted by William I. Arbitrary, narrow-minded, obstinate, and moreover an intolerant Calvinist, he surrounded himself almost exclusively with Dutchmen, who were totally ignorant of Catholic matters and of the Belgian character. In addition, he was imbued with the principles of "enlightened despotism" which made him regard his absolutism as the form of government best suited to the needs of his kingdom, and thus he was unequal to his task from the very outset. While still Prince of Fulda, he had persecuted his Catholic subjects until the Diet was forced to check him. As King of the Netherlands, he showed that he had learned nothing by experience, and imagined that he could effect the fusion of the two peoples by transforming Belgium into Holland as far as possible.

On the other hand, the Belgians, passionately attached to their national traditions, and even more to their religious unity, did not take sufficiently into account the profound changes which had taken place in the conditions of the two peoples. Forgetful of the French Revolution and the consequent upheaval of Western Europe they were convinced that past conditions could be restored even in the midst of a society

that had outgrown them; nor did they grasp the fact that as the Treaty of London established freedom of worship in the Kingdom of the Netherlands they were under an international obligation which could not be put aside. They calmly demanded, first of the Allied Sovereigns, then of the Congress of Vienna, not only the restoration of the former rights of the Church, but the re-establishment of their old constitution in its entirety. Their disappointment was great when their sovereign, obeying the provisions of the Treaty of London, submitted for their acceptance the "Fundamental Law of Holland", with some modifications. Leaving out of the question the initial injustice in granting each country the same numerical representation in the States-General, despite the fact that the population of Belgium was almost twice that of Holland, it entirely overthrew the old order of things, suppressed the clergy as an order, abolished the privileges of the Catholic Church, and guaranteed the enjoyment of the same civil and political rights to every subject of the king, and equal protection to every religious creed. The Belgian bishops promptly made respectful appeals to the king. William having disregarded these, they issued a "Pastoral Instruction" for the use of the prominent Belgians summoned to present their views on the revised Fundamental Law. This condemned the Law as contrary to religion and forbade its acceptance. The high-handed course taken by the Government to hinder the effectiveness of these measures proved unavailing; of the 1,603 prominent Belgians consulted, 280 did not vote, 796 voted against the Fundamental Law, and only 527 declared themselves in favour of it. The Fundamental Law was therefore rejected by the nation; for, adding to the 527 favourable votes the 110 unanimous votes of the States of Holland, there was a total of only 637 votes. Nevertheless, the king declared the Fundamental Law adopted, because, according to him, those who did not vote were to be regarded as favouring it, while of the 796 who opposed it, 126 did so only because they misunderstood its meaning. Owing to this "Dutch arithmetic", as King William's computations were termed, Belgium found itself under a constitution which it had legally repudiated, a constitution too which proved to the Kingdom of the Netherlands a heavy burden during its brief, stormy existence.

The adoption of the Fundamental Law, by the king's decision, did not end the conflict between the civil authority and the Belgian conscience. Besieged with questions as to whether it was permissible to take the oath of fidelity to the Fundamental Law, the bishops published their "Doctrinal Decision", which condemned it (1815). In consequence, many Catholics in obedience to their religious superiors, refused to take the oath, resigned their offices and their seats in the legislature. On the other hand, the Prince de Méan, former Prince-Bishop of Liège, took the required oath, and the king immediately appointed him to the archiepiscopal See of Mechlin, then vacant. The king next had attempted to gain the Holy See for his side in his struggle with the Belgian episcopacy, by practically demanding of it Bulls of canonical investiture for his candidate as well as a formal censure of the "Doctrinal Decision". The pope replied gently but firmly, condemning the words of the oath of allegiance to the Fundamental Law, sending a Brief of commendation to the bishops, and refusing investiture to the Prince de Méan until he should have publicly declared that his oath had not bound him to anything "contrary to the dogmas and laws of the Catholic Church, and that in swearing to protect all religious communions, he understood this protection only in its civil sense". The condescension of the Holy See in this matter, instead of winning the king to moderation, seemed to make him bolder. Reviving the obsolete claims of the old Gallican and Jo-

sephinit governments, and determined to overcome the opposition of the Bishop of Ghent, he had the bishop prosecuted for having published the "Doctrinal Decision"; for having corresponded with Rome without authorization; and for having published the papal Bulls without approbation. The Brussels Court of Assizes condemned the bishop to be deported for contumacy (1817), and the Government, carrying the sentence even farther, had the bishop's name written on the pillory, between two professional thieves sentenced to be pilloried and branded. The clergy of the Diocese of Ghent who remained faithful to the bishop were also persecuted by the State. The conflict would have continued indefinitely had not the prelate died in exile, in 1821, after having twice confessed the Faith in the face of persecution. After his death, the Government conceded that the oath should be binding only from the civil point of view, which set at rest the Catholic conscience and ended the difficulties which had beset the first six years of the Kingdom of the Netherlands.

If there had been any real desire on the part of King William to respect the conscience of Catholics, who constituted the greater part of the nation, he would now have inaugurated a policy, which would have set aside religious differences, and started the kingdom along lines leading to the frank and cordial fusion of the two peoples. This was not done. On the contrary, in his obstinate determination to treat the sovereign pontiff as an outsider, and to bring the Catholic Church under the omnipotence of the State, William in his blind fury continued his policy of oppression. Before the above-mentioned conflict, the king had created a State commission for Catholic affairs and had declared in the decree that "no church ordinance coming from a foreign authority—[i. e. the pope] could be published without the approval of the Government". This was equivalent to re-establishing in the full dawn of the nineteenth century the *placet* of the despotic governments of the former regime. Going farther, he instructed this commission "to be on their guard in maintaining the liberties of the Belgian Church", an extravagant formula borrowed from defunct Gallicanism, implying that the commission should take care to withdraw the Belgian Church from the legitimate authority of the pope. The men he had chosen to help him pushed their distrust and hatred of the Catholic hierarchy farther than he did. Baron Goubau, the head of the board of Catholic worship, and his superior, Van Maanen the minister of justice, by a system of petty persecutions soon made their names the most hated in Belgium, and largely increased the unpopularity of the Government.

In 1821 the Government began to be chiefly occupied with the suppression of liberty in the matter of education. Since the foundation, in 1817, of the three State universities, Liège, Ghent, and Louvain, higher education had been entirely under the control of the State, which now assumed control of middle inferior education (20 May, 1821) by a ministerial ordinance which allowed no free school to exist without the express consent of the Government. Lastly, a decree of 14 June, 1825, suppressed free middle superior instruction by determining that no college could exist without being expressly authorized, and that no one could teach the children of more than one family without an official diploma. A second decree of the same date declared anyone who had made his studies abroad ineligible for any public office in the kingdom. The State having monopolized all lay education, there still remained the training of the clergy, which by the general canons of the Church, and those of the Council of Trent, in particular, belonged exclusively to the bishops. By a third decree, 14 June, 1825, said to be a revival of that of Joseph II,

establishing the General Seminary, a State institution was erected under the name of Philosophical College (*Collège philosophique*), in which every aspirant for the priesthood was obliged to make a course of at least two years before he could be admitted to a *grand séminaire*.

On this occasion, the Archbishop of Mechlin, whose servility toward the king had till then known no limit, did not hesitate to make some respectful remonstrances to the Government, declaring that he could not in conscience accept these decrees. Goubau, in answering, repeated in substance Napoleon's gibe to the Prince de Broglie, "Your conscience will be regarded as a mere pretext and for good reasons". The other bishops, however, the capitular vicars of vacant sees, and the rest of the clergy, unanimously took sides with the Archbishop of Mechlin and joined in his protest. The Catholic Belgian deputies to the States-General protested; the Holy See protested in its turn. Nothing availed; the Government closed the free colleges one after another, thereby ruining a flourishing educational system in which Belgian families had absolute confidence; the Philosophical College was opened with great pomp, with a corps of instructors little thought of, either from a scientific or a moral point of view; students were drawn thither by bursaries or scholarships, and by exemption from military service. The Government becoming more radical than ever, then undertook to create a schism in the Belgian Church by elaborating a plan, whereby the authority of the Holy See would be abolished and the bishops placed immediately under the Government.

But all these measures only increased the discontent of the Belgians and their passive resistance. To get the mastery, the Government conceived the idea of having recourse a second time to the sovereign pontiff, and broaching again the project of a Concordat, which had failed in 1823, on account of the king's inadmissible claims. The king counted, on the one hand, on wresting as many concessions as possible from the Holy See, and on the other, on gaining popularity among the Belgians through the arrangement he would make with the pope. These calculations failed, and once more the superiority of papal diplomacy was made manifest in the difficult negotiations which finally resulted in the Concordat of 1827. The Philosophical College ceased to be obligatory for clerics and became a matter of choice; in place of having the right of designating the bishops, the king was obliged to content himself with that of vetoing the choice made by the Chapters. The Concordat, which filled the Catholics with joy, excited the ire of the Calvinists and the Liberals, and the Government tried hard to quiet the latter by showing the worst possible will in the application of the treaty which it had just concluded with the Vatican. The Philosophical College was not declared optional until 20 June, 1829; vacant episcopal sees were provided with titulars elected according to the conditions laid down in the Concordat, but a royal decree rendered the recruiting of the clergy almost impossible save from the ranks of the old pupils of the Philosophical College. The Catholic opposition, headed by Bishop Van Bommel, the new Bishop of Liège, was so vigorous, and political complications so grave, that the king at last consented to permit the bishops to reorganize their seminaries as they wished (20 October, 1829). Then, as the crisis became more serious, he went farther, and on 9 June, 1830, entirely suppressed the Philosophical College, which had been deserted from the time attendance had become optional. On 27 May of the same year, the king even revoked his decrees regarding freedom in education; he thanked Goubau and committed to Catholic zeal the direction of matters concerning Catholic worship, and would have left no ground for grievance on the part of

Catholics had he not, at the last moment, seen fit, in the negotiations with the Holy See, to demand the right of approving appointments to canonries. But all the king's concessions, which were really extorted from him by the force of circumstances, and despite his dogged reluctance, came too late, and the negotiations in regard to the question of canons were still in progress when the Belgian Revolution broke out.

As to the causes of an event so decisive for the future of the Belgian people, it is highly improbable that if King William had given them grounds for complaint only in religious matters, the public discontent would have culminated in a revolution. The Catholics, faithful to the teachings of the Church and to the counsels of their pastors, had no wish to exceed what was lawful and knew that they should confine themselves to peaceful protests. But the Government had injured many other interests to which a great number were more sensitive than they were to the oppression of the Catholic Church, at which they would have been wholly indifferent if, indeed, they would not have rejoiced. It will suffice to recall the principal grievances. Although Holland's population was less than Belgium by almost half, each nation was allowed the same number of deputies in the States-General. Acquaintance with the Dutch language was at once made obligatory for all officials. The greater number of institutions of the central Government were located in Holland, and the majority of the offices were reserved for the Dutch. Taxes on corn and on slaughtering weighed most heavily on the southern provinces. The press was under the arbitrary control of the Government and the courts, and they vigorously prohibited any criticism of the Government and its deputies. The Government stubbornly opposed the introduction of the jury system, the verdicts of which, inspired by a saner appreciation of public feeling, would often have calmed opinion instead of inflaming it. Lastly, as if wishing to fill the measure of its blunders, the Government shamelessly hired an infamous forger condemned by the French tribunals, a certain Libri-Bagnano, whose journal, the "National", never ceased insulting and taunting every Belgian who had the misfortune of incurring the displeasure of the Government. There came a time when the Liberals, who, as late as 1825, had applauded the Government in its persecution of the Church, found themselves attacked in their turn, and began to protest with more violence than the Catholics had ever done.

Then the inevitable happened. Equally oppressed, the two parties forgot their differences, and joined forces. The fiery anti-clerical Louis de Potter, author of various historical works extremely irreligious in tone, was one of the first to advocate, from the prison in which he was confined for some violation of laws concerning the press, the union of the Catholics and the Liberals. This union was made the more easy because the greater part of the Catholics, under the influence of the teachings of Lamennais and the pressure of events, had abandoned their stand of 1815 and had rallied to the doctrine of "liberty in all and for all". Once effected, the union of Catholics and Liberals soon bore fruit. Their first step, proposed by the Catholics who wished to employ lawful means only, was the presentation of petitions by every class of society in turn. Hundreds of petitions piled up in the offices of the States-General, demanding liberty of education, freedom of the press, and the righting of other wrongs. While these petitions were being circulated the perfect order that was maintained deceived the king. On a tour which he made through the southern provinces, to convince himself personally as to the state of the public mind, he received such demonstrations of loyalty that he persuaded himself that the petitioning was a factitious movement, and went so far as to declare, at Liège,

that the conduct of the petitioners was infamous (1829).

This false step was his undoing. In the face of his refusal to initiate any reforms, the country became incensed, and the direction of the national movement passed from the hands of the peaceful Catholics into those of the impatient Liberals. The resistance soon took on a revolutionary character. The ecclesiastical authorities had foreseen this, and had for a long time opposed both the "Union", and the petitions which were its first manifestation. The Bishops of Ghent and Liège had come forward to remind the faithful of their duties to the sovereign; the Archbishop of Mechlin had assured the Government of the neutrality of the clergy; the nuncio had shown his disapproval of the "Union", and the Cardinal-Secretary of State had stigmatized it as monstrous. But the religious authorities soon found themselves powerless to control the movement. The Catholics, imitating the Liberals, had recourse to violent language; their most important periodical refused to print the conciliatory letter of the Bishop of Liège, which one of the Liberal leaders styled an episcopal-ministerial document; the lower clergy, in turn, allowed itself to be drawn into the current; the Government, wilfully blind, continued wantonly, in its imprudence, to pile up the materials for a great conflagration; at last, nothing was lacking but a fuse. This came from France. The revolution of July, 1830, lasting from the 27th to the 29th, overthrew the government of Charles X; on 25 August, of the same year, a riot broke out in Brussels and brought on the revolution which culminated in the conflicts between (24-26 September) the Dutch troops and the people of Brussels assisted by re-enforcements of volunteers from the provinces. The whole country rose up; at the end of some weeks the Dutch army had evacuated the soil of the southern provinces, and Belgium was free.

III. INDEPENDENT BELGIUM (1830-1905).—As has been shown, not only was the revolution the work of two parties but the chief rôle in it had been played by the Liberals, and for a long time, although a minority in the nation, their ranks supplied the principal leaders in national life. The Catholics did not close their eyes to this state of things. Sincerely attached to the Union of 1828, they wanted a unionist policy without laying too much stress on party names. The provisional government which assumed the direction of affairs after the revolution had but one Catholic among its ten members, and had as head and inspiration, Charles Rogier, who, in September, 1830, had come, at the head of the Liège volunteers, to lend a strong helping hand to the combatants in Brussels. The constituent Congress, convoked by the provisional government, was in great majority composed of Catholics; partisans of liberty "in all and for all", in conformity with the teachings of Lamennais. The Liberal minority was split into two groups; the stronger professed the same ideas of liberty as the Catholics; the other was made up of a small number of sectarians and of State idolaters who had dreams of bringing the Catholic Church into subjection to the civil power. The leaders of the Catholic group were Count Félix de Mérode, a member of the provisional government, and Baron de Gerlache, President of the Congress; the most prominent among the Liberals were Charles Rogier, Joseph Lebeau, Paul Devaux, J. B. Nothomb, and Sylvan Van de Weyer; the group of sectarians followed the orders of Eugene Defacqz. The Constitution which resulted from the deliberations of the Congress reflected the dispositions of the great majority of the assembly and showed at the same time a reaction against the tyrannical regime of King William. It proclaimed the absolute freedom of worship and of the press, which the Liberals put first, and also freedom of education and association, two things especially dear

to the Catholics; concessions were even made to the prejudices of some, by rendering obligatory the priority of civil marriage over the religious ceremony and commanding that no one should be forced to observe the religious holidays of any denomination. The Congress showed the same broad-mindedness in the choice of a sovereign. The first selection fell on the Duke de Nemours, son of Louis Philippe, but the French king, fearing the jealousy of the European powers, dared not accept the throne for his son. Then, after having given the regency for some months to Baron Surllet de Chokier, the Congress declared in favour of Prince Leopold de Saxe-Coburg Gotha, widower of the Princess Charlotte, heir presumptive to the Crown of England. Though a Protestant prince, Leopold I (1831-65) showed himself worthy of the confidence of a Catholic people; during his entire reign he maintained an even balance between the two parties, and never lost his solicitude for the moral and religious interests of the nation. Owing largely to Leopold's wise policy, Belgium successfully inaugurated free institutions, and showed the world that a Catholic people is capable of progress in every field.

During the early years of the new kingdom both sides remained faithful to the union of 1828, the administration being divided between the Catholics and Liberals. The dominant thought was to defend against Holland the patrimony of independence and of liberty won by the revolution, patriotism inspiring unanimous opposition to the foreigner. The tendency towards mutual conciliation was evident in the organic laws perfected during these early years, especially in that of 1842 on primary education which was passed unanimously by the Chamber, save for three blank votes, and received the unanimous vote of the senate. This law, the work of J. B. Nothomb, the minister, made religious teaching obligatory, but dispensed dissidents from attendance. King Leopold expressed his gratification on signing it. For thirty-seven years this remained the fundamental charter of public education. At this time, everyone of whatever party was convinced of the necessity of religion in the education of the people. The clergy readily rallied to the support of the bill and even suffered a great number of the 2,284 private schools which they had opened to be closed that they might co-operate in the establishment of the public schools.

The law of 1842 was, in a way, the last product of Unionist principles. Since the treaty of 1839 had definitely regulated Belgium's position in regard to Holland, the fear of an outside enemy had been removed, and the Liberal party was convinced that there was no longer anything to hinder its political doctrines from prevailing in the national government. This attitude was partly justified by the state of affairs. The Catholics were weak, without organization, without a press, without consciousness of their own strength; they had no relish for partisan contests, and they counted on Unionism to maintain public life along the lines of 1830. In contrast to the Catholic masses who lacked cohesion, and consciousness of their strength, the Liberals formed a young, spirited, united party, gaining recruits from the bourgeoisie and the learned classes alike, commanding much sympathetic support from official circles, in possession of a press with twenty times the influence of the Catholic press, in a word, master of the Belgian Government since 1830. Paul Devaux, one of the most remarkable men of this party and one of the organizers of the Union in 1828, became the apostle of Liberalism in its later development, which implied the abolition of the Union and the victory of a policy exclusively Liberal in character. The articles which, beginning with 1839, he published in the "National Review", founded by him, exerted an enormous influence upon his party and even gradually won over to his ideas a large number of moderate Liberals.

While the Union of 1828 was being dissolved and some of its promoters were seeking to give a partisan predominance to mixed ministries, the dissenters, who cherished an implacable hatred for the Catholic Church, wished to profit by the new turn of affairs in Liberal ranks to avenge the defeat they had met with at the hands of the constituent Congress. The Masonic lodges entered on the scene with the avowed intention of forming the "conscience" of the Liberal party and of outlining its programme. They established a large society called "The Alliance", which soon numbered 1,000 members, and which was to serve as their agent and go-between with that part of the people in which Freemasonry awakened distrustfulness. In 1846, the Alliance called together a Liberal Congress, presided over by Eugene Defacqz, the dissenter of 1830, now Grand Master of Belgian Freemasonry. The same secrecy was preserved in the deliberations of the Congress as in the Lodges, from which it originated, and the only knowledge of its proceedings was to be gained from the programme which it published. In this document, side by side with political reforms, appeared "the real independence of the civil power", a mere formula signifying systematic war on the Church, and "the organization of public instruction under the exclusive direction of civil authority, which should be granted legal means to maintain a competition with private establishments, without the interference of the clergy, on the ground of authority. At the time that this programme was being drawn up, the Congress made plans for a general confederation of Liberalism in Belgium, which with the Alliance as centre and type, was to establish in each district an association of free Liberal electors, bound in honour to vote for the candidates chosen by the Congress. There were also to be electoral divisions in every one of the cantons to extend the influence of the association. General reunions were to be held periodically to enable the alliance to reach the members of the associations and imbue them with the Masonic spirit. The Liberal Congress of 1846 brought the session to a close with "a resolution favouring the liberation of the lower clergy", whom they hoped to incite against the bishops by suggesting possibilities of bettering their condition. This resolution brought out strongly the true character of the Congress, as a reactionary movement against the work of the National Congress of 1830. It stands to reason that the strong impulse stirred up by the Congress in the ranks of the Liberal party, and the ardent hopes based on it reacted on the legislative elections, while the Catholics remained buried in their dream of Unionism, then merely an anachronism. The elections of 1847 placed the Liberals in power.

The new Government brought together in the same ministry Charles Rogier, member of the Congress of 1830, and Frère-Orban, one of the promoters of the Congress of 1846. Under the influence of the latter, a man of great talent but extremely arbitrary, whose imperious will got the better of the Unionist scruples of his colleague, the Cabinet declared that it would inaugurate a "new policy" taking as its principle the "independence of the civil power". And as a matter of fact, from this time forth, war was made on religious influence with a bitterness destined to divide the Belgian nation into two hostile camps. De Haussy, the Minister of Justice, set about applying to charitable foundations the most unheard-of principles. According to him, only charitable (State) bureaux could receive charitable bequests, and all endowments were to be turned over to them, even though the testator had made the selection of an administrator for the endowment an indispensable condition. On the other hand, the law of 1850 on middle-superior education was inspired by a spirit diametrically opposite to that of the law concerning

primary education; it showed the Government's intention of using the taxpayers' money to start competition with free education, and if, as a matter of policy, the clergy were invited to give religious instruction in public institutions, conditions were such as to make their co-operation lack both dignity and effectiveness.

The Belgian nation was not yet ripe for the adoption of a policy so out of harmony with the spirit of its national traditions, and after five years, the cabinet was overthrown. A more moderate Liberal cabinet modified the law of 1850 by adopting the "agreement of Antwerp" made between the communal administration of that city and the bishops, giving to the clergy the guarantees required for their admission to the public institutions of secondary education. The support given to this agreement, by the Chamber, the vote being 86 to 7, showed that the necessity of religious instruction was still understood by a large number of Liberals. The elections of 1855, which returned a Catholic majority, resulted in a cabinet presided over by P. de Decker, who may be called the last of the Unionists. This cabinet, which its friends might have reproached with excessive moderation, was destined to be overthrown as reactionary. One of its members, A. Nothomb, drafted a law concerning charitable bequests intended to protect the interests of testators and repair the unfortunate effects of De Haussey's legislation. Testators were authorized to appoint special administrators for their bequests, but the powers of the latter were circumscribed and their exercise placed under the strict supervision of the State (1857). Under the leadership of Frère-Orban, who under the pseudonym of Jean Van Damme had just written a sensational pamphlet, the Liberals pretended to find in this scheme a roundabout restoration of the monastic *main-morte*; they called it the law of the convents, and when the plan was brought up for discussion, they organized riots which intimidated the head of the cabinet. He took advantage of the communal elections, which had been favourable to the Liberal party, to tender the resignation of the cabinet. This pusillanimous conduct delivered the Government again into the hands of the Liberals, who held power for thirteen years (1857-70).

During this long period the new ministry, which was merely the outcome of a riot, did nothing but emphasize the anti-religious character of its policy. The real head was Frère-Orban, who in the end forced his colleague, Rogier, to retire (1868), and carried out successively the principal features in his programme of secularization. More prominent than ever was the alleged aim of protecting civil society against the "encroachments of the clergy". The law of 1859 on charitable endowments was the counterpart of that of 1857 and the despoiling policy inaugurated in 1847 by de Haussey. A law of 1869, of the same animus, confiscated all the bursaries for free scholarships, nine-tenths of which had been established to advance the Christian education of the young, annulling the formal provisions of the testators. A law of 1870 confined exemption from military service to students of the *grands séminaires*, refusing it to novices of religious orders. In actual practice, the Government was sectarian and intolerant towards religion and the clergy. It countenanced the efforts prompted by the Masonic lodges to secularize cemeteries, notwithstanding the decree of Prairial, twelfth year, that there should be a cemetery for each denomination, which left Catholic cemeteries under the Church's jurisdiction. Appointments to public offices, especially to the magistracy, were noticeably partisan. An example of the petty prejudice of the Government was its suppression of the annual subsidy which the Bollandists (q. v.) had hitherto received for the continuation of their magnificent work, the "*Acta Sanctorum*".

It seemed as if the rule of the Liberal party would continue indefinitely, and that Catholics were permanently excluded from power, which their adversaries declared they were incapable of exercising. However, the Catholics made use of their long exclusion from a share in governmental affairs in at last seriously attempting to organize their forces. Jules Malou devoted himself most energetically to this task, and for the first time, the broad outlines of organization were visible, an organization such as the Liberal party had long possessed. At the same time, in imitation of the German Catholics, they held important Congresses at Mechlin, in 1863, 1864, and 1867, which awakened Catholic enthusiasm and gave courage to the pessimists. In this way, Catholics found themselves able to resume the struggle with new vigour. Dissensions in the Liberal party, the strenuous opposition to the Liberals, or Doctrinaires, of the Government, on the part of men of advanced ideas, who claimed the double title of Progressists, and of Radicals, combined to help the Catholics and in 1870, they finally succeeded in overthrowing the Liberal Government.

The Liberals then had recourse to the means which had contributed to their success in 1857. The ministry had appointed as Governor of Limburg P. de Decker, who had been the head of the ministry of 1855, and whose name had been connected with the failure of a financial association. The Liberals affected to be greatly scandalized and organized riots which so frightened Leopold II that he dismissed his ministry (1871). He replaced it, it is true, by another Catholic ministry, of which Jules Malou was president. Though formed during the disturbances of a popular outbreak in defiance of the wishes of the large cities, which were all Liberal in their sympathies, and secretly impugned before the king by Jules Van Praet, the royal secretary, who was nicknamed the "Seventh Ministry", this ministry managed to hold out until 1878 only by dint of being as unobtrusive as possible. None of the anti-religious laws made by the Liberals were revised, not even the one concerning bursaries, which had been passed by a bare majority. There was no restoration of the balance of power in public offices, which continued to be held by the Liberals. In 1875, the Burgomaster of Liège having forbidden the Jubilee processions in that city, in defiance of the Constitution, the Government dared not annul his illegal order and had the humiliation of seeing the 1,500 Liberals tender him a complimentary banquet. Catholic rule seemed in very truth what its adversaries called it, an "empty parenthesis", and, towards the end of his administration, Jules Malou in a Catholic meeting, summed it up in these words: "we have existed"—*Nous avons vécu*.

When a turn in the elections brought the Liberals back into power, after the Catholic administration had dragged out a precarious existence of eight years, they were able to continue their anti-Catholic policy from the point where they had left it. While out of office they had become more irreligious owing to the growing influence of Masonry. Not only the clergy, but the Church, and religion itself, became the objects of their attacks. They encouraged writers who, like Professor Laurent of the University of Ghent, denied the necessity of granting liberty to the Church, or who, like Professor de Laveleye of the University of Liège, asserted the superiority of Protestantism. Their Antwerp associations flooded the country with copies of a pamphlet written by the latter in this vein. Besides this, the Liberals sought to make the country Protestant by supporting de Laveleye and Goblet d'Alviella, who, taking advantage of a quarrel between the villagers of Sart-Dame-Aveline and the parish priest, introduced Protestant worship there and tried to proselytize the inhabitants. They adopted the name *Gueux* (beggars) which they found in the story

of the religious troubles of the sixteenth century. Their presses daily waged war on the Catholic religion; their carnival pageants were vulgar parodies which exposed the most sacred things to popular derision. Lastly, the leaders of the movement agreed upon a revision of the law of 1842 dealing with primary instruction. Once more in power they set about their work of uprooting Christianity without delay, and framed the famous school law of 1879, which the Catholics called the "Law of Misfortune" (*Loi de malheur*), a name it still retains.

The work of drafting this law was placed in charge of Van Humbeck, the Minister of Public Instruction, a Freemason who some years before had declared in his lodge that "Catholicism was a corpse that barred the way of progress and would have to be thrown into the grave". The law did him justice, being in every respect the reverse of the law of 1842; it excluded from the schools all religious instruction, and barred from the ranks of teachers all graduates of free normal, i. e. religious schools. But for once, Freemasonry had counted too much on the apathy and good nature of the Catholic masses. The resistance was unanimous. At the call of the bishops Catholics rose in a body and entered on a campaign of petitions; committees for resistance were everywhere formed; public prayers were offered in all the churches for delivery from "teachers without faith", and "godless schools". In the Chambers, the Catholics after emphatic protests refused to take any part in the discussion of the law even of its amendment, which forced the Liberals to do their worst and to shoulder the entire responsibility. It was carried without formal opposition. The President of the Senate, Prince de Ligne, a Liberal, resigned his post, deploring the division of the nation into Guelphs and Ghibellines. The Catholics, co-operating with the bishops and the clergy, achieved wonders. In one year they erected three or four thousand Catholic schools; the rule that there should be one to each commune was obeyed with few exceptions. More than 2,000 teachers of both sexes resigned their positions, the greater number to take part in free education often at a very small salary. At the end of a year, the State schools had lost fifty-five per cent. of their pupils, and retained only thirty-eight per cent. of the entire body of school children, while the Catholic schools had sixty-one per cent. Many of the State schools were entirely deserted, and others had a ridiculously small attendance. Dumbfounded and enraged at such unexpected resistance, the Government tried every resource, however contemptible or absurd. Negotiations were begun with the Vatican, and a breach of diplomatic relations threatened, in the hope of forcing Leo XIII to condemn the action of the Belgian bishops. Nothing came of this, and in consequence the Belgian ambassador to the Holy See was recalled. To intimidate the clergy and the Catholics, a decree was passed ordering an inquiry as to the execution of the school law, and the investigators journeyed through the country like real judges, and cited people before their tribunal at random, exposing the most respectable people to the insults of the mob. This tour of investigation was scarcely finished, when the Freemasons, carrying their blindness to the limit, proposed to the Chamber another inquiry concerning the *main-morte* measure that is to say, a campaign against convents. This time, the nearness of elections dictated a more prudent policy and the motion was lost by a majority of two votes.

The country was roused to great excitement. In the face of open persecution, the Catholics showed unexpected energy. Foreseeing their triumph, they established the "Union for the Redress of Grievances", to compel their candidates in the event of their election to adopt a vigorous policy. On 10 June,

1884, the country was called on to pronounce judgment. The result was overwhelming. Half the members of the Chamber had been candidates for reelection. Only two Liberal deputies were returned, the others being defeated in the whirlwind which uprooted Liberalism. Amid great national rejoicing, the Catholics resumed the reins of power, which they have held uninterruptedly for twenty-three years. "We shall surprise the world by our moderation" said one of their leaders; and in this moderation which is not devoid of energy, lies their strength. The school law of 1879 was repealed without delay, the first time in the history of Belgium that a Catholic Government had courage to repeal a law made by the Liberals. The legislators of 1884, however, did not revive the law of 1842. Taking into consideration the change of times, they took the primary schools from State control and placed them under the communes, leaving each commune to decide whether or not religious instruction should be given; the State subsidized these schools, on condition that they would accept the State programme and would submit to State inspection; all laws subversive of liberty were repealed, and, needless to say, relations with the Vatican were resumed.

The Liberals, counting on the support of the cities, thought that by violence they could bring about a reaction against the decision of the electoral body, as they had done in 1857 and 1871. With the connivance of the Burgomaster of Brussels, they assailed and scattered a peaceful procession of 80,000 Catholics, who had come to the capital to make a demonstration in favour of the Government, and, as in 1857, appealed to false statistics of the communal elections of 1884, to prove that the voters had changed their minds. In this way, they obtained from King Leopold II the dismissal of Charles Woeste and Victor Jacobs, the two ministers whom they held in special aversion. Jules Malou, the head of the Cabinet, protested, and followed his colleagues into retirement. But the Catholic party remained in power and M. Beernaert, who succeeded Malou, inaugurated the era of prosperity which has placed Belgium in the front rank among nations.

The situation confronting the Government bore no resemblance to that of former years. Since 1830, the inner national energy had been absorbed by the struggle between the Catholics and the Liberals, both representing bourgeois voters, who were divided as to the amount of influence to be allowed to Catholicism in public affairs. By 1886 a change had come about. A third party had come into existence known as the "Workingman's Party", which recruited entirely from the labouring classes, presented a dangerous platform, comprehending not reforms but economic and social revolutionary measures. This Socialist party had been secretly taking shape since 1867, and continued in Belgium the traditions of the "Internationale", created by Karl Marx. It proclaimed to the workingmen that they were slaves, promised to give them liberty and prosperity and, as the first means towards the necessary reforms, to secure for them the right of suffrage. In this way the great mass of the people were won over and organized while the two older parties were wholly occupied with their traditional quarrel. Not that eminent Catholics, such as Edouard Ducpéiaux, to mention one of the highest rank, had not sought for a long time a way of bettering the condition of the working classes, or that many zealous men had not made disinterested attempts to bring about such a result; but the body of the nation had not realized the political rôle soon to be played by the dense ranks of the organized proletariat, and hence had not tried to find legislative means of satisfying their demands. Moreover, the administrative classes, Liberals as well as Catholics, were under the influence of the Manchester school. The policy of

non-interference was accepted as the guiding principle, and particularly when there was any question of labour legislation, the words on every tongue were: "most liberty, least government."

When, therefore, in 1886, serious uprisings, plainly revolutionary in character, took place, first at Liège (18 March), and soon afterwards in the industrial districts of Hainaut, the whole country was thrown into a state of consternation and alarm. The labour party came forward and put the social question before the country in the form of incendiary and riots. The most enlightened Catholics grasped the significance of these events and saw that the time had come for turning their attention towards labour reform. Under the presidency of Bishop Doutreloux of Liège, three Congresses of Social Works were held at Liège, in 1886, 1887, and 1890, in which the most vital questions were studied and exhaustively discussed. Groups were formed, especially among the younger men, to introduce the most urgent reforms into the Catholic platform; Canon Pottier, professor of moral theology in the *grand séminaire* of Liège, became the apostle of the reform movement; the Catholic friends of reform established a Democratic Christian League, which, encouraged by the bishops and keeping within the bounds of the strictest orthodoxy, bent all its energies on reform. The Bishop of Liège formed among the secular priests a new order, "The Almoners of Labour", whose zeal and devotion were entirely directed to bettering the lot of the working people.

As for the Government, it proved equal to its task, new and unforeseen as it was. A thorough investigation of the labour question gave an understanding of the nature and extent of the principal grievances of the working classes, after which the necessary reforms were energetically entered upon. For several years, the entire legislative activity devoted itself to the redress of the most crying evils. Councils of Industry and of Labour were formed; legislation was passed on the following subjects: workmen's dwellings, wages, the abolition of the truck system, the illegality of attaching or assigning wages, labour inspection, child-labour, and the labour of women. Strong encouragement was given to mutual benefit societies which had been hitherto in anything but a flourishing condition. To these important laws was added the commendable law of conditional condemnation and liberation, the work of M. Lejeune, the minister of justice; it has since been imitated by many larger countries.

This work, which extended over ten years, culminated in a revision of the Constitution, which the advanced members of the Liberal party had been demanding for a long time, and which the Socialists were now insisting on. This revision had become imperative. Belgium was a country which had very few voters; out of a population of more than six millions there never were more than 150,000, and during the last years of the Liberal Government no less than six laws had been passed to diminish this number still further by excluding entire classes of Catholic voters. In spite of this, and though it was clear to all that the Catholics would be the first to profit by a revision, through a spirit of conservatism, they shrank from taking the initiative in this matter. One of their leaders, M. Woeste, was its declared adversary. The Liberals, observing this hesitation on the part of their opponents, joined the Socialists in demanding the revision, hoping for its refusal. Under these circumstances, and with a full appreciation of the necessities of the situation, M. Beernaert proposed the revision of the Constitution, and succeeded, after many difficulties, in having the revision adopted by the party of the Right. The revision was as broad as possible: the motion for universal suffrage was passed without opposition—

a suffrage, however, modified by plural voting as proposed by M. Nysens, a deputy of the Right. Each Belgian was to have one vote; a married man who could prove his title to some property had two; a man able to give certain proofs of education had three. The electoral body was increased tenfold, and henceforth only the worthless and the incompetent were excluded from the administration of public affairs in Belgium (1893).

In this way the Belgian Government, by exercising prudence as well as courage, succeeded in a few years in carrying out a splendid reform programme, and deserved the admirable eulogy of Fernand Payen, a French juriscult: "We have before us the most complete body of legislation which the history of this century can show in any country." A former liberal minister praised hardly less emphatically the wise policy of the Catholic Government, by declaring that it was difficult to combat it because it offered no grounds for complaint. For the first time in the history of Belgium Catholics showed their ability to govern, that is to say, their ability to comprehend at a glance the needs of the times and to meet them satisfactorily. Even the king, hitherto distrustful of Catholics, gradually gave up his prejudices, and at every election the voters confirmed their tenure of power. The party of the Right showed their ingratitude towards M. Beernaert, by declining, partly through motives of personal interest, to vote for the proportional representation of parties, and this the head of the Cabinet demanded as an indispensable item in the revision of the Constitution. On this refusal, M. Beernaert resigned his position at the head of the Cabinet, in 1894, depriving Belgium of her greatest statesman.

Results proved M. Beernaert's wisdom. From the time of the revision, the Liberal party, which had its exclusive support in the bourgeoisie of the cities, had been entirely shut out of Parliament, where its place had been taken by a strong group of Socialists. This group, destitute, for the most part, of culture and parliamentary training, introduced coarse and violent methods of discussion into the Chamber, seriously compromising the dignity of parliamentary debate. On the other hand, the total suppression of Liberal representation was both an injustice, since this party still retained the sympathies of the middle class in the large cities, and a danger, for the true parliamentary spirit was violated by the exclusion from public life of views which had lately been all powerful and were still very much alive. Proportional representation seemed to be the only way of restoring parliamentary balance, and it came about that those who had caused M. Beernaert's loss of power to avoid this very thing were won over to his views. Proportional representation was therefore proposed and carried, making electoral legislation in Belgium the most complete in the world. The Liberals returned to the Chambers, the Catholics sacrificing their overwhelming majority in their desire for the representation of every shade of opinion to be found in the electoral body, thus substituting the three parties for the two which had divided the power previous to 1893.

The Catholics, nevertheless, retained a permanent majority. The successors of M. Beernaert continued to conduct the Government along his lines, even if with less prestige and authority. From time to time the administration was affected by reactionary influences, occasionally compromised by mistakes in policy, but the current of social legislation has not changed its course. In 1895, a special department of Labour was created, and M. Nysens, the first minister, filled the position with great distinction. Laws were passed regulating workshops, trade unions, pensions for workmen, insurance against accidents while working, and providing for rest on Sundays.

The number and importance of these legislative enactments was such that a Socialist deputy codified and published them in a collection, rendering thereby tacit but significant homage to the Government responsible for them.

But the very stability of the Government, which each successive election retained in power, was the despair of its enemies who saw the impossibility of overthrowing it by legal methods. The Socialists decided that their success would be greater if they obtained by threats, or, if necessary, by violence, a new revision of the Constitution, suppressing the plural vote and replacing it by universal suffrage, pure and simple: "One man, one vote." Failing to bring about this reform by intimidating the Chamber, they sent revolutionary bands into the streets. "I have always tried to dissuade you from violence," said Vandervelde, their leader, to his audience of workmen; "but to-day, I say to you: The pear is ripe, and must be plucked." Another leader, Grimard, the Socialist senator, and a millionaire, even went so far as to declare that he would turn over his whole fortune to the workmen and would start again with nothing. Intoxicated by these words, the workmen of many large cities and industrial districts abandoned themselves to excesses, and blood was shed in several places, notably at Louvain. The energy with which the Government applied repressive measures, however, soon put an end to these attempts. Then the General Council of the workmen's party declared a general strike, the last weapon of the revolutionary party. This failed after a few days, and the General Council was forced to advise the workmen to return to work. The prestige of the Socialists with the popular masses was greatly impaired by the failure of so great an effort and the Catholic Government came out of the crisis stronger than ever (1902).

There remained but one way of overcoming the Government: the alliance of the two opposition parties, the Socialists and the Liberals. This was effected at the time of the general elections of 1906. Although from the economic point of view the two parties were antipodal, they were united in their anticlerical sympathies, and there was reason to fear that their success would mean the downfall of religion. In their certainty of success they circulated the names of their future ministers, and open preparations were made for the festivities attendant on their victory. But their alliance met with a crushing defeat in the elections of 1906, which left the Catholic Government as strong as ever. The fêtes, commemorating the seventy-fifth anniversary of national independence, had been celebrated throughout the country with unrestrained enthusiasm, under the patronage of the Catholic Government, which, in 1909, will celebrate the twenty-fifth anniversary of its own existence. In the history of Belgium no government has held power so long, and the Catholic party has come to be more and more of a national party, or, to speak more correctly, the nation itself.

This summary would be incomplete if the history of the struggles in defence of religion and of social order were not supplemented by the internal history of the Catholic people of Belgium, i. e. the development of popular opinion during a quarter of a century. Generally, in the face of adversaries who attacked their most precious possession, the religion of their fathers, Catholics had proclaimed themselves "conservatives"; their political associations were thus designated and it was the name which the leaders of the party were fond of applying to themselves in Parliament. But the appearance of the workmen on the political scene and the programme of their claims in pointed opposition to the conservatives (1886), brought home to enlightened Catholics the danger of this name. Hence the name "Conserva-

tive" was repudiated not only by the advanced members of the party, who called themselves "Democratic Christians", but even by the Catholics opposed to reforms, who really aimed at preserving the economic regime which had caused all the grievances of the working class. The latter, rejecting the term "Conservative" as a wrong done them, desire to be called simply "Catholics". Of the two groups, that of the Democratic Christians is at present numerically inferior, although more influential by reason of its enthusiasm, its activity, its faculty for taking the initiative, and its propaganda. To understand this it must be recalled that before the revision of the Constitution the Catholic, like the Liberal, party was exclusively a bourgeois party, as its members had to pay a large poll tax for the privilege of suffrage. Its leaders for the most part were drawn from the upper bourgeoisie, and those whose ability and energy called them to a share in the direction of affairs had no other ideals, or interests, than those of the bourgeoisie. When the revision heavily recruited their ranks, the new voters, though large in number, played the part of mere privates and had no active part in the management of the parties. Those of the new-comers, who were conscious of possessing the requisite ability and courage in order to carry out their ideas and programme were obliged to organize new groups, which were looked at askance by the former leaders, often even regarded with suspicion, and accused of socialistic tendencies.

In a large number of arrondissements, the rivalry of conservative and democratic tendencies among Belgian Catholics resulted in the establishment of two distinct political groups, and the Belgian bishops, and the most farsighted leaders, found it a hard task to prevent an open rupture. At Ghent, where the Democratic Christians assumed the harmless name of Anti-Socialists, there was never any real danger of a break in the ranks. At Liège, which was a centre of opposition to democratic ideas, Catholic circles being under the control of employers and financiers inimical to reform principles, a rupture was barely averted. At Alost, where the break was beyond control, the Abbé Daens organized an independent and radical body, which, taking the name of "Christene Volksparty" (Christian people's party), abandoned by the Anti-Socialists, opposed the Catholics more bitterly than the Socialists. It made common cause with the latter in carrying on a campaign against the Government in the elections of 1906. But, apart from the Daensists, a group, very small at most, which in its best days was unable to send more than two or three representatives to the Chamber, the Democratic Christians, in all their electoral battles, have always marched to the polls side by side with the conservative Catholics. They hold the controlling vote indispensable for any victory, and their leaders in Parliament have been in the front ranks in advocating the labour legislation which has produced the social laws. After opposing them for a long time, the Conservatives have gradually become accustomed to regard them as an essential factor of the Catholic army. In the meantime, the birth and progress of this group clearly marked the evolution which is taking place in the Catholic party in the direction of a new social ideal, an evolution too slow for some, and too rapid for others, but in any case, evident and undeniable.

IV. CONCLUSION.—This politico-religious history of Belgium, covering over a hundred years, contains more than one lesson. In the first place, it clearly establishes the fact that in every generation the Belgian nation has fought with vigour against every regime that was inimical to its faith. It struggled against the French Republic, against Napoleon I, against William I, against the Liberal Government, against the coalition of the Liberals and the Socialists,

and has come forth victorious. In the second place it must be remarked that the war on the religion of the people has daily assumed a more threatening aspect. At the close of the eighteenth century, Belgium had no enemies except its foreign oppressors, abetted by a few handfuls of traitors. Under the Dutch Government, it was evident that the generation which developed under the French domination had been partly won over to revolutionary doctrines, and that among the bourgeoisie of the cities there was a body which no longer recognized the authority of religion in social matters. After 1846, it was manifest that this faction was under the control of the Masonic lodges, and had positively declared itself for war upon religion and the Church. In 1886, it was evident that, in the bourgeois class, the great mass of workmen had been won over to the cause of irreligion and that the population of the industrial districts had been seriously affected. In addition to this, the four larger cities of Belgium, Brussels, Antwerp, Liège, and Ghent, and most of the cities of the Walloon provinces, had gone over to the Anti-Catholic party. The defenders of religion and its oppressors tended to become numerically equal, a state of things that would be apparent to all, were it not masked in a way by the system of plural voting. In the votes cast at the general elections there is always a Catholic majority, but it is a question whether the majority of voters are Catholics. If it is asked whether the Catholics, namely, the Belgians who submit to the teachings of the Church, still constitute the majority of the nation, the answer would be more or less doubtful. This leads to a third remark. The resistance to the enemies of religion has not been as effective as the duration and intensity of the contest might lead one to believe. Whenever the Catholics were successful, they have been satisfied with keeping the power in their hands; they have not exercised it to carry out their programme. No Catholic wrongs have been redressed; every law made by the Liberals against the Church and the clergy has remained unrepealed, and it was only in 1884 that the Government, supported by the entire nation, felt strong enough to inaugurate a bolder policy. But the revision of the School Law of 1879 is the solitary instance of this progress, and will probably continue to be so for some time to come.

The social condition of the Catholic religion in Belgium, while doubtless favourable, is not, therefore, free from danger. The School Law of 1884, amended in 1895, is inadequate to guarantee the Christian education of the people. It is evaded by the municipal government of the capital, which manages by trickery to exempt the majority of the children from religious instruction, and even in the Liberal communes, where the pupils receive religious instruction, it is neutralized by the lessons given them by their freethinking teachers. Many of the public schools are now developing generations of unbelievers. This is a matter that needs attention. It is also imperative to re-enforce the Catholic army by drawing recruits from the only source open to it, namely, the people. To do this the Government must accentuate the character of its social legislation, which is too often compromised by provisions which deprive it of a large part of its effectiveness. The law on trade unions deprives them of the means most likely to make them prosper, which is to make trade. The law on labour accidents would be excellent, if insurance against accidents was made obligatory. The law enjoining the Sunday rest, carried with the co-operation of the Socialists, contains such a large number of exceptions and is enforced with such want of earnestness that it is almost a dead letter. The Socialists declare, often with a semblance of truth, that the laws passed to benefit the workmen are mere blinds, and it is

not always easy to convince them of the contrary. The continuation of the Catholic regime in Belgium seems to be contingent on a radical reform of school legislation, on provision for the division of State subventions among all the communal or private schools in proportion to the services that they render, and greater boldness in the solution of the labour questions. Religion has in Belgium so strong a support in popular loyalty and devotion that by judiciously taking advantage of them at the proper time, an indefinite tenure of power will be ensured.

V. STATISTICS.—According to the census of 31 December, 1905, the population of Belgium is 7,160,547. The great majority of the inhabitants are Catholic, but the lack of religious statistics makes it difficult to give the exact number of non-Catholics. There are about 30,000 Protestants, 3,000 to 4,000 Jews and several thousand persons who, not having been baptized, do not belong to any faith. The kingdom is divided into six dioceses, namely: The Archdiocese of Mechlin and the suffragan Dioceses of Bruges, Ghent, Liège, Namur, and Tournai. Each diocese has a seminary and one or several preparatory schools for the training of the clergy; there are, in addition, the Belgian College at Rome, a seminary to which all the Belgian bishops send the best of their pupils, and the College of the Saint-Esprit at Louvain, where a superior theological course is pursued. The secular clergy number 5,419; the regular clergy, 6,237; these latter are distributed in 293 houses. The religious orders in Belgium have 29,303 members living in 2,207 houses; the members of the orders, both male and female, devote their time chiefly to teaching and nursing the sick; the male orders also aid the secular clergy in parochial work.

Under the guidance of this large body of labourers for the Church, the religious life in Belgium is intense, and the works of piety and charity are very numerous. Statistics of these charities are given in Madame Charles Vloebergh's "*La Belgique charitable*", in the preface to which M. Beernaert states that no country has their equal. Belgium also takes a share out of all proportion to the size of its territory in international works of piety and in foreign missions. It is at the head of the work of the Eucharistic Congress, two of its bishops, Monseigneur Doutreloux, of Liège, and Monseigneur Heylen, of Namur, having been the first two presidents of the association. Five sessions of this congress have been held in Belgium; at Liège (1883), Antwerp, Brussels, Namur, and Tournai. Equally distinguished are the services of Belgium in the sphere of Catholic missions. The congregation of secular priests of the Immaculate Heart of Mary, founded at Scheutveld near Brussels in 1862, labour for the evangelization of Mongolia and the Congo; several of their members have suffered martyrdom in these countries. The Belgian Jesuits have for their mission-field Calcutta and Western Bengal. Their missionaries are trained in the Apostolic school established at Turnhout. The American seminary at Louvain (1857) aids in recruiting the secular clergy of the United States. Other religious orders also labour for the evangelization of foreign regions. The toils and heroism of a number of the Belgian missionaries have given them a world-wide renown; such are, Father Charles de Smedt, the apostle to the Indians of the Rocky Mountains, and Father Damien de Veuster, who devoted himself to the lepers of Molokai.

The great success of Catholicism in Belgium is largely explained by the freedom it enjoys under the Constitution. "The freedom of religions and their public exercise, as well as the right to the expression of opinions on all subjects are guaranteed, with the exception of misdemeanours committed in exercising this liberty" (art. 14). The sole restriction to this liberty is contained in article 16 of the Constitution

which says that a civil marriage must always precede the religious ceremony, with such exceptions as may be established by law. The priest who, in fulfilling his duty, blesses a marriage in *extremis* under this article is in danger of prosecution and condemnation; the law which the Constitution provided for, and which would have protected such cases, has never been passed. With the exception of this and the law authorizing divorce, to which, however, recourse is seldom had, it may be said that the legislation of Belgium conforms to the Catholic standard of morality. Although the Church is independent in Belgium, and the country has no State religion, it does not follow that the governmental and the religious authorities have no connexion with each other. Tradition and custom have produced numerous points of contact and relations of courtesy between Church and State. The latter pays the stipends of the Catholic clergy as well as of the clergy of the Protestant and Jewish religions, very moderate salaries which have been slightly increased by a law passed in 1900. The State also assists in the expense of erecting buildings for religious purposes and of keeping them in repair. The parishes have been granted a civil existence and can hold property; each parish has a board of administration, of which the mayor of the town is a member by law, for the aid of the clergy in the management of the finances of the Church. The Liberal party, it is true, has tried a number of times to get control of the church property, but the law of 1870 (a compromise law), concerning the temporalities of the different religions, only requires the supervision of the public authorities over expenses concerning which the intervention of these authorities is requested. Students at the theological seminaries, who are to be parish priests, are exempted from military duty. Finally, the civil authorities are officially present at the "Te Deum" which is sung on the national anniversaries; and except during the period of 1880-84 (see above) the Government has maintained diplomatic relations with the Holy See.

VI. EDUCATION.—The most successful work of the Belgian Church has been done in the field of education, in spite of most violent opposition on the part of the Liberal party. Article 17 of the Constitution, says, concerning instruction: "Teaching is free; all preventive measures are forbidden; the repression of offences is reserved to the law. Public instruction given by the State is equally regulated by law." The Constitution, therefore, supposes at the same time a free instruction and an instruction by the State; it guarantees complete liberty to the first and subordinates the latter to the enactments of the law. The Catholics alone have made use of this article of the Constitution to establish a flourishing series of schools and colleges leading up to a university. The Liberals have contented themselves with founding a university (subsidized by the city of Brussels and the province of Brabant) and an insignificant number of schools, and are generally satisfied with State instruction for their children; this instruction they endeavour to make as neutral, that is, as irreligious as possible. They also favour in every way State instruction to the detriment of the free teaching. There are two State universities, Ghent and Liège, which have, respectively, 1000 and 2000 students. There are also 20 State atheneums with 6000 students, besides 7 communal colleges having about 1000 pupils; these institutions are for secondary education in its upper classes. The lower classes are taught in 112 intermediate schools, 78 of which are for boys and 34 for girls, with a total of 20,000 pupils. There are also 11 intermediate schools opened by the communes, 5 for boys and 6 for girls, with a total of 4000 pupils. The law of 1895 makes the communes responsible for primary instruction; each commune is

obliged to have at least one school, but it may be relieved of this responsibility if it is shown that private initiative has made sufficient provision for instruction. The State intervenes also in primary instruction by means of its normal schools for male and female teachers, by employing school inspectors whose business it is to see whether all the legal requirements are observed, and by the subsidies granted to communes which carry out the law.

Compared with these State institutions the schools established for free education are equal and in several respects superior. The Catholic University of Louvain, founded by the bishops, has 2200 students; it is surrounded by several institutes, one of the most famous of which is the "Institut philosophique", of which Monseigneur Mercier, now Cardinal Archbishop of Mechlin, was the founder and first president (until 1906). The Episcopal Institute of St. Louis at Brussels and the Jesuit College of Notre-Dame at Namur prepare pupils for the degrees of philosophy and letters. There are 90 free colleges for intermediate instruction, most of them diocesan, others carried on by the different religious orders, among whom the Jesuits take the lead with 12 colleges, having 5500 pupils. The free colleges have a total of 18,000 pupils, which is more than three times that of corresponding State schools. The situation in the intermediate classes of the lower grade is not so satisfactory for Catholics and may be called the dark page of their school statistics.

Since 1879 the subject of primary education has been the real battle-field; during this struggle the Catholics almost attained the ideal, having at least one school in almost every commune. But this was done at the cost of great sacrifices, so that since the suppression of the "Law of Misfortune" (*Loi de malheur*) of 1879, which had taken the Christian character from the primary schools, Catholics have accepted the communal schools in their renewed Christian form and have given up those which they had founded. The State, moreover, subsidizes the free schools when they give the guarantees necessary from a pedagogical point of view, and it authorizes the communes to adopt them as communal schools. Notwithstanding this, the legislation concerning primary teaching is far from being absolutely satisfactory; the large communes evade or even openly disregard the law, and it is only at long intervals that the Government interferes to check the most scandalous abuses. The law puts the State instruction and the free teaching on an absolute equality, and this equality is maintained by the Government; the diplomas granted by the free universities open the way to government positions just as do those granted by the State universities; the certificates given by the free institutes are equal to those of the State schools.

VII. CEMETERIES.—It is only by the greatest exertions that the Catholics of Belgium have saved the Catholic schools. In regard to the question of cemeteries they have shown less vigour. The decree of Prairial of the year XII (1804), by which the cemeteries of Belgium were regulated, stipulated that, in localities where several religions exist, each form of faith should have its own cemetery, and that where there was but one cemetery it should be divided into as many sections as there were different denominations. The Catholic cemeteries, in conformity with the Ritual, had separate sections for those who had died in communion with the Church, for infants dying without baptism, for those to whom the Church had refused religious burial, and for free-thinkers who died outside of the Catholic communion. There was no conflict until 1862 when, obedient to the order of the Freemason lodges, the Liberals declared the law of 1804 to be unconstitutional. The Government, then carried on by the Liberals, left it to the

communal authorities to apply the law of 1804 or not, and for some fifteen years the law was disregarded or observed at the pleasure of the mayors of the towns. With the lapse of time the enforcement of the law declined, and a further step was taken; in 1879, the year of the *Loi de malheur*, the Court of Cassation suddenly changed its traditional method and began to convict those mayors who enforced the law of 1804. From this date the enforcement of the law became a misdemeanour, and many adverse sentences fell on the authorities who believed themselves bound in conscience to maintain this decree. Owing to the inactivity of the Catholics, there has been, since that time, no freedom with regard to cemeteries in Belgium.

GODEFROID KURTH.

**Belgrade and Smederevo**, titular (united) sees of Servia. The history of these sees is as confused as their present plight is pitiful from the Catholic standpoint. Dalmatia and Illyria claim St. Titus, the disciple of St. Paul, as their first Christian missionary; but the first Bishop of Belgrade, Theodosius, dates only from 1059. As the ancient Singidunum, however, it was an episcopal see in the fourth century, but gradually declined during the invasions of the barbarian Slavs. The mediæval see was founded by the King of Croatia. The Hungarians and the Venetians disputed the possession of Belgrade (Serb *Beograd*, white city). The latter having destroyed the town (1126), the episcopal see was transferred to the neighbouring Scardona, so extensively embellished by them that it received the name of Scardona Nova. Religion had long flourished there, for one of the bishops at the Council of Salona (530) signs as *Episcopus Ecclesiæ Scardonitanæ*. On the occasion of the transfer to Scardona the title of Belgrade disappears for centuries from ecclesiastical history. The neighbouring city of Smederevo (Lat. *Semendria*) was also an episcopal see. Gams gives the names of four of its bishops from 1544 to 1605, a list, beginning 1334, of bishops whom he styles "of Belgrade and Semendria" (*Nadoralbenses et Belgradenses*). It is certain that in 1650 Innocent X re-established the title and See of Belgrade; for a Brief (4 December, 1651) is extant addressed to Matthew Benlich, *Episcopus Bellegradensis, Ecclesiæ Samadiensis Administrator*, creating him vicar Apostolic for those sees of the Church of Hungary which were under Turkish domination.

In 1729 the two Dioceses of Belgrade and Smederevo were united by Benedict XIII, and in 1733 Vincent Bagradin became the first holder of the double title. Thenceforward the list of bishops is regular and complete. The "Notizie di Roma" (the official annual of the Holy See) gives the names of all the prelates of this see. Until recent years Belgrade and Smederevo were considered residential sees; it is expressly so stated in the consistory of 1858. It

was added that these two sees (ancient Alba Græca and Singidunum respectively) were suffragans of the metropolitan See of Antivari, and that the nomination to them resided in the Emperor of Austria, "but as they are held by the infidels, their actual state is passed over in silence". For many years the title was given to the auxiliary of an Hungarian bishop (at present to the auxiliary of the Archbishop of Zagrab) who was bound to reside with his superior. The "Gerarchia" for 1906, without giving any notice of the change, has transferred this see to the list of titular bishoprics, though Bishop Krapac, who now holds the title, was named in 1904 as a residential bishop.

The present condition of this Church is most lamentable. The limits of the diocese are those of the Kingdom of Servia, which has an area of 18,630 square miles and a population (1905) of 2,676,989, belonging for the most part to the Greek schism, which is the official religion of the State. Since 1861 the Bishop of Diakovar acts as administrator Apostolic; since 1886 the territory is united to the ecclesiastical province of Scutari (Kirch. Handlex., I, 533). There are only two or three priests, who divide their activities between the three principal stations of Belgrade (4,000 Catholics), Kragujevats (200), and Nish (1,000). There are also seven secondary stations, numbering about 1,000 Catholics all told. (It is to be noted that according to the "Statesman's Year Book" for 1907, the Servian census of 1900 gives 10,243 Catholics.) One church, two chapels, and two elementary schools (at Belgrade and Nish respectively) complete the list of the mission's resources.

The statistics say nothing of Uniat Greeks, which leads us to suppose that these Latin Catholics are only western Europeans whose province obliges them to reside in Servia. Belgrade has (1905) a population of 80,747. Situated on the right bank of the Danube, just below the Save, it has always been a natural fortress, and as such is famous in military history. From 1522 to 1867 it passed alternately from Turks to Austrians; in the latter year the Turkish garrison was withdrawn, and in 1878, by the Treaty of Berlin, Belgrade became the capital of the new Christian Kingdom of Servia.

ALBERT BATTANDIER.

**Belgrado**, GIACOPO, Italian Jesuit and natural philosopher, b. at Udine, 16 November, 1704; d. in the same city, 26 March, 1789. He belonged to a noble family and received his early education at Padua. He entered the novitiate of the Society of Jesus, 16 October, 1723, and showed marked talent, studying mathematics and philosophy at Bologna under Father Luigi Marchenti, a former pupil of Varignon at Paris. After completing his philosophical studies he taught letters for several years at Venice, where he won the affection of his students as well as the esteem and friendship of the scholars of that city. He studied theology at Parma and then became professor of mathematics and physics at the university, holding this position for twelve years. While at Parma he did much experimental work in physics with apparatus specially constructed by two of his assistants. After pronouncing his solemn vows, on 2 February, 1742, Belgrado was summoned to the court, where he was appointed confessor, first to the Duchess and later to the Duke Don Filippo. The title of mathematician of the court was also bestowed on him. In 1757 he erected an observatory on one of the towers of the college of Parma and furnished it with the necessary instruments. In 1773 he became rector of the college of Bologna. He was a member of most of the academies of Italy and a corresponding

member of the Académie des Sciences of Paris. He was likewise one of the founders of the Arcadian colony of Parma. He wrote on a variety of subjects, among his works being: "I Fenomeni Elettrici" (1749); "Della riflessione de' corpi dall' acqua e della diminuzione della mole de' sassi ne' torrenti e ne' fiumi" (1755); "De analyseos vulgaris usu in re physica" (1761-62); "Delle sensazioni del freddo e del calore" (1764); "Theoria Cochleæ Archimedis" (1767); "Dell' esistenza di Dio da' teoremi geometrici" (1777), etc.

H. M. BROCK.

**Belial**, found frequently as a personal name in the Vulgate and various English translations of the Bible, is commonly used as a synonym of Satan, or the personification of evil. This sense is derived from II Cor., vi, 15, where Belial (or Beliar) as prince of darkness is contrasted with Christ, the light. It is clear in the Vulgate and Douay translations of III Kings, xxi, 10 and 13, where the same Hebrew word is rendered once as Belial and twice as "the devil". In the other instances, too, the translators understood it as a name for the prince of evil, and so it has passed into English. Milton, however, distinguishes Belial from Satan, regarding him as the demon of impurity. In the Hebrew Bible, nevertheless, the word is not a proper name, but a common noun usually signifying "wickedness" or "extreme wickedness". Thus, Moore renders "sons of Belial" as "vile scoundrels" (Judges, xix, 22); most prefer "worthless fellows". In some cases *belial* seems to mean "destruction", "ruin"; thus in Ps., xli, 9 (Heb.), the word is parallel to the thought of utter destruction and seems to mean the same. In Ps., xviii, 5, it is parallel to "death" and "Sheol"; some understand it as "destruction", Cheyne as "the abyss". The etymology of the word בלל is doubtful; it is usually given as בל, "not", "without", and יל, a verb which occurs only in the Hiphil (causative active) form, "to use", "be of use", "to be profitable to"; the compound is supposed to mean worthlessness. Cheyne suggests בלי יעלה, that from which no one comes up, namely, the abyss, Sheol. St. Jerome's etymology "without yoke", which he has even inserted as a gloss in the text of Judges, xix, 22, is contrary to Hebrew philology. Belial, from meaning wickedness or Sheol, could develop into a name for the prince of evil or of darkness; and as such was widely used at the beginning of our era. Under the names Beliar, Berial, he plays a very important rôle in apocryphal literature, in the "Ascension of Isaiah", the "Sibylline Oracles", and the "Testament of the Twelve Patriarchs". He is the prince of this world and will come as Antichrist; his name is sometimes given also to Nero, returning as Antichrist.

JOHN F. FENLON.

**Belief** (*be* and *lyian*, to hold dear), that state of the mind by which it assents to propositions, not by reason of their intrinsic evidence, but because of authority. Though the term is commonly used in ordinary language, as well as in much philosophical writing, to cover a great many states of mind, the quasi-definition advanced is probably the best calculated to differentiate belief from all other forms of mental assent. In framing it, respect is paid to the motive of the assent rather than to its nature; for, since intellectual assent is of its nature simple and indivisible, no *differentiæ proximæ* can be assigned by which it could be separated into various species.

As the objects of belief, also, are of a nature similar to those of knowledge, opinion, and doubt, so, again, no criterion of division can be found in them (as in the case of the objects of separate faculties) to distinguish it from other mental states. St. Thomas Aquinas qualifies his definition of faith with the addition of the note of certainty (*Summa*, I-II, Q. i, a. 4). Though he treats of faith as a theological virtue in the article cited, his words may well be extended to include belief as a purely natural state of the mind. It will thus be seen to cover intellectual assent to truths accepted on authority either human or Divine. In the former case belief may be designated by the synonym credence; in the latter the more usual term is faith. Often, also, belief is used in the sense of *fiducia*, or trust; and this especially in Protestant theology as a substitute for faith. By the definition given above we are enabled to distinguish belief (1) from intelligence, in that the truth of the fact or proposition believed is not seen intuitively; (2) from science or knowledge, since there is no question of resolving it into its first principles; (3) from doubt, because belief is an assent and positive; (4) from opinion and conjecture, in which the assent is not complete.

Belief, however, as has already been noted, is often indiscriminately used for these and for other states of mind from which for the sake of accuracy it should be as carefully distinguished as is possible. Though we may know a thing and at the same time believe it (as in the case of the existence of God, which is a natural verity as well as a revealed truth), it is in the interest of clearness that we should keep to the distinction drawn and not confound belief and knowledge, because of the fact that the same truth may simultaneously be the object of both. But there is another very general use of the term belief in which it is taken to designate assent complete enough to exclude any practical doubt and yet distinguishable from the assent of knowledge. In this use no account is taken of authority. We have many convictions resting upon evidence that is not sufficiently clearly presented to our mind to enable us to say we know, but abundantly sufficient for us to produce a practically unqualified assent. While this would seem to fall under the Scholastic head of opinion, it is the point about which has turned the controversy that has been waged since David Hume brought the question into prominence upon the philosophic issue. Briefly, to select a certain number of typical writers for examination, the issues involved are these. How far do we believe—in the sense of trusting our natural faculties in their reports and judgments; and in how far can we be said to know? Hume, in accordance with his sensistic principles, would restrict our knowledge to purely ideal truths. We are capable of knowing, according to the Scotch sceptic, such ideal principles as those of mathematics, together with the conclusions that are derived from them. But our attribution of an objective reality to what we imagine to be the causes of sensations is a belief. So also are such judgments as that of the principle of causality. We cannot be said to know, but to believe, that there is actually such a relation as that of effect to cause. We believe this, and other similar truths, because of a peculiar character of vivacity, solidity, firmness, or steadiness attaching to our conceptions of them. The division is an arbitrary one and the explanation offered as to the nature of belief unsatisfactory and insufficient. Similarly, James Mill would have the assent given to the objective reality of beings a belief. With him the occasion of the belief is the association of ideas: or, rather, as he wrongly states it, the association of ideas is the belief. If belief is a state of mind at all, it can scarcely be described as an association of ideas. Such an association could at most be considered as

a cause of the belief. John Stuart Mill in his note to his father's *Analysis*, makes belief a primitive fact. It is impossible to analyze it. Locke, though he deals at some length with belief, does not try to analyze it or do more than assign objects to it and investigate the grounds of credibility. Alexander Bain originally held belief to be a function of the will rather than a state of the intellect. In his opinion it was the development of the will under the pursuit of immediate ends. Later, he modified this opinion; and, while retaining the essentially volitional and emotional character, or tendency, as causes, relegated the act of belief itself to the intellectual part of man's nature. Father Maher, S.J., whose admirable treatment of the whole subject ought to be consulted, advances an acute criticism of Dr. Bain's position. He points out (1) that readiness to act is a test of belief, not the belief itself; (2) that belief is generally not active but characteristically passive; (3) that primitive credulity, which Bain makes a chief factor in belief, involves a vicious circle, explaining, as it does, belief by credulity or believing.

A not inconsiderable part of the "Grammar of Assent" is concerned with this subject, though hardly dealing with the problem on the foregoing lines. In his treatment of "Simple Assent", and especially in sections 4 and 5 of Chapter iv, Par. 1, Cardinal Newman's view can be found. He calls the notional assent that we give to first principles presumption. We cannot be said to trust our powers of reasoning or memory as faculties, though we may be supposed to have a trust in any one of their particular acts. That external nature exists is a first principle and is founded upon an instinct. The use of the term is justified by the consideration that the brute creation also possesses it. Further, "the belief in causation" is one of these presumptions, and the assent to it notional. But, on the other hand, "we believe without any doubt that we exist; that we have an individuality and identity all our own; . . . that we have a present sense of good and evil, of a right and a wrong. . . ." Again: "Assent on reasonings not demonstrative is too widely recognized an act to be irrational, unless man's nature is irrational, too familiar to the prudent and clear-minded to be an infirmity or an extravagance." It will be noted that Newman (1) justifies belief as an assent because based on a common use of the rational faculty. Demonstrative grounds may be lacking, but the conviction is none the less neither an infirmity nor an extravagance, but rational. (2) He groups belief and knowledge together under the heading of presumption without drawing any hard and fast line between them. And indeed, from the point of view of mere assent, there is nothing psychological by which they are to be distinguished: since assent itself, as has been noted, is a simple and ultimate fact. The difference lies elsewhere. In this broader sense of belief, it is to be found in the antecedent cause of the assent. For knowledge there will be explicit, for belief implicit, intuition or evidence.

Of German philosophers who have treated this topic, Germar, Fechner, and Ulrici may be consulted. The first limits belief to a conscious assent arising from fact; that is, an assent given without consciousness of its causes or grounds. In the case where the causes or grounds become actual factors in the consciousness, the belief rises to the dignity of knowledge. Kant's view naturally has belief as the necessitated result of the practical reason. It is to be considered epistemologically rather than psychologically. We believe in such truths as are necessitated by the exigencies of our moral nature. And these truths have necessary validity on account of the requirements of that moral nature. We need motives upon which to act. Such beliefs are practical and

lead to action. All natural truths that we accept on belief might conceivably be accepted as truths of knowledge. The implicit may unfold and become explicit. This frequently happens in ordinary experience. Evidence may be adduced to prove assertions. Similarly, any truth of knowledge may be accepted as belief. What is said to be known to one individual may be, and often is, accepted upon his testimony by another.

A great variety of factors may play their part in the genesis of belief. We are accustomed to assent to propositions that we cannot be said to know, on account of many different causes. Some of them are often inadequate and even frivolous. We frequently discover that our beliefs rest on no stable foundation, that they must be reconstructed or done away with altogether. The ordinary reasons upon which belief may be based can be reduced to two: testimony and the partial evidence of reason. A third class of causes of belief is sometimes added. Feeling, desire, and the wish to believe have been noted as antecedent causes of the act of assent. But that feeling, desire, or the wish to believe is a direct antecedent is open to discussion. It cannot be denied that many so-called beliefs, more properly described, perhaps, as trust or hope, have their immediate origin in feelings or wishes; but, as a rule, they seem not to be capable of bearing any real strain; whereas we are accustomed to consider that belief is one of the most unchangeable of mental states. Where these antecedents work indirectly through the election of the will, to which reference is made below, belief may issue as a firm and certain assent. (1) Testimony is a valid and satisfactory cause of assent provided it possesses the necessary note of authority, which is the sole direct antecedent of the ensuing belief. Our ultimate witness must know his facts or truths and be veracious in his presentation of them. Intermediate witnesses must have accurately preserved the form of the original testimony. In the case of human testimony the ordinary rules of prudence will naturally be applied before giving credence to its statements. Once, however, the question of knowledge and veracity is settled, belief may validly issue and an assent be given as to a certainty. Of course there is room also for doubt or for opinion, as the credentials of the authority itself may vary almost indefinitely. But there is a further class of truths believed upon testimony that does not fall within the scope of natural investigation and inquiry. The supersensible, supra-intellectual truths of revelation, at any rate in the present state of man's existence, cannot be said to be assented to either on account of an intuition of their nature or because of any strict process of demonstration of their validity. They are neither evident in themselves nor in their principles. The assent to such truths is of the same nature as that given to truths believed naturally. Only here the authority motivating it is not human but Divine. Acts of assent on such authority are known as acts of faith and, theologically speaking, connote the assistance of grace. They are, none the less, intellectual acts, in the eliciting of which the will has its part to play, just as are those in which assent is given to the authoritative utterances of credible human witnesses. With regard to the nature of this authority upon which such supernatural truths are assented to in faith, it is sufficient to indicate that God's knowledge is infinite and His veracity absolute. (2) The partial evidence of reason has already been touched upon. It may be noted, however, that the evidence may be relative either relatively or absolutely. In the first case we may have recourse to the authority of those who know for our belief, or base it for ourselves upon such evidence as is forthcoming. In the second, as is the case with much of the teaching of science and philosophy, the whole human race can have no more

than a strictly so-called belief in it. Probable opinions, conjectures, obscured or partially recalled memories, or any truths or facts of which we have not a consciously evidential grasp, are the main objects of a belief resultant upon partial evidence. In this its distinction from knowledge lies. We are said to know intuitional truths as well as all those that are indirectly evident in their principles. We know all facts and truths of our own personal experience, whether of consciousness or of objective nature. Similarly, we know the truth of the reports of memory that come clearly and distinctly into consciousness. Nor is it necessary, with Hamilton, to have recourse to an initial belief or trust as implied in all knowledge. We cannot properly be said to trust our faculties. We do not believe evident truth. (3) With the two immediate causes of belief already noted, the action of the will must also be alluded to. Under this head emotion, feeling, and desire may conveniently be grouped, since they play an important, though indirect, part in motivating assents through the election of the will and so causing belief. The action of the will referred to is observed especially in a selection of the data to be examined and approved by the intellect. Where there are several sets of evidences or partial arguments, for and against, the will is said to cause belief in the sense of directing the intellect to examine the particular set of evidences or arguments in favour of the resultant assent and to neglect all that might be urged against it. In this case, however, the belief can easily be referred to the partial evidence of reason, in that as a rational, rather than a volitional act, it is due to the actual considerations before the mind. Whether these are voluntarily restricted or incomplete from the very nature of the case, does not alter the fact that the assent is given because of the partial evidence they furnish. In faith the meritorious nature of the act of belief is referred to this elective action of the will.

The effects of belief may be summed up generally under the head of action or movement, though all beliefs are not of their nature operative. Indeed, it would seem to depend more on the nature of the content of the belief than upon the act of believing. As with certain truths of knowledge, there are beliefs that leave us unmoved and even tend to restrict and prevent rather than instigate to action. The distinction drawn between the assents of knowledge and belief cannot be said to be observed at all closely in practice, where they are frequently confused. It is none the less undoubtedly felt to exist, and, upon analysis of the antecedents, the one can readily be distinguished from the other. It is found that most of the practical affairs of ordinary life depend entirely upon beliefs. In the vast majority of cases in which action is called for it is impossible to have strictly so-called knowledge upon which to act. In such cases belief readily supplies its place, growing stronger as it is justified by the event. Without it, as a practical incentive to action and a justification of it, social intercourse would be an impossibility. Such things as our estimates of the character of our friends, of the probity of those with whom we transact business, are examples of the beliefs that play so large and so necessary a part in our lives. In their own subject-matter they are on a par with the reasonable beliefs of science and philosophy—founded, as are hypotheses and theories, upon practically sufficient, yet indemonstrative and incomplete data.

**Belin, ALBERT (JEAN)** French prelate and writer, b. in Besançon early in the seventeenth century; d. 29 April, 1677. He made his profession in the Benedictine monastery of Faverney, 29 December, 1629, and spent some time at the monasteries of Charité-sur-Loire, Nevers, and Paris as prior and subsequently as abbot. He was consecrated Bishop of Belley, 14 February, 1666. His works, which were written in French, are: "*Pierre philosophe*" (Paris, 1653); "*Talismans justifiés*" (ibid., 1653); "*Poudre de sympathie mystérieuse*" (ibid., 1653); "*Poudre de projection démontrée*" (ibid., 1653); "*Le voyage inconnu*" (ibid., 1653); "*Principes de la foi démontrés par la raison*" (ibid., 1667); "*Preuves convaincantes des vérités du christianisme*" (ibid., 1666); "*Emblèmes eucharistiques, ou octave du très S. Sacrement*" (1647, 1660); "*Les solides pensées de l'âme, pour la porter à son devoir*" (Paris, 1668). He is probably identical with Alphonsus Belin, O.S.B., Prior of Charité-sur-Loire in the latter half of the seventeenth century, and author of "*La vérité de la religion catholique et la fausseté de la religion prétendue réformée*" (Nevers, 1683).

**Bell, ARTHUR (alias FRANCIS)**, VENERABLE, Friar Minor and English martyr, b. at Temple-Broughton near Worcester, 13 January, 1590; d. at London, 11 December, 1643. When Arthur was eight his father died and his mother gave him in charge of her brother Francis Daniel, a man of wealth, learning, and piety, who sent him at the age of twenty-four to the English college at St. Omer; thence he went to Spain to continue and complete his studies. Having been ordained priest, he received the habit of the Franciscan Order at Segovia, 9 August, 1618, and shortly after the completion of his novitiate was called from Spain to labour in the restoration of the English province. He was one of the first members of the Franciscan community at Douai, where he subsequently fulfilled the offices of guardian and professor of Hebrew. In 1632 Bell was sent to Scotland as first provincial of the Franciscan province there; but his efforts to restore the order in Scotland were unsuccessful and in 1637 he returned to England, where he laboured until November, 1643, when he was apprehended as a spy by the parliamentary troops at Stevenage in Hertfordshire and committed to Newgate prison.

The circumstances of his trial show Bell's singular devotedness to the cause of religion and his desire to suffer for the Faith. When condemned to be drawn and quartered it is said that he broke forth into a solemn Te Deum and thanked his judges profusely for the favour they were thus conferring upon him in allowing him to die for Christ. The cause of his beatification was introduced at Rome in 1900. He

ARTHUR BELL

wrote "The History, Life, and Miracles of Joane of the Cross" (St.-Omer, 1625). He also translated from the Spanish of Andrew a Soto "A brief Instruction how we ought to hear Mass" (Brussels, 1624).

STEPHEN M. DONOVAN.

**Bell, JAMES**, priest and martyr, b. at Warrington in Lancashire, England, probably about 1520; d. 20 April, 1584. For the little known of him we depend on the account published four years after his death by Bridgewater in his "Concertatio" (1588), and derived from a manuscript which was kept at Douay when Challoner wrote his "Missionary Priests" in 1741, and is now in the Westminster Diocesan Archives. A few further details were collected by Challoner, and others are supplied by the State Papers. Having studied at Oxford he was ordained priest in Mary's reign, but unfortunately conformed to the established Church under Elizabeth, and according to the Douay MS. "ministered their bare few sacraments about 20 years in diverse places of England". Finally deterred by conscience from the cure of souls and reduced to destitution, he sought a small readership as a bare subsistence. To obtain this he approached the patron's wife, a Catholic lady, who induced him to be reconciled to the Church. After some time he was allowed to resume priestly functions, and for two years devoted himself to arduous missionary labours. He was at length apprehended (17 January, 1583-84) and, having confessed his priesthood, was arraigned at Manchester Quarter Sessions held during the same month, and sent for trial at Lancaster Assizes in March. When condemned and sentenced he said to the Judge: "I beg your Lordship would add to the sentence that my lips and the tops of my fingers may be cut off, for having sworn and subscribed to the articles of heretics contrary both to my conscience and to God's Truth". He spent that night in prayer and on the following day was hanged and quartered together with Ven. John Finch, a layman, 20 April, 1584.

EDWIN BURTON.

**Bellamy, JEROME**, of Uxenden Hall, near London, England, d. 1586, a member of an old Catholic family noted for its hospitality to missionaries and recusants. He was a warm sympathizer with Mary Queen of Scots. In the latter years of the sixteenth century the Babington plot to free Mary and assassinate Elizabeth was exposed, and Babington, with two of his fellow-conspirators, Barnewell and Donne, sought refuge in Bellamy's house. He concealed them and was later arrested with them and accused of complicity in the plot. All four were indicted, tried, convicted 15 September, 1586, and within six days thereafter executed.

GILLOW, *Bibl. Dict. Eng. Cath.*, I, 176.

THOMAS GAFFNEY TAAFFE.

**Bellarini, JOHN**, Barnabite theologian, b. at Castelnovo, Italy, in 1552; d. at Milan, 27 August, 1630. He was Visitor and twice Assistant General of his order. He taught theology at Padua and Rome, and was highly esteemed by bishops and cardinals, particularly by Gregory XV. Best known as a moral theologian, he has left a number of solid theological treatises, the most valuable of which is a commentary on the Council of Trent and the Roman Catechism, in two parts, forming two distinct volumes. The first, for the instruction of the

faithful, is entitled "Doctrina d. Concilii Tridentini et Cathedismi Romani de Symbolo Apostolorum" (Brescia, 1603). The parts of this work relating to the decalogue have been published in French. The second work, designed for the conversion of heretics, and entitled "Doctrina Catholica ex Sacro Concilio Tridentino et Catechismo Romano" (Milan, 1620), has passed through several editions. Bellarini also composed a number of booklets in Italian for confessors and penitents, and a treatise on the doctrine of St. Thomas on physical predetermination and on the determination in general of all things and causes into active operation (Milan, 1606). He is also the author of a work on method (Milan, 1606), which was republished under a slightly different title, along with his "Mirror of Divine and Human Wisdom" (Milan, 1630).

MANGENOT in *Dict. de théol. cath.*, II, 559; *Bibliotheca Scriptorum e Cong. Cler. Regul. S. Pauli* (Rome, 1836), 140.

S. H. FRISBEE.

**Bellarmino (BELLARMINO), ROBERT FRANCIS ROMULUS, VENERABLE**, a distinguished Jesuit theologian, writer, and cardinal, b. at Montepulciano, 4 October, 1542; d. 17 September, 1621. His father was Vincenzo Bellarmino, his mother Cinthia Cervini, sister of Cardinal Marcello Cervini, afterwards Pope Marcellus II. He was brought up at the newly founded Jesuit college in his native town, and entered the Society of Jesus on 20 September, 1560, being admitted to his first vows on the following day. The next three years he spent in studying philosophy at the Roman College, after which he taught the humanities first at Florence, then at Mondovi. In 1567 he began his theology at Padua, but in 1569 was sent to finish it at Louvain, where he could obtain a fuller acquaintance with the prevailing heresies. Having been ordained there, he quickly obtained a reputation both as a professor and a preacher, in the latter capacity drawing to his pulpit both Catholics and Protestants, even from distant parts. In 1576 he was recalled to Italy, and entrusted with the chair of Controversies recently founded at the Roman College. He proved himself equal to the arduous task, and the lectures thus delivered grew into the work "De Controversiis" which, amidst so much else of excellence, forms the chief title to his greatness. This monumental work was the earliest attempt to systematize the various controversies of the time, and made an immense impression throughout Europe, the blow it dealt to Protestantism being so acutely felt in Germany and England that special chairs were founded in order to provide replies to it. Nor has it even yet been superseded as the classical book on its subject-matter, though, as was to be expected, the progress of criticism has impaired the value of some of its historical arguments.

In 1588 Bellarmino was made Spiritual Father to the Roman College, but in 1590 he went with Cardinal Gaetano as theologian to the embassy Sixtus V

VENERABLE ROBERT CARDINAL  
BELLARMINO

was then sending into France to protect the interests of the Church amidst the troubles of the civil wars. Whilst he was there news reached him that Sixtus, who had warmly accepted the dedication of his "De Controversiis", was now proposing to put its first volume on the Index. This was because he had discovered that it assigned to the Holy See not a direct but only an indirect power over temporals. Bellarmine, whose loyalty to the Holy See was intense, took this greatly to heart; it was, however, averted by the death of Sixtus, and the new pope, Gregory XIV, even granted to Bellarmine's work the distinction of a special approbation. Gaetano's mission now terminating, Bellarmine resumed his work as Spiritual Father, and had the consolation of guiding the last years of St. Aloysius Gonzaga, who died in the Roman College in 1591. Many years later he had the further consolation of successfully promoting the beatification of the saintly youth. Likewise at this time he sat on the final commission for the revision of the Vulgate text. This revision had been desired by the Council of Trent, and subsequent popes had laboured over the task and had almost brought it to completion. But Sixtus V, though unskilled in this branch of criticism, had introduced alterations of his own, all for the worse. He had even gone so far as to have an impression of this vitiated edition printed and partially distributed, together with the proposed Bull enforcing its use. He died, however, before the actual promulgation, and his immediate successors at once proceeded to remove the blunders and call in the defective impression. The difficulty was how to substitute a more correct edition without affixing a stigma to the name of Sixtus, and Bellarmine proposed that the new edition should continue in the name of Sixtus, with a prefatory explanation that, on account of *aliqua vitia vel typographorum vel aliorum* which had crept in, Sixtus had himself resolved that a new impression should be undertaken. The suggestion was accepted, and Bellarmine himself wrote the preface, still prefixed to the Clementine edition ever since in use. On the other hand, he has been accused of untruthfulness in stating that Sixtus had resolved on a new impression. But his testimony, as there is no evidence to the contrary, should be accepted as decisive, seeing how conscientious a man he was in the estimation of his contemporaries; and the more so since it cannot be impugned without casting a slur on the character of his fellow-commissioners who accepted his suggestion, and of Clement VIII who with full knowledge of the facts gave his sanction to Bellarmine's preface being prefixed to the new edition. Besides, Angelo Rocca, the Secretary of the revisory commissions of Sixtus V and the succeeding pontiffs, himself wrote a draft preface for the new edition in which he makes the same statement: (Sixtus) "dum errores ex typographiâ ortos, et mutationes omnes, atque varias hominum opiniones recognoscere cœpit, ut postea de toto negotio deliberare atque Vulgatam editionem, prout debebat, publicare posset, morte præventus quod cœperat perficere non potuit". This draft preface, to which Bellarmine's was preferred, is still extant, attached to the copy of the Sixtine edition in which the Clementine corrections are marked, and may be seen in the Biblioteca Angelica at Rome (see this question well discussed by Père Prat in the "Études religieuses" for September, 1890).

In 1592 Bellarmine was made Rector of the Roman College, and in 1595 Provincial of Naples. In 1597 Clement VIII recalled him to Rome and made him his own theologian and likewise Examiner of Bishops and Consultant of the Holy Office. Further, in 1599 he made him Cardinal-Priest of the title of Santa Maria in via, alleging as his reason for this promotion that "the Church of God had not his equal in learning". He was now appointed, along with the

Dominican Cardinal d'Ascoli, an assessor to Cardinal Madruzzi, the President of the Congregation *de Auxiliis*, which had been instituted shortly before to settle the controversy which had recently arisen between the Thomists and the Molinists concerning the nature of the concord between efficacious grace and human liberty. Bellarmine's advice was from the first that the doctrinal question should not be decided authoritatively, but left over for further discussion in the schools, the disputants on either side being strictly forbidden to indulge in censures or condemnations of their adversaries. Clement VIII at first inclined to this view, but afterwards changed completely and determined on a doctrinal definition. Bellarmine's presence then became embarrassing, and he appointed him to the Archbishopric of Capua just then vacant. This is sometimes spoken of as the cardinal's disgrace, but Clement consecrated him with his own hands—an honour which the popes usually accord as a mark of special regard. The new archbishop departed at once for his see, and during the next three years set a bright example of pastoral zeal in its administration.

In 1605 Clement VIII died, and was succeeded by Leo XI, who reigned only twenty-six days, and then by Paul V. In both conclaves, especially the latter, the name of Bellarmine was much before the electors, greatly to his own distress, but his quality as a Jesuit stood against him in the judgment of many of the cardinals. The new pope insisted on keeping him at Rome, and the cardinal, obediently complying, demanded that at least he should be released from an episcopal charge the duties of which he could no longer fulfil. He was now made a member of the Holy Office and of other congregations, and thenceforth was the chief adviser of the Holy See in the theological department of its administration. Of the particular transactions with which his name is most generally associated the following were the most important: The inquiry *de Auxiliis*, which after all Clement had not seen his way to decide, was now terminated with a settlement on the lines of Bellarmine's original suggestion. 1606 marked the beginning of the quarrel between the Holy See and the Republic of Venice which, without even consulting the pope, had presumed to abrogate the law of clerical exemption from civil jurisdiction and to withdraw the Church's right to hold real property. The quarrel led to a war of pamphlets in which the part of the Republic was sustained by John Marsiglio and an apostate monk named Paolo Sarpi, and that of the Holy See by Bellarmine and Baronius. Contemporaneous with this Venetian episode was that of the English Oath of Allegiance. In 1606, in addition to the grave disabilities which already weighed them down, the English Catholics were required under pain of *præmunire* to take an oath of allegiance craftily worded in such wise that a Catholic in refusing to take it might appear to be disavowing an undoubted civil obligation, whilst if he should take it he would be not merely rejecting but even condemning as "impious and heretical" the doctrine of the deposing power, that is to say, of a power, which, whether rightly or wrongly, the Holy See had claimed and exercised for centuries with the full approval of Christendom, and which even in that age the mass of the theologians of Europe defended. The Holy See having forbidden Catholics to take this oath, King James himself came forward as its defender, in a book entitled "Triplici nodo triplex cuneus", to which Bellarmine replied in his "Responsio Matthæi Torti". Other treatises followed on either side, and the result of one, written in denial of the deposing power by William Barclay, an English jurist resident in France, was that Bellarmine's reply to it was branded by the Regalist *Parlement* of Paris. Thus it came to pass that, for following the *via media* of the indirect power, he was

condemned in 1590 as too much of a Regalist and in 1605 as too much of a Papalist.

Bellarmino did not live to deal with the later and more serious stage of the Galileo case, but in 1615 he took part in its earlier stage. He had always shown great interest in the discoveries of that investigator, and was on terms of friendly correspondence with him. He took up too—as is witnessed by his letter to Galileo's friend Foscarini—exactly the right attitude towards scientific theories in seeming contradiction with Scripture. If, as was undoubtedly the case then with Galileo's heliocentric theory, a scientific theory is insufficiently proved, it should be advanced only as an hypothesis; but if, as is the case with this theory now, it is solidly demonstrated, care must be taken to interpret Scripture only in accordance with it. When the Holy Office condemned the heliocentric theory, by an excess in the opposite direction, it became Bellarmine's official duty to signify the condemnation to Galileo, and receive his submission. Bellarmine lived to see one more conclave, that which elected Gregory XV (February, 1621). His health was now failing, and in the summer of the same year he was permitted to retire to Sant' Andrea and prepare for the end. His death was most edifying and was a fitting termination to a life which had been no less remarkable for its virtues than for its achievements.

His spirit of prayer, his singular delicacy of conscience and freedom from sin, his spirit of humility and poverty, together with the disinterestedness which he displayed as much under the cardinal's robes as under the Jesuit's gown, his lavish charity to the poor, and his devotedness to work, had combined to impress those who knew him intimately with the feeling that he was of the number of the saints. Accordingly, when he died there was a general expectation that his cause would be promptly introduced. And so it was, under Urban VIII in 1627, when he became entitled to the appellation of Venerable. But a technical obstacle, arising out of Urban VIII's own general legislation in regard to beatifications, required its prorogation at that time. Though it was reintroduced on several occasions (1675, 1714, 1752, and 1832), and though on each occasion the great preponderance of votes was in favour of the beatification, a successful issue has never yet been reached. This was partly because of the influential character of some of those who recorded adverse votes, Barbarigo, Casanate, and Azzolino in 1675, and Passionei in 1752, but still more for reasons of political expediency, Bellarmine's name being closely associated with a doctrine of papal authority most obnoxious to the Regalist politicians of the French Court. "We have said," wrote Benedict XIV to Cardinal de Tencin, "in confidence to the General of the Jesuits that the delay of the Cause has come not from the petty matters laid to his charge by Cardinal Passionei, but from the sad circumstances of the times" (*Etudes Religieuses*, 15 April, 1896).

A full list of Bellarmine's writings, and of those directed against him, may be seen in Sommervogel's "*Bibliothèque de la compagnie de Jésus*". The following are the principal: *Controversial works*. "*Disputationes de Controversiis Christianæ Fidei adversus hujus temporis hæreticos*", of the innumerable editions of which the chief are those of Ingolstadt (1586-89), Venice (1596), revised personally by the author, but abounding in printer's errors, Paris or "Triadelpi" (1608), Prague (1721), Rome (1832); "*De Exemptione clericorum*", and "*De Indulgentiis et Jubilæo*", published as monographs in 1599, but afterwards incorporated in the "*De Controversiis*"; "*De Transitu Romani Imperii à Græcis ad Francos*" (1584); "*Responsio ad præcipua capita Apologiæ . . . pro successione Henrici Navarreni*" (1586);

"*Judicium de Libro quem Lutherani vocant Concordiæ*" (1585); four *Risposte* to the writings on behalf of the Venetian Republic of John Marsiglio and Paolo Sarpi (1606); "*Responsio Matthæi Torti ad librum inscriptum Triplici nodo triplex cuneus*" (1608); "*Apologia Bellarmini pro responsione sua ad librum Jacobi Magnæ Britannię Regis*" (1609); "*Tractatus de potestate Summi Pontificis in rebus temporalibus, adversus Gulielmum Barclay*" (1610). *Catechetical and Spiritual Works*. "*Doctrina Christiana brevis*", and "*Dichiarazione più copiosa della dottrina cristiana*" (1598), two catechetical works which have more than once received papal approbation, and have been translated into various languages; "*Dichiarazione del Simbolo*" (1604), for the use of priests; "*Admonitio ad Episcopum Theanesem nepotem suum quæ sint necessaria episcopo*" (1612); "*Exhortationes domesticæ*", published only in 1899, by Père van Ortruy; "*Conciones habitæ Lovanii*", the more correct edition (1615); "*De Ascensione mentis in Deum*" (1615); "*De Æternâ felicitate sanctorum*" (1616); "*De gemitu columbæ*" (1617); "*De septem verbis Christi*" (1618); "*De arte bene moriendi*" (1620). The last five are spiritual works written during his annual retreats. *Exegetical and other works*. "*De Scriptoribus ecclesiast.*" (1615); "*De Editione Latinâ Vulgatâ, quo sensu a Concilio Tridentino definitum sit ut ea pro authenticâ habeatur*", not published till 1749; "*In omnes Psalmos dilucida expositio*" (1611). Complete editions of Bellarmine's *Opera omnia* have been published at Cologne (1617); Venice (1721); Naples (1856); Paris (1870).

Ven. R. Bellarmini, S.R.E. Cardinalis, *vita quam ipse scripsit* (with an Appendix), written in 1613, at the request of Fathers Eudæmon Joannis and Mutius Vitelleschi, first published among the *acta* of the Process of Beatification, 1675; republished in 1887 by DÖLLINGER and REUSCH, with notes many of which are useful but the general tone of which is unfair and spiteful; a multitude of unpublished documents in the archives of the Vatican, Simancas, Salamanca, the Society of Jesus, etc.; *Epistolæ familiares* (1650); EUDÆMON JOANNIS, *De pio obitu Card. Bellarmini* (1621); FINALI, *Èscame fatto per me*, that is, by the lay brother who attended him in his last sickness, MS.; lives by FULIGATTI (1824); translated into Latin with additions by PETRA SANCTA, (1826) and BARTOLI, (1678); CERVINI, *Imago virtutum* (1625). These form the chief original material. Of derived lives the best are those by FRIZON (1708), and COUDERC (1893). See also LE BACHELET in VACANT, *Dict. de théol. cath.*; and for Bellarmine's doctrine on papal authority, DE LA SERVIERE, *De Jacobo Angl. Rege cum Card. R. Bellarmiano . . . disputante* (1900).

SYDNEY F. SMITH.

BELLASIS, EDWARD, Serjeant-at-Law, b. 14 October, 1800; d. 24 January, 1873; was one of the most able and respected of that little band of English converts who in the later years of the Tractarian movement joined the Catholic Church from the ranks of the legal profession. The distinguished advocate, J. R. Hope-Scott, who married Sir Walter Scott's granddaughter, and the conveyancer, Edward Badesley, to whom Cardinal (then Doctor) Newman in 1867 dedicated his volume of "*Verses on Various Occasions*", were the Serjeant's lifelong friends, and all three became Catholics about the same time. Edward Bellasis was the son of the Rev. George Bellasis, D.D., a scion of a younger branch of the Belasyse family (see BELASYSE, JOHN), and of his second wife, Leah Cooper Viall, the daughter and heiress of Emery Viall of Walsingham, Norfolk. His uncle, General John Bellasis, and his half-brothers, Joseph and George, won high military honours in India towards the close of the eighteenth century. Edward was educated at Christ's Hospital, and after making his legal studies at the Inner Temple he contrived at a relatively early age to form an excellent practice at the Chancery bar. It was, however, the period of great railway developments in the United Kingdom, and Bellasis, turning his attention to the Parliamentary Committees, was constantly retained as counsel for the

various companies in the proceedings to which the opening up of the new lines gave rise. In 1844 he received the coif of Serjeant-at-Law, a dignity now abolished, and amongst other *causes célèbres* took part in the famous libel action, *Achilli v. Newman*, in 1852, and in the litigation connected with the title and estates of the last Catholic Earl of Shrewsbury. In this, as in all his legal work, Bellasis set an example of great disinterestedness. He retired from the profession in 1867, leaving behind him the reputation of an excellent lawyer and a careful and finished speaker.

Although brought up amid rather evangelical surroundings, Serjeant Bellasis had followed with great interest the developments of the Oxford movement. His Catholic tendencies were stimulated partly by the narrowness of anti-Roman prejudice which he recognized in the attitude of his fellow-religionists, and partly by his intercourse with Catholics whom he met on his travels abroad. His approach towards the Church was slow and characteristically prudent, but the friendships he formed with many advanced Anglicans like Oakley, W. G. Ward, and J. B. Morris, who before long passed over to the Roman side, could not fail to produce an effect. Eventually he was received into the Church by Father Brownbill, S.J., 27 December, 1850. His wife and children followed soon after. From that time until his death Serjeant Bellasis was amongst the most devoted and edifying of Catholic laymen. His interest in all Catholic projects was keen, his social and intellectual position was such as commanded respect, and his charity was inexhaustible. From the founding of the new school of the Oratorians under the direction of Dr. Newman, at Edgbaston, to the providing of scientific apparatus for the Observatory at Stonyhurst; from the collection of relics for churches to the encouragement of the Nazareth House Sisters who tended the aged poor, the Serjeant was foremost in every good work. His personal holiness, fostered by constant private retreats, and his kindness towards all won him universal respect and lent additional effectiveness to the conciliatory pamphlets which he occasionally published in explanation of Catholic truth. His first wife had died as early as 1832. By his second marriage, in 1835, with Miss Eliza Garnett, he left ten children, of whom two sons, the eldest and the youngest, are priests, and three daughters became nuns. In nothing is the beauty of the Serjeant's character more plainly seen than in those fragments of his intercourse with his children which have been reproduced by his biographer. After his death on the 24th of January, 1873, Cardinal Newman wrote: "He was one of the best men I ever knew". Newman's "Grammar of Assent", published in 1870, bears a dedication to Bellasis. Of the Serjeant's own publications the best remembered is a volume of short dialogues collected under the title "Philotheus and Eugenia".

BELLASIS, *Memorial of Mr. Serjeant Bellasis* (2d ed., London, 1895), a charming biography written by his son, Mr. Edward Bellasis, Lancaster Herald, and partly based on some autobiographical notes. It includes two excellent portraits. *Dict. of Nat. Biog.*, IV, 180; *GLLOW, Bibl. Dict. of Eng. Cath.*, I. HERBERT THURSTON.

**Bellecius**, ALOYSIUS, Jesuit ascetic author, b. at Freiburg im Breisgau, 15 February, 1704; d. at Augsburg, 27 April, 1757. He taught philosophy one year and theology seven, and spent four years as a missionary in South America among the Indians living along the Amazon. Recalled to Europe, he was charged with the spiritual care of his religious brethren and later with the direction of the seminary of Porrentruy in the Diocese of Basle. He is the author of a number of ascetic works in Latin, most of which have been translated into different languages

and often reprinted. The most noteworthy of these are: "Christianus pie moriens" (1749); "Virtutis Solidæ præcipua impedimenta, subsidia, et incitamenta" (1755); "Medulla Asceseos seu Exercitia S. P. Ignatii" (1757); "Triduum Sacrum præcipue Religiosorum usui accomodatum" (1757). English translations of the last three have been made and are still in print. The first, entitled "Solid Virtue", is translated from the French (London, 1887); the second appeared under the title "Spiritual Exercises according to the method of St. Ignatius", translated from the Italian version of Father Bresciani, S. J., by William Hutch, D.D. (London, 1876). In this translation Father Bresciani slightly modified some of the opinions of Bellecius which he considered too rigid. The third translation was made by Father John Holzer, S. J., and was published in New York in 1882. It is entitled "Solid Virtue: A Triduum and Spiritual Conferences". The Triduum is an abridgment of Bellecius's larger work on "Solid Virtue"—an abridgment made by himself. The three Spiritual Conferences show practically in what solid virtue consists.

S. H. FRISBEE.

**Bellenden** (BALLENDEN, or BALLANTYNE), JOHN, a Scotch poet, b. at Haddington or Berwick in the latter part of the fifteenth century; d. at Rome, c. 1587. He was a Catholic and at an early age matriculated at the University of St. Andrews. Later he went to Paris, where he took the degree of Doctor of Divinity at the Sorbonne. Returning to Scotland, he brought with him from Paris the great work by Hector Boece, the "Historia Scotorum", and was received with great favour at the court of James V. He was subsequently appointed by the king to undertake the work of translating the "Historia" into the Scotch vernacular, which, together with some poems that he wrote at this period, occupied him about three years. He was also commissioned by the king to translate Livy into English, a work which hitherto had not been attempted. Bellenden was appointed Archdeacon of Moray, and in the succeeding reign he was vigorous in his opposition to Protestantism. This opposition subsequently led to his flight to escape persecution. He is supposed to be identical with one of the same name who was at one time secretary to Archibald, Earl of Angus.

THOMAS GAFFNEY TAAFFE.

**Belleville**, DIOCESE OF, comprises that part of southern Illinois, U. S. A., which lies south of the northern limits of St. Clair, Clinton, Marion, Clay, Richland, and Lawrence counties, an area of 11,678 square miles. This territory was formerly a part of the Diocese of Alton, but upon the demise of Bishop Baltes, of that see, a new diocese was erected, 7 January, 1887, with the episcopal see at Belleville, St. Clair Co. The Rev. John Janssen, who had held the office of vicar-general successively under Bishop Juncker and Bishop Baltes of Alton, was appointed first bishop of the newly erected diocese on 28 February, 1888, and consecrated on 25 April, 1888. The standing of the new diocese at that time is shown by the following statistics: secular priests fifty-six; regular four; churches with resident priests fifty-three; missions with churches twenty-nine; academies three; parochial schools fifty-three; children attending 5,395; orphan asylum 1; orphans 30; hospitals 3. The Catholic population was about 50,000 and remained almost stationary for a number of years. The mining industries in the southern part of the diocese are fast developing, so that, with immigration, the population has increased to 56,200, with

bright prospects for the future. The diocese has 100 secular and two regular priests; eighty-two churches with resident priests; thirty-two missions with churches; eighteen chapels; twenty-four ecclesiastical students; a high school for boys; two academies for young ladies; sixty-seven parochial schools with 5,033 pupils; an orphan asylum with 112 orphans; eight hospitals; and a house for the aged. The following religious communities are represented in the diocese: Brothers of Mary, Sisters of Christian Charity, Sisters of St. Dominic, Franciscan Sisters, Hospital Sisters of St. Francis, School Sisters of St. Francis, Sisters of the Poor Handmaids of Christ, Sisters of the Holy Cross, Sisters of St. Joseph, Polish Sisters of St. Joseph, Sisters of Loretto, School Sisters of Notre Dame, Sisters of the Precious Blood, Servants of Mary, Ursuline Sisters, and White Benedictine Sisters of Mt. Olive.

To this diocese belong some of the oldest missions of the West. The records of the church of Kaskaskia date from the year 1695 and give the name of the Rev. Jac. Gravier, S.J., as the missionary priest. The Jesuits continued to attend to the wants of the Indian tribe of the Kaskaskias and of the French, and alternately the Jesuit Fathers De Beaubois, Le Boulenger, Tartarin, Aubert, and Meurin had this territory as the field of their apostolic labours. Father Meurin was the last Jesuit doing missionary work at Kaskaskia; the order was suppressed in his time. He died at Prairie du Rocher and is buried at Florissant, Missouri. The Rev. P. Gibault who in 1768 came from Quebec was the first secular priest, who as resident pastor of Kaskaskia had charge also of the large surrounding territory, and who became vicar-general of the territory of Illinois. He continued his arduous labours until 1791, the time of his death. Until 1820 the Lazarist Fathers were in this field; after that the work was continued by secular priests. The old town of Kaskaskia, with its statehouse and church, has been swallowed up by the Mississippi River and about two miles farther inland a new town and a new church have been built up.

The organization of the congregation of Prairie du Rocher coincides with the building of the first Fort Chartres on the banks of the Mississippi in 1720. The Rev. J. Le Boulenger, chaplain of the militia stationed at the Fort, was placed in charge of the congregation. The church, built by the people, was placed under the protection of St. Anne. In 1743 the Rev. J. Gagnon, S.J., took charge of the mission and laboured there until his death in 1755. His remains were interred by the side of the altar in the chapel in the cemetery. This chapel was built in 1734, and placed under the patronage of St. Joseph. When the river inundated one corner of the newly built stone structure at Fort Chartres and threatened the village and St. Anne's church, the Fort was evacuated, the village deserted; its inhabitants sought the high ground at the foot of the bluffs, and the cemetery chapel became the parish church and served as such until 1858, when a brick church was erected. Among the missionaries who worked there, the names of Gabriel Richard (later Delegate to Congress from Michigan); Dautien Olivier (who lived to be ninety-five years of age); Xavier Dahmen, and John Timon (later Bishop of Buffalo, New York) deserve special mention. The early records of the old church of Cahokia have been lost, and accurate data can be found from the year 1783 only. At that time the religious wants of the Catholics of Cahokia and the surrounding territory, including St. Louis across the river, were attended to by Father De Saintpierre. When in 1843 the Diocese of Chicago was erected, Cahokia, Prairie du Long, Belleville, Shoal Creek (now Germantown), Kaskaskia, Prairie du Rocher, and Shaw-

neetown were the only parishes in the territory now comprised by the Diocese of Belleville.

H. J. HAGEN.

**Belley** (BELLICITUM), DIOCESE OF, coextensive with the civil department of Ain and a suffragan of the Archbishopric of Besançon. Although suppressed at the time of the Concordat, the Diocese of Belley was re-established in 1822 and took from the Archdiocese of Lyons the arrondissements of Belley, Bourg, Nantua, and Trévoux, and from the Archdiocese of Chambéry the arrondissement of Gex.

Local tradition maintains that Belley was evangelized in the second century by the martyrs Marcellus and Valerian, companions of St. Pothinus. The first bishop of historic certainty is Vincentius, mentioned in 552. Others who occupied the see were St. Hippolytus, Abbot of Condat (eighth century); St. Anthelm (1163-78), seventh General of the Carthusian Order; St. Arthaud (1179-90), founder of the Carthusians at Arvières; Camus (1609-29), a noted preacher and romancist; and Monseigneur François M. Richard (1872-75), later Cardinal and Archbishop of Paris. Belley honours in a special manner St. Amandus, Bishop of Maastricht, who founded the Abbey of Nantua about 660; St. Vulbas, a patrician of Bourgogne and a war companion of King Dagobert, treacherously assassinated in 642; St. Rambert, killed by order of Ebroin in the seventh century, whose name has been given to a city of the diocese; St. Trivier, the solitary, who died about 650; St. Barnard (ninth century), who founded the great Benedictine Abbey of Ambronay and died Archbishop of Vienna; St. Lambert (twelfth century), founder of the Cistercian Abbey at Chesery; St. Roland (twelfth century), Abbot of Chesery; St. Stephen of Châtillon, who founded the Carthusian monastery at Portes, in 1115, and died Bishop of Die; St. Stephen of Bourg, who founded the Carthusian monastery at Meyria in 1116; and St. Jean-Baptiste Vianney (1786-1857), parish priest at Ars.

The Diocese of Belley which, in the Middle Ages, had no less than eight Carthusian monasteries, was the birthplace of the Josephites, a congregation founded by Jacques Crétenet (1606-67), a layman and surgeon who became a priest after the death of his wife; of the teaching order of the Sisters of St. Charles, founded by Charles Déma of Bourg (1636-89); and of three teaching orders founded in the first half of the nineteenth century: the Brothers of the Society of the Cross of Jesus; the Brothers of the Holy Family of Belley, and the Sisters of St. Joseph of Bourg. In 1858 a Trappist monastery was established in the unhealthy Dombes district. Cardinal Louis Aleman (1390-1450) and Sœur Rosalie (1787-1866), noted in the history of modern Parisian charities, were both natives of the Diocese of Belley. Blessed Pierre-Louis-Marie Chanel was born at Cuet near Bourg. For thirty years of its existence (1701-31), "*Le Journal de Trévoux*", a valuable repository of the literary and religious history of the period, was published by the Jesuits at Trévoux, in this diocese. The church at Brou, near Bourg, is a marvel of architecture and contains some wonderful pieces of sculpture. It was built between 1511 and 1536 under the direction of Margaret of Austria, widow of Philibert (II) the Fair, Duke of Savoy.

The latest statistics for the diocese give the following institutions: 1 maternity hospital, 66 infant schools, 1 deaf-mute institute, 3 boys' orphanages, 10 girls' orphanages, 21 hospitals, or hospices, 2 dispensaries, 21 communities for the care of the sick in their homes, 1 home for incurables, and 5 homes for the aged, all conducted by sisters; and 1 deaf-

mute institute, and 2 insane asylums conducted by brothers.

In 1900 the following religious orders were represented in the Diocese of Belley: Carthusians, at Portes and Sélignac; Trappists at Notre Dame des Dombes; Marists at Belley; Lazarists at Musiniens; and Fathers of the Blessed Sacrament at Trévoux. Congregations local to the diocese are: two teaching orders; the Brothers of the Society of the Cross of Jesus founded by M. Bochart in 1824, and the Brothers of the Holy Family, founded by Brother Taborin in 1835; and the Sisters of St. Joseph, with mother-house at Bourg, very numerous throughout the department. At the close of the year 1905 the Diocese of Belley contained 350,416 inhabitants, 36 parishes, 404 mission churches, and 75 curacies.

GEORGES GOYAU.

**Bellings** (or **BELLING**), SIR RICHARD, Irish historian, b. near Dublin early in the seventeenth century; d. in 1677. He was the son of Sir Henry Bellings, a Catholic landowner in Leinster. He was trained to the law and entered Lincoln's Inn, London, and while there wrote a supplementary book (the sixth) to Sir Philip Sydney's "Arcadia", which has been generally printed with that work. He returned to Ireland, became a member of the Irish Parliament, and married a daughter of Viscount Mountgarret. In 1642, when the Irish Confederation was formed, Bellings joined, his father-in-law being president, and became secretary to the Supreme Council. He was sent to the continent in 1644 as a representative of this body. In the following year he returned to Ireland and was active as a royalist till 1649, when he withdrew to France, most of his property having been confiscated by the Cromwellians. His estate was restored to him after the accession of Charles II, who, with Ormonde, held him in high regard. He died in 1677 and was buried near Dublin. Perhaps his chief work is his defence of the Catholics of Ireland, "Vindiciarum Catholicorum Hiberniæ libri duo", which, under the pseudonym of "Philopater Irenæus", was published at Paris in 1650. During his later years he also wrote an account of Irish affairs (1641-48), an imperfect copy of which was printed in 1772. The complete work was, however, recovered, and was published under the editorship of John T. Gilbert, with the following title: "History of the Irish Confederation and the War in Ireland, 1641-48". This edition (Dublin, 1882-85) is enriched with many valuable documents and many illustrative notes, and was published from the original MSS. The above-mentioned "Vindication" is regarded as one of the most trustworthy of the many works written on that period. However, the Irish Franciscan, Father John Ponce, controverted many of its statements in his "Richard Bellingi Vindiciæ Eversæ" (Paris, 1653). A "Letter from Richard Bellings to M. Callaghan" on Irish affairs (Paris, c. 1652) is to be found in a French translation of the same date in the Gilbert Library, Dublin.

D. J. O'DONOGHUE.

**Bellini**, GIACOMO (JACOPO), father of Gentile and Giovanni Bellini, b. about 1400; d. 1471. Interest in him arises mainly from the fact that he was the teacher of his sons who were the chief founders of the Venetian school of painting. The paintings produced by Giacomo Bellini which are still in existence are unimportant and few in number. His interesting sketch-book proves, however, his industry and power of observation. It contains copies of antique statues and re-

liefs, drawings portraying Biblical stories and Christian legends, and sketches from nature and life which are executed with animation and show a sense of perspective in the composition. He was a competitor in art of the painters of the Vivarini family who came from the neighbouring island of Murano; Antonio and Bartolommeo Vivarini opened a studio in Venice but they were excelled by the Bellinis. Giacomo Bellini had worked under Gentile da Fabriano in his native city and at Florence. He had also been employed at other places, especially at Padua, where he came under the influence of the classic and plastic tendencies of Squarcione. His sons at an early age became his assistants at Venice.

GENTILE BELLINI, (b. about 1427; d. 1507). He was the elder of the brothers. He also had been in Padua and painted at first in the style of Squarcione, Donatello, and Mantegna; this style was good in conveying individuality, but it was weak in composition and somewhat clumsy. The painting containing the four heroic-sized figures of Saints Mark, Theodore, Jerome, and Francis, the picture of the patriarchs surrounded by ecclesiastics and angels, a Madonna with the benefactors of a religious foundation, and a bust-portrait of the doge belong to this period. At first Gentile worked mainly in partnership with his father and brother, as at Padua in the Cappella di Gattamelata. But after the father retired, Gentile's fame soon exceeded that of the elder Bellini. He painted eight pictures in the Scuola di San Giovanni Evangelista at Venice in continuation of his father's work "The Miracle of the Holy Cross". Three of these pictures, painted between 1490-1500, are preserved in a damaged condition at the Academy of Venice. These pictures bear throughout the characteristic peculiarities of the Venetian school of painting. They are filled with figures from real life, which are clearly modelled, each figure having its own individuality; the religious processions are stately, the architecture which appears is of great splendour, and skill is shown in the perspective of lines and atmosphere.

The "Sermon of St. Mark at Alexandria", now at Milan, which Giovanni completed after the death of his brother, equals those just mentioned in worth. It also shows a large number of figures skillfully grouped, an over-elaborate architectural background, much pomp in the scene depicted, brilliant light, and great richness of colour. The Oriental costumes added a new grace to the painting. In 1479 Gentile had gone to Constantinople on the recommendation of the Signory, who had been requested by the Sultan Mohammed II to send him a portrait-painter. Gentile painted the Sultan and other important personages. He brought home a great many sketches, including one of the Sultan and the Dowager Sultana in sitting posture. The journey to Constantinople was not only instructive but greatly increased the fame of the painter. Among the fruits of this trip are a portrait (in the Layard collection at Venice) giving the head and shoulders of Mohammed, and the canvas "Reception of the Venetian Ambassadors by the Grand Vizier", now in the Louvre. The visit to Constantinople had, however, interrupted another large undertaking. In 1474 Gentile had been honoured with the commission to restore the paintings in the Great Council Chamber of the doge's palace and to add to their number. Earlier artists had painted for the hall a series of pictures on a large scale representing scenes from the history of Venice. Gentile after his return from Constantinople, in company with his brother, went on with the work. The seven pictures they produced were destroyed in the fire of 1577. In his middle and later period Gentile abandoned tempera and painted in oil.

GIOVANNI BELLINI (b. about 1428; d. 1516) carried the new form of art to its greatest height. He was greatly influenced by the tendencies which have

been mentioned; of these the style of his father and of the Paduan school had the most effect upon him. Mantegna was his brother-in-law. Another painter who strongly affected him was Antonello da Messina. Messina was the first person in Italy to understand the Flemish method of painting in oil, and towards the end of his life he spent several years (1474-76) in Milan and Venice. The surroundings of Venetian life and the realistic direction which Venetian art had taken gave the Venetian painters a keen perception of the charm of colour, so that even the short time during which Messina was with them sufficed to lead them into a new path. The genius of Giovanni Bellini enabled him to obtain the full benefit of the new stimulus; at the same time other painters, Bartolommeo and Luigi Vivarini, Gentile Bellini, and other men, also took up the new technique. The use of the new medium produced a softness of outline and an improvement in the modelling which tempered the hardness of the Paduan style and obtained beautiful effects in colour. Giovanni had more feeling and a keener spiritual insight than his brother, and his style gradually developed until he attained a perfect har-

which represent Mary Magdalen and St. Catherine, or St. Paul and St. George, in company with the Madonna. Similar to these is the fine picture "The Presentation of Jesus in the Temple". Mary offers the Child to the high-priest over a table while the aged Simeon and Joseph worship. Giovanni did not attempt to solve, even in his larger works, such difficult problems of perspective and of the gradation of light and shade as his brother undertook. He had, however, learned from his brother the entire art of the distribution of light and shade and applied it with more skill to bringing out the inner feeling of a composition. Unfortunately we are not able to judge of his style in historical work as we are in the case of his brother. His historical compositions, seven in all, were painted for the Great Council Chamber of the doge's palace. He worked on these from 1479 until his death; at times the work was done in conjunction with his brother, at times he had the aid of other men. The paintings were all destroyed by fire in 1577. Two duplicates remain of the portraits of the doges, painted in the same place, and these show his skill in portrait-painting. His master-

THE DOGE LOREDANO

GIOVANNI BELLINI

MADONNA

mony of drawing, perspective, drapery, light, and colour.

His two Pietàs, in Venice, produce a deep effect on the mind, yet they betray a striking harshness which becomes at times even ugliness, showing that the characteristic qualities of his style had not yet developed into a harmonious beauty. The painting at Berlin of the "Angels Mourning over Christ" although in the relief style, is noble, tender, and rich in colour. The feeling of devotion loses nothing here through the realistic portrayal of all the details. A peculiarity of these pictures is the upright position of the dead body of Christ. The smaller pictures of the Madonna appear at all stages in the development of the artist. Notwithstanding their large number they show no real repetition; at times the expression of Mother and Child is very earnest, at times strange, then again it is lovely and perfectly natural. In one of them the Child listens in a most winning way to the song of the angels and looks upward with open mouth in childlike astonishment, while the Mother is absorbed in her infant.

The carefully worked out details of these pictures are not too obtrusive. Giovanni preferred half-length figures even when a number of saints were grouped together; as, for example, in the pictures

pieces, however, are his great devotional and altar pictures.

Giovanni's artistic powers entered their period of highest development in 1479. In this year he completed the first large oil painting produced at Venice. In a niche which rises in arched form over pilasters is enthroned the Madonna holding with a solemn, earnest expression the Divine Child. The Child stretches out its little hands towards the worshipping sufferer, Job, who is thus honoured as a patron of the Church. Near Job stands St. Francis, farther back is John the Baptist, to the right are St. Sebastian, St. Dominic, and Bishop Leo. At the foot of the throne are angels playing musical instruments, above in the curve of the arch are cherubim and the inscription, "Ave virginis flos intemerate pudoris". The Virgin herself seems to be thrilled by the solemn inspiration of the moment and raises her left hand as if in warning not to disturb the music of the angels. Deep devotion is expressed on all the faces. A large picture of the year 1488 at Murano in which St. Martin presents the Doge Barbarigo to the enthroned Madonna suffers somewhat from a mechanical symmetry. Nevertheless the same musical tone prevails in it, together with great richness of colouring and costume. On each side is seen a beautiful landscape in the dis-

tance. By means of the action represented a greater unity is obtained in this canvas than in the one just mentioned, and much more still than in the Madonna of San Zaccaria, Venice (1505). In the latter the enthroned Madonna holding the Child is surrounded by Saints Catherine, Peter, Jerome, and Lucia. Each one of the saints is separately absorbed in devotion while an angel at the foot of the throne softly touches the strings of his instrument in accompaniment to the spirit of adoration. Here also the feeling produced by the music creates the unity of the whole composition and the painting is a wonderful expression of adoring worship. The scene is laid in a beautiful renaissance structure the arches of which are adorned with mosaics.

One can perceive the unity of composition attained by means of this spirit of devotion and music of the angels even in those canvases where the surrounding saints stand in separate niches. Such, for example, is the picture where four saints are represented on the wings of an altar-piece in the church of Santa Maria dei Frari at Venice (1488). The Mother and Child are enthroned in the middle space; at their feet two boy-angels are playing cheerfully on the lute and flute. A lighter, although by no means a jarring impression, is made by this triptych. The separated positions of the saints, to whom an altar and a church had been consecrated, recalls the practice of the older painters. By uniting the saints in the same space and giving them an outer as well as an inner relation to one another Bellini created the so-called "Sacre Conversazioni", or "the Societies of Saints". It was not necessary that the personages should belong to the same historical time, as they receive in the altar-piece a new, ideal life. The spirit of devotion inspired by the Madonna and her Divine Child unites them sufficiently but the more so when a new bond of union arises from the action indicated in the composition, such as, in many cases, the beautiful music or even the effect produced by light and shade.

A couple of pictures should be mentioned in which Giovanni, whom time never robbed of the freshness of his imagination, set for himself problems in landscape-painting. In 1501 he painted a "Baptism of Christ" in which the art of Giorgione and Titian seems to be apparent. The scene is laid in a romantic mountain-valley lighted by the evening sunshine. Three kneeling angels are the witnesses. The influence of younger painters is very evident in a picture having the same tone as the one just mentioned, the picture of St. Jerome. Giovanni continued to learn even when he was old, although he was properly more often the teacher and never obscured his own individuality of style. St. Jerome, in this picture, is seated on a great rock in front of a mountain landscape and is absorbed in the study of the Scriptures. In the foreground, on an eminence, stands St. Augustine absorbed in thought, and on the other side is St. Christopher holding the Child Jesus. These three mighty men of Christianity may also be considered as bound together by an inner spiritual unity. In the "Death of Peter the Martyr" there is a prospect to right and left from the forest out over a city and mountains. Such vistas are always important features in the genre pictures for which Giovanni had a strong liking. Giovanni had little taste for mythological scenes and his few canvases of this kind do not need mention.

G. GIETMANN.

**Belloy, JEAN-BAPTISTE DE**, Cardinal-Archbishop of Paris, b. 9 October, 1709, at Morangles in the Diocese of Beauvais; d. in Paris, 10 June, 1808. Although of an ancient family of no mean military

fame, young Belloy preferred an ecclesiastical career, made his classical and theological studies at Paris, where he was ordained priest, and received the degree of Doctor in Theology in 1737. In the ministry he shone more by his virtue than by his learning. Sweetness of character, enlightened and moderate zeal, unswerving fidelity to the principles and traditions of the Church, characterized him through life, and rendered even his early ministry remarkably fruitful. His bishop, Cardinal de Gèvres, appointed him vicar-general and archdeacon of his cathedral. In 1751 he was consecrated Bishop of Glandèves. At the famous Assembly of the French Clergy of 1755, he took sides with the moderate party and contributed to the restoration of tranquillity in the Church of France. Dissensions occasioned by the Bull "Unigenitus" had become so great in the Diocese of Marseilles that, at the death of the saintly Bishop de Belsunce, there was imminent danger of schism. In this emergency a chief pastor of consummate prudence and tact was needed, and Bishop de Belloy was accordingly transferred to that see. Without sacrifice of principle or duty, by gentleness, tact, and justice, he gained the confidence of both parties and restored peace. In July, 1790, the National Assembly decreed the suppression of the Diocese of Marseilles. The bishop withdrew, but sent to the assembly a letter of protest against the suppression of one of the oldest episcopal sees of France. He retired to Chambly, a little town near his native place, where he remained during the most critical period of the Revolution. When, in 1801, the sovereign pontiff decided that the French bishops should tender their resignation in order to facilitate the conclusion of the Concordat, he was the first to comply, setting an example which exercised great influence over the other bishops. Napoleon, highly pleased with this act of devotion to Church and State, appointed the nonagenarian bishop to the See of Paris. Notwithstanding his extreme age he governed his new diocese with astonishing vigour and intelligence, reorganized the parishes, provided them with good pastors, and visited his flock in person. He restored the Crown of Thorns (10 August, 1806) to its place of honour in the Sainte Chapelle. Napoleon was so well satisfied that he asked and readily obtained for him the cardinal's hat, which Pius VII placed on the prelate's venerable head in a consistory held in Paris, 1 February, 1805. At his death Cardinal de Belloy had spent seventy-five years in the holy ministry to the edification of all and the evident satisfaction of both Napoleon and Pius VII, then engaged in deadly conflict. He is buried in Notre Dame, Paris, where the monument erected by Napoleon in his honour is one of the finest in the cathedral.

FISQUET, *La France pontificale* (Paris), I, 542-556; FELLER *Biog. univ.*, II, 199.

CHARLES B. SCHRANTZ.

**Bells.**—The subject will be treated under the following heads: I. Origin; II. Benediction; III. Uses; IV. Archaeology and Inscriptions; V. Points of Law.

I. ORIGIN.—That bells, at any rate hand-bells of relatively small size, were familiar to all the chief nations of antiquity is a fact beyond dispute. The archaeological evidence for this conclusion has been collected in the monograph of Abbé Morillot and is quite overwhelming. Specimens are still preserved of the bells used in ancient Babylon and in Egypt, as well as by the Romans and Greeks, while the bell undoubtedly figured no less prominently in such independent civilizations as those of China and Hindustan. There is consequently no reason why the bells upon the high priest's ephod (Ex., xxxiii, 33) should not have been tiny bells of normal shape. Further, it may be inferred from the purposes for which they were used that the *tininnabula* of which we read in

THE GIRALDA, SEVILLE

BELL TOWERS  
THE LEANING TOWER, SARAGOSSA

THE MIGUELETE, VALENCIA

the classics, must at least in some instances have betokened hand-bells of larger size. See for example Martial, "Epig.", xiv, 161, where the signal for the opening of the baths is made with a *tintinnabulum* also described as *as thermarum*. None the less, the question whether anything corresponding in size to a church bell was known in pre-Christian times does not readily admit of an answer. We are not only ignorant of the dimensions but also of the shape of the *κῶδωρ* which was used for example to announce the opening of the public markets (Cf. Strabo, Geogr., IV, xxi). We translate the word as bell, but it is possible that it would be more correctly rendered gong or cymbals. The officer who made the round of the sentries at night carried a *κῶδωρ* (Thucyd., IV, cxxxv; Aristoph., Aves, 842 sqq.), and it is difficult to believe that anything resembling an ordinary bell could have been used for a duty in which the avoidance of accidental noise must often have been of the highest importance.

In coming to the Christian period the same difficulty is encountered. A new set of terms is introduced, *signum*, *campana*, *clocca*, *nola*, which are all commonly translated "bell", and it is certain that at a later period these were all used to denote what

were in the strictest sense "church bells" of large size. The first Christian writer who frequently speaks of bells (*signa*) is Gregory of Tours (c. 585). We learn that they were struck or shaken, and we even find mention of a cord being used for this purpose (*funem illum de quo signum commovetur*, "De Vitâ Martini", I, xxviii), while as regards the use of these *signa* it appears that they rung before church services and that they roused the monks from their beds. Again, the word *signum* appears in the almost

BELL TOWER OF PISA

contemporary "Life of St. Columban" (615), for when one of his monks was dying Columban is said to have assembled the community by ringing the bell (*signo tacto omnes adesce imperavit*, Krusch, "Scrip. Merov.", IV, 85). Similar expressions, *signo tacto*, or *cum exauditi fuerit signum*, are used in Constitutions attributed to St. Cæsarius of Arles (c. 513) and in the Rule of St. Benedict (c. 540). Moreover, if Dom Ferotin's view of the very early date of the Spanish ordinals which he has published (Monumenta Liturgica, V) could be safely accepted, it is possible that large bells were in common use in Spain at the same period. Still it must be remembered that *signum* primarily meant a signal and we must not be too hasty in attributing to it a specific instead of a generic meaning when first employed by Merovingian writers.

Again, the word *campana*, which even in the early Middle Ages undoubtedly meant a church bell and nothing else, occurs first, if Reifferscheid's "Anecdota Cassinensia" (p. 6) may be trusted, in Southern Italy (c. 515) in a letter of the deacon Ferrandus

to Abbot Eugippius. It has been suggested from a Latin inscription connected with the Arval Brethren (C. I., L. VI, no. 2067) that it was previously used to mean some kind of brazen vessel. However no quite satisfactory examples of *campana* in church Latin seem to be forthcoming before the latter part of the seventh century, and it is then found in the North. It is used by Cummian at Iona (c. 665) and by Bede in Northumbria (c. 710), and frequently elsewhere after that date. In Rome the "Liber Pontificalis" tells us that Pope Stephen II (752-757) erected a belfry with three bells (*campanæ*) at St. Peter's. It was probably this name which led Walafrid Strabo in the first half of the ninth century to make the assertion that bells were of Italian origin and that they came from Campania and more particularly from the town of Nola. Later writers went further and attributed the invention to St. Paulinus of Nola, but as St. Paulinus himself in the minute description which he has left of his own church makes no mention of bells, this is extremely improbable.

The word *clocca* (Fr. *cloche*; Ger. *Glocke*; Eng. clock) is interesting because in this case it is definitely known what was meant by it. It was certainly Irish in origin and it occurs at an early date both in Latin and in the Irish form *clog*. Thus it is found in the Book of Armagh and is used by Adamnan in his life of St. Columbkille written c. 685. The Irish and English missionaries no doubt imported it into Germany where it appears more than once in the Sacramentary of Gellone. It is plain that in primitive Celtic lands an extraordinary importance was attached to bells. A very large number of these ancient bells, more than sixty in all—the immense majority being Irish—are still in existence. Many of them are reputed to have belonged to Irish saints and partake of the character of relics. The most famous is that of St. Patrick, the *clog-an-edachta* or "bell-of-the-will" now preserved in the Museum of the Royal Irish Academy, Dublin. There seems no serious reason to doubt that this was the bell which lay upon St. Patrick's breast and was taken from his tomb in the year 552. Like most of these bells it had an official and hereditary custodian (in this case named Mulholland) in whose possession it remained, being handed down for centuries from father to son. Other similar early bells are those of St. Senan (c. 540) and St. Mura; there are several in Scotland and Wales, one at St. Gall in Switzerland, one known as the Saufang at Cologne, and another at Noyon in France. The evidence for the extraordinary veneration with which these bells were regarded in Celtic lands is overwhelming. Even Giraldus Cambrensis notes in the twelfth century that upon them was taken the most solemn form of oath. They were also carried into battle, and though the earlier specimens are nothing but rude cow-bells, wedge-shape in form and made of iron plate bent and roughly rivetted, still they were often enclosed at a later date in cases or "shrines" of the richest workmanship. The shrine of St. Patrick's bell bears an inscription of some length from which we learn that this beautiful specimen of the jeweller's craft must have been wrought about the year 1005. History tends to repeat itself, and if we remember the important part played in the missionary work of St. Francis Xavier by the hand-bell with which he gathered round him the children, the idle, or the curious, we have probably a clue to the intimate association of these early Celtic bells with the work of Christianity. When in 1683 Father Maunoir, the great Breton missionary, had at last to relinquish further expeditions, the bell which he handed on to his successor was regarded as a sort of investiture. It may be noted that the famous round towers of Ireland, which are now generally recognized to have been places of refuge against the inroads of the

Danes and other marauders, were commonly called *doc teach*. The bells occasionally stored there for the sake of safety seem to have been regarded as the most precious of their treasures and from this circumstance the towers probably derived their name, though it is of course possible that they in some cases served as belfries in the more ordinary sense.

The great development in the use of bells may be identified with the eighth century. It was then, seemingly, that they began to be regarded as an essential part of the equipment of every church, and also that the practice of blessing them by a special form of consecration became generally prevalent. If we interpreted literally a well-known passage in Bede (*Hist. Eccl.*, IV, xxi) we should have to believe that already in the year 680, the bell (*campana*) that was rung at Whitby at the passing away of St. Hilda was heard at Hackness thirteen miles off. But the whole setting of the story implies that Bede regarded the occurrence as miraculous and that the distance might as well have been thirty miles as thirteen. On the other hand, it is clear that in the eighth century church towers began to be built for the express purpose of hanging bells in them, which implies that the bells must have been increasing in size. The case of St. Peter's at Rome has already been noticed. So in the annals of St. Vandrille (*cap. x*, p. 33) we read that in the time of Ernharius who died in 738, that abbot had a bell made, to be hung in the little tower (*turricula*) "as is the custom of such churches"; while the "*Monachus Sangallensis*" (*De Carolo Magno*, I, xxxi) tells the story of a monastic bell-founder who asked Charlemagne to give him a hundred pounds of silver with a proportionate amount of copper to provide materials for a single great bell. In any case it is certain from Charlemagne's "*Capitularies*", as well as from Alcuin, Amalarius, and other writers of the early ninth century, that by that time in the Frankish dominions every parish church was expected to have at least one bell. In the next century Regino of Prüm, providing a programme of questions to be asked at an episcopal visitation, puts in the very first place a question about the church bells. Seeing that the clearest evidence of the popularity of church bells in Carolingian times is encountered in regions where the influence of Irish or English missionaries had prevailed, it may perhaps be concluded that this development should be traced to Celtic influence. The missionary's hand-bell, with which he gathered his congregation together in the open air, would soon become sacred as a thing immediately associated with him and his work. Moreover, the idea would grow up that no religious service could take place without some preliminary ringing of a bell. Although we have traces of the use of *signa* and *campanæ* in monasteries before the Irish became missionaries, there is no evidence to show that these were bells rather than gongs. On the other hand, the *σημαντήριον*, used to announce the beginning of service in Greek monasteries was a flat plate of metal and its name (from *σημαίνειν*, "to make a signal") is obviously the counterpart of *signum*. Further we also find in an old glossary of the tenth century that the Greek word *τύμπανον* (drum) is given as the equivalent of *campanum* (*Corpus Glossariorum Latinorum*, III, 24). At the same time we can trace in Ireland itself a gradual evolution of the shape of the bell, passing from the small cow-bell of rivetted iron to the cast bronze instrument of considerable size, nearly approximating the bell with which we are now familiar.

II. BENEDICTION.—Since the beginning of the sixteenth century there has been much purposeless controversy over the question of the so-called "baptism" of bells. Protestant critics, following the lead of Luther himself, have professed to find in the rite not only superstition but a profanation of the sacra-

ment. But one might as well be scandalized at the ceremonial usually followed in the launching and christening of a ship. The phrase "baptism of bells" is merely popular and metaphorical. It has been tolerated, but has never been formally recognized by the Church (Benedict, XIV, *Instit.*, 47, n. 33). Every Catholic child is aware that the essence of the Sacrament of Baptism consists in the form: "I baptize thee", etc., but no properly authorized ritual for the blessing of bells is known to have contained any phrase which can be regarded as an equivalent or parody of these words. Certain local "agenda" in which something of the sort is found, for example at Cologne (see Schönfelder, *Liturgische Bibliothek*, I, 99-100) appear never to have received any official recognition (cf. *The Month*, September, 1907). On the other hand, the ceremonial of the Church is often imitative. The rite for the blessing of palms closely follows the arrangement of the variable portions of the Mass. The order for the coronation of a king copies so nearly that for the consecration of a bishop that Anglican writers have recently contended that the king is a "spiritual person" invested with episcopal powers. Hence it would not be surprising that in the "*Benedictio Signi vel Campanæ*" a certain resemblance should be traced to details in the ritual of baptism. Exorcisms are used, and water and salt and unctions with the holy oils; the bell receives a name, and formerly, at least, the name was suggested by a "godfather". But for all the controversy the resemblances are really very superficial. The following is a summary of the ceremony now in use from which the mediæval pontificals differ but slightly. The bishop in white vestments first recites seven psalms with his attendant clergy to implore the Divine assistance. Then he mixes salt with water, reciting prayers of exorcism analogous to those always used in the preparation of holy water, but making special reference to the bell and to the evil influences of the air—the phantoms, the storms, the lightning—which threaten the peace of devout Christians who come to the church to sing the praises of God. Then the bishop and his attendants "wash" (*lavant*) the bell inside and out with the water thus prepared and dry it with towels, the Psalm "*Laudate Dominum de cœlis*" and five others of similar import being sung meanwhile. These are followed by various unctions, those on the outside of the bell being made with the oil of the sick in seven places, and those on the inside with chrism in four places. In the accompanying prayers mention is made of the silver trumpets of the Old Law and of the fall of the walls of Jericho, while protection is asked once more against the powers of the air, and the faithful are encouraged to take refuge under the sign of the Holy Cross. In this respect the prologue of Longfellow's "*Golden Legend*" leaves a generally correct impression, despite the inaccurate statement:

For these bells have been anointed  
And baptized with holy water.

In making the unctions, and not, be it noticed, in washing the bell, a form is used introducing the patron saint: "May this bell be + hallowed, O Lord, and + consecrated in the name of the + Father, and of the + Son and of the + Holy Ghost. In honour of St. N. Peace be to thee". Finally the thurible with incense (*thymiama*) and myrrh are placed under the bell so that the smoke arising may fill its concavity. Then another prayer is said of similar purport to the last, and the ceremony ends with the reading of the passage in the Gospel concerning Martha and Mary.

In all essentials this ritual agrees with that in use in Carolingian times, found in many manuscripts, and dating probably as far back as the pontificate of

Egbert of York in the middle of the eighth century. The washing and the unctions were prescribed as at present, but of old we find no trace of the form of words or of the name-giving which now accompany the unctions. That the ritual for the blessing of bells, which has thus been in use in the Church for nearly twelve hundred years, was framed with any design of imitating the ceremonies of baptism seems highly improbable for many reasons. First there is no triple immersion nor even strictly speaking any pouring of water. The bell is "washed" by the bishop and his assistants, just as the altars are washed on Maundy Thursday. Further there is nothing whatever to recall the *ephpheta* ceremony, yet this is the one detail in the rite of baptism which would seem in place if the ritual were transferred to a bell. Against the argument used by the Reformers that Charlemagne in his capitularies decreed *ut cloccas non baptizent*, it may be urged as a quite natural explanation of this ordinance that some practice may have begun to grow up which seemed too closely to parody the rite of baptism and that the prevalence of our existing less objectionable ceremonial was precisely the result of Charlemagne's intervention. It is probable that a rubric found in one or two, but no more, of the extant pontificals, "Tunc sub trinâ infusione aquæ sanctæ impone ei [i. e. campanæ] nomen, si velis", preserves the trace of the practice which Charlemagne condemns. Certain Spanish ordinals, the original of which must date from the seventh century or earlier, contain a quite different rite for the blessing of bells (Ferotin, *Monumenta Liturgica*, V, 160). Here there is no mention of unctions or of any washing with holy water, but there are exorcisms and prayers of the same general purport as those found in the Roman Pontifical. Indirectly this Spanish ritual, by speaking of "*hoc vas concretum generibus metallorum*", proves that from an early date a combination of metals was used in founding bells.

III. Uses.—The first ecclesiastical use of bells was to announce the hour of church services. It is plain that in the days before watches and clocks some such signal must have been a necessity, more especially in religious communities which assembled many times a day to sing the Divine praises. Among the Egyptian cenobites we read that a trumpet was used for the purpose; among the Greeks a wooden board or sheet of metal was struck with a hammer; in the West the use of bells eventually prevailed. In the Merovingian period there is no trustworthy evidence for the existence of large bells capable of being heard at a distance, but, as it became needful to call to church the inhabitants of town or hamlet, bell turrets were built, and bells increased in size, and as early as the eighth century we hear of two or more bells in the same church. Perhaps these were at first intended to reinforce each other and add to the volume of sound. But in any case it became in time a recognized principle that the *classicum*, the clash of several bells ringing at once, constituted an element of joy and solemnity befitting great feasts (Rupert of Deutz, *De Div. Offic.*, I, 16). Medieval consuetudinaries show that where there were many bells, different bells were used for different purposes. Even in ordinary parish churches it was customary to ring not only for Mass but before both Matins and Vespers (Hartzeim, IV, 247; V, 327) while differences in the manner of ringing and the number of bells employed indicated the grade of the feast, the nature of the service, the fact that a sermon would be preached, and many other details. The custom of making such announcements by bell still survives here and there. Thus in Rome on the evening before a fast day the bells are rung for a quarter of an hour in all the parish churches to remind people of their obligations on the morrow.

II.—27

Some rude lines quoted in the gloss of the "*Corpus Juris*", and often found in inscriptions, describe the principal functions of a bell (cf. Longfellow, *The Golden Legend*):

Laudo Deum verum plebem voco congrego clerum  
Defunctos ploro, nimbum fugo, festa decoro.  
(I praise the true God, I call the people, I assemble the clergy;

I bewail the dead, I disperse storm clouds, I do honour to feasts.)

Or otherwise:

Funera plango fulmina frango sabbata pango  
Excito lentos dissipio ventos paco cruentos  
(At obsequies I mourn, the thunderbolts I scatter, I ring in the sabbaths;  
I hustle the sluggards, I drive away storms, I proclaim peace after bloodshed.)

Under *defunctos ploro* we may reckon the "passing bell", which in its strict meaning is a usage of very early date. In all monastic orders when any one of the community seemed to be at the point of death a signal was given by ringing a bell or striking a wooden board (*tabula*) either to summon the monks to his bedside or to admonish them to pray (see Eddius, *Vita Wilfridi*, 64). This was extended later to parish churches, and a bell was rung to announce that a parishioner was in his agony, which seemingly also developed further into a bell tolled after his decease to solicit prayers for his soul. So deeply rooted were these practices in England that it was found impossible at the Reformation to abolish them altogether. Hence the "Canons" of the Church of England prescribe (Can. lxvii): "When any is passing out of this life a bell shall be tolled and the minister shall not then slack to do his last duty. And after the party's death, if it so fall out, there shall be rung no more than one short peal, and one other before the burial and one other after the burial". "Though the tolling of this bell", says Ellacombe, "has been prescribed for four distinct occasions, modern custom has limited it to two: first, after the death of the parishioner, to which the term passing-bell has been incorrectly transferred; and the second time during the procession of the funeral from the house of the deceased to the church-gate or entrance". In many places it was formerly customary by some variation in the manner of ringing to indicate the sex, quality, or age of the deceased. Thus Durandus in the fourteenth century directed that when anyone was in *extremis* the passing-bell should be tolled twice for a woman, thrice for a man, and for a cleric a greater number of times according to the orders which he had received. Among Celtic peoples the ancient hand-bells which, as already noted, were so deeply venerated partly as objects immediately connected with God's worship, partly as relics of holy men, were usually carried and rung at funerals. To this day St. Finnan's little bell lies exposed upon the altar of a ruined chapel in one of the Catholic dis-

BYZANTINE HAND-BELL OF BRONZE IN THE COLLECTION OF THE A.B.P. OF REIMS

tricts of the Highlands of Scotland. It is used at funerals, but is otherwise left unprotected, being regarded with such deep veneration by all that no one dares to interfere with it (see Macdonald, Moidart, Oban, 1889, 120). In many parts of France there were formerly confraternities of hand-bell-ringers who regularly attended funerals, walking at the head of the procession. They also paraded the streets at night and rang to remind people to pray for the holy souls. This happened especially on the eve of All Saints and on Christmas Eve (Morillot, Clochetes, 160 sqq.).

In Rome the "De Profundis" is rung every evening by the parish churches one hour after the Ave Maria. Clement XII in 1736 granted an indulgence for this practice and endeavoured to extend it. This custom is observed in many other places, particularly in North America.

The Curfew (*ignitegium*), a warning to extinguish fires and lights, after which all respectable characters went home to bed, was possibly of ecclesiastical origin but seems to have been rung as a rule by the town bell (*campana communis*, *banchoche*). Still in many cases one of the church bells was used for this and similar purposes. In England this was particularly frequent, and in many small towns and parishes the curfew is rung to this day at hours varying from 8 P. M. to 10.

The Angelus or Ave Maria may or may not have developed out of the curfew. There seems good reason to believe that a special bell, often called the Gabriel bell, was devoted to this purpose. In the Middle Ages the Angelus seems commonly to have been rung with three equal peals, and this arrangement still obtains in many places. In Rome, where the Ave Maria is sung half an hour after sunset this method obtains: three strokes and a pause, four strokes and a pause, five strokes and a pause, a final stroke.

From the introduction of the Elevation of the Host in the Mass at the beginning of the thirteenth century it seems to have been customary to ring one of the great bells of the church, at any rate during the principal Mass, at the moment when the Sacred Host was raised on high. This was to give warning to the people at work in the fields in order that they might momentarily kneel down and make an act of adoration. It seems, however, not improbable that in England the big bell was not commonly rung but that a small hand-bell was used for the purpose. This was taken to a small window (low side window) ordinarily closed by a shutter, thrust through the aperture and rung outside the church. Whether this was distinct from the little bell which the rubrics of the Mass now order to be rung by the server is not quite clear. It may be noted here that in regard to this same *tintinnabulum* usage varies very much in different countries. In Belgium, France, and some other places, this little bell is rung also at the "little elevation" before the Pater Noster. In Rome it is never rung at the Domine non sum dignus and is not used at all at Masses said by the pope or by cardinals.

In the rite of the blessing of bells the verse is applied to them *vox Domini in virtute*, *vox Domini in magnificentia* (The voice of the Lord is in power; the voice of the Lord in magnificence, Ps., xxviii, 4). It is no doubt in virtue of the solemnity which they lend to worship that the "Ceremoniale Episcoporum" directs that they are to be rung in honour of the bishop when he visits the parish. The same mark of respect is observed in the case of secular princes, while such occasions as processions of the Blessed Sacrament, solemn Te Deums, marriages, and days of national rejoicing are similarly distinguished. On the other hand, in token of mourning the bells are silent from the Gloria of the Mass on Maundy Thursday until the Gloria on Holy Saturday. This rule

goes back to the eighth century and Amatus is authority for the statement that then as now a wooden rattle was used in their place. Again the idea of *vox Domini in Virtute* in remembrance of their special consecration has led to the bells being rung at times of storm and apprehended danger. The inscription *Salva Terra* often found in the old bells of the South of France seems to bear special reference to this virtue of the bells as sacramentals.

IV. ARCHÆOLOGY AND INSCRIPTIONS.—Unquestionably the oldest existing Christian bells are those of Irish, or at least Celtic, origin, of which, as already stated, a surprisingly large number are preserved. The earliest, made of iron plate, bent and riveted, seem to have been dipped in melted bronze, a process which probably much improved their sonority. Somewhat later hand-bells began to be cast in bronze, and one such specimen (eight inches in diameter and nearly a foot high) can be dated by the aid of the inscription which it bears *OR AR CHUMASCACH MC AILILLA* [A prayer upon (i. e. for) Chumascach son of Aillil]. Now as Chumascach, steward of the Church of Armagh, died in 904, this bell probably belongs to the closing years of the ninth century. Another bell of early date, but of small size (five and one-half inches high and seven inches in diameter), is preserved in the Museum of Cordova. It bears the inscription: "Offert hoc munus Sanson abbatis [sic] in domum sancti Sebastiani martyris Christi era DCCCCLXIII". This is the Spanish Era and corresponds with A. D. 925. Of church bells properly so called, the earliest existing specimens seem to belong to the eleventh, twelfth, and thirteenth centuries. They are for the most part of a sort of beehive, thimble or barrel shape, sometimes disproportionately broad, sometimes narrower, while the sides are commonly straight or even in some few instances converge a little toward the bottom. They are also often perforated with three or four small triangular apertures in the upper part of the bell. The inscriptions, when they occur, are engraved and not as a rule cast in relief. Most of them are very short, but this is probably due to the accident that so very few early bells have survived, for we have record of much longer inscriptions engraved on bells as far back as the ninth century. Thus Folcuin who was Abbot of Lobbes from 965 to 990, tells us in his chronicle of one of his predecessors Harbert (835-864) who had a bell made with this inscription:—

Harberti imperio componor ab arte Paterni  
Nec musis docta en cantus modulabor amoenos  
Nocte dieque vigil depromam carmina Christi.

Folcuin himself set up bells which bore the words: "Jussu Fulcuini me condidit artificis manus Danielis, ad laudem triadis"; and "Fulcuinus Deo et patrono suo S. Ursinarius."

This last instance, perhaps the earliest example of a bell with a name, throws an interesting light on the origin of the practice of assigning bells to a particular patron. Again we know that the Cistercians of Waverley about 1239 had a bell made with the legend:

Dicor nomine quo tu Virgo domestica Christi  
Sum Domini præco cuius tutela fuisti

And an even longer inscription consisting of four hexameter lines was to be read upon the bell called Edmund at Bury, which dated from about 1105. The oldest church bell now in existence is probably that known as the Lullus bell at Hersfeld which may belong to the middle of the eleventh century, but the oldest which bears a certain date (i. e. 1164) is said to be one at Iggenbach in Bavaria. It may be doubted, however, whether certain ancient Italian bells at Siena and elsewhere have yet been adequately studied (see Ellacombe, 405, 530). In England many medieval bells still survive, but no dated bell is older than that of Claughton in Lancashire, 1296. As regards the lettering of the inscriptions, it suffices to say

that while the earlier bells often show a very ornate style of character, known as "crowned Lombardic", those of the fifteenth and late fourteenth century approximate to the ordinary Gothic or "black letter" type.

As regards the inscriptions themselves, both purport and wording are infinitely varied. Some are barbarous in syntax and metre, others have evidently been submitted to some sort of scholarly revision. That the practice of naming bells began, as stated by Baronius, with the dedication of a bell to St. John the Baptist by Pope John XIII in 969 rests on unsatisfactory evidence, but most existing medieval bells preserve some indication of the name by which they were called. A very large number were in one way or other dedicated to the Blessed Virgin, and most of these were probably used either for the Angelus or at the Mary Mass. The inscriptions vary indefinitely. One of the commonest was

Protege prece piâ quos convoco sancta Maria  
or what is metrically a little more correct:

Ora mente piâ pro nobis Virgo Maria.

In Germany a very favourite inscription for *Mary* bells was:

Maria vocor. O rex gloriæ veni cum pace.

This almost certainly was meant as a reference to the Incarnation, for in many cases this legend was joined with the words: "Et homo factus est". Such

terre m'étais nommée". Or again we often find only: "Xtus vincit; Xtus regnat; Xtus imperat". Later inscriptions were often chronographic. Thus in a bell of 1659 we have:

Rupta bis ante fui nunc integra reddita cantem  
Magno Igni LIqVefaCta Deo reparata benIgno  
—capitals in second line giving date MDCLVIII.

The following inscriptions are on the principal bell of St. Peter's Basilica, Rome (shown in illustration):  
On the upper part:

+In nomine Domini Matris, Petrique Paulique,  
Accipe devotum, parvum licet, accipe munus  
Quod tibi Christe datum Petri Paulique triumphum  
+Explicat, et nostram petit populique salutem  
Ipsorum pietate dari meritisque refundi.  
Et Verbum caro factum est.

+Anno milleno trecenteno cum quinquageno  
Additis et tribus, Septembris mense, colatur.  
Ponderat et mille decies septiesque librarum.

+Campanam hanc longo usu confractam non  
plus quam quatuordecim mille libras pendere com-  
pertum est; Benedictus XIV addito usque ad viginti  
mille libras metallo, conflare et denuo refici iussit,  
anno reparatae salutis MDCCXLVII.

+Eandem septimo vix exacto lustro, rimis actis  
inutilem, uno plus et viginti millibus pondo metalli  
repertam, Pius Sextus, Pont. Max. non mediocri  
metallo superaddito ad idem ponderis conflare fun-  
dique mandavit, anno Domini MDCCCLXXXV,  
Pont. XI.

Aloysius eques Valadier construxit.

For the credit of eighteenth century scholarship, it seems desirable to explain that only the latter part of this inscription belongs to the pontificate of Pius VI. The earlier portion with its metrical irregularities is simply a copy of what was read upon the great bell of St. Peter's at the beginning of the fourteenth century. Probably the metal came from the bell originally cast by Leo IV in 850, or even earlier, under Pope Stephen II. Then, when the campanile was burned down in 1303, Boniface VIII had a new bell made with the inscription which stands first in the above series. Only fifty years afterwards the tower was struck by lightning, and a new great bell was founded (colatur, cf. the French *coulée*) in September, 1353. Then Benedict XIV had the bell recast in larger size in 1747, and when this cracked (*rimis actis*), the metal was once more used by Aloysius Valadier to make the present beautiful bell under Pius VI in 1785. (See Cancellieri, *De Secretariis*, Rome, 1786, III, 1357, and IV, 1995 sqq.)

In point of size any very great development of medieval bells was probably checked by the mechanical difficulty of ringing them. At Canterbury, for example, we hear of as many as twenty-four men being required to ring one bell, while sixty-three men were needed for the whole peal of five (Ellacombe, 443). In the eleventh century a bell given by King Robert to the church at Orleans was thought to be of remarkable size, but it weighed little over a ton. The "Cantabona" bell of Blessed Azelin at Hildesheim (eleventh century) is said to have weighed about four tons, a Rouen bell of 1501 sixteen tons, and the still existing "Maria Gloriosa" of Erfurt Cathedral, cast in 1497, weighs thirteen tons. Of modern bells consecrated with the rites of the Catholic Church, the largest is that of Cologne Cathedral, which was made out of captured French cannon, and weighs nearly twenty-seven tons. That in the church of the Sacred Heart at Montmartre weighs over eighteen, and others at Vienna and Rouen about seventeen. In the Catholic cathedral of Montreal is a bell of thirteen and one-half tons. The very beautiful bell of St. Peter's, Rome, weighs about nine tons. The gigantic bells cast in Russia, China,

BELL OF ST. PETER'S, ROME

bells were probably used for the Angelus. Bells in honour of St. Peter were also very common. In England we find many such inscriptions as

Petrus ad æternæ ducat nos pascua vitæ  
or again:

Nomen Petri fero qui claviger exstat in ævo.  
Inscriptions to the saints, notably to St. Gabriel for the Angelus, were numerous. Thus, to take an English example, we have at Shapwick, Dorset,  
I Kateryne, Goddes derlyng, to thee Mari shal I  
synge.

Among French bells allusion to protection against the powers of darkness was frequent, and many bells were called *Sauveterre*. Thus we have: "Jhs autem transiens per medium illorum ibat. Salva

Japan, and Burma seem only to be struck with a hammer and never properly "rung". The largest bell in England is that of St. Paul's Cathedral, London, which weighs seventeen and one-half tons.

**V. POINTS OF LAW.**—In medieval England it was distinctly laid down that the church bells and ropes had to be provided at the cost of the parishioners. The canon law assumed that a cathedral had five or more bells, a parish church two or three, while the churches of the mendicant orders, like public oratories, were originally limited to one. The solemn ceremony of benediction provided in the Pontifical can only be carried out by a bishop or by a priest specially empowered, and it is only to be employed in the case of bells intended for church use. For other bells a simpler blessing is provided in the "Rituale". Numerous prohibitions exist against the church bells being used for "profane" purposes, e. g. for summoning meetings or for merely secular festivities and in particular for executions. In Catholic ecclesiastical legislation the principle is maintained that the control of the bells rests absolutely with the clergy. In cathedral churches according to the "Ceremoniale Episcoporum" this jurisdiction is vested in the *Sacrista*. Theoretically, the actual ringing of the bells should be performed by the *ostiarium* and in the conferring of this minor order the cleric is given a bell to ring, but for centuries past his functions have everywhere become obsolete, and lay bell-ringers have been almost exclusively employed. Finally, we may note a decision of the secular courts given in an action brought against the Redemptorists of Clapham, England, in 1851, whereby an injunction was granted to restrain these Fathers from ringing their bells at certain hours, at which, as it was complained, such ringing caused unreasonable annoyance to residents in the neighbourhood.

HERBERT THURSTON.

**Belluno-Feltre, DIOCESE OF.**—Belluno, which was anciently called Bellunum, the metropolis of the province of that name in Venetia, Italy, is situated on a hill between the torrent of Ardo and the River Piave, and has a population of 10,000. At the end of the tenth century Belluno was affected by the political disturbances then agitating the Venetian provinces. Bishop Joannes II (959) obtained from Emperor Otto I for himself and his successors the title of count and temporal sovereignty over this city and the surrounding territory. He also fortified the city. In the course of time there were many disputes over the civil mastery of Belluno, but in

1420 the inhabitants of their own accord acknowledged the authority of Venice. Belluno is the seat of a bishopric suffragan to the Patriarchate of Venice, and is united with the See of Feltre. Christianity is said to have been first preached there by St. Hermagoras, a disciple of St. Mark and first Bishop of Aquileia, and next by Prosdocimus, first Bishop of Padua. Ughelli places the first bishop, Theodorus, in the reign of Emperor Commodus and the second, St. Salvator, as succeeding under Pertinax. About 300 another Theodorus is thought to have brought from Egypt the remains of St. Giovata, patron of the city. The first bishop known to history is a certain Laurentius, who, in 587, attended the schismatic assembly convened by Severus, Patriarch of Aquileia, in connexion with the dispute of the Three Chapters. The twelfth century was a stormy period for Belluno, in both civil and ecclesiastical respects. In 1197 Bishop Gerardo de Taccoli was murdered by the inhabitants of Treviso, after which Innocent III united the Diocese of Belluno with that of Feltre.

Feltre, the ancient Feltria, is situated in the province of Belluno in Venetia, on the River Colmeda, and contains 13,000 inhabitants. From the year 80 B. C. it enjoyed the rights of Roman citizenship. It was besieged during the invasion of Attila. Emperor Henry III created the Bishops of Feltre counts of the city and vicinity, but their authority was almost constantly assailed by the Counts of Camino, by Ezzelino da Romano, the Scaligeri, the Carrara, and finally by the Visconti themselves. At last, in 1404, the city fell into the power of the Venetians. Feltre also claims to have received the Gospel from St. Prosdocimus. St. Victor, a martyr, is said to have lived there about A. D. 170. The first Bishop of Feltre whose date can be fixed is Fonteius, who in 579 took part in a council in Aquileia and in 591 dedicated a book to Emperor Mauritius. Drudo of Camino (1174) was the first bishop of the united sees of Belluno and Feltre, the latter being the residence of the bishop. The twelfth, thirteenth, and fourteenth centuries were filled with civil strife.

In 1462, at the request of the Venetian Republic, the two dioceses were separated. The first Bishop of Belluno was Ludovico Donato. Bishops Pietro Barozzi, Mosè Buffarello, and Bernardo Rossi (1499) rebuilt the cathedral. One of the most illustrious bishops was Luigi Lollin (1595) who did much to promote the love of learning among the clergy and left large bequests to perpetually provide for a number of priests at the University of Padua. Giulio Berlendis (1655) completed the work of enforcing the Tridentine reforms, and Gianfrancesco Bembo, a member of the Somaschi (1695), was very zealous in the cause of popular education. In 1818 the diocese was reunited with that of Feltre. Among the Bishops of Feltre after the separation mention should be made of Angelo Faseolo (1464), who was appointed on many legations in connexion with the Crusade against the Turks; Lorenzo Campeggio (1512), famous as the nuncio to England during the time of Henry VIII, later made cardinal and transferred (1520) to Bologna. He was succeeded by his nephew Tommaso Campeggio, who was nuncio several times. Agostino Gradengo (1610) restored the cathedral; Zerbino Lugo (1640) built the seminary; Giovanni Bortoli (1748) was a distinguished professor of canon law at Padua.

The most remarkable sacred edifices in Belluno are, in addition to the cathedral, the church of San Pietro, and that of San Stephano, the latter in Gothic style; all three contain paintings by the most distinguished Venetian artists. In Feltre there are the cathedral, dedicated to St. Laurence, the oratory of San Giacomo, the churches of San Giorgio in Villabruna, and San Rocco; in the last named the painting over the high altar is the work of Palma il Vecchio.

Outside the city, on the slopes of Mount Misnea is the church of SS. Vittore e Corona, erected by the Crusaders of Feltre after the First Crusade.

The Diocese of Belluno contains 72 parishes, 280 churches, chapels, and oratories, 137 secular priests, 22 regulars, 22 seminarians, 5 lay brothers, 29 sisters, and a population of 127,500. Feltre has 17 parishes, 100 churches, chapels, and oratories, 48 secular priests, 25 regulars, 56 seminarians, 2 schools for boys and 2 for girls, and a population of 48,000.

U. BENIGNI.

**Belmont**, FRANÇOIS VACHON DE, fifth superior of the Sulpicians at Montreal, b. at Grenoble, France, 1645; d. 1732. He went to Canada in 1680 and was appointed a missionary among the Indians of La Montagne; he filled this position until 1700, when he succeeded Dollier de Casson as superior of the order. He erected at his own expense Fort de La Montagne on the site of the present Grand Séminaire, built the old seminary which still exists in the street of Notre Dame, and began the construction of the Lachine canal. Among his writings are: "Histoire du Canada", printed in the "Collection de mémoires et de relations sur l'histoire ancienne du Canada", published by the Historical Society of Quebec; "Histoire de l'eau-de-vie en Canada", printed in the above-mentioned "Collection"; "Oraison funèbre de la Mère Bourgeoys", quoted by Faillon in "Vie de la Sœur Bourgeoys", II, 88-98; "Eloges de quelques personnes mortes en odeur de sainteté à Montréal", and a number of memoirs still in manuscript. Mention should also be made of the funeral oration of Bishop Montmorency-Laval, first Bishop of Quebec, delivered at Montreal, June, 1708.

BERTRAND, *Bibliothèque Sulpicienne ou hist. litt. de la c. de Saint-Sulpice* (Paris, 1900).

A. FOURNET.

**Belson**, THOMAS, VENERABLE, martyr, b. at Brill in Oxfordshire, England, date uncertain; d. 5 July, 1589. He was at the college at Reims in 1584, and in 1589 was arrested at the Catherine Wheel Inn, near Balliol College, Oxford, with his confessor George Nicols, Richard Yaxley, a priest, and Prichard, a servant. They were sent to London, whence, after examination before Walsingham and repeated tortures in Bridewell and the Tower, they were sent back to Oxford to be tried. Belson was found guilty of felony for assisting the priests, and was executed with his companions at Oxford. He suffered after the priests and, kissing the dead bodies of his pastors, begged the intercession of their happy souls that he might have the grace to imitate their courage and constancy.

BEDE CAMM.

**Belsunce de Castelmoron**, HENRI FRANÇOIS XAVIER DE, Bishop of Marseilles, b. 1671 at the Château de la Force, in Périgord; d. 1755 at Marseilles. His father was Armand de Belsunce, Marquis de Castelmoron and his mother Anne de Caumont de Lausun. He studied classics in Paris at the Collège de Clermont or Louis-le-grand and then entered the Society of Jesus. In 1699 he left the Society to become Vicar-General of Agen. The "Vie de Suzanne de Foix", his aunt, was written by him and published while at Agen, 1709. That same year he was made Bishop of Marseilles. The heroic charity he displayed during the plague of 1720 and 1721 has made his name a household word and won for him the title of "Good Bishop". When the plague broke out a large fleet was taking the Princess of Orléans to Italy where she was to marry the Duke of Modena. The suite of the princess took to flight, and with them all the notables of the city, but Bishop Bel-

sunce remained with a few heroic friends, and together they battled against the plague with heroic self-sacrifice and devotion, till they conquered it. In his address to the Assembly of the Clergy in 1725, Belsunce stated that more than 250 priests and religious perished in their mission of Christian charity. But he was the soul of the rescuers and the praises bestowed on him by Pope and Millevoye ("Essay on Man") and "Belsunce ou la peste de Marseille") are not above his real merits. The King of France offered him, by way of recognition, the See of Laon to which was attached the first ecclesiastical peerage of the realm and afterwards the metropolitan See of Bordeaux. Belsunce refused both and contented himself with accepting the pallium sent him by Clement XII. During his incumbency Belsunce fought against another plague called Jansenism. He attended, 1727, the Synod of Embrun where Soanen was condemned. He opposed with all his power Colbert of Pamiers. In spite of the protest of the Parliament of Provence, he instructed his priests to refuse absolution to the appellants against the Bull "Unigenitus". Nearly all his pastoral instructions are against Jansenism. Belsunce was a writer of no mean power. Besides the "Vie de Suzanne de Foix" (Agen, 1709), and his pastoral instructions, we have from his pen "Le combat chrétien" translated from St. Augustin's "De Agone Christiano" and "L'art de bien mourir" translated from Bellarmine's "De Arte Bene Moriendi", also "Antiquités de l'Eglise de Marseille" (Marseilles, 1747-51). All these writings have been published by Jauffret under the title of "Œuvres de Belsunce" (Metz, 1822).

**Bels**. See CHELM.

**Belsoni**, GIAMBATTISTA, an Egyptian explorer, b. at Padua, Italy, in 1778; d. at Gato, Africa, 3 Dec., 1823. His father was a barber, and intended his son to follow that trade, but the boy, who was a born traveller, left home at the age of fifteen, and after some wanderings settled down at Rome, where he began the study of hydraulics. Whether or not he became a monk is uncertain, but, at any rate, he quitted Rome in 1798 and travelled as far as Holland. Having returned to Italy, he again departed in 1803 and travelled through the British Isles, being finally obliged, by reduced circumstances, to secure an engagement in pantomime. Leaving England, he went to Egypt, where, at the request of the pasha, he undertook a scheme for raising the waters of the Nile at Zubra, but the work was later abandoned by the authorities, and he turned his attention to unearthing the colossal bust of Memnon now in the British Museum. Having accomplished this difficult task, he ascended the Nile, and besides many other important Egyptological investigations, made his famous discovery of the mummy of Psammethis. Again setting out from Cairo, he explored the pyramid of Chephren, travelled through Fayûm, visited Lake Mœris and the ruins of Arsinoe, penetrated into Libya, and reached the oasis of El-Cassar. In 1819 he went to England, whence, after a stay of a few years, he set out for further travels in Africa, intending to explore Timbuku and the sources of the Niger, and to visit Benin and Abyssinia; but having landed, he was attacked by a fever, and died. He printed a narrative of his journeys at London, in 1821, and his original drawings of "The Tombs of the Kings" were published by his widow, at London, in 1829.

EDWIN RYAN.

**Bema**. See AMBO.

**Bembo**, PIETRO, a famous Italian scholar and Cardinal, b. of a noble family at Venice, 20 May

1470; d. at Rome, 18 January, 1547. He was the son of Bernardo Bembo, whose enthusiasm for Italian literature led him to raise a monument to Dante at Ravenna. His early education was received at Florence. He afterwards studied Greek under Lascaris at Messina and philosophy under Pomponazzo

CARDINAL BEMBO  
Medal attributed to Benvenuto Cellini

at Padua. After spending some time at the court of Ferrara, where he met Lucrezia Borgia, with whom he maintained a Platonic friendship for many years, he went in 1506 to Urbino, where he became the leading figure among the brilliant group of men of wit and culture gathered about the court. In 1512 he accompanied his intimate friend, Giuliano de' Medici, to Rome, where a short time afterwards he was appointed secretary to Pope Leo X. He remained at Rome for eight years, enjoying the society of many distinguished men and loved and admired by all who knew him. There he became enamoured of the beautiful Morosina. It was at her urgent solicitation that Bembo, in 1520, on the death of Leo X, withdrew from public affairs and retired with his health impaired by severe sickness to Padua, where he lived in ease and elegance, devoting himself to literary pursuits and the society of his learned friends. Here he collected an extensive library and formed a rich museum of medals and antiquities. His Paduan retreat became the gathering-place of all the most cultured and most scholarly men in Italy. In 1529 he accepted the office of historiographer of the Republic of Venice, and shortly afterwards was appointed librarian of St. Mark's. In 1539 Pope Paul III recalled him to Rome and conferred on him the cardinal's hat. From the time of Bembo's ecclesiastical preferment there was a marked change in his conduct. Heretofore his life had been anything but edifying—in fact it had been more pagan than Christian. But now he renounced the study of the classics and applied himself chiefly to the study of the Fathers and the Holy Scriptures. Two years after he was raised to the cardinalate, he was made Bishop of Gubbio, and still later he received the Bishopric of Bergamo. He died more admired and lamented than any man of letters of his time and was buried not far from Pope Leo in the Church of the Minerva.

Bembo was a thorough master of elegant diction. He possessed beyond any contemporary the formal perfection of style, both in Latin and Italian, demanded by the age in which he lived. In his Latin writings it was his aim to imitate as closely as possible the style of Cicero. His letters were masterpieces of Latin style and of the art of letter-writing. He is said to have passed his compositions through numerous portfolios, revising them in each one of them. Bembo's works include a history of Venice, poems, dialogues, criticisms, and letters. The most important are: "Rerum Veneticarum Libri XII" (1551), a history of Venice covering the period from 1487 to 1513, originally published in Latin, but afterwards translated by the author into Italian; "Gli Asolani" (Venice, 1505), a dialogue in Italian on Platonic love, composed in imitation of Cicero's Tusculan Disputations, and dedicated to Lucrezia Borgia; "Le Prose", a short treatise on the Italian language; "Le Rime" (Venice, 1530); "Carmina" (Venice, 1533), a collec-

tion of Latin poems; and several volumes of letters, written in Latin. Besides these original works he edited the Italian poems of Petrarch, printed by Aldus (1501), and the "Terze rime" of Dante (1502). His collected works were published at Venice in four volumes in 1729.

EDMUND BURKE.

**Benadir**, PREFECTURE APOSTOLIC OF, in Africa, lies between 8° and 12° N. lat., and between 42° and 51° 16' E. long. It comprises the whole territory of Italian Somaliland, the area of which is a little more than 192,800 square miles, or nearly twice that of Italy; and its boundaries are identical with those of the Italian possessions in East Africa, namely: on the east, the Indian Ocean; on the north, the Gulf of Aden from Cape Guardafui to the boundary of British Somaliland; on the west, the same British boundary as far south as the Juba River; and on the south, the course of that river from Lugh to the Indian Ocean. The longest meridian within this territory measures 776 miles, while the greatest width is 559 miles.

The commercial company which had been formed for the exploitation of El Benadir (i. e. "The Ports", now the littoral region of Italian Somaliland) found it to its own interest to call the Church to its aid, and asked for missionaries, to whom it assigned a subsidy of 10,000 lire (\$2,000) per annum. Propaganda, by a decree of 21 January, 1904, entrusted the mission to the Discalced Trinitarians, for which order the redemption of captives is a special tradition, and the first prefect Apostolic, Father Leander of the Seven Dolours, embarked within the same year. However, the presence of a religious who would jealously watch the slave trade, and denounce infractions of the treaties, might become inconvenient; the governor, therefore, forbade Father Leander to enter his territory, and the prefect Apostolic, excluded from his mission, was obliged to take refuge in the British territory to the south. The governor's order was rescinded in May, 1906, and Father Leander then entered upon his prefecture; but on the 10th of July, 1906, he died at Gelib, nearly 250 miles from the coast. Towards the end of that year Father Guglielmo da San Felice was sent as successor to Father Leander, taking with him five religious of his own order. At the present writing (1907) too short a time has, of course, elapsed to permit of obtaining any information as to the actual progress of missionary work in Italian Somaliland.

The residence of the prefect Apostolic is at Brava, while the headquarters of the colonial government are at Mogadishu (Mogadoxo, or Mukdishu). The population of the whole territory is estimated at 3,000,000, almost all Mohammedans. Slavery is practised, and the efforts of the Anti-Slavery Society to suppress the slave trade, by representations to the Italian Government, have so far had no result.

*Misiones Catholicas* (Propaganda, Rome, 1907), 355; *Statesman's Year Book* (London, 1907).

ALBERT BATTANDIER.

**Benard**, LAURENT, chief founder of the Maurist Congregation of the Benedictine Order, b. at Nevers, 1573; d. at Paris, 1620. He joined the Cluniac Benedictines at Nevers, became a Doctor of the Sorbonne and later Prior of the Cluny College, Paris, which he reformed with the help of two monks of the recently established Congregation of St.-Vannes. Refusing the abbacy of St. Etienne, Caen, and the grand-priorship of Cluny, he passed through a second novitiate at St.-Vannes, and renewed his profession

there in 1615. At his suggestion the Congregation of St.-Maur was formed, to be for France what that of St.-Vannes was for Lorraine. Royal letters patent were obtained for it in 1618 and the project was warmly supported by Cardinal de Retz and others. Bénard's works include "Parénèses", "De l'esprit des ordres religieux", "Instructions Monastiques", "L'éloge Bénédictin", and "Police régulière", all published in Paris between 1616 and 1619.

TASSIN, *Hist. Lit. Cong. S. Maur* (Brussels, 1770); SAINTE-MARTE, *Gallia Christiana* (Paris, 1744), VII, 474.

G. CYPRIAN ALSTON.

**Benavides** (BENAVIDEZ), FRAY ALONZO, Archbishop of Goa in the Portuguese Indies. Although a prelate of high rank, the life of Fray Alonso de Benavides is very imperfectly known. He was born on the Island of San Miguel, professed in the Franciscan convent of Mexico in 1603, and, after acting as master of novices at the convent of Puebla, became Custos of the Missions of New Mexico, returned to Spain in 1630 and there was in communication with the Venerable Marfa de Agreda. Upon his return to America he was made Archbishop of Goa. The date and place of his death are as yet unknown. Fray Alonso de Benavides was indefatigable in his efforts to promote the welfare, temporal and spiritual, of New Mexico. He it was who, through the agency of Fray Esteban de Peréa, secured a reinforcement of missionaries for the utterly neglected province. In order to excite interest in those remote regions, he wrote and published two booklets, full of exaggerations in regard to the number of Indians, but otherwise of the highest value for the ethnography and ethnology of New Mexico. They must be judged as "encouraging guides", embodying at the same time much accurate and valuable information gathered from personal knowledge. His account of the numbers of people and villages may have been influenced by data taken from Espejo but such mistakes do not affect the value of his writings in general. He published "Relación de los grandes Tesoros espirituales y temporales descubiertos con el auxilio de Dios en el Nuevo Mexico", in 1630, and is best known through the "Memorial que Fray Juan de Santander de la orden de San Francisco &c. presenta á la Majestad Católica del Rey" (Madrid, 1630; translated into various languages and republished).

AD. F. BANDELIER.

**Benda**, a titular see of Albania. Its history is closely connected with that of the Sees of Narenta and Mostar. Narenta, or in Italian Narona, represents the ancient Chelmium, or Chulmia, and its bishop, a suffragan of Dyrrhachium (Durazzo), took the title of *episcopus Stephanensis*, or *Stephaniacensis*, the cathedral being dedicated to St. Stephen; this is the title of Cosmas at the council under Photius in 879. But as these bishops resided at Spalato, the title shortly became *Spalatensis*. About the middle of the fourteenth century, Narenta became the seat of a Latin bishopric, to which was united the See of Benda, the chief town in a district of this name, near Croia, in the pashalik of Scutari. Its bishop thus obtained a double title, *episcopus Bendenensis et Stephanensis*, to which, about 1400, was added the title *Priscensis*, or *Prisnensis*, from Prisca, or Prisma, probably identical with the village Pressa, or Press, in Albania. Be that as it may, these three titles were borne from the first by only one titular; Gams separates them wrongly (Series episcop., 422). The first titular was not, as is commonly said, the Dominican Petrus de Anagnia, but Demetrius, probably identical with the Franciscan Demetrius de Scutaro who is

mentioned in the Bullar. Franciscan. (VI, n. 662). From the seventeenth century the see became titular, probably because the bishops had transferred their residence to Mostar, on the left bank of the River Narenta, a see known as *Mandatriensis et Dumnensis*.

L. PETTIT.

**Benedetti**, PIETRO. See AMBARACH, PETER.

**Benedict I-X**, POPES.—Of the first Pontiff who bore the name of Benedict practically nothing is known. The date of his birth is unknown; he d. 30 July, 579. He was a Roman and the son of Boniface, and was called Bonosus by the Greeks (Evagrius, Hist., V, 16). The ravages of the Lombards rendered it very difficult to communicate with the emperor at Constantinople, who claimed the privilege of confirming the election of the popes. Hence there was a vacancy of nearly eleven months between the death of John III and the arrival of the imperial confirmation of Benedict's election, 2 June, 575. He reigned four years, one month, and twenty-eight days. Almost the only act recorded of him is that he granted an estate, the *Massa Veneris*, in the territory of Minturnæ, to Abbot Stephen of St. Mark's "near the walls of Spoleto" (St. Gregory I, Ep. ix, 87, l. al. 30). Famine followed the devastating Lombards, and from the few words the Liber Pontificalis has about Benedict, we gather that he died in the midst of his efforts to cope with these difficulties. He was buried in the vestibule of the sacristy of the old basilica of St. Peter. In an ordination which he held in December he made fifteen priests and three deacons, and consecrated twenty-one bishops.

**BENEDICT II**, SAINT, POPE, date of birth unknown; d. 8 May, 685; was a Roman, and the son of John. Sent when young to the *schola cantorum*, he distinguished himself by his knowledge of the Scriptures and by his singing, and as a priest was remarkable for his humility, love of the poor, and generosity. He became pope 26 June, 684, after an interval of over eleven months. To abridge the vacancies of the Holy See which followed the deaths of the popes, he obtained from the Emperor Constantine Pogonatus a decree which either abolished imperial confirmations altogether or made them obtainable from the exarch in Italy [cf. "Liber Diurnus R.R. PP.", ed. Sickel (Vienna, 1889), and Duchesne's criticism, "Le Liber Diurnus" (Paris, 1891)]. He adopted Constantine's two sons by receiving locks of their hair sent him by the emperor. To help to suppress Monothelism, he endeavoured to secure the subscriptions of the Spanish bishops to the decrees of the Sixth General Council (see ep. in P. L., XCVI, 423), and to bring about the submission to them of Macarius, ex-Bishop of Antioch. He was one of the popes who favoured the cause of St. Wilfred of York (Eddius, "Vita Wilfridi", ed. Raine in "Historians of York", I, 62 sqq. Cf. Raine, "Lives of the Archbishops of York", I, 55 sqq.). Many of the churches of Rome were restored by him; and its clergy, its deaconries for the care of the poor, and its lay sacristans all benefited by his liberality. He was buried in St. Peter's.

**BENEDICT III**, POPE, date of birth unknown; d. 17 April, 858. The election of the learned and ascetic Roman, Benedict, the son of Peter, was a troubled one. On the death of Leo IV (17 July, 855) Benedict was chosen to succeed him, and envoys were despatched to secure the ratification of the decree of election by the Emperors Lothaire and Louis II. But the legates betrayed their crust and allowed themselves to be influenced in favour of the ambitious and excommunicated Cardinal Anastasius. The imperial *missi*, gained over in turn by them, endeavoured to force Anastasius on the Roman

Church. Benedict was insulted and imprisoned. Most of the clergy and people, however, remained true to him, and the *missi* had to yield. Benedict was accordingly consecrated on the 29th of September, or 6th of October, 855, and though his rival was condemned by a synod, he admitted him to lay communion. Owing to dissensions and attacks from without, the kingdom of the Franks was in disorder, and the Church within its borders was oppressed. Benedict wrote to the Frankish bishops, attributing much of the misery in the empire to their silence (cf. "Capitularia regum Francorum", ed. Boretius, II, 424); and to lessen its internal evils endeavoured to curb the powerful subdeacon Hubert (Ep. Bened., in Mon. Germ. Epp., V, 612), who was the brother-in-law of Lothaire II, King of Lorraine, and defied the laws of God and man till he was slain, in 864. In an appeal made to Benedict from the East, he held the balance fair between St. Ignatius, Patriarch of Constantinople, and Gregory, Bishop of Syracuse. He was visited by the Anglo-Saxon King Ethelwulf with his famous son Alfred, and completed the restoration of the *Schola Anglorum*, destroyed by fire in 847. He continued the work of repairing the damage done to the churches in Rome by the Saracen raid of 846. He was buried near the principal gate of St. Peter's. One of his coins proves there was no Pope Joan between Leo IV and himself [Garampi, "De nummo argenteo Bened. III" (Rome, 1749)].

BENEDICT IV, POPE, date of birth unknown; d. in the summer of 903. The Popes Benedict from the fourth to the ninth inclusive belong to the darkest period of papal history. The reigns of several of them were very short, and very little is known about their deeds. The dates of their accession to the See of Peter and of their deaths are largely uncertain. Benedict IV, a Roman and the son of Mammalus, became pope in the first half of 900. His high birth, his generosity, his zeal for the public good are loudly commended by the contemporary historian Frodoard, who gives him the title of "Great". The principal historic act of his reign was his crowning Louis the Blind as emperor. He supported the decision of Pope Formosus, who had ordained him priest, in favour of Agrim's claim to the See of Langres (Jaffé, "Regesta", 3527, 3528), upheld the cause of Stephen, Bishop of Naples (Auxilius ap. Dümmler, "Auxilius und Vulgarius", 96 sqq.), excommunicated the assassin of Fulk, Archbishop of Reims (Frodoard, Hist. Remensis, IV, 10), and offered practical sympathy to Malacenus, Bishop of Amasia, who had been driven from his see by the advances of the Saracens (Jaffé, loc. cit., 3530). Fulda and other monasteries received privileges from him. He was buried in front of St. Peter's near the gate of Guido.

BENEDICT V, POPE, date of birth unknown; d. 4 July, 965; was elected pope (May, 964) in very critical circumstances. The powerful emperor, Otho I, had forcibly deposed the unworthy John XII, and had replaced him by a nominee of his own who took the title of Leo VIII. But at the first opportunity the Romans expelled Leo, and on the death (14 May, 964) of the lawful pope, John XII, elected the Cardinal-Deacon Benedict (known from his learning as Grammaticus—see Benedict of Soracte, xxxvii). Otho was furious, marched on Rome, seized Benedict, and put an end to his pontificate (23 June, 964.—Liutprand, Hist. Ottonis, xxi; Thietmar, Chron., II, 18). It is more probable that Benedict was degraded by force than that he voluntarily declared himself an intruder. After reinstating Leo, Otho left Rome and carried Benedict with him to Germany. Placed under the care of Adalag, Archbishop of Hamburg-Bremen, who treated him with great consideration, he was even

then acknowledged as pope by some of the German clergy. His remains, first laid to rest in the cathedral at Hamburg, were afterwards translated to Rome (Adam of Bremen, Gesta, II, 10; IV, 39, 40; VI, 53).

BENEDICT VI, POPE, date of birth unknown; d. August, 974 (see Riccobaldi of Ferrara, Compil. Chron., in Rer. Ital. SS. IX). Benedict, Cardinal-Deacon of St. Theodore, a Roman and the son of Hildebrand, was elected as the successor of John XIII, who died 6 September, 972; but the necessity of waiting for the ratification of the Emperor Otho delayed his consecration till 19 January, 973. Nothing is known of his deeds, except that he confirmed the privileges of some churches and monasteries. The most striking event of his pontificate is its tragic close. He was seized and thrown into the Castle of Sant' Angelo by a faction of the nobility headed by Crescentius and the Deacon Boniface Franco, who afterwards became the antipope Boniface VII. There, after a confinement of less than two months, he was strangled by their orders, to prevent his release by Sicco, an imperial envoy, sent to Rome by Otho II.

BENEDICT VII, POPE, date of birth unknown; d. c. October, 983. Acting under the influence of Sicco (see BENEDICT VI), the Roman clergy and people elected to succeed Benedict VI another Benedict, Bishop of Sutri, a Roman and the son of David (October, 974). His authority was opposed by Boniface VII, and, though the antipope himself was forced to fly, his party followed fiercely in his footsteps and compelled Benedict to call upon Otho II for help. Firmly established on his throne by the emperor, he showed himself both desirous of checking the tide of simony which was rising high in the Church, and of advancing the cause of monasticism, which then meant that of civilization. In response to a request of the people of Carthage "to help the wretched province of Africa", he consecrated the priest James, who had been sent to him for the purpose (see the letter of the papal legate, the Abbot Leo, to the Kings Hugh Capet and Robert). Though he did not die till about October, 983, our knowledge of his undertakings is not in proportion to the length of his pontificate.

BENEDICT VIII, POPE, date of birth unknown; d. 9 April, 1024. The first of the Tusculan popes, being the son of Gregory, Count of Tusculum, and Maria, and brother of John XIX, he was, though a layman, imposed on the chair of Peter by force (18 May, 1012). Nevertheless, dislodging a rival, he became a good and strong ruler. On the 14th of February, 1014, he crowned the German king, Henry II, emperor (Thietmar, Chron., VI, 61), and ever kept friendly with him. The peace of Italy was promoted by his subjugating the Crescentii, defeating the Saracens, and allying himself with the Normans, who appeared in its southern parts in his time. Going to Germany, he consecrated the cathedral of Bamberg (Ann. Altanen. Majores, 1020; Chron. Cass., II, 47), visited the monastery of Fulda, and obtained from Henry a charter confirmatory of the donations of Charlemagne and Otho. To restrain the vices of clerical incontinence and simony, he held, with the emperor, an important synod at Pavia (1022—Labbe, Concilia, IX, 819), and supported the reformation which was being effected by the great monastery of Cluny. To further the interest of peace, he encouraged the "Truce of God" and countenanced the ecclesiastical advancement of Gauzlin, the natural brother of Robert the Pious, King of France. This he did because, though illegitimate, Gauzlin was a good man, and his royal brother was very desirous of his promotion (cf. life of Gauzlin, in "Neues Archiv.", III). Benedict VIII was one of the many popes who were called upon

to intervene in the interminable strife for precedence between the Patriarchs of Grado and of Aquileia (Dandolo, Chron., IX, 2, n. 2). In 1022 he received Ethelnoth of Canterbury "with great worship and very honourably hallowed him archbishop", and reinstated in his position Leofwine, Abbot of Ely (A. S. Chron., 125, 6, R. S.). A friend of St. Odilo, Abbot of Cluny, and one of the few popes of the Middle Ages who was at once powerful at home and great abroad, Benedict VIII has, on seemingly insufficient grounds, been accused of avarice.

**BENEDICT IX, POPE.**—The nephew of his two immediate predecessors, Benedict IX was a man of very different character to either of them. He was a disgrace to the Chair of Peter. Regarding it as a sort of heirloom, his father Alberic placed him upon it when a mere youth, not, however, apparently of only twelve years of age (according to Raoul Glaber, Hist., IV, 5, n. 17. Cf. V, 5, n. 26), but of about twenty (October, 1032). Of his pontifical acts little is known, except that he held two or three synods in Rome and granted a number of privileges to various churches and monasteries. He insisted that Bretislav, Duke of Bohemia, should found a monastery, for having carried off the body of St. Adalbert from Poland. In 1037 he went north to meet the Emperor Conrad and excommunicated Heribert, Archbishop of Milan, who was at enmity with him (Ann. Hildesheimenses, 1038). Taking advantage of the dissolute life he was leading, one of the factions in the city drove him from it (1044) amid the greatest disorder, and elected an antipope (Sylvester III) in the person of John, Bishop of Sabina (1045—Ann. Romani, init. Victor, Dialogi, III, init.). Benedict, however, succeeded in expelling Sylvester the same year; but, as some say, that he might marry, he resigned his office into the hands of the Archpriest John Gratian for a large sum. John was then elected pope and became Gregory VI (May, 1045). Repenting of his bargain, Benedict endeavoured to depose Gregory. This resulted in the intervention of King Henry III. Benedict, Sylvester, and Gregory were deposed at the Council of Sutri (1046) and a German bishop (Suidger) became Pope Clement II. After his speedy demise, Benedict again seized Rome (November, 1047), but was driven from it to make way for a second German pope, Damasus II (November, 1048). Of the end of Benedict it is impossible to speak with certainty. Some authors suppose him to have been still alive when St. Leo IX died, and never to have ceased endeavouring to seize the papacy. But it is more probable that the truth lies with the tradition of the Abbey of Grottaferrata, first set down by Abbot Luke, who died about 1085, and corroborated by sepulchral and other monuments within its walls. Writing of Bartholomew, its fourth abbot (1065), Luke tells of the youthful pontiff turning from his sin and coming to Bartholomew for a remedy for his disorders. On the saint's advice, Benedict definitely resigned the pontificate and died in penitence at Grottaferrata. [See "St. Benedict and Grottaferrata" (Rome, 1895), a work founded on the more important "De Sepulcro Benedicti IX", by Dom Greg. Piacentini (Rome, 1747).]

**BENEDICT X, POPE.**—The bearer of this name was an antipope in the days of Nicholas II, 1056-61.

The most important source for the history of the first nine popes who bore the name of Benedict is the biographies in the *Liber Pontificalis*, of which the most useful edition is that of DUCHESNE, *Le Liber Pontificalis* (Paris, 1886-92), and the latest that of MOMMSEN, *Gesta Pontif. Roman.* (to the end of the reign of Constantine only, Berlin, 1898). JAFFÉ, *Regesta Pont. Rom.* (2d ed., Leipzig, 1885), gives a summary of the letters of each pope and tells where they may be read at length. Modern accounts of these popes will be found in any large Church History, or history of the City of Rome. The fullest account in English of most of them is to be read in MANN, *Lives of the Popes in the Early Middle Ages* (London, 1902, passim).

HORACE K. MANN.

**Benedict XI, POPE** (NICHOLAS BOCCASINI), b. at Treviso, Italy, 1240; d. at Perugia, 7 July, 1304. He entered the Dominican Order at the age of fourteen. After fourteen years of study, he became lector of theology, which office he filled for several years. In 1296 he was elected Master General of the Order. As at this time hostility to Boniface VIII was becoming more pronounced, the new general issued an ordinance forbidding his subjects to favour in any way the opponents of the reigning pontiff; he also enjoined on them to defend in their sermons, when opportune, the legitimacy of the election of Boniface. This loyalty of Boccasini, which remained unshaken to the end,

ARMS OF BENEDICT XI

was recognized by Boniface, who showed him many marks of favour and confidence. Thus with the two cardinal-legates, the Dominican General formed the important embassy, the purpose of which was the concluding of an armistice between Edward I of England and Philip IV of France, then at war with each other. In the year 1298 Boccasini was elevated to the cardinalate; he was afterwards appointed Bishop of Ostia and Dean of the Sacred College. As at that time Hungary was rent by civil war, the cardinal-bishop was sent thither by the Holy See as legate *a latere* to labour for the restoration of peace. At the time of the return of the legate to Rome, the famous contest of Boniface VIII with Philip the Fair had reached its height. When, in 1303, the enemies of the pope had made themselves masters of the sacred palace, of all the cardinals and prelates only the two Cardinal-Bishops of Ostia and Sabina remained at the side of the venerable Pontiff to defend him from the violence of William of Nogaret and Sciarra Colonna.

A month after this scene of violence, Boniface having died, Boccasini was unanimously elected Pope, 22 October, taking the name of Benedict XI. The principal event of his pontificate was the restoration of peace with the French court. Immediately after his election Philip sent three ambassadors to the pope bearing the royal letter of congratulation. The king, while professing his obedience and devotion, recommended to the benevolence of the pope the Kingdom and Church of France. Benedict, judging a policy of indulgence to be necessary for the restoration of peace with the French court, absolved Philip and his subjects from the censures they had incurred and restored the king and kingdom to the rights and privileges of which they had been deprived by Boniface. The Colonna cardinals were also absolved from their censures, but not reinstated in their former dignities. This policy of leniency Benedict carried out without compromising the dignity of the Holy See or the memory of Boniface VIII. Nogaret and Sciarra Colonna and those implicated in the outrage of Anagni were declared excommunicated and summoned to appear before the pontifical tribunal. After a brief pontificate of eight months, Benedict died suddenly at Perugia. It was suspected, not altogether without reason, that his sudden death was caused by poisoning, through the agency of William of Nogaret. Benedict XI was beatified in the year 1773. His feast is celebrated at Rome and throughout the Dominican Order on the 7th of July. He is the author of a volume of sermons and commentaries on a part of the Gospel of St. Matthew, on the Psalms, the Book of Job, and the Apocalypse.

**Benedict XII** (JACQUES FOURNIER), third of the Avignon popes, b. at Saverdun in the province of Toulouse, France, elected 20 December, 1334; d. at Avignon 24 April, 1342. Nothing is known of his parentage or boyhood. In youth he became a

ARMS OF BENEDICT XII

Cistercian monk in the monastery of Boulbonne, whence he moved to that of Fontfroide, whose abbot was his natural uncle, Arnold Novelli, by whose name Fournier was also known. He studied at the University of Paris, where he received the doctorate in theology. Mean-

time he was made Abbot of Fontfroide, succeeding his uncle who was created cardinal 19 December, 1310. In December 1317, he became Bishop of his native Diocese of Palmiers, was translated to Mirepoix 26 January, 1327, and was made cardinal by Pope John XXII, 18 December, 1327. On the latter's death, 4 December, 1334, the cardinals in conclave, most of whom opposed a return to Rome, demanded of Cardinal de Comminges whose election seemed assured, the promise to remain at Avignon. His refusal precipitated an unexpected canvass for candidates. On the first ballot, 20 December, 1334, many electors, intending to sound the mind of the conclave, voted for the unlikely Cardinal Fournier, who, though he was one of the few men of real merit in the college, was but lightly regarded because of his obscure origin and lack of wealth and following. He amazed the conclave by receiving the necessary two-thirds vote. On 8 January, 1335, he was enthroned as Benedict XII.

Resolved to re-establish the papacy at Rome, Benedict signaled his accession by providing for the restoration of St. Peter's basilica and the Lateran. He was prepared to acquiesce in the petition of a Roman deputation soliciting his return, but his cardinals pictured the impossibility of living in faction-rent Italy. They were right, whatever were their motives, and Benedict yielded. Conscience-stricken during a critical illness, he proposed as a compromise a transfer of his court to Bologna. The cardinals urged the slender hope of securing obedience, and Benedict decided to remain at Avignon, where in 1339 he commenced to build the massive papal castle which still exists. Mindful always of distracted Italy, he often sent money to succour the famine-stricken people and to restore churches. Reform of abuse was Benedict's chief concern. Immediately after his elevation he remanded to their benefices clerics not needed at Avignon, and menaced with summary chastisement violators of the law of residence. He revoked the scandalous "expectancies" granted by his predecessors and forbade conferring benefices in *commendam*. (See COMMENDATORY ABBOT.) He condemned unseemly "pluralities" and conferred benefices with such conscientious discrimination that several were left long vacant, and so gave colour to the calumny that he was himself harvesting their revenues. He inveighed vigorously against greed for gain among ecclesiastics; regulated the taxes on documents issued by papal bureaux; made episcopal visitation less of a financial burden to the clergy; abolished the practice of countersigning requests for papal favours, which was extremely lucrative to venal officials; and established the Registry of Supplications for the control of such petitions. Abhorring nepotism, he granted preferment to but one relative, naming the eminent

John Bauzian Archbishop of Arles in deference to the insistence of the cardinals; he compelled his only niece to discourage noble suitors and marry one of her own humble rank. A legend, vouched for by Ægidius of Viterbo (d. 1532), accredited him with saying, "a pope should be like Melchisedech, without father, mother, or genealogy". Monastic reform particularly engaged his zeal. Himself a Cistercian, he sought to revive pristine monastic fervour and devotion to study. Pertinent papal constitutions and visitations of monasteries attest his solicitude for a monastic renaissance.

Being a learned theologian, he was as bishop, cardinal, and pope, keenly interested in scholastic discussions. He terminated the controversy on the vexed question as to whether the Beatific Vision was enjoyed before or only after the General Judgment. John XXII had advocated the latter view and stirred up vigorous discussion. Eager to solve the question, Benedict heard the opinions of those maintaining the theory of deferred vision, and, with a commission of theologians, gave four months to patristic research. Their labours terminated in the proclamation (29 January, 1336) of the Bull "Benedictus Deus" defining the immediate intuitive vision of God by the souls of the just having no faults to expiate. Zealous too for the preservation of the Faith, he stimulated the bishops of infected districts to vigilance in the repression of heresy and urged the use of the preventive remedies of the Inquisition. He combated energetically the anti-papal doctrines which the ecclesiastico-political theorists of the disturbed Avignon period had spread, and which were unfortunately sustained by a school of misguided Franciscans. (See FRATICELLI, MARSILIUS OF PADUA, WILLIAM OF OCCAM; MICHAEL OF CESENA.) Distressed by disloyalty in Ireland, he tried to persuade Edward III to establish the Inquisition in his realm and urged him to assist the Irish bishops to extirpate heresy. But, though the most ardent foe of heresy, Benedict was remarkably patient and loving in dealing with heretics. He looked also to the interests of the Faith in the East; negotiated for the union of the Eastern Church with Rome through a delegate of the Emperor Andronicus, whose sincerity, however, Benedict was forced to question; manifested his solicitude for the Church in Armenia which, in the early fourteenth century, suffered from Mohammedan invasions, succouring the unfortunates in temporal matters and healing doctrinal differences which had long rent Armenia with schism.

In purely ecclesiastical affairs Benedict's pontificate was creditable to himself and productive of good to the Church. Pious, prudent, and firm, he strove conscientiously to meet the Church's needs at a critical period. In political relations, however, he was not so successful. Inexperienced in politics, he had little taste for diplomacy and an imperfect knowledge of men and affairs of the world. Conflicting political motives confused him, and hesitancy and vacillation contrasted painfully with his firmness and decision in ecclesiastical matters. Though determined to act independently of Philip VI of France, the latter generally succeeded in committing the pope to his policy. He helped to prevent his return to Rome. He frustrated his desire to make peace with the Emperor Louis of Bavaria whom John XXII had excommunicated for fomenting sedition in Italy, proclaiming himself King of the Romans, and intruding an anti-pope. Willing to absolve him should he but submit to the Church, Benedict exposed to Louis's delegates his generous terms of peace (July, 1335). But Philip, aided by the cardinals, persuaded the pope that his generosity encouraged heresy and rebellion. Benedict yielded. Thrice the imperial envoys came to Avignon, but French influence prevailed, and, on 11 April, 1337, Benedict declared it

impossible to absolve Louis. The latter, as Benedict feared, allied himself with Edward III of England against France. In vain the pope tried to avert war, but he was no match for the kings and their allies. His good offices were spurned; and he was humiliated by Philip's later alliance with Louis, who had also allied to himself the pope's political and ecclesiastical enemies, and by the emperor's denial of the pope's authority over him, and, worst insult of all, by his usurpation of papal power in declaring the nullity of the marriage of John Henry of Bohemia and Margaret Maultasch, that the latter might marry his son, Louis of Brandenburg. The French king hindered Benedict's projected crusade against the infidels, making the war with England an excuse to forego his promise to lead the armies, and even diverting the money subscribed for it to financing his own wars, despite the protests of the conscientious pope. Benedict's crusading ardour found solace in Spain, where he encouraged the campaign against the Mohammedans who in 1339 invaded the peninsula.

Benedict XII has not escaped calumny. Reformer, foe of heresy, builder of the Avignon papal palace, unwilling ally of France and enemy of Germany, he made many enemies whose misrepresentations have inspired most non-Catholic appreciations of his character. Much harm was done to his memory by the satires of Petrarch, who, though befriended and honoured by Benedict, yet bitterly resented his failure to return to Rome. His natural obesity, too, stimulated caricature and undeserved criticism. But history offers a vindication and testifies that, though he failed to cope successfully with the political difficulties to which he fell heir, his piety, virtue, and pacific spirit, his justice, rectitude, and firmness in ruling, his zeal for doctrinal and moral reform, and his integrity of character were above reproach.

JOHN B. PETERSON.

**Benedict XIII**, POPE (PIETRO FRANCESCO ORSINI), b. 2 February, 1649; d. 23 February, 1730. Being a son of Ferdinando Orsini and Giovanna Frangipani of Tolpha, he belonged to the archducal family Orsini-Gravina. From early youth he exhibited a decided liking for the

ARMS OF BENEDICT  
XIII

Order of St. Dominic, and at the age of sixteen during a visit to Venice he entered the Dominican novitiate against the will of his parents, though he was the eldest son and heir to the title and estates of his childless uncle the Duke of Bracciano. Their appeal to Clement IX was fruitless; the pope not only approved the purpose of the young novice, but even shortened his novitiate by half in order to free him from the importunities of his relatives. As student and novice, the young prince was a model of humility and zeal, and devoted himself to the acquisition of ecclesiastical learning. At the age of twenty-one he was promoted to a professorship. On 22 February, 1672, he was elevated to the cardinalate by his relative Clement X. He protested strenuously against this honour, but was compelled to accept it under the vow of obedience by the General of the Dominicans, at the instance of the pope. As cardinal he adhered

strictly to the observance of the rule of his order, and never laid aside its habit. In 1675 having the choice between the Archbishopric of Salerno and that of Manfredonia (Siponto) he chose the latter because it was a poor diocese and required great exercise of pastoral zeal. His virtuous life not only overcame the opposition made by his relatives when he became a monk, but exercised such a salutary influence that in time his mother, his sister, and two of his nieces embraced the religious life in the Third Order of St. Dominic. During the conclave that followed the death of Clement X (1676), he was one of the band of cardinals known as the *zelanti* who had agreed that no considerations of worldly prudence would influence them in the choice of a new pope. In the government of his diocese, Cardinal Orsini was unremitting in his labours and zeal. He visited even the most remote hamlets and was not less watchful over temporal than over spiritual things. He provided for the needs of the people, repaired churches and held a diocesan synod, the decrees of which he published. In 1680, when Innocent XI transferred him to Cesena, he left to the people of Siponto a memorial of his apostolic activity in a pastoral letter on the rules of Christian life which he had always inculcated. At Cesena his frugality, modesty, and activity, his devotion to the poor and his constant preaching brought about a thoroughgoing reformation among both clergy and people. Seeing on his frequent journeys the condition of the churches in even the poorest parishes, he neglected none and by the promulgation of strict rules, he abolished all known abuses.

In 1686, a serious illness, attributed by his physicians to the climate, caused his transfer to Benevento, where he remained for thirty-eight years or until he was elected pope. During this long period he seldom left his diocese. Each year he made an episcopal visitation to every parish. Whenever necessary, he built or renovated churches. He built hospitals and strove incessantly for the alleviation of the sufferings of the poor. Twice during his episcopate (5 June, 1688, and 14 March, 1702) Benevento was visited by earthquakes and on these occasions his courage, his active charity in behalf of the stricken inhabitants, and his energy in the reconstruction of the city, won for him the title of the "Second Founder" of Benevento. He held two provincial synods, the first in 1693 attended by eighteen bishops, the second in 1698, with an attendance of twenty, the acts of which were approved at Rome. The only reproach made against his administration is that his simplicity and childlike confidence exposed him to the wiles of some unscrupulous persons who abused his confidence.

Cardinal Orsini had already taken part in four conclaves, when Innocent XIII died in March, 1724; and in all he had acted in the spirit of the *zelanti*. The conclave at which he was himself chosen assembled on 20 March; two months afterwards (25 May) no choice had been made. This long delay weighed heavily on the soul of Orsini, who commenced a novena of prayers to his patron, St. Philip Neri, that the election of a new pope might be no longer delayed. Before the novena was finished he saw with terror that he himself would be chosen, and, reluctant to accept a position which filled him with dread, he sought by all means in his power to prevent his election. Against his oft repeated protestations he was chosen 29 May, 1724, and even after the final vote was taken he refused to yield, arguing that his age, his physical weakness, his incapacity, and a resolution which he made never to become pope, should exempt him from such a grave responsibility. He yielded only when it was made clear to him that grave dangers were to be feared if the conclave should be reopened. So with tears, and

obeying the command of the general of his order, he allowed himself to be proclaimed pope. In honour of Benedict XI, a member of the Dominican Order, he took the name of Benedict XIV, which he shortly changed to Benedict XIII as Peter de Luna who had previously borne the name (1394-1423) was a schismatic.

His first concern as pope was to enforce rigidly ecclesiastical discipline. He issued several decrees on ecclesiastical dress and was unsparing in his efforts to abolish any semblance of luxury or worldly pomp among the cardinals. During the Jubilee of 1725, he discharged personally the duties of Grand Penitentiary, and is said to have seriously considered the revival of public penances for certain grave offences. In order to encourage the foundation of diocesan seminaries, he organized a special commission (*Congregatio Seminariorum*). At a provincial Roman Lateran synod held in 1725, he required an unqualified acceptance of the Bull "Unigenitus" and through his efforts Cardinal de Noailles, Archbishop of Paris, was led to accept it in 1728. During his pontificate Benedict retained the Archbishopric of Benevento which he administered by a vicar-general and which he twice visited (1727, 1729).

In diplomatic matters and in his relations with foreign powers Benedict did not exhibit the vigour and conservatism which marked his administration in religious matters. His love of peace led him to attempt a settlement of the dispute in regard to the ecclesiastical privileges of the Kings of Naples (*Monarchia Sicula*) by a revocation of the constitution of Clement XI (1715) and by granting to the King of Naples (and Sicily) and his successors the right to appoint a spiritual judge in ecclesiastical affairs, reserving, however, the most important cases to the Holy See. The quarrel with Victor Amadeus of Savoy was compounded by giving to the king the right of patronage over the churches and monasteries in his dominions, without, however, conceding any claim to the incomes from vacant benefices. Towards John V, King of Portugal, the pope exhibited extraordinary firmness in refusing a claim based on the privilege held by other courts to propose candidates for the cardinalate. This was in consequence of the protests made by the cardinals against the elevation of Vincenzo Biechi, Nuncio to Lisbon. In retaliation John recalled all Portuguese residents in Rome, forbade all communication with the Roman Curia, and attempted to prevent the sending of the customary alms from Portugal to Rome; he also interfered with applications for dispensations from matrimonial impediments. At many courts of Europe grave offence was taken by the extension (1728) to the Universal Church of the Office of Gregory VII containing an account of the excommunication and deposition of Henry IV, which to Gallicans and Protestants seemed offensive.

Although full justice can scarcely be done to the virtuous life and the fatherly zeal for the interests of religion of Benedict, his pontificate lost much of its lustre because of his misplaced confidence in Cardinal Nicolò Coscia, who had been his coadjutor at Benevento. The pope was ignorant of the peculations and venality of his favourite, whose greed did much to diminish the prestige of the Holy See, and against whom a popular uprising took place on the pope's death, resulting in a ten years' imprisonment for this unworthy cardinal. Benedict's theological writings were published in three volumes (Ravenna, 1728).

QUÉTIFF-ECHARD, *Script. Ord. Præd.*, I, 814; CAVALIERI, *Galleria de' sommi pontefici, Patriarchi . . . dell' O. P.* (Benevento, 1696), I, 668; PITTONI, *Vita del sommo pontefice Benedetto XIII* (Venice, 1730); BORGIA, *Benedicti XIII vita* (Rome, 1752); GUARNACCI, *Hist. pontif. roman.*, I, 39, II, 409 sqq.;

PATRICK J. HEALY.

**Benedict XIV** (PROSPERO LORENZO LAMBERTINI), son of Marcello Lambertini and Lucretia Bulgarini, b. at Bologna 31 March, 1675; d. 3 May, 1758. His early education was received from tutors. At the age of thirteen he went to the Collegium Clementinum in Rome where he studied rhetoric, philosophy, and theology. St. Thomas Aquinas was his favourite author, but the bent of his own mind was towards historical and legal studies in which latter he excelled, as well in civil as in ecclesiastical law. In 1694, though only nineteen, he received the degree of Doctor of Theology and *Doctor Utriusque Juris* (canon and civil law). On the death of Innocent XII he was made consistorial advocate by Clement XI, and shortly afterwards Consulor of the Holy Office. In 1708 he was appointed Promoter of the Faith; in 1712 canon theologian at the Vatican and assessor of the Congregation of Rites; in 1713 he was named domestic prelate; in 1718 secretary of the Congregation of the Council; and in 1725 titular Bishop of Theodosia. He was made Bishop of Ancona in 1727 and cardinal 30 April, 1728. He was transferred to the Archbishopric of Bologna in April, 1731, in succession to Lorenzo Corsini who had become pope as Clement XII.

Benedict XIV is best known to history as a student and a scholar. Though by no means a genius, his enormous application coupled with more than ordinary cleverness of mind made him one of the most erudite men of his time and gave him the distinction of being perhaps the greatest scholar among the popes. His character was many-sided, and his range of interests large. His devotion to science and the serious investigation of historical problems did not interfere with his purely literary studies. "I have been reproached", he once said, "because of my familiarity with Tasso and Dante and Ariosto, but they are a necessity to me in order to give energy to my thought and life to my style." This devotion to the arts and sciences brought Lambertini throughout his whole life into close and friendly contact with the most famous authors and scholars of his time. Montfaucon, whom he knew in Rome, said of him: "Young as he is, he has two souls: one for science, the other for society." This last characterization did not interfere with his restless activity in any of the many important positions which he was called on to fill, nor did it diminish his marvellous capacity for the most arduous work.

The zeal and energy which Lambertini carried to this office infused new life into all his subjects. He himself explained his assiduity by saying that he looked on the episcopate not as an honour, but as an opportunity to do good. His administration was exemplary: he visited all parts of his diocese, held synods, incited the people to piety by word and example, and supervised the affairs of his diocese so thoroughly that nothing needing change or correction escaped him. His humility and vast learning were a source of inspiration and strength to his clergy, and his broad firm grasp of public affairs and public questions gave him a position of unique influence among rulers and people. In his opinion the foundation of success in episcopal administration was thorough harmony between bishop and clergy, and this he succeeded in obtaining. Be

ARMS OF BENEDICT XIV

cause of his wonderful gifts and his extraordinary success as Bishop of Ancona, Pope Benedict XIII wished to transfer him to some position of greater responsibility affording a wider field for the display of his powers and activity, but he replied in his usual

POPE BENEDICT XIV

jocose vein that no change of place could make him other than he was, cheerful, joyous, and the friend of the pope. When he was transferred to Bologna in 1731 his energies and activities seemed to redouble. He became all things to all men and is said to have never allowed anyone to leave his presence dissatisfied or in anger, and without being strengthened and

refreshed by his wisdom, advice, or admonitions. His efforts were largely directed to the improvement of clerical education in his diocese. He reformed the programme of studies in his seminary and drew up a new curriculum in which special stress was laid on the study of Sacred Scripture and patrology.

When Clement XII died (6 February, 1740) the fame of Lambertini was at its highest. Through intrigues of various kinds the conclave which commenced on 17 February lasted for six months. It was composed of fifty-four cardinals of whom forty-six were Italians, three French, four Spanish, and one German. These were split into several parties. One was composed of those who had been appointed by Clement XI, Innocent XIII, and Benedict XIII; another of those appointed by Clement XII who were known as the new college. The long, tedious session and the intense heat did not improve the temper of the cardinals; after six months of fruitless effort and constant intrigue, the election seemed no nearer than in the beginning. Various expedients were suggested, such as the withdrawal of the names of the leading candidates and the substitution of others, but without avail. After several plans had been tried to end the deadlock, Lambertini, whose name had been proposed as a compromise, addressed the conclave, saying: "If you wish to elect a saint, choose Gotti; a statesman, Aldobrandini; an honest man, elect me." These words spoken as much perhaps in jest as in earnest helped to end the difficulty. Lambertini was chosen and took the name of Benedict XIV in honour of his friend and patron Benedict XIII. As pope, Lambertini was no less energetic, brave, and unassuming than before his election. His great learning placed him in a position to deal successfully with ecclesiastical situations that needed reformation, and the broad Christian spirit which animated his dealings with foreign powers removed the pressure and hostility of even Protestant courts and rulers. He was undoubtedly liberal in his political dealings, though he never lost sight of the essential interests of the Church and religion.

**PUBLIC POLICY.**—To go to the extreme limit of concession and conciliation seems to have been the principle that dominated all Benedict's actions in his negotiations with governments and rulers, so much so, indeed, that he has not escaped criticism even from those within the Church as being too prone to settle difficulties by making concessions or compromises. However his actions may be judged, and

whatever may be thought of his motives, it cannot be denied that he aimed constantly at peace and that few causes of friction remained after the close of his administration. Moreover, in estimating the value and effect of his concessions, it is seen that in nearly every case he strengthened the moral influence of the papacy even though some rights of patronage or other material interests were abandoned. Nor was his influence less potent among Protestant than Catholic rulers; the universal esteem in which he was held throughout the world meant much in an epoch, the close of which was to witness the disruption of many time-honoured institutions, social and political as well as religious. An enumeration of his principal dealings with the heads of states will show that Benedict wisely abandoned, in most cases, the shadow of temporal authority to maintain the substance of spiritual supremacy.

The King of Portugal received the right of patronage over all the sees and abbeys in his kingdom (1740) and was further favoured with the title of *Rex Fidelissimus* (1748). In the matter of church revenues and the allotment of ecclesiastical benefices Spain was also treated very generously. In 1741 permission was granted to tax the income of the clergy, and in 1753 the Government received the right of nomination to nearly all the Spanish benefices; in 1754 an agreement was ratified by which the revenues from all the benefices in Spain and in the American colonies were paid into the government treasury to carry on the war against the African pirates. The King of Sardinia received the title of Vicar of the Holy See which carried with it the right of nomination to all ecclesiastical benefices in his dominions and the income of the pontifical fiefs in lieu of which a yearly indemnity of one thousand ducats was to be paid. Through the mediation of the pope a tribunal was established in Naples consisting of an equal number of clerical and lay members presided over by an ecclesiastic, which formed the final court for the trial of ecclesiastical cases. As mediator between the Knights of Malta and the King of Naples the pope brought a long standing controversy to a happy termination. By the Encyclical "*Ex omnibus christiani orbis*" (16 October, 1756), the bitter controversy regarding the question of admitting to the sacraments persons who would not accept the Bull "*Unigenitus*" was brought to a close. While insisting on the authority of the "*Unigenitus*" and pointing out that it was the duty of all the faithful to accept it with veneration, the pope decrees that only those persons should be excluded from the sacraments whose opposition to the pontifical constitution was public and notorious, and who therefore should be regarded as public enemies. The title of King of Prussia, taken in 1701 by the Elector of Brandenburg, was recognized by Benedict against the vigorous opposition of many members of the Curia. He was referred to as the *sage par excellence* by Maria Theresa, and received many encomiums from the sultan to whom he playfully referred in his writings as the "*Good Turk*". At the close of his pontificate the only question of importance in the foreign relations of the Holy See which had not been successfully settled was that concerning the Patriarchate of Aquileia over which the Republic of Venice and the emperor claimed control. Benedict decided that the rights of the patriarchate should be divided between the Archbishopric of Görz, in Austria, and that of Udine in the Venetian States. This decision was regarded as unjust by Venice, which in retaliation decreed that no Bull, Brief, or communication of the Holy See should be promulgated within the jurisdiction of the Republic without the supervision and approval of the Government.

**TEMPORAL AND SPIRITUAL RULER.**—As temporal sovereign Benedict governed the States of the Church

with wisdom and moderation and introduced many reforms for the purpose of diminishing abuses and promoting the happiness and prosperity of the people. With a view to replenishing the treasury which had been exhausted by the extravagance of some of his predecessors, especially that of Benedict XIII under the influence of Cardinal Coscia, and because of the enormous outlay for public buildings under Clement XII, he made no promotions to the Sacred College for four years. Measures were set on foot to reform the nobility, a new regional division of the city was introduced for the purpose of greater administrative efficiency, agriculture was fostered and encouraged by the introduction of new and improved methods, commerce was promoted, and luxury restrained, while the practice of usury, against which he published the Encyclical "*Vix Pervenit*" (1745), was almost entirely suppressed. (See *USURY*.) Benedict abandoned none of the claims of his predecessors, but the liberal use of his powers had no other aim than the promotion of the arts of peace and industry. How serious the problem was is best seen from his own words: "The pope orders, the cardinals do not obey, and the people do as they please."

In purely spiritual and religious matters the influence of Benedict left a lasting impress on the entire Church and its administration. His Bulls and Encyclicals, which have played such an important part in defining and clarifying obscure and difficult points of ecclesiastical law, were learned treatises full of wisdom and scholarship. The vexed question of mixed marriages, unions between Catholics and Protestants, demanded settlement in consequence of the increasing frequency with which they occurred. Much of the bitterness of the Reformation time had passed away and Protestants sought to have their marriages with Catholics solemnized with ceremonies equal to those when both parties were Catholics. Though the doctrine prevailed in Rome that the contracting parties were the real ministers of the Sacrament of Matrimony, no general unanimity prevailed among theologians on this point. Without derogating in the least from this theory, Benedict in reply to the questions from bishops in many places, especially in Holland and Poland, decreed by the Bull "*Magnæ nobis admirationis*" (29 June, 1748) that mixed marriages were allowable only under certain well-defined conditions, the principal of which was that children born of those marriages should be brought up in the Catholic Faith, but that such marriages while tolerated, should never be performed with the ceremonies that imply formal ecclesiastical approval.

**RELATIONS WITH EASTERN CHURCHES.**—Under the skilful hand of Benedict a formal union was consummated with some of the Eastern Churches. The frequent attempts of the Greek Melchite Patriarchs of Alexandria, Antioch, and Jerusalem to obtain recognition from the Holy See did not for a long time result in any definite union, because of dissatisfaction on the part of the popes with the formulation of the Oriental creeds. In 1744, Benedict XIV sent the pallium to Seraphin Tanas whom he acknowledged as Patriarch of the Greek Melchites of Antioch. The conflicts in the Maronite Church, after the deposition of Jacob II, which seriously threatened its unity were settled in a national council (1736), the decrees of which were approved by Benedict. On 18 March, 1751, he renewed the prohibitions of Clement XII against the Freemasons, and though very few governments regarded the suppression of this society as demanding decisive action on their part, laws were at once passed by Spain and Naples, and in 1757 by Milan. The controversy in regard to Chinese and Malabar customs, or the system of accommodation to heathenism which some missionaries had permitted their converts to practice, and by which it was said

that pagan ideas and pagan practices had been grafted on Christianity, was terminated by Benedict XIV who issued two Bulls on the subject, and required the missionaries to take an oath that such abuses would not be tolerated in the future. The Bull "*Ex quo singulari*", in regard to the abuses in China, was published 11 July, 1742; that in regard to Malabar, "*Omnium sollicitudinum*", 12 September, 1744. (See *CHINA, INDIA*.) Because of the manner in which church festivals had been multiplied, Benedict strove to diminish them. This he did in Spain in 1742, in Sicily and Tuscany in 1748, and later in Sardinia, Austria, and the Papal States. Such a move met with much opposition from many cardinals. Benedict silenced their reproaches by saying that fewer feasts observed in a more Christian manner would contribute more to the glory of religion.

**LITURGICAL REFORMS.**—In liturgical matters Benedict XIV was extremely conservative. He viewed with grief the profound changes which had been introduced into the Roman Calendar since the time of Pius V. The increase in the number of Feasts of Saints and the multiplication of offices with the rank of *Duplex* had superseded the old ferial and dominical offices, and throughout his entire pontificate he set himself determinedly against the introduction of any new offices in the Breviary, a policy which he adhered to so strictly that the only change it underwent during his administration was that Leo the Great received the title of Doctor. So profoundly impressed was he with the necessity of a thorough revision of the Breviary which would eliminate those portions with which the critical sense of the eighteenth century found fault that he commissioned the Jesuit, Fabio Danzetto, to prepare a report on the subject. This report in four volumes of notes was of such a sweeping character that it is said to have caused Benedict to desist from his project. The plan of reforming the Roman Martyrology was, however, carried to a successful issue, and a new edition was published by his authority in Rome in 1748. The same is true of the "*Cæremoniale Episcoporum*", which Benedict XIII undertook to reform and which Benedict XIV published (1752) in the now usual form. The classical work of Benedict on liturgical matters is his "*De Servorum Dei Beatificatione et de Beatorum Canonizatione*" which still regulates the process of beatification and canonization. Other important liturgical writings of Benedict deal with the sacrifice of the Mass and the feasts of Our Lord, the Blessed Virgin, and some saints. Besides these he published numerous works on the rites of the Greeks and Orientals; Bulls and Briefs on the celebration of the octave of the Holy Apostles, against the use of superstitious images, on the blessing of the pallium, against profane music in churches, on the golden rose, etc.

In order that the clergy should not be deficient in ecclesiastical and historical science, and that they might not lack opportunity to profit by the intellectual progress of the period, he founded at Rome four academies for the study of Roman antiquities, Christian antiquities, the history of the Church and the councils, and the history of canon law and liturgy. He also established a Christian museum, and commissioned Joseph Assemani to prepare a catalogue of the manuscripts in the Vatican Library which he enriched by the purchase of the Ottobonian Library containing 3,300 MSS. of unique value and importance. He founded chairs of chemistry and mathematics in the Roman university known as the Sapienza, and many others for painting, sculpture, etc., at other schools. Over all these foundations he exercised the closest supervision; he also found time to carry out many schemes for the building and adornment of churches in Rome. The fact that Benedict never raised a Jesuit to the cardinalate is attributed

to his hostility to the Society; on the other hand, it must be noted that it was to a Jesuit, Emmanuel Azevedo, that he committed the complete edition of his works (1747-51). He had been long urged by his friends Cardinals Passionei and Archinto to order a thorough reformation of that body, but it was not until the last year of his life that any decisive action was taken. On 1 April, 1758, he issued a Brief by which Cardinal Saldanha was commissioned to inspect all the colleges and houses of the Society in Portugal, and to undertake a reform of the same, but this authority was withdrawn by his successor, Clement XIII.

Benedict XIV sought recreation in the society of learned men and artists, among whom he shone as a wit and a scholar. Gay, lively, and talkative, his conversation at times amazed, if it did not shock, the staid sensibilities of some of the dignified courtiers who came in contact with him. Mild and gracious in

TOMB OF BENEDICT XIV

his demeanour to all who approached him, the pope was at times lacking neither in energy nor spirit. On one occasion a violent scene took place in which the pope expressed in a most decided manner his disapproval of the tactics of the French court. Choiseul, the French ambassador, called at the Vatican to request that the appointment of Cardinal Archinto to succeed Cardinal Valenti as Secretary of State be deferred until after some matters in which the French king was interested were decided. Choiseul himself gives an account of this scene (Letters, p. 169), without, however, relating all the details. The conversation was more lively than Choiseul reported, and from the "Mémoires" of the Bâron de Besenval (p. 106) we learn that when the pope had grown tired of the importunities of Choiseul he seized him by the arm and pushing him into his own seat said: "Be pope yourself" (*Fa el Papa*). Choiseul replied: "No, Holy Father, let us each do his part. You

continue to be pope and I shall be ambassador." This brusqueness, however, was not usual with Benedict. He could be gay as well as serious. The Abbate Galiani once presented him with a collection of minerals saying: *Dic ut lapides isti panes fiant* (Command that these stones be made bread), and the hint was not lost. The miracle requested was performed and the abbé received a pension.

To his subjects Benedict was an idol. If they complained at times that he wrote too much and governed them too little, they all agreed that he spoke well and wittily, and his jokes and bon mots were the delight of Rome. Cares of state, after his elevation to the pontificate prevented him from devoting himself as much as he would have wished to his studies of former days; but he never lacked intellectual stimulus. He surrounded himself with such men as Quirini, Garampi, Borgia, Muratori, and carried on an active correspondence with scholars of many shades of opinion. His intellectual pre-eminence was not only a source of pride to Catholics, but formed a strong bond with many not of the Faith. Voltaire dedicated to him his "Mahomet" with the words: "Au chef de la véritable religion un écrit contre le fondateur d'une religion fausse et barbare". On another occasion he composed for a portrait of the pope the following distich:

Lambertinus hic est, Romæ decus, et pater orbis.

Qui mundum scriptis docuit, virtutibus ornat.

(This is Lambertini, the pride of Rome, the father of the world, who teaches that world by his writings and honours by his virtues.) The distich caused discussion regarding the quantity of "hic", but the pope defended the prosody of Voltaire who confirmed his opinion by a quotation from Virgil which he said ought to be the epitaph of Benedict.

Great as a man, a scholar, an administrator, and a priest, Benedict's claim to immortality rests principally on his admirable ecclesiastical writings. The most important of them, besides those already mentioned, are: "Institutiones Ecclesiasticæ", written in Italian, but translated into Latin by P. Ildephonsus a S. Carolo; it is a collection of 107 documents, principally pastoral letters, letters to bishops and others, independent treatises, instructions, etc., all of which are really scientific dissertations on subjects connected with church law or the care of souls; the classical work "De Synodo Diocesana", published after his elevation to the papacy, an adaptation to diocesan administration of the general ecclesiastical law; this book is called by Schulte, because of its influence, one of the most important, if not the most important, modern work in canon law; "Casus Conscientiæ de mandato Prosp. Lambertini Archiep. Bonon propositi et resoluti", valuable for the lawyer as well as the confessor; "Bullarium Benedicti XIV", which contains the legislation of his pontificate, many of its documents being scientific treatises. He also compiled a "Thesaurus Resolutionum Sacre Congregationis Concilii", the first attempt at a scientific presentation of the "Praxis" of the Roman Congregations. A complete edition of his works appeared at Rome (1747-51) in twelve folio volumes, by Emmanuel Azevedo, S.J., who also translated into Latin the Italian documents. A better and more complete edition is that of Venice, 1788. The latest and most serviceable (Prato, 1844) is in seventeen volumes. Some letters of Benedict were published by Kraus: "Briefe Benedict's XIV an den Canonicus Pier Francesco Peggi in Bologna (1729-1758) nebst Benedict's Diarium des Conclaves von 1740" (2d ed., Freiburg, 1888). Cf. Batifol, "Inventaire des lettres inédites du Pape Benoît XIV" (Paris, 1894); R. De Martinis, "Acta Benedicti XIV" (Naples, 1884, *passim*). In 1904 Heiner edited three hitherto unpublished treatises of Benedict XIV on rites, the feast of the Apostles, and the Sacraments.

The best account of the writings of Benedict and the sources for his life are contained in the above-mentioned work of KRAUS. See also GUARNACCI, *Vita et res gestae Romanorum Pontificum et Card. a Clem. X usque ad Clem. XI* (Rome, 1857); NOVAES, *Storia dei Sommi Pontefici* (Rome, 1822); RANKE, *Die röm. Papste in den letzten vier Jahrhund.* (Leipzig, ed. 1900); *Vie du Pape Bened. XIV* (Paris, 1783); GRÖNE, *Papst-Geschichte* (Ratisbon, 1875), II. For a long account of the Curia and the character of the cardinals in the time of Benedict XIV, see CHOISEUL, *Lettres et Mémoires inédites, publiées par Maurice Boutry* (Paris, 1895). On Benedict as a canonist see SCHULTE, *Gesch. der Quellen und Litt. des can. Rechts* (Stuttgart, 1880), III, 503 sqq.

PATRICK J. HEALY.

**Benedict, RULE OF SAINT.**—This work holds the first place among monastic legislative codes, and was by far the most important factor in the organization and spread of monasticism in the West. For its general character and also its illustration of St. Benedict's own life, see the article BENE-DICT, SAINT. Here, however, it is treated more in detail, under the following heads: I. The Text of the Rule; II. Analysis of the Rule; III. Practical Working of the Rule.

I. THE TEXT OF THE RULE.—The exact time and place at which St. Benedict wrote his Rule are not known, nor can it be determined whether the Rule, as we now possess it, was composed as a single whole or whether it gradually took shape in response to the needs of his monks. Somewhere about 530, however, may be taken as a likely date, and Monte Cassino as a more probable place than Subiaco, for the Rule certainly reflects St. Benedict's matured monastic and spiritual wisdom. The earliest chronicler says that when Monte Cassino was destroyed by the Lombards in 581, the monks fled to Rome, carrying with them, among other treasures, a copy of the Rule "which the holy Father had composed"; and in the middle of the eighth century there was in the pope's library a copy believed to be St. Benedict's autograph. It has been assumed by many scholars that this was the copy brought from Monte Cassino; but though the supposition is likely enough, it is not a certainty. Be that as it may, this MS. of the Rule was presented by Pope Zachary to Monte Cassino in the middle of the eighth century, a short time after the restoration of that monastery. Charlemagne found it there when he visited Monte Cassino

towards the end of the century, and at his request a most careful transcript of it was made for him, as an exemplar of the text to be disseminated throughout the monasteries of his empire. Several copies of the Rule were made from it, one of which survives to this day; for there can be no doubt that the present Codex 914 of the St. Gall Library was copied directly from Charlemagne's copy for the Abbey of Reichenau. An exact diplomatic reprint (not in facsimile) of this codex was published at Monte Cassino in 1900, so that the text of this MS., certainly the best individual text of the Rule in existence, can be studied

without difficulty. Various other MSS. go back to Charlemagne's MS., or to its original at Monte Cassino, which was destroyed by fire in 896, and thus the text of the so-called autograph may be restored by approved critical methods with quite unusual certainty, and could we be certain that it really was the autograph, there would be no more to say.

But as already pointed out, it is not quite certain that it was St. Benedict's autograph, and the case is complicated by the circumstance that there is in the field another type of text, represented by the oldest known MS., the Oxford Hatton MS. 42, and by other very early authorities, which certainly was the text most widely diffused in the seventh and eighth centuries. Whether this text was St. Benedict's first recension and the "autograph" his later revision, or whether the former is but a corrupted form of the latter, is a question which is still under debate, though the majority of critics lean towards the second alternative. In either case, however,

RULE OF ST. BENEDICT, MS. A.D. 1129  
(British Museum)

the text of the "autograph" is the one to be adopted. The MSS., from the tenth century onwards, and the ordinary printed editions, give mixed texts, made up out of the two earliest types. Thus the text in current use is critically a bad one, but very few of the readings make any substantial difference.

The Rule was written in the *Lingua Vulgaris* or Low Latin vernacular of the time, and contains much syntax and orthography not in conformance with classical models. There is as yet no edition of the Rule that satisfies the requirements of modern criticism, though one is in process of preparation for the Vienna "Corpus" of Latin Ecclesiastical writers,

A sufficiently good manual edition was published by Dom Edmund Schmidt, of Metten, at Ratisbon in 1892, presenting in substance the text of the St. Gall MS., with the Low Latin element eliminated.

The number of commentators on the Rule is legion. Calmet gives a list of over one hundred and thirty such writers, and Ziegelbauer gives a similar list. The earliest commentary, in point of date, is that which has been variously ascribed to Paul Warnefrid (a monk of Monte Cassino about 780-799), Hildemar, Ruthard of Hirsau, and others. Hildemar, a Gallic monk, brought to Italy by Angelbert, Archbishop of Milan, reformed the monastery of Sts. Faustinus and Jovita at Brescia and died in 840. Martène, who considered this commentary to be the best ever produced, maintained that Hildemar was its real author, but modern critics attribute it to Paul Warnefrid. Amongst other commentators the following deserve mention: St. Hildegard (d. 1178), the foundress and first Abbess of Mount St. Rupert, near Bingen on the Rhine, who held that St. Benedict's prohibition of flesh-meat did not include that of birds; Bernard, Abbot of Monte Cassino, formerly of Lérins and afterwards a cardinal (d. 1282); Turrecremata (Torquemada) a Dominican (1468); Trithemius, Abbot of Sponheim (1516); Perez, Archbishop of Tarragona and Superior-General of the congregation of Valladolid; Haeften, Prior of Afflighem (1648); Stengel, Abbot of Anhausen (1663); Mège (1691) and Martène (1739), Maurists; Calmet, Abbot of Senones (1757); and Mabillon (1707), who discusses at length several portions of the Rule in his Prefaces to the different volumes of the "Acta Sanctorum O. S. B."

It is impossible to gauge the comparative value of these and other commentaries, because the different authors treat the Rule from different points of view. That of Calmet is perhaps the most literal and is exhaustive on many important points; those of Martène and Haeften are mines of information regarding monastic tradition; Perez and Mège are practical and pious, though the latter has been considered lax in many of the views maintained; that of Turrecremata is useful as treating the Rule from the standpoint of moral theology; and others give mystical interpretations of its contents. It may here be pointed out that in studying the Rule as a practical code of monastic legislation, it is necessary to remember that in order to facilitate uniformity of observance, each congregation of the order has also its own Constitutions, approved by the Holy See, by which are regulated many matters of detail not touched upon in the Rule itself.

Before proceeding to analyze St. Benedict's Rule and to discuss its leading characteristics, something must be said about the monasticism that preceded his times, and out of which his system grew, in order that some idea may be gained as to how much of the Rule was borrowed from his precursors and how much was due to his own initiative. Such considerations are important because there is no doubt whatever that the introduction and propagation of St. Benedict's Rule was the turning-point which changed the whole trend of monasticism in the West.

The earliest forms of Christian monachism were characterized by their extreme austerity and by their more or less eremitical nature. In Egypt the followers of St. Anthony were purely eremitical, whilst those who followed the Rule of St. Pachomius, though they more nearly approached the cenobitical ideal, were yet without that element of stability insisted upon by St. Benedict, viz: the "common life" and family spirit. Under the Antonian system the austerities of the monks were left entirely to their own discretion; under the Pachomian, though there was an obligatory rule of limited severity, the monks were free to add to it

what other ascetical practices they chose. And, in both, the prevailing idea was that they were spiritual athletes, and as such they rivalled each other in austerity. Syrian and strictly Oriental monasticism need not be considered here, as it had no direct influence on that of Europe. When St. Basil (fourth century) organized Greek monasticism, he set himself against the eremitical life and insisted upon a community life, with meals, work, and prayer, all in common. With him the practice of austerity, unlike that of the Egyptians, was to be subject to the control of the superior, for he considered that to wear out the body by austerities so as to make it unfit for work, was a misconception of the Scriptural precept of penance and mortification. His idea of the monastic life was the result of the contact of primitive ideas, as existing in Egypt and the East, with European culture and modes of thought.

Monasticism came into Western Europe from Egypt. In Italy, as also in Gaul, it was chiefly Antonian in character, though both the rules of St. Basil and St. Pachomius were translated into Latin and doubtless made their influence felt. As far as we know, each monastery had practically its own rule, and we have examples of this irresponsible form of monastic life in the community which St. Benedict was called from his cave to govern, and in the *Grovagi* and *Sarabaita* whom he mentions in terms of condemnation in the first chapter of his Rule. A proof that the pervading spirit of Italian monachism was Egyptian lies in the fact that when St. Benedict determined to forsake the world and become a monk, he adopted, almost as a matter of course, the life of a solitary in a cave. His familiarity with the rules and other documents bearing upon the life of the Egyptian monks is shown by his legislating for the daily reading of the "Conferences" of Cassian, and by his recommendation (c. lxxiii) of the "Institutes" and "Lives" of the Fathers and the Rule of St. Basil.

When, therefore, St. Benedict came to write his own Rule for the monasteries he had founded, he embodied in it the result of his own mature experience and observation. He had himself lived the life of a solitary after the most extreme Egyptian pattern, and in his first communities he had no doubt thoroughly tested the prevailing type of monastic rule. Being fully cognizant, therefore, of the unsuitability of much in the Egyptian systems to the times and circumstances in which he lived, he now struck out on a new line, and instead of attempting to revivify the old forms of asceticism, he consolidated the cenobitical life, emphasized the family spirit, and discouraged all private venture in austerities. His Rule thus consists of a carefully considered combination of old and new ideas; rivalry in austerity was eliminated, and there was to be henceforth a sinking of the individual in the community. In adapting a system essentially Eastern, to Western conditions, St. Benedict gave it coherence, stability, and organization, and the verdict of history is unanimous in applauding the results of such adaptation.

II. ANALYSIS OF THE RULE.—Of the seventy-three chapters comprising the Rule, nine treat of the duties of the abbot, thirteen regulate the worship of God, twenty-nine are concerned with discipline and the penal code, ten refer to the internal administration of the monastery, and the remaining twelve consist of miscellaneous regulations.

The Rule opens with a prologue or hortatory preface, in which St. Benedict sets forth the main principles of the religious life, viz.: the renunciation of one's own will and the taking up of arms under the banner of Christ. He proposes to establish a "school" in which the science of salvation shall be taught, so that by persevering in the monastery till

death his disciples may "deserve to become partakers of Christ's kingdom". In chapter i are defined the four principal kinds of monks: (1) Cenobites, those living in a monastery under an abbot; (2) Anchorites, or hermits, living a solitary life after long probation in the monastery; (3) Sarabaites, living by twos and threes together, without any fixed rule or lawfully constituted superior; and (4) Gyrovagi, a species of monastic vagrants, whose lives, spent in wandering from one monastery to another, only served to bring discredit on the monastic profession. It is for the first of these classes, as the most stable kind, that this Rule is written. Ch. ii describes the necessary qualifications for an abbot and forbids him to make distinction of persons in the monastery except for particular merit, warning him at the same time that he will be answerable for the salvation of the souls committed to his care. Ch. iii ordains the calling of the brethren to council upon all affairs of importance to the community. Ch. iv summarizes the duties of the Christian life under seventy-two precepts, which are called the "Instruments of good works" and are mainly Scriptural either in letter or spirit. Ch. v prescribes prompt, cheerful, and absolute obedience to the superior in all things lawful, which obedience is called the first degree of humility. Ch. vi deals with silence, recommending moderation in the use of speech, but by no means prohibiting profitable or necessary conversation. Ch. vii treats of humility, which virtue is divided into twelve degrees or steps in the ladder that leads to heaven. They are: (1) fear of God; (2) repression of self-will; (3) submission of the will to superiors; (4) obedience in hard and difficult matters; (5) confession of faults; (6) acknowledgment of one's own worthlessness; (7) preference of others to self; (8) avoidance of singularity; (9) speaking only in due season; (10) stifling of unseemly laughter; (11) repression of pride; (12) exterior humility. Ch. ix-xix are occupied with the regulation of the Divine Office, the *opus Dei* to which "nothing is to be preferred", or Canonical Hours, seven of the day and one of the night. Detailed arrangements are made as to the number of Psalms, etc., to be recited in winter and summer, on Sundays, weekdays, Holy Days, and at other times. Ch. xix emphasizes the reverence due to the presence of God. Ch. xx directs that prayer in common is to be short. Ch. xxi provides for the appointment of deans over every ten monks, and prescribes the manner in which they are to be chosen. Ch. xxii regulates all matters relating to the dormitory, as, for example, that each monk is to have a separate bed and is to sleep in his habit, so as to be ready to rise without delay, and that a light shall burn in the dormitory throughout the night. Ch. xxiii-xxx deal with offences against the Rule and a graduated scale of penalties is provided: first, private admonition; next, public reproof; then separation from the brethren at meals and elsewhere; then scourging; and finally expulsion; though this last is not to be resorted to until every effort to reclaim the offender has failed. And even in this last case, the outcast must be received again, should he so desire, but after the third expulsion all return is finally barred. Ch. xxxi and xxxii order the appointment of a cellarer and other officials, to take charge of the various goods of the monastery, which are to be treated with as much care as the consecrated vessels of the altar. Ch. xxxiii forbids the private possession of anything without the leave of the abbot, who is, however, bound to supply all necessities. Ch. xxxiv prescribes a just distribution of such things. Ch. xxxv arranges for the service in the kitchen by all the monks in turn. Ch. xxxvi and xxxvii order due care for the sick, the old, and the young. They are to have certain dispensations from the strict Rule, chiefly in the matter of food.

Ch. xxxviii prescribes reading aloud during meals, which duty is to be performed by such of the brethren, week by week, as can do so with edification to the rest. Signs are to be used for whatever may be wanted at meals, so that no voice shall interrupt that of the reader. The reader is to have his meal with the servers after the rest have finished, but he is allowed a little food beforehand in order to lessen the fatigue of reading. Ch. xxxix and xl regulate the quantity and quality of the food. Two meals a day are allowed and two dishes of cooked food at each. A pound of bread also and a *hemina* (probably about half a pint) of wine for each monk. Flesh-meat is prohibited except for the sick and the weak, and it is to be always within the abbot's power to increase the daily allowance when he sees fit. Ch. xli prescribes the hours of the meals, which are to vary according to the time of year. Ch. xlii enjoins the reading of the "Conferences" of Cassian or some other edifying book in the evening before Compline and orders that after Compline the strictest silence shall be observed until the following morning. Ch. xliii-xlvi relate to minor faults, such as coming late to prayer or meals, and impose various penalties for such transgressions. Ch. xlvii enjoins on the abbot the duty of calling the brethren to the "work of God" in choir, and of appointing those who are to chant or read. Ch. xlviii emphasizes the importance of manual labour and arranges the time to be devoted to it daily. This varies according to the season, but is apparently to be never less than about five hours a day. The times at which the lesser of the "day-hours" (Prime, Terce, Sext, and None) are to be recited control the hours of labour somewhat, and the abbot is instructed not only to see that all work, but also that the employments of each are suited to their respective capacities. Ch. xlix treats of the observance of Lent, and recommends some voluntary self-denial for that season, with the abbot's sanction. Ch. l and li contain rules for monks who are working in the fields or travelling. They are directed to join in spirit, as far as possible, with their brethren in the monastery at the regular hours of prayers. Ch. lii commands that the oratory be used for purposes of devotion only. Ch. liii is concerned with the treatment of guests, who are "never wanting in a monastery" and who are to be received "as Christ Himself". This Benedictine hospitality is a feature which has in all ages been characteristic of the order. The guests are to be met with due courtesy by the abbot or his deputy, and during their stay they are to be under the special care of a monk appointed for the purpose, but they are not to associate with the rest of the community except by special permission. Ch. liv forbids the monks to receive letters or gifts without the abbot's leave. Ch. lv regulates the clothing of the monks. It is to be sufficient in both quantity and quality and to be suited to the climate and locality, according to the discretion of the abbot, but at the same time it must be as plain and cheap as is consistent with due economy. Each monk is to have a change of garments, to allow for washing, and when travelling shall be supplied with clothes of rather better quality. The old habits are to be put aside for the poor. Ch. lvi directs that the abbot shall take his meals with the guests. Ch. lvii enjoins humility on the craftsmen of the monastery, and if their work is for sale, it shall be rather below than above the current trade price. Ch. lviii lays down rules for the admission of new members, which is not to be made too easy. These matters have since been regulated by the Church, but in the main St. Benedict's outline is adhered to. The postulant first spends a short time as a guest; then he is admitted to the novitiate, where, under the care of the novice-master, his vocation is severely tested; during this time he

is always free to depart. If, after twelve months' probation, he still persevere, he may be admitted to the vows of Stability, Conversion of Life, and Obedience, by which he binds himself for life to the monastery of his profession. Ch. lix allows the admission of boys to the monastery under certain conditions. Ch. lx regulates the position of priests who may desire to join the community. They are charged with setting an example of humility to all, and can only exercise their priestly functions by permission of the abbot. Ch. lxi provides for the reception of strange monks as guests, and for their admission if desirous of joining the community. Ch. lxii empowers the abbot to choose certain of his monks for ordination, which, however, shall not give them any higher rank in the community, unless perchance they be promoted for special merit. Ch. lxiii lays down that precedence in the community shall be determined by the date of admission, merit of life, or the appointment of the abbot. Ch. lxiv orders that the abbot be elected by his monks and that he be chosen for his charity, zeal, and discretion. Ch. lxv allows the appointment of a provost, or prior, if need be, but warns such a one that he is to be entirely subject to the abbot and may be admonished, deposed, or expelled for misconduct. Ch. lxvi provides for the appointment of a porter, and recommends that each monastery should be, if possible, self-contained, so as to avoid the need of intercourse with the outer world. Ch. lxvii gives instructions as to the behaviour of a monk who is sent on a journey. Ch. lxviii orders that all shall cheerfully attempt to do whatever is commanded them, however hard it may seem. Ch. lxix forbids the monks to defend one another. Ch. lxx prohibits them from striking one another. Ch. lxxi encourages the brethren to be obedient not only to the abbot and his officials, but also to one another. Ch. lxxii is a brief exhortation to zeal and fraternal charity; and Ch. lxxiii is an epilogue declaring that this Rule is not offered as an ideal of perfection, but merely as a means towards godliness and is intended chiefly for beginners in the spiritual life.

*Characteristics of the Rule.*—In considering the leading characteristics of this Holy Rule, the first that must strike the reader is its wonderful discretion and moderation, its extreme reasonableness, and its keen insight into the capabilities as well as the weaknesses of human nature. Here are no excesses, no extraordinary asceticism, no narrow-mindedness, but rather a series of sober regulations based upon sound common-sense. We see these qualities displayed in the deliberate elimination of austerities and in concessions made with regard to what the monks of Egypt would have looked upon as luxuries. A few comparisons between the customs of these latter and the prescriptions of St. Benedict's Rule will serve to bring out more clearly the extent of his changes in this direction.

With regard to food, the Egyptian ascetics reduced it to a minimum, many of them eating only twice or thrice in the week, whilst Cassian describes a meal consisting of parched vetches with salt and oil, three olives, two prunes, and a fig, as a "sumptuous repast" (Coll. viii, 1). St. Benedict, on the other hand, though he restricts the use of flesh-meat to the sick, orders a pound of bread daily and two dishes of cooked food at each meal, of which there were two in summer and one in winter. And he concedes also an allowance of wine, though admitting that it should not properly be the drink of monks (Ch. xi). As to clothing, St. Benedict's provision that habits were to fit, to be sufficiently warm, and not too old, was in great contrast to the poverty of the Egyptian monks, whose clothes, Abbot Pambo laid down, should be so poor that if left on the road no one would be tempted to take them (Apophthegmata,

in P. G., LXV, 369). In the matter of sleep, whereas the solitaries of Egypt regarded its diminution as one of their most valued forms of austerity, St. Benedict ordered from six to eight hours of unbroken sleep a day, with the addition of a siesta in summer. The Egyptian monks, moreover, frequently slept on the bare ground, with stones or mats for pillows, and often even sitting or merely reclining, as directed in the Pachomian Rule, whilst Abbot John was unable to mention without shame the finding of a blanket in a hermit's cell (Cassian, Coll. xix, 6). St. Benedict, however, allowed not only a blanket but also a coverlet, a mattress, and a pillow to each monk. This comparative liberality with regard to the necessities of life, though plain and meagre perhaps, if tested by modern notions of comfort, was far greater than amongst the Italian poor of the sixth century or even amongst many of the European peasantry at the present day. St. Benedict's aim seems to have been to keep the bodies of his monks in a healthy condition by means of proper clothing, sufficient food, and ample sleep, so that they might thereby be more fit for the due performance of the Divine Office and be freed from all that distracting rivalry in asceticism which has already been mentioned. There was, however, no desire to lower the ideal or to minimize the self-sacrifice that the adoption of the monastic life entailed, but rather the intention of bringing it into line with the altered circumstances of Western environment, which necessarily differed much from those of Egypt and the East. The wisdom and skill with which he did this is evident in every page of the Rule, so much so that Bossuet was able to call it "an epitome of Christianity, a learned and mysterious abridgment of all the doctrines of the Gospel, all the institutions of the Fathers, and all the Counsels of Perfection".

St. Benedict perceived the necessity for a permanent and uniform rule of government in place of the arbitrary and variable choice of models furnished by the lives and maxims of the Fathers of the Desert. And so we have the characteristic of collectivism, exhibited in his insistence on the common life, as opposed to the individualism of the Egyptian monks. One of the objects he had in view in writing his Rule was the extirpation of the Sarabaites and Gyrovagi, whom he so strongly condemns in his first chapter and of whose evil lives he had probably had painful experience during his early days at Subiaco. To further this aim he introduced the vow of Stability, which became the guarantee of success and permanence. It is only another example of the family idea that pervades the entire Rule, by means of which the members of the community are bound together by a family tie, and each takes upon himself the obligation of persevering in his monastery until death, unless sent elsewhere by his superiors. It secures to the community as a whole, and to every member of it individually, a share in all the fruits that may arise from the labours of each monk, and it gives to each of them that strength and vitality which necessarily result from being one of a united family, all bound in a similar way and all pursuing the same end. Thus, whatever the monk does, he does it not as an independent individual but as part of a larger organization, and the community itself thus becomes one united whole rather than a mere agglomeration of independent members. The Vow of Conversion of Life indicates the personal striving after perfection that must be the aim of every Benedictine monk. All the legislation of the Rule, the constant repression of self, the conforming of one's every action to a definite standard, and the continuance of this form of life to the end of one's days, is directed towards "putting off the old man and putting on the new", and thereby

accomplishing that *conversio morum* which is inseparable from a life-long perseverance in the maxims of the Rule. The practice of obedience is a necessary feature in St. Benedict's idea of the religious life, if not indeed its very essence. Not only is a special chapter of the Rule devoted to it, but it is repeatedly referred to as a guiding principle in the life of the monk; so essential is it that it is the subject of a special vow in every religious institute, Benedictine or otherwise. In St. Benedict's eyes it is one of the positive works to which the monk binds himself, for he calls it *labor obedientie* (Prologue). It is to be cheerful, unquestioning, and prompt; to the abbot chiefly, who is to be obeyed as holding the place of Christ, and also to all the brethren according to the dictates of fraternal charity, as being "the path that leads to God" (Ch. lxxi). It is likewise extended to hard and even impossible things, the latter being at least attempted in all humility. In connexion with the question of obedience there is the further question as to the system of government embodied in the Rule. The life of the community centres round the abbot as the father of the family. Much latitude with regard to details is left to his "discretion and judgment", but this power, so far from being absolute or unlimited, is safeguarded by the obligation laid upon him of consulting the brethren—either the seniors only or else the entire community—upon all matters affecting their welfare. And on the other hand, wherever there seems to be a certain amount of liberty left to the monks themselves, this, in turn, is protected against indiscretion by the repeated insistence on the necessity for the abbot's sanction and approval. The vows of Poverty and Chastity, though not explicitly mentioned by St. Benedict, as in the rules of other orders, are yet implied so clearly as to form an indispensable and essential part of the life for which he legislates. Thus by means of the vows and the practice of the various virtues necessary to their proper observance, it will be seen that St. Benedict's Rule contains not merely a series of laws regulating the external details of monastic life, but also all the principles of perfection according to the Evangelical Counsels.

With regard to the obligation or binding power of the Rule, we must distinguish between the statutes or precepts and the counsels. By the former would be meant those laws which either command or prohibit in an absolute manner, and by the latter those that are merely recommendations. It is generally held by commentators that the precepts of the Rule bind only under the penalty of venial sin, and the counsels not even under that. Really grave transgressions against the vows, on the other hand, would fall under the category of mortal sins. It must be remembered, however, that in all these matters the principles of moral theology, canon law, the decisions of the Church, and the regulations of the Constitutions of the different congregations must be taken into consideration in judging of any particular case.

III. PRACTICAL WORKING OF THE RULE.—No higher testimony as to the inherent excellencies of the Rule can be adduced than the results it has achieved in Western Europe and elsewhere; and no more striking quality is exhibited by it than its adaptability to the ever-changing requirements of time and place since St. Benedict's days. Its enduring character is the highest testimony to its wisdom. For fourteen centuries it has been the guiding light of a numerous family of religious, men and women, and it is a living code at the present day, just as it was a thousand years ago. Though modified and adapted, from time to time, to suit the peculiar necessities and conditions of various ages and countries, by reason of its wonderful

elasticity its principles still remain the same, and it has formed the fundamental basis of a great variety of other religious bodies. It has merited the encomiums of councils, popes, and commentators, and its vitality is as vigorous at the present time as it was in the ages of faith. Though it was no part of St. Benedict's design that his spiritual descendants should make a figure in the world as authors or statesmen, as preservers of pagan literature, as pioneers of civilization, as revivers of agriculture, or as builders of castles and cathedrals, yet circumstances brought them into all these spheres. His sole idea was the moral and spiritual training of his disciples, and yet in carrying this out he made the cloister a school of useful workers, a real refuge for society, and a solid bulwark of the Church (Dudden, *Gregory the Great*, II, ix). The Rule, instead of restricting the monk to one particular form of work, makes it possible for him to do almost any kind of work, and that in a manner spiritualized and elevated above the labour of merely secular craftsmen. In this lies one of the secrets of its success.

The results of the fulfilment of the precepts of the Rule are abundantly apparent in history. That of manual labour, for instance, which St. Benedict laid down as absolutely essential for his monks, produced many of those architectural triumphs which are the glory of the Christian world. Many cathedrals (especially in England), abbeys, and churches, scattered up and down the countries of Western Europe, were the work of Benedictine builders and architects. The cultivation of the soil, encouraged by St. Benedict, was another form of labour to which his followers gave themselves without reserve and with conspicuous success, so that many regions have owed much of their agricultural prosperity to the skillful husbandry of the sons of St. Benedict. The hours ordered by the Rule to be devoted daily to systematic reading and study, have given to the world many of the foremost scholars and writers, so that the term "Benedictine erudition" has been for long centuries a byword indicative of the learning and laborious research fostered in the Benedictine cloister. The regulations regarding the reception and education of children, moreover, were the germ from which sprang up a great number of famous monastic schools and universities which flourished in the Middle Ages.

It is true that as communities became rich and consequently less dependent upon their own labours for support, the primitive fervour for the Rule diminished, and for this reason grave charges of corruption and absolute departure from monastic ideals have been made against the monks. But, although it is impossible to deny that the many reforms that were initiated seem to give colour to this view, it cannot be admitted that the Benedictine Institute, as a whole, ever became really degenerate or fell away seriously from the ideal established by its legislator. Individual failures there certainly were, as well as mitigations of rule, from time to time, but the loss of fervour in one particular monastery no more compromises all the other monasteries of the same country than the faults of one individual monk reflect necessarily upon the rest of the community to which he belongs. So, whilst admitting that the rigour of the Rule has varied at different times and in different places, we must, on the other hand, remember that modern historical research has entirely exonerated the monastic body as a whole from the charge of a general departure from the principles of the Rule and a widespread corruption of either ideal or practice. Circumstances have often rendered mitigations necessary but they have always been introduced as such and not as new or better interpretations of the Rule itself. The fact that the Benedictines still glory in their Rule, guard it

with jealousy, and point to it as the exemplar according to which they are endeavouring to model their lives, is in itself the strongest proof that they are still imbued with its spirit, though recognizing its latitude of application and its adaptability to various conditions.

G. CYPRIAN ALSTON.

**Benediktbeurn**, ABBEY OF, situated in the Bavarian Alps, about thirty miles south of Munich. It was formerly in the Diocese of Augsburg, but some writers, including Mabillon, have wrongly described it as having been in that of Freising. The name has been variously spelt as Beuren, Beuern, Buron, Beweren, Baiern, Beyrn, etc., but that given above is the officially accepted spelling at the present time. Tradition, as well as manuscripts dating as far back as the tenth century, ascribe its foundation, in the year 740, to three brothers of noble birth, named Lanfrid, Wulfram, and Eliland, acting under the influence of St. Boniface, who was then preaching the Faith in Bavaria. The three founders, each in turn, ruled the monastery, which in 955 (or 973 according to some authorities) was destroyed by the Huns, who then ravaged the country. Restored in 969 by Wolfold, a secular priest, it continued as a college of regular clergy, or canons, until 1031. Through the influence of the Emperor Henry III, the Benedictine rule was revived there in 1031 by Abbot Ellinger and eleven monks from the neighbouring Abbey of Tegernsee.

Under the next abbot, Gothelm, the famous monastic school was established. The abbey also became a great place of pilgrimage and the scene of many miracles, by reason of the relics of St. Anastasia which were brought thither in 1053. Throughout the Middle Ages it continued to flourish as a home of learning and piety. Many privileges were granted by different popes, and several of the emperors honoured it with their favour and their visits. The Abbots Ortolph II (1271-84) and Henry III (1284-89) were made Princes of the Empire by Rudolph of Hapsburg. The abbey was four times burnt down, viz: in 1248, 1377, 1378, and 1490, and as often rebuilt. In 1611 its numbers were depleted by a plague which carried off many of the monks, and it also suffered during the Swedish invasion under Gustavus Adolphus and the Thirty Years' War in the seventeenth century. In 1803 the abbey was suppressed by the Government and the monks, thirty-four in number, dispersed. The conventual buildings became successively a barracks, a military hospital, and a stud-house. In 1901 Freiherr von Kramer-Klett, the restorer of several Bavarian monasteries, offered five and one-half million marks for the property, but was met by a demand for twelve millions, which he refused.

The library and archives contained many priceless manuscripts and charters. Ziegelbauer (Hist. Lit. Ord. S.B., I, 543) printed a catalogue of the library, dated 1250, in which more than one hundred and fifty books and MSS. are enumerated. Mabillon, who

visited the abbey in 1683, and Bernard Pez, librarian of Melk, who was there in 1717, have both left on record their testimony as to the great value of the codices there preserved. At the suppression the library comprised 40,000 volumes. A number of these were incorporated with the Court Library and the remainder left to be disposed of by the subsequent occupants of the abbey.

Amongst the illustrious men produced by Benedictbeurn the following deserve mention: Gothelm, abbot 1032-62; founded the monastic school in 1033. Gotschalk, who translated the relics of St. Anastasia to Beurn in 1053; the first historian of the abbey ("Breviarium Gotschalki" in Mon. Germ. Hist., IX, 221). Dom Simon Speer, martyr; tortured and put to death by the Swedes for refusing to surrender the goods of the abbey, 1632. Magnus, abbot 1707-40; resuscitated the school, 1711. Dom Carolus Meichelbeck, "the Livy of Bavaria", b. 1669; took the habit, 1687 and was librarian and archivist from 1696 till his death in 1734. He taught philosophy and theology and wrote various historical works, including the "History of the Diocese of Freising", the "Chronicon Benedicto-Buranum", and the "Annals of the Bavarian Congregation".

Various charters, etc., in *Monumenta Boica* (Munich); YEPES, *Chronicon Generale O.S.B.* (Yraghe, 1609), III, 87; MABILLON, *Annales O.S.B.* (Paris, 1703-39), ed. 1735, II, 114; MEICHELBECK, *Chronicon Benedicto-buranum* (Benediktbeurn, 1752); KUEN, *Collectio Scriptorum* (Ulm, 1755); PERTZ, *Mon. Germ. Hist.: Script.* (Hanover, 1851), LX, 210; VON HEFNER, *Leistungen des Klosters Benediktbeurn*, in *Oberbayerisches Archiv*, III, 337; RETTBERG, *Deutschl. Kirchengesch.*, II, 165; DAFFNER, *Gesch. des Klosters Benediktbeurn* (Munich, 1893); SCHLEGMANN, *Gesch. der Säkularisation im rechtsrheinischen Bayern* (Regensburg, 1903-05).

G. CYPRIAN ALSTON.

**Benedict Biscop**, SAINT, an English monastic founder, b. of a noble Anglo-Saxon family, c. 628; d. 12 January, 690. He spent his youth at the court of the Northumbrian King Oswy. When twenty-five years old, he made the first of his five pilgrimages to Rome. On his return to England, Benedict introduced, wherever he could, the religious rites as he saw them practised in Rome. Soon afterwards he made a second pilgrimage to Rome, stopping on his return at Lérins, in 666, to take the religious habit. When, two years later, he returned to Rome, Pope Vitalian sent him and the monk Adrian as advisers with Theodore, the newly appointed Archbishop of Canterbury. On their arrival in England, Theodore appointed Benedict Abbot of St. Peter's at Canterbury. After two years, in 671, he resigned this office and made another pilgrimage to Rome. During this and his two succeeding pilgrimages to the city of the Apostles he collected numerous relics, books, and paintings for the monasteries of Wearmouth and Jarrow, the former of which he founded in 674, the latter in 682. He also engaged Abbot John, Arch-cantor of St. Peter's in Rome, to teach Roman chant at these monasteries. Benedict was the first to introduce into England the building of stone churches and the art of making glass windows. His festival is observed on 12 February.

MONTALEMBERT, *Monks of the West* (Boston), II, 493; HOPE, *Conversion of the Teutonic Race* (London), I, 400; STANTON, *A Menology of England and Wales* (London, 1892); ALLIES, *Hist. of the Church in England* (London, 1892), I, 59; MABILLON, *Acta SS. O. S. B., sec. II.* His biography in Latin by St. BEDE is published in *P. L.*, XCIV, 711-734.

MICHAEL OTT.

**Benedicti**, JEAN, a Franciscan theologian of the sixteenth century belonging to the Observantine Province of Tours and Poitiers. He became in time secretary of the order and in this capacity accompanied the minister-general, Christopher a Capite Fontium, throughout the whole of Europe in the latter's canonical visitation of Franciscan houses. Afterwards he was made commissary-general of the French and visitor of many Italian Provinces, and in

order to fulfil a vow went on a pilgrimage to the Holy Land. Wadding says that he was a man of most distinguished parts and great culture, having thoroughly mastered the learning of his day and being especially conversant with the Hebrew, Greek, and Latin tongues. In 1599 the first edition of his "*Somme des péchés et le remède d'iceux comprenant tous les cas de conscience*" was published in Paris and was immediately in great demand among confessors, for we learn that after having been revised, corrected, and augmented by the Theological Faculty of Paris it reached its fifteenth edition. He also wrote "*La triomphante victoire de la Sainte Vierge*" which tells of a remarkable exorcism in the church of the Cordeliers at Lyons. His remains were interred in the Friary at Laval.

Wadding, *Annales minor. ad ann.*, 1596, IV; SBARALEA, *Suppl. ad script. O. M.* (Rome, 1806).

ANDREW EGAN.

**Benedict Joseph Labre**, SAINT, b. 26 March, 1748, at Amettes in the Diocese of Boulogne, France; d. in Rome, 16 April, 1783. He was the eldest of fifteen children. His parents, Jean-Baptiste Labre and Anne-Barbe Grandsire, belonged to the middle class and so were able to give to their numerous offspring considerable opportunities in the way of education. His early training he received in his native village in a school conducted by the vicar of the parish. The account of this period furnished in the life written by his confessor, Marconi, and that contained in the one compiled from the official processes of his beatification are at one in emphasizing the fact that he exhibited a seriousness of thought and demeanour far beyond his years. Even at that tender age he had begun to show a marked predilection for the spirit of mortification, with an aversion for the ordinary childish amusements, and he seems from the very dawning of reason to have had the liveliest horror for even the smallest sin. All this we are told was coexistent with a frank and open demeanour and a fund of cheerfulness which remained unabated to the end of his life. At the age of twelve his education was taken over by his paternal uncle, François-Joseph Labre, curé of Erin, with whom he then went to live. During the six following years which he spent under his uncle's roof, he made considerable progress in the study of Latin, history, etc. but found himself unable to conquer a constantly growing distaste for any form of knowledge which did not make directly for union with God. A love of solitude, a generous employment of austerities, and devotedness to his religious exercises were discernible as distinguishing features of his life at this time and constitute an intelligible prelude to his subsequent career. At the age of sixteen he resolved to embrace a religious life as a Trappist, but having on the advice of his uncle returned to Amettes to submit his design to his parents for their approval he was unable to win their consent. He therefore resumed his sojourn in the rectory at Erin, redoubling his penances and exercises of piety and in every way striving to make ready for the life of complete self-annihilation to which the voice within his soul seemed to be calling him.

After the heroic death of his uncle during an epidemic in September, 1766, Benedict, who had dedicated himself during the scourge to the service of the sick and dying, returned to Amettes in November of the same year. His absorbing thought at this time was still to become a religious at La Trappe, and his parents fearing that further opposition would be resistance to the will of God fell in with his proposal to enter the cloister. It was suggested, however, by his maternal uncle, the Abbé Vincent, that application be made to the Carthusians at Val-Sainte-Aldegonde rather than to La Trappe. Benedict's petition at Val-Sainte-Aldegonde was unsuccessful, but he was directed to another monastery of the same

order at Neuville. There he was told that as he was not yet twenty there was no hurry, and that he must first learn plain-chant and logic. During the next two years he applied twice unsuccessfully to be received at La Trappe and was for six weeks as a postulant with the Carthusians at Neuville; he finally sought and obtained admission to the Cistercian Abbey of Sept-Fonts in November, 1769. After a short stay at Sept-Fonts during which his exactness in religious observance and humility endeared him to the whole community, his health gave way, and it was decided that his vocation lay elsewhere. In accordance with a resolve formed during his convalescence he then set out for Rome. From Chieri in Piedmont he wrote to his parents a letter which proved to be the last they would ever receive from him. In it he informed them of his design to enter some one of the many monasteries in Italy noted for their special rigour of life. A short time, however, after the letter was dispatched he seems to have had an internal illumination which set at rest forever any doubts he might have as to what his method of living was to be. He then understood "that it was God's will that like St. Alexis he should abandon his country, his parents, and whatever is flattering in the world to lead a new sort of life, a life most painful, most penitential, not in a wilderness nor in a cloister, but in the midst of the world, devoutly visiting as a pilgrim the famous places of Christian devotion". He repeatedly submitted this extraordinary inspiration to the judgment of experienced confessors and was told he might safely conform to it. Through the years that followed he never wavered in the conviction that this was the path appointed for him by God. He set forward on his life's journey clad in an old coat, a rosary about his neck, another between his fingers, his arms folded over a crucifix which lay upon his breast. In a small wallet he carried a Testament, a breviary, which it was his wont to recite daily, a copy of the "*Imitation of Christ*", and some other pious books. Clothing other than that which covered his person he had none. He slept on the ground and for the most part in the open air. For food he was satisfied with a piece of bread or some herbs, frequently taken but once a day, and either provided by charity or gotten from some refuse heap. He never asked for alms and was anxious to give away to the poor whatever he received in excess of his scanty wants.

The first seven of the thirteen remaining years of his life were spent in pilgrimages to the more famous shrines of Europe. He visited in this way Loreto, Assisi, Naples, Bari, Fabriano in Italy; Einsiedeln in Switzerland; Compostella in Spain; Paray-le-Monial in France. The last six years he spent in Rome, leaving it only once a year to visit the Holy House of Loreto. His unremitting and ruthless self-denial, his unaffected humility, unhesitating obedience and perfect spirit of union with God in prayer disarmed suspicion not unnaturally aroused as to the genuineness of a Divine call to so extraordinary a way of existence. Literally worn out by his sufferings and austerities, on the 16th of April, 1783, he sank down on the steps of the church of Santa Maria dei Monti in Rome and, utterly exhausted, was carried to a neighbouring house where he died. His death was followed by a multitude of unequivocal miracles attributed to his intercession. The life written by his confessor, Marconi, an English version of which bears the date of 1785, witnesses to 136 miraculous cures as having been certified to up to 6 July, 1783. So remarkable, indeed, was the character of the evidence for some of the miracles that they are said to have had no inconsiderable part in finally determining the conversion of the celebrated American convert, Father John Thayer, of Boston, who was in Rome at the time of the saint's death.

Benedict was proclaimed Venerable by Pius IX in 1859 and canonized by Leo XIII 8 December, 1881. His feast is kept on the 16th of April, the day of his death.

JOSEPH F. DELANY.

**Benedictine Order.** THE, comprises monks living under the Rule of St. Benedict, and commonly known as "black monks". The order will be considered in this article under the following sections: I. History of the Order; II. Lay brothers, Oblates, Confraters, and Nuns; III. Influence and Work of the Order; IV. Present Condition of the Order; V. Benedictines of Special Distinction; VI. Other Foundations Originating from, or Based upon, the Order.

**I. HISTORY OF THE ORDER.**—The term *Order* as here applied to the spiritual family of St. Benedict is used in a sense differing somewhat from that in which it is applied to other religious orders. In its ordinary meaning the term implies one complete religious family, all of which are subject to a common superior or "general" who usually resides either in Rome or in the mother-house of the order, if there be one. It may be divided into various provinces, according to the countries over which it is spread, each provincial head being immediately subject to the general, just as the superior of each house is subject to his own provincial. This system of centralized authority has never entered into the organization of the Benedictine Order. There is no general or common superior over the whole order other than the pope himself, and the order consists, so to speak, of what are practically a number of orders, called "congregations", each of which is autonomous; all are united, not under the obedience to one general superior, but only by the spiritual bond of allegiance to the same Rule, which may be modified according to the circumstances of each particular house or congregation. It is in this latter sense that the term *Order* is applied in this article to all monasteries professing to observe St. Benedict's Rule.

**Beginnings of the Order.**—St. Benedict did not, strictly speaking, found an order; we have no evidence that he ever contemplated the spread of his Rule to any monasteries besides those which he had himself established. Subiaco was his original foundation and the cradle of the institute. From St. Gregory we learn that twelve other monasteries in the vi-

cinity of Subiaco also owed their origin to him, and that when he was obliged to leave that neighbourhood he founded the celebrated Abbey of Monte Cassino, which eventually became the centre whence his Rule and institute spread. These fourteen are the only monasteries of which there is any reliable evidence of having been founded during St. Benedict's lifetime. The tradition of St. Placid's mission to Sicily in 534, which first gained general credence in the eleventh century, though accepted as genuine by such writers as Mabillon and Ruinart, is now generally admitted to be mere romance. Very little more can be said in favour of the supposed introduction of the Benedictine Rule into Gaul by St. Maurus in 543, though it also has been strenuously upheld by many responsible writers. At any rate, evidences for it are so extremely doubtful that it cannot be seriously regarded as historical. There is reason for believing

that it was the third Abbot of Monte Cassino who began to spread a knowledge of the Rule beyond the circle of St. Benedict's own foundations. It is at least certain that when Monte Cassino was sacked by the Lombards about the year 580, the monks fled to Rome, where they were housed by Pope Pelagius II in a monastery adjoining the Lateran Basilica. There, in the very centre of the ecclesiastical world, they remained for upwards of a hundred and forty years, and it seems highly probable that this residence in so prominent a position constituted an important factor in the diffusion of a knowledge of Benedictine monasticism. It is generally agreed also that when Gregory the Great embraced the monastic state and converted his family palace on the Cœlian Hill into a monastery dedicated to St. Andrew the Apostle, it was the

Benedictine form of monachism that he adopted there.

It was from the monastery of St. Andrew in Rome that St. Augustine, the prior, and his forty companions set forth in 595 on their mission for the evangelization of England, and with them St. Benedict's idea of the monastic life first emerged from Italy. The arguments and authorities for this statement have been admirably marshalled and estimated by Reyner in his "*Apostolatus Benedictinorum in Angliâ*" (Douai, 1626), and his proofs have been adjudged by Mabillon to amount to demonstration. [Cf. Butler, "*Was St. Augustine a Benedictine?*" in *Downside Review*, III (1884).] At their various stopping places during the journey through France the monks left behind them traditions concerning their rule and form of life, and probably also some copies of the Rule, for we have several evidences of its

THE ABBEY OF SUBIACO

having been gradually introduced into most of the chief monasteries of Gaul during the seventh century. Lérins, for instance, one of the oldest, which had been founded by St. Honoratus in 375, probably received its first knowledge of the Benedictine Rule from the visit of St. Augustine and his companions in 596. Dismayed by the accounts they had heard of the ferocity of the English, the missionaries had sent their leader back to Rome to implore the pope to allow them to abandon the object of their journey. During his absence they remained at Lérins. Not long after their departure, Aygulph, Abbot of Fleury, was called in to restore the discipline and he probably introduced the full Benedictine observance; for when St. Benedict Biscop visited Lérins later on in the seventh century he received the Benedictine habit and tonsure from the hands of Abbot Aygulph. Lérins continued through several centuries to supply from its monks bishops for the chief churches of Southern Gaul, and to them perhaps may be traced

A BENEDICTINE MONK

the general diffusion of St. Benedict's Rule throughout that country. There, as also in Switzerland, it had to contend with and supplement the much stricter Irish or Celtic Rule introduced by St. Columbanus and others. In some monasteries the two rules were amalgamated, or practised side by side. Gregory of Tours says that at Ainay, in the sixth century, the monks "followed the rules of Basil, Cassian, Cæsarius, and other fathers, taking and using whatever seemed proper to the conditions of time and

place," and doubtless the same liberty was taken with the Benedictine Rule when it reached them. In other monasteries it entirely displaced the earlier codes, and had by the end of the eighth century so completely superseded them throughout France that Charlemagne could gravely doubt whether monks of any kind had been possible before St. Benedict's time. The authority of Charlemagne and of his son, Louis the Pious, did much, as we shall presently see, towards propagating the principles of the Father of western monachism.

St. Augustine and his monks established the first English Benedictine monastery at Canterbury soon after their arrival in 597. Other foundations quickly followed as the Benedictine missionaries carried the light of the Gospel with them throughout the length and breadth of the land. It was said that St. Benedict seemed to have taken possession of the country as his own, and the history of his order in England is the history of the English Church. Nowhere did the order link itself so intimately with people and institutions, secular as well as religious, as in England. Through the influence of saintly men, Wilfrid, Benedict Biscop, and Dunstan, the Benedictine Rule spread with extraordinary rapidity, and in the North, when once the Easter controversy had been settled and the Roman supremacy acknowledged (Synod of Whitby, 664), it was adopted in most of the monasteries that had been founded by the Celtic missionaries from Iona. Many of the episcopal sees of England were founded and governed by the

Benedictines, and no less than nine of the old cathedrals were served by the black monks of the priories attached to them. Even when the bishop was not himself a monk, he held the place of titular abbot, and the community formed his chapter.

Germany owed its evangelization to the English Benedictines, Sts. Willibrord and Boniface, who preached the Faith there in the seventh and eighth centuries and founded several celebrated abbeys. From thence spread, hand in hand, Christianity and Benedictine monasticism, to Denmark and Scandinavia, and from the latter even to Iceland. In Spain monasteries had been founded by the Visigothic kings as early as the latter half of the fifth century, but it was probably some two or three hundred years later that St. Benedict's Rule was adopted. Mabillon gives 640 as the date of its introduction into that country (*Acta Sanctorum O. S. B.*, sæc. I, præf. 74), but his conclusions on this point are not now generally accepted. In Switzerland the disciples of Columbanus had founded monasteries early in the seventh century, two of the best known being St. Gall's, established by the saint of that name, and Dissentis (612), founded by St. Sigisbert. The Celtic rule was not entirely supplanted by that of St. Benedict until more than a hundred years later, when the change was effected chiefly through the influence of Pepin the Short, the father of Charlemagne. By the ninth century, however, the Benedictine had become the only form of monastic life throughout the whole of Western Europe, excepting Scotland, Wales, and Ireland, where the Celtic observance still prevailed for another century or two. At the time of the Reformation there were nine Benedictine houses in Ireland and six in Scotland, besides numerous abbeys of Cistercians.

Benedictine monasticism never took such deep root in the eastern countries of Europe as it had done in the West. The Bohemians and the Poles, nevertheless, owed their conversion respectively to the Benedictine missionaries Adalbert (d. 997) and Casimir (d. 1058), whilst Bavaria and what is now the Austrian Empire were evangelized first by monks from Gaul in the seventh century, and later on by St. Boniface and his disciples. A few of the larger abbeys founded in these countries during the ninth and tenth centuries still exist, but the number of foundations was always small in comparison with those farther west. Into Lithuania and the Eastern Empire the Benedictine Rule never penetrated in early times, and the great schism between East and West effectually prevented any possibilities of development in that direction.

*Early Constitution of the Order.*—During the first four or five centuries after the death of St. Benedict there existed no organic bond of union amongst the various abbeys other than the Rule itself and obedience to the Holy See. According to the holy legislator's provisions each monastery constituted an independent family, self-contained, autonomous, managing its own affairs, and subject to no external authority except that of the local diocesan bishop, whose powers of control were, however, limited to certain specific occasions. The earliest departures from this system occurred when several of the greater abbeys began sending out offshoots, under the form of daughter-houses retaining some sort of dependence upon the mother abbey from which they sprang. This mode of propagation, together with the various reforms that began to appear in the eleventh and succeeding centuries, paved the way for the system of independent congregations, still a feature peculiar to the Benedictine Order.

*Reforms.*—A system which comprised many hundreds of monasteries and many thousands of monks, spread over a number of different countries, without any unity of organization; which was exposed,

moreover, to all the dangers and disturbances inseparable from those troublous times of kingdom-making; such a system was inevitably unable to keep worldliness, and even worse vices, wholly out of its midst. Hence it cannot be denied that the monks often failed to live up to the monastic ideal and sometimes even fell short of the Christian and moral standards. There were failures and scandals in Benedictine history, just as there were declensions from the right path outside the cloister, for monks are, after all, but men. But there does not seem ever to have been a period of widespread and general corruption in the order. Here and there the members of some particular house allowed abuses and relaxations of rule to creep in, so that they seemed to be falling away from the true spirit of their state, but whenever such did occur they soon called forth efforts for a restoration of primitive austerity; and these constantly recurring reform movements form one of the surest evidences of the vitality which has pervaded the Benedictine Institute throughout its entire history. It is important to note, moreover, that all such reforms as ever achieved any measure of success came invariably from within, and were not the result of pressure from outside the order.

The first of the reforms directed towards confederating the monastic houses of a single kingdom was set on foot early in the ninth century by Benedict of Aniane under the auspices of Charlemagne and Louis the Pious. Though a Benedictine himself, born in Aquitaine and trained at Saint-Seine near Dijon, Benedict was imbued with the rigid austerity of the East, and in his Abbey of Aniane practised a mode of life that was severe in the extreme. Over Louis he acquired an ascendancy which grew stronger as years went on. At his instigation Louis built for him a monastery adjoining his own palace at Aix-la-Chapelle, which was intended to serve as a model according to which all others were to be reformed, and to bring about this end Benedict was invested with a general authority over all the monasteries of the empire. Absolute uniformity of discipline, observance, and habit, after the pattern of the royal monastery, was then the general scheme which was launched at an assembly of all the abbots at Aachen (Aix-la-Chapelle) in 817 and embodied in a series of eighty *capitula* passed by the meeting. Though by reason of the very minuteness of these *capitula*, which made them vexatious and ultimately intolerable, this scheme of centralized authority lasted only for the lifetime of Benedict himself, the *capitula* (printed in full in Herrgott, "Vetus Disciplina Monastica", Paris, 1726) were recognized as supplying a much needed addition to St. Benedict's Rule concerning points not sufficiently provided for therein, and as filling much the same place then as the approved Constitutions of a monastery or congregation do now.

A century later, in 910, the first real reform that produced any widespread and general effect was commenced at the Abbey of Cluny in Burgundy, under St. Berno, its first abbot. The object was an elaboration of the Benedictine ideal, for the uniform preservation of which a highly centralized system of government, hitherto unknown to Benedictine monachism, except as suggested by St. Benedict of Aniane, was introduced. It was in fact the establishment of a veritable order, in the common acceptance of that term, within the Benedictine family, the abbot of Cluny retaining an actual headship over all dependent houses, the latter being governed only by priors as his vicars. For two centuries or more Cluny was probably the chief religious influence in the Latin Church, as it was also the first abbey to obtain exemption from episcopal oversight. Through the efforts of Berno's immediate successors the congregation grew apace, partly by

founding new houses and partly by incorporating those already existing, so that by the twelfth century Cluny had become the centre and head of an order embracing some 314 monasteries in all parts of Europe, France, Italy, the Empire, Lorraine, Spain, England, Scotland, and Poland. Although the congregation had its own constitutions and was absolutely autonomous, its members always claimed to be and were actually recognized as real Benedictines; hence it was not strictly a new order but only a reformed congregation within the order. (See CLUNY.)

Following the example of Cluny, several other reforms were initiated from time to time in different parts during the next three centuries, which while taking the Rule of St. Benedict as a basis, aimed frequently at a greater austerity of life than was practised by the black monks or contemplated by the holy Rule. Some were even semi-eremitical in their constitution, and one—Fontevault—consisted of double monasteries, the religious of both sexes being under the rule of the abbess. In dealing with these reformed congregations a distinction must be made between those which, like Cluny, continued to be considered as part of the main Benedictine body, and those which constituted practically new and independent orders, like Cîteaux, and have always been looked upon as outside the Benedictine confederation, though still professing the Rule of St. Benedict in some form or other. Those of the former category are treated here, since they and their successors constitute the order as we understand it at the present day. In the latter class the most important were Camaldoli (1099), Vallombrosa (1039), Grammont (1076), Cîteaux (1098), Fontevault (1099), Savigny (1112), Monte Vergine (1119), Sylvestrines (1231), Celestines (1254), and Olivetans (1319). All of these will be described in detail under the respective titles.

The influence of Cluny, even in monasteries which did not join its congregation or adopt any of the other reforms mentioned above, was large and far-reaching. Many such abbeys, including Subiaco and Monte Cassino, adopted its customs and practices, and modelled their life and spirit according to the example it set. Monasteries such as these often became in turn the centres of revival and reform in their respective neighbourhoods, so that during the tenth and eleventh centuries there arose several free unions of monasteries based on a uniform observance derived from a central abbey. These unions, the germ of the congregational system which developed later on, deserve a somewhat detailed enumeration here. In England there had been three distinct efforts at systematic organization. The various monasteries founded by St. Augustine and his fellow-monks had preserved some sort of union, as was only natural with new foundations in a pagan country proceeding from a common source of origin. As Christianity spread through the land this necessity

A BENEDICTINE MONK, IN CHOIR DRESS

for mutual dependence diminished, but when St. Benedict Biscop came to England with Archbishop Theodore in 669, it fell to him to foster a spirit of uniformity amongst the various Benedictine monasteries then existing. In the tenth century St. Dunstan set himself to reform the English monastic

A BENEDICTINE ABBOT

houses on the model of Fleury and of what he had seen successfully carried out at Ghent during his exile in Flanders. With his co-operation St. Ethelwold brought out his "Concordia Regularis", which is interesting as an early attempt to procure a uniform observance in all the monasteries of a nation. A century later Lanfranc continued the same idea by issuing a series of statutes regulating the life of the English Benedictines. It should be noted here that these several attempts were directed only towards securing outward uniformity, and that as yet there was apparently no idea of a *congregation*, properly so called, with a central source of all legislative authority. In France the abbey of Fleury, Marmoutier, St. Benignus (Dijon), St. Denis, Chaise-Dieu (Auvergne), St. Victor (Marseilles), St. Claude, Lérins, Sauve-Majour, Tiron, and Val-des-Choux, were all centres of larger or smaller groups of houses, in each of which there was uniformity of rule as well as more or less dependence upon the chief house. Fleury adopted the Cluniac reform, as did also St. Benignus of Dijon, though without subjection to that organization; and all were eventually absorbed by the congregation of St. Maur in the seventeenth century, excepting St. Claude, which preserved its independence until the Revolution, Val-des-Choux, which became Cistercian, and Lérins, which in 1505 joined the Italian congregation of St. Justina of Padua. In Italy the chief groups had their centres at Cluse in Piedmont, at Fonte Avellana, which was united to the Camaldolese congregation in 1569, La Cava, which joined the congregation of St. Justina in the fifteenth century, and Sasso-Vivo, which was suppressed as a separate federation in the same century and its forty houses united to other congregations of the Benedictine family. The monasteries of Germany were divided chiefly between Fulda and Hirschau, both of which eventually joined the Bursfeld Union. (See BURSVELD.) In Austria there were two groups of monasteries, the abbey of Melk (Molck or Melek) and Salzburg being the chief houses. They continued thus until well into the seventeenth century, when systematic congregations were organized in compliance with the Tridentine decrees, as will be described in due course. Other free unions, for purposes of mutual help and similarity of discipline, were to be found also in Scotland, Scandinavia, Poland, Hungary, and elsewhere, in which the same idea was carried out, viz., not so much a congregation in its later sense, with a centralized form of government, as a mere banding together of houses for the better maintenance of rule and policy.

Notwithstanding all these reform movements and unions of monasteries, a large number of Benedictine abbeys in different countries retained to the end of the twelfth century, and even later, their original independence, and this state of things was only terminated by the regulations of the Fourth Lateran Council, in 1215, which were to change materially the whole trend of Benedictine polity and history. By the twelfth canon of this council it was decreed that all the monasteries of each ecclesiastical province were to unite into a congregation. The abbots of each province or congregation were to meet in chapter every third year, with power to pass laws binding on all, and to appoint from amongst their own number "visitors" who were to make canonical visitations of the monasteries and to report upon their condition to the ensuing chapter. In each congregation one of the abbots was to be elected president, and the one so chosen presided over the triennial chapter and exercised a certain limited and well-defined authority over the houses of his congregation, in such a way as not to interfere with the independent authority of each abbot in his own monastery. England was the first and for some time the only country to give this new arrangement a fair trial. It was not until after the issue of the Bull "Benedictina" by Benedict XII, in 1336, that other countries, somewhat tardily, organized their national congregations in conformity with the designs of the Lateran Council. Some of these have continued to the present day, and this congregational system is now, with very few exceptions and some slight variations in matters of detail, the normal form of government throughout the order.

*Progress of the Order.*—At the time of this important change in the constitution of the order, the black monks of St. Benedict were to be found in almost every country of Western Europe, including Iceland, where they had two abbeys, founded in the twelfth century, and from which missionaries had penetrated even into Greenland and the lands of the Eskimo. At the beginning of the fourteenth century the order is estimated to have comprised the enormous number of 37,000 monasteries. It had up to that time given to the Church no less than 24 popes, 200 cardinals, 7,000 archbishops, 15,000 bishops, and over 1,500 canonized saints. It had enrolled among its members 20 emperors, 10 empresses, 47 kings, and 50 queens. And these numbers continued to increase by reason of the additional strength which accrued to the order from its consolidation under the new system. In the sixteenth century the Reformation and the religious wars spread havoc amongst its monasteries and reduced their number to about 5,000. In Denmark, Iceland, and Sweden, where several houses had joined the German (Bursfeld) Union, the order was entirely obliterated by the Lutherans about 1551 and its property confiscated by the crown. The arbitrary rule of Joseph II of Austria (1765-90) and the French Revolution and its consequences completed the work of destruction, so that in the early part of the nineteenth century the order numbered scarcely more than fifty monasteries all told. The last seventy years, however, have witnessed a remarkable series of revivals and an accession of missionary enterprise, with the result that there are now over one hundred and fifty monasteries of black monks, or, including affiliated congregations and convents of nuns, a total of nearly seven hundred. These revivals and examples of expansion will now be treated in detail under the headings of the various congregations, which will bring the history of the order down to the present day.

(1) *The English Congregation.*—The English were the first to put into practice the decrees of the Lateran Council. Some time was necessarily spent

in preliminary preparations, and the first general chapter was held at Oxford in 1218, from which time up to the dissolution under Henry VIII the triennial chapters appear to have been held more or less regularly. (Details of these chapters will be found in Reyner, "Apostolatus Benedictinorum".) At first only the monasteries of the southern province of Canterbury were represented, but in 1338, in consequence of the Bull "Benedictina", the two provinces were united and the English congregation definitely established. This system of the union of houses and periodical chapters interfered in the least possible degree with the Benedictine tradition of mutual independence of monasteries, though the Bull "Benedictina" was intended to give some further development to it. In other countries attempts were made from time to time to effect a greater degree of organization, but in England there was never any further advance along the path of centralization. At the time of the dissolution there were in England nearly three hundred houses of black monks, and though the numbers had from one cause or another somewhat declined, the English congregation may truthfully be said to have been in a flourishing condition at the time of the attempt to suppress it in the sixteenth century. The grave charges brought against the monks by Henry VIII's Visitors, though long believed in, are not now credited by serious historians. This reversal of opinion has been brought about mainly through the researches of such writers as Gasquet (Henry VIII and the English Monasteries, London, new ed., 1899; Eve of the Reformation, London, 1890), and Gairdner (Prefaces to "Calendars of State Papers of Henry VIII").

Throughout the period of suppression the monks were the champions of the old Faith, and when turned out of their homes very few conformed to the new religion. Some sought refuge abroad, others accepted pensions and lingered on in England hoping for a restoration of the former state of things, whilst not a few preferred to suffer lifelong imprisonment rather than surrender their convictions and claims. In Queen Mary's reign there was a brief revival at Westminster, where some of the surviving monks were brought together under Abbot Feckenham in 1556. Of the monks professed there during the three years of revived existence, Dom Sigebert Buckley alone survived at the beginning of the seventeenth century; and he, after forty years of imprisonment, when nigh unto death, in 1607, invested with the English habit and affiliated to Westminster Abbey and to the English congregation two English priests, already Benedictines of the Italian congregation. By this act he became the link between the old and the new lines of English black monks, and through him the true succession was perpetuated. About the same time a number of English monks were being trained abroad, mostly in Spain, for the English mission, and these were in 1619 aggregated by papal authority to the English congregation, though the monasteries founded by them had perforce to be situated abroad. St. Gregory's at Douai was established in 1605, St. Lawrence's at Dieulouard in Lorraine in 1606, and St. Edmund's at Paris in 1611. The first two of these communities remained on the continent until driven to England by the French Revolution, but the third has only recently returned. In 1633, by the Bull "Plantata", Pope Urban VIII bestowed upon the restored English congregation "every privilege, grant, indulgence, faculty, and other prerogative which had ever belonged to the ancient English congregation" and also approved of its members taking an oath by which they bound themselves to labour for the reconversion of their country. So zealous were they in this work that during the penal times no fewer than twenty-seven suffered martyrdom for the Faith, whilst eleven died

in prison. Two other monasteries were added to the congregation, viz., Lamspring in Germany in 1643, and Saint-Malo in Brittany in 1611, the latter, however, being passed over to the French (Maurist) congregation in 1672.

In 1795 the monks of Douai were expelled from their monastery by the Revolution, and after many hardships, including imprisonment, escaped to England, where, after a temporary residence at Acton Burnell (near Shrewsbury), they settled in 1814 at Downside in Somerset. The monks of Dieulouard were also driven out at the same time and after some years of wandering established themselves in 1802 at Ampleforth in Yorkshire. The monks of St. Edmund's, Paris, not successful in making their escape from France, were dispersed for a time, but when, in 1818, the buildings of St. Gregory's at Douai were recovered by the congregation, the remnants of St. Edmund's community reassembled and resumed conventual life there in 1823. For eighty years they continued undisturbed, recruited by English subjects and carrying on their school for English boys, until, in 1903, the "Association Laws" of the French government once more expelled them from their monastery; returning to England, they have established themselves at Woolhampton in Berkshire. The Abbey of Lamspring continued to flourish amongst Lutheran surroundings until it was suppressed by the Prussian Government in 1802 and the community dispersed. In 1828 a restoration of conventual life in a small way was attempted at Broadway in Worcestershire, which lasted until 1841. The monks then went to other houses of the congregation, though the community was never formally disbanded. Continuity was preserved by the last survivors of Broadway being incorporated in 1876 into the newly founded community of Fort Augustus in Scotland. In 1859 St. Michael's priory, at Belmont, near Hereford, was established, in compliance with a decree of Pius IX, as a central novitiate and house of studies for the whole congregation. It was also made the pro-cathedral of the Diocese of Newport, the bishop and canons of which are chosen from the English Benedictines, the cathedral-prior acting as provost of the chapter. Up to 1901 Belmont had no community of its own, but only members from the other houses who were resident there either as professors or students; the general chapter of that year, however, decided that novices might henceforth be received for St. Michael's monastery. In 1899 Leo XIII raised the three priories of St. Gregory's (Downside), St. Lawrence's (Ampleforth), and St. Edmund's (Douai) to the rank of abbeys, so that the congregation now consists of three abbeys and one cathedral-priory, each with its own community, but Belmont still remains the central novitiate and *tyrocinium* for all the houses. Besides its regular prelates, the English congregation is, by virtue of the Bull "Plantata" (1633), allowed to perpetuate as titular dignities the nine cathedral-priorities which belonged to it before the Reformation, viz., Canterbury, Winchester, Durham, Coventry, Ely, Worcester, Rochester, Norwich, and Bath; to these have been added three more, Peterborough, Gloucester, and Chester, originally Benedictine abbeys but raised to cathedral rank by Henry VIII. Six ancient abbacies also, St. Alban's, Westminster, Glastonbury, Evesham, Bury St. Edmunds, and St. Mary's, York, are similarly perpetuated by privilege granted in 1818.

(2) *The Cassinese Congregation*.—To prevent confusion it is necessary to point out that there are two congregations of this name. The first, with Monte Cassino as its chief house, was originally known as that of St. Justina of Padua, and with one exception has always been confined to Italy. The other is of much later institution and is distinguished by the

title of "Primitive Observance". What follows relates to the former of these two.

Most of the Italian monasteries had fallen under the influence of Cluny in the tenth and eleventh centuries, and had adopted its customs, but by the end of the fourteenth century they had so greatly declined that there was then hardly one left in which the Cluniac observance was retained. The Abbey of St. Justina at Padua, which had formerly been Cluniac, was in a very corrupt and ruinous state in 1407 when Gregory XII bestowed it *in commendam* on the Cardinal of Bologna. That prelate, desirous of reform, introduced some Olivetan monks, but the three remaining Cluniac monks appealed to the Venetian Republic against this encroachment on their rights, with the result that the abbey was restored to them and the Olivetans dismissed. The cardinal resigned the abbey to the pope, who thereupon gave it to Ludovico Barbo, a canon regular of St. George in Alga. He took the Benedictine habit and received the abbatial blessing in 1409. With the help of two Camaldolese monks and two canons of Alga, he instituted a reformed observance, which was quickly adopted in other monasteries as well. Permission was obtained from the pope for these to unite and form a new congregation, the first general chapter of which was held in 1421, when Abbot Barbo was elected the first president. Amongst those that joined were the celebrated abbeys of Subiaco, Monte Cassino, St. Paul's in Rome, St. George's at Venice, La Cava, and Farfa. In 1504 its title was changed to that of the "Cassinense Congregation". It gradually came to embrace all of the chief Benedictine houses of Italy, to the number of nearly two hundred, divided into seven provinces, Rome, Naples, Sicily, Tuscany, Venice, Lombardy, and Genoa. In 1505 the Abbey of Lérins in Provence together with all its dependent houses joined it. A highly centralized system of government was developed, modelled on the Italian republics, by which the autonomy of the individual houses was almost entirely destroyed. All power was vested in a committee of "definitors", in whose hands were all appointments, from that of president down to the lowest official in the smallest monastery. But in spite of this obvious departure from the Benedictine ideal and the dangers arising from such a system, the congregation continued in considerable prosperity until the wars of the Revolution period; and the later decrees of the Italian government put a check to its reception of novices and began a series of suppressions which have reduced its numbers enormously and shorn it of much of its former greatness. The formation of the congregation of Primitive Observance from out of its midst has still further diminished the congregation, until it now consists nominally of sixteen monasteries, some entirely without communities, and only three or four with sufficient numbers to keep up full conventual observances.

(3) *The Cassinese Congregation of Primitive Observance*.—In the year 1851 Abbot Casaretto of Subiaco initiated at Genoa a return to a stricter observance than was then in vogue, and several other monasteries of the Cassinese congregation, including Subiaco itself, desiring to unite in this reforming movement, Pius IX joined all such abbeys into one federation, which was called after its chief house, the "Province of Subiaco". Before long monasteries in other countries adopted the same reformed observance and became affiliated to Subiaco. In 1872 this union of monasteries was separated altogether from the original congregation and erected as a new and independent body under the title of the "Cassinense Congregation of Primitive Observance", which was divided into provinces according to the different countries in which its houses were situated, with the Abbot of Subiaco as abbot-general of the whole

federation. (a) The Italian Province dates from the original federation in 1851, and comprises ten monasteries with over two hundred religious. One of these is the Abbey of Monte Vergine, formerly the mother-house of an independent congregation, but which was aggregated to this province in 1879.

(b) The English Province was formed in 1858, when certain English monks at Subiaco obtained permission to make a foundation in England. The Isle of Thanet, hallowed by the memory of St. Augustine's landing there twelve hundred and sixty years previously, was selected and a church which Augustus Welby Pugin had built at Ramsgate was placed at their disposal. By 1860 a monastery had been erected and full conventual life established. It became a priory in 1880 and in 1896 an abbey. In course of time, in addition to serving several neighbouring missions, the community embarked on work in New Zealand, where Dom Edmund Luck, a Ramsgate monk, was made Bishop of Auckland. They also undertook work in Bengal in 1874, but this has since been relinquished to the secular clergy.

(c) The Belgian Province began in 1858 with the affiliation to Subiaco of the eleventh-century Abbey of Termonde. Afflighem followed in 1870, and since then two new foundations have been made in Belgium, and quite recently missionary work has been undertaken in the Transvaal, South Africa.

(d) The French Province, perhaps the most numerous and flourishing in the congregation, dates from 1859. Jean-Baptiste Muard, a parish priest and founder of a society of diocesan missionaries, became a monk at Subiaco. After his profession there in 1849, he returned to France with two companions and settled at Pierre-qui-Vire, a lonely spot amid the forests of Avallon, where a most austere form of Benedictine life was established. After his death in 1854, the abbey he had founded was affiliated to the Cassinese P. O. congregation and became the mother-house of the French province. New foundations were made at Béthisy (1859), Saint-Benoît-sur-Loire, the ancient Fleury (1865), Oklahama, Indian Territory, U. S. A., with an Apostolic vicariate attached (1874), Belloc (1875), Kerbeneat (1888), Encalcat (1891), Niño-Dios, Argentina (1899), and Jerusalem (1901). In 1880 the French Government annexed Pierre-qui-Vire and expelled the community by force; some of them, however, were able to regain possession a year or two later. The remainder sought refuge in England, where in 1882 they acquired the site of the old Cistercian Abbey of Buckfast, in Devonshire. Here they are gradually rebuilding the abbey on its original foundations. The "Association Laws" of 1903 again dispersed the congregation, the monks of Pierre-qui-Vire finding a temporary home in Belgium, those of Belloc and Encalcat going to Spain, and Kerbeneat to South Wales, whilst those of Béthisy and Saint-Benoît, being engaged in parochial work, obtained authorization and have remained in France.

(e) The Spanish Province dates from 1862, the year in which the ancient Abbey of Montserrat, founded in the ninth century, was affiliated to the Cassinese P. O. congregation. The old Spanish congregation, which ceased to exist in 1835, is dealt with separately. Other old monasteries which had been restored, St. Clodio in 1880, Vilvaneira in 1883, and Samos in 1888, were, in 1893, joined with Montserrat to form the Spanish province. Since then new foundations have been made at Pueyo (1890), Los Cabos (1900), and Solsona (1901), besides one at Manila (Philippines) in 1895. This province also includes the Abbey of New Nursia in Western Australia, founded in 1846 by two exiled monks from St. Martin's Abbey, Compostella, who after the general suppression in 1835 had found a home at La Cava in Italy. Seeing no hope of a return

to Spain they had volunteered for foreign mission work and were sent to Australia in 1846. Their names were Joseph Serra and Rudesind Salvado. They settled amongst the aboriginal inhabitants at a place some seventy miles north of Perth, which they called New Nursia in honour of St. Benedict's birthplace, and there worked as pioneers of civilization and Christianity amongst the natives. Their labours were crowned with success and their abbey gradually became the centre from which a number of outlying mission stations were established. Dom Serra became coadjutor to the Bishop of Perth in 1848, and Dom Salvado was made Bishop of Port Victoria in 1849, though he still remained superior of New Nursia, which was made an abbey in 1867 with a diocese attached. It had been aggregated to the Italian province of the congregation in 1864, but was transferred to the Spanish province on its formation in 1893. The monks own vast tracts of bushland around their monastery and they rear horses, sheep, and cattle on a large scale. The community includes a number of aboriginal converts amongst its lay brethren.

(4) *The Bursfeld Union*.—Although more fully dealt with in a separate article, something must be said here about this congregation. Formed in 1430, it included all the principal monasteries of Germany, and at the height of its prosperity numbered one hundred and thirty-six houses of men and sixty-four of women. It flourished until the Protestant Reformation, which with the religious wars that followed entirely obliterated it, and most of its monasteries passed into Lutheran hands. In 1628 the few remaining representatives of the congregation, having recovered a right to some of their possessions, offered seven monasteries to the newly resuscitated English congregation, on condition that the task of getting rid of the Lutheran occupants should devolve upon the English monks, whilst the monasteries should be restored to the Bursfeld congregation in the event of its ever requiring them. No advantage was taken of this offer except with regard to two houses—Rintelin, which was used as a seminary for a few years by the English Benedictines, and Lamspring, which continued as an abbey of English monks from 1644 to 1802. No other monasteries of the Bursfeld Union were ever restored to Benedictine uses. (See BURS-FELD.)

(5) *The Spanish Congregation*.—There were originally two distinct congregations in Spain, that of the "Claustres" or of Tarragona, formed in 1336, and that of Valladolid, organized in 1489. At the time of the general suppression in 1835, the former comprised sixteen abbeys, and the latter fifty, besides one or two priories in Peru and Mexico. Belonging to the Claustres were Our Lady's Abbey, Vilvaneira, St. Stephen's, Rivas del Sil, founded in the sixth century, and St. Peter's, Cardena, which claimed to be the oldest in Spain. The Valladolid congregation had St. Benedict's, Valladolid (founded 1390), for its mother-house, and amongst its houses were St. Martin's, Compostella (ninth century); St. Benedict's, Sahagun, the largest in Spain; St. Vincent's, Salamanca, famous for its university; Our Lady's, Montserrat; and St. Domingo at Silos. Of the sixty-six monasteries suppressed in 1835, five have been restored, viz., Montserrat (1844), St. Clodio (1880), Vilvaneira (1883), and Samos (1888) by the Cassinese P. O. congregation, and Silos (1880) by the French monks from Ligugé. Of the rest, sixteen remain as parish churches, thirteen are now occupied by other religious orders, two or three are used as barracks, two as prisons, one as a diocesan seminary, a few have been converted into municipal buildings or private residences, and the remainder have been destroyed.

(6) *The Portuguese Congregation*.—In the sixteenth

century the monasteries of Portugal were all held by commendatory abbots and consequently were in a very unsatisfactory state as regards discipline. A reform was initiated in 1558 in the Abbey of St. Thirso, monks from Spain being introduced for the purpose. After much difficulty the leaders succeeded in spreading their reform to two or three other houses, and these were formed into the Portuguese congregation by Pius V in 1566. The first general chapter was held at Tibães in 1568 and a president elected. The congregation eventually comprised all the monasteries of Portugal and continued in a flourishing state until the wholesale suppression of religious houses in the early part of the nineteenth century, when its existence came to an abrupt end. Only one Benedictine monastery in Portugal has since been restored—that of Cucujães, originally founded in 1091. Its resuscitation in 1875 came about in this way: to evade the law forbidding their reception of novices, the Brazilian Benedictines had sent some of their subjects to Rome for study and training in the monastery of St. Paul's, where they were professed about 1870. The Brazilian government refusing them permission to return to that country, they settled in Portugal and obtained possession of the old monastery of Cucujães. After twenty years of somewhat isolated existence there, unable to re-establish the Portuguese congregation, they were, in 1895, affiliated to that of Beuron. Thus Brazil, which had received its first Benedictines from Portugal, became in turn the means of restoring the Benedictine life in that country.

(7) *The Brazilian Congregation*.—The first Benedictines to settle in Brazil came from Portugal in 1581. They established the following monasteries: St. Sebastian, Bahia (1581); Our Lady of Montserrat, Rio de Janeiro (1589); St. Benedict, Olinda (1640); the Assumption, São Paulo (1640); Our Lady's, Parahyba (1641); Our Lady's, Brotas (1650); Our Lady's, near Bahia (1658); and four priories dependent on São Paulo. All these remained subject to the Portuguese superiors until 1827, when in consequence of the separation of Brazil from the Kingdom of Portugal, an independent Brazilian congregation was erected by Leo XII, consisting of the above eleven houses, with the Abbot of Bahia as its president. A decree of the Brazilian government in 1855 forbade the further reception of novices, and the result was that when the empire came to an end in 1889, the entire congregation numbered only about twelve members, of whom eight were abbots of over seventy years of age. The abbot-general appealed for help to the pope, who applied to the Beuronese congregation for volunteers. In 1895 a small colony of Beuronese monks having spent some time in Portugal learning the language, set out for Brazil and took possession of the abandoned Abbey of Olinda. The divine office was resumed, mission work in the neighbourhood commenced, and a school of *alumni* (pupils destined for the monastic state) established. Two new abbeys have also been added to the congregation: Quixadá, founded in 1900, and St. André at Bruges (Belgium) in 1901, for the reception and training of subjects for Brazil. In 1903 Rio de Janeiro was made the mother-house of the congregation and the residence of the abbot-general.

(8) *The Swiss Congregation*.—The earliest monasteries in Switzerland were founded from Luxeuil by the disciples of Columbanus, amongst whom was St. Gall, who established the celebrated abbey afterwards known by his name. By the end of the eighth century the Benedictine Rule had been accepted in most, if not in all of them. Some of these monasteries still exist and their communities can boast of an unbroken continuity from those early days. The various monasteries of Switzerland were united to form the Swiss congregation in 1602, through

the efforts of Augustine, Abbot of Einsiedeln. The political disturbances at the end of the eighteenth century reduced the number of abbeys to six, of which five still continue and constitute the entire congregation at the present day. They are as follows: (a) Dissentis, founded in 612; plundered and destroyed by fire in 1799; restored 1880. (b) Einsiedeln, founded 934, the abbey from which the Swiss-American congregation has sprung. (c) Muri, founded 1027; suppressed 1841; but restored at Gries (Tyrol) 1845. (d) Engelberg, founded 1082. (e) Maria Stein, founded 1085; the community was disbanded in 1798, but reassembled six years later; again suppressed in 1875, when the members went to Delle in France; expelled thence in 1902, they moved to Dürnbürg in Austria, and in 1906 settled at Bregenz. The sixth abbey was Rheinau, founded 778, which was suppressed in 1862; its monks, being unable to resume conventual life, were received into other monasteries of the congregation.

(9) *The Congregation of St.-Vannes*.—To counteract the evils resulting from the practice of bestowing ecclesiastical benefices upon secular persons in *commendam*, then rife throughout Western Europe, Dom Didier de la Cour, Prior of the Abbey of St.-Vannes in Lorraine, inaugurated in 1598 a strict disciplinary reform with the full approbation of the commendatory abbot, the Bishop of Verdun. Other monasteries soon followed suit and the reform was introduced into all the houses of Alsace and Lorraine, as well as many in different parts of France. A congregation, numbering about forty houses in all, under the presidency of the prior of St.-Vannes, was formed, and was approved by the pope in 1604. On account of the difficulties arising from the direction of the French monasteries by a superior residing in another kingdom, a separate congregation—that of St.-Maur—was organized in 1621 for the monasteries in France, whilst that of St.-Vannes was restricted to those situated in Lorraine. The latter continued with undiminished fervour until suppressed by the French Revolution, but its privileges were handed on by Gregory XVI in 1837 to the newly founded Gallican congregation, which was declared to be its true successor, though not enjoying actual continuity with it.

(10) *The Congregation of St.-Maur*.—The French monasteries which had embraced the reform of St.-Vannes were in 1621 formed into a separate congregation named after St. Maur, the disciple of St. Benedict, which eventually numbered one hundred and eighty houses, i. e. all in France except those of the Cluniac congregation. The reform was introduced mainly through the instrumentality of Dom Laurent Bénard and quickly spread through France. Saint-Germain-des-Prés at Paris became the mother-house, and the superior of this abbey was always the president. The constitution was modelled on that of the congregation of St. Justina of Padua and it was a genuine return to the primitive austerity of conventual observance. It became chiefly celebrated for the literary achievements of its members, amongst whom it counted Mabillon, Montfaucon, d'Achéry, Martène, and many others equally famous for their erudition and industry. In 1790 the Revolution suppressed all its monasteries and the monks were dispersed. The superior general and two others suffered in the massacre at the Carmes, 2 September, 1792. Others sought safety in flight and were received into Lamspring, and abbeys of Switzerland, England, and North America. A few of the survivors endeavoured to restore their congregation at Solesmes in 1817, but the attempt was not successful, and the congregation died out, leaving behind it a fame unrivalled in the annals of monastic history. (See MAURISTS.)

(11) *The Congregation of St. Placid*.—This congre-

gation was also an outcome of the reform instituted at St.-Vannes. The Abbey of St. Hubert in Ardennes, which had been founded about 706 for canons regular but had become Benedictine in 817, was the first in the Low Countries to embrace the reform. To facilitate its introduction, monks were sent from St.-Vannes in 1618 to initiate the stricter observance. In spite of some opposition from the community as well as from the diocesan, the Bishop of Liège, the revival of discipline gradually gained the supremacy and before long other monasteries, including St. Denis in Hainault, St. Adrian, Affligem, St. Peter's at Ghent, and others followed suit. These were formed into a new congregation (c. 1630) which was approved by Pope Urban VIII, and existed until the Revolution. Two abbeys of this congregation, Termonde and Affligem, have since been restored and affiliated to the Belgian province of the Cassinese P. O. congregation.

(12) *The Austrian Congregations*.—For many centuries the monasteries of Austria maintained their individual independence and their abbots acquired positions of much political power and dignity, which, though considerably diminished since medieval times, are still such as are enjoyed by no other Benedictine abbots. The example of reform set by the congregation of St. Justina in the fifteenth century exercised an influence upon the Austrian monasteries. Beginning (1418) in the Abbey of Melk (founded about 1089), the reform was extended to other houses, and in 1460 a union of those that had adopted it was proposed. Sixteen abbots were present at a meeting held in 1470, but for some reason this union of abbeys does not seem to have been at all lasting, for in 1623 a new Austrian congregation was projected to consist of practically the same abbeys as the former congregation: Melk, Göttweig, Lambach, Kremsmünster, Vienna, Garsten, Altenburg, Seitenstetten, Mondsee, Kleinsee, and Marienberg. In 1630 it was proposed to unite this congregation, those of Bursfeld and Bavaria, and all the houses that were still independent, into one general federation, and a meeting was held at Ratisbon to discuss the scheme. The Swedish invasion, however, put an end to the plan and the only result was the formation of another small congregation of nine abbeys, with that of St. Peter's, Salzburg, at its head. These two congregations, Melk and Salzburg, lasted until towards the end of the eighteenth century, when the despotic rule of Joseph II (1765–90) gave them their death-blow. In 1803 many of the abbeys were suppressed and those that were suffered to remain were forbidden to receive fresh novices. The Emperor Francis I, however, restored several of them between the years 1809 and 1816, and in 1889 those that still survived, some twenty in number, were formed into two new congregations under the titles of the Immaculate Conception and St. Joseph, respectively. The former comprises ten houses under the presidency of the Abbot of Göttweig, and the latter seven, with the Abbot of Salzburg at its head. The congregation of the Immaculate Conception, in which are Kremsmünster, dating from 777, St. Paul's in Carinthia, and the Scots monastery at Vienna, includes none of later date than the twelfth century; whilst in the congregation of St. Joseph there are Salzburg (before 700), Michaelbeuern (785), four others of the eleventh century, and only one of recent foundation, Innsbruck (1904).

(13) *The Bavarian Congregation*.—A reform initiated amongst the monasteries of Bavaria, based upon the Tridentine decrees, caused the erection of this congregation in 1684. It then consisted of eighteen houses which flourished until the general suppression at the beginning of the nineteenth century. Beginning in 1830, the pious King Ludwig I restored the abbeys of Metten and Ottobeuern

(founded in the eighth century), Scheyern (1112), and Andechs (1455), and founded new monasteries at Augsburg (1834), Munich (1835), Meltenburg (1842), and Schäftlarn (1866). Pius IX restored the congregation (1858) comprising the above houses, of which the Abbot of Metten is president. The abbey of Plankstetten (1189) and Ettal (1330) were restored in 1900 and 1904, respectively and added to the congregation.

(14) *The Hungarian Congregation*.—This congregation differs from all others in its constitution. It comprises the four abbey of Zalavár (1019), Bakonybél (1037), Tihany (1055), and Dömölk (1252), which are dependent on the Arch-Abbey of Monte Pannonia (Martinsberg), and to these are added six "residences" or educational establishments conducted by the monks. The members of this body are professed for the congregation and not for any particular monastery, and they can be moved from one house to another at the discretion of the arch-abbot and his sixteen assessors. The arch-abbey was founded by Stephen, the first king of Hungary, in 1001, and together with the other houses enjoys an unbroken succession from the date of foundation. The congregation is affiliated to the Cassinese, though it enjoys a status of comparative independence.

(15) *The Gallican Congregation*.—This, the first of the new congregations of the nineteenth century, was established in 1837 at Solesmes in France by Dom Guéranger. He had been professed at St. Paul's, Rome, and though at one time desirous of joining the community of Monte Cassino, was urged by the Bishop of Le Mans to restore the Benedictine Order in France. He acquired possession of the old Maurist priory of Solesmes, which Pope Gregory XVI made an abbey and the mother-house of the new congregation. He also declared it to be the true successor to all the privileges formerly enjoyed by the congregations of Cluny, St.-Vannes, and St.-Maur. Guéranger was soon joined by numbers of zealous monks, which enabled him to send out several offshoots. In this way Ligugé, originally founded by St. Martin of Tours in 360, was restored in 1853, Silos (Spain) in 1880, Glanfeuil in 1892, and Fontanelle (St. Wandrille), founded 649, in 1893. New foundations were likewise made at Marseilles in 1865, Farnborough (England), and Wisque in 1895, Paris 1893, Kergonan 1897, and a cell from Silos was established in Mexico in 1901. The community

as possible, using the parish church for the Divine Office. Each time they succeeded in re-entering their abbey, but at the final expulsion in 1903 they were, in common with all other religious of France, driven out of the country. The Solesmes monks have settled in the Isle of Wight, England, those of Fontanelle, Glanfeuil, Wisque, and Kergonan have gone to Belgium, those of Ligugé to Spain, and those

ST. VINCENT'S ARCH-ABBAY, BEATTY, PENN.

of Marseilles to Italy. The Fathers at Paris have been allowed to remain, in consideration of the important literary and historical work on which they are engaged. This congregation has endeavoured to carry on the work of the Maurists, and numbers many well-known writers amongst its members. The Abbot of Solesmes is the superior general, to which position he has been twice re-elected.

(16) *The Congregation of Beuron*.—This congregation was founded by Dom Maurus Wolter, who, whilst a seminary professor, was fired with the desire of restoring the Benedictine Order in Germany. He went to St. Paul's, Rome, where he was joined by his two brothers, and all were professed in 1856, one dying soon after. The two survivors, Maurus and Placid, set out in 1860, with a sum of £40 and the pope's blessing, to reconquer Germany for St. Benedict. In 1863, through the influence of the Princess Katharina von Hohenzollern, they obtained possession of the old Abbey of Beuron, near Sigmaringen, which had been originally founded in 777, but was destroyed in the tenth century by Hungarian invaders and later restored as a house of canons regular; it had been unoccupied since 1805. Dom Maurus became the first abbot of Beuron and superior of the congregation. In 1872 a colony was sent to Belgium to found the Abbey of Maredsous, of which Dom Placid was first abbot. The community of Beuron were banished in 1875 by the "May Laws" of the Prussian Government and found a temporary home in an old Servite monastery in the Tyrol. Whilst there their numbers increased sufficiently to make new foundations at Erdington, England, in 1876, Prague in 1880, and Seekau, Styria, in 1883. In 1887 Beuron was restored to them, and since then new houses have been established at Maria Laach, Germany (1892), Louvain, and Billerbeck, Belgium (1899 and 1901), and in 1895 the Portuguese monastery of Cucujães was added to the congregation. The founder died in 1900, and his brother, Dom Placid Wolter, succeeded him as Arch-abbot of Beuron.

(17) *The American Cassinese Congregation*.—Nothing very definite can be said with regard to the first Benedictines in North America. There were probably settlements amongst the Eskimo from Iceland, by way of Greenland, but these must have disap-

MARIA LAACH ABBEY

of Solesmes have been expelled from their monastery by the French government no less than four times. In the years 1880, 1882, and 1883 they were ejected by force, and, being afforded hospitality in the neighbourhood, kept up their corporate life as far

peared at an early date. In 1493 a monk from Montserrat accompanied Columbus on his voyage of discovery and became vicar-Apostolic of the West Indies, but his stay was short, and he returned to Spain. During the seventeenth and eighteenth centuries one or two English monks, and at least one of the Maurist congregation, worked on the American mission; and at the time of the French Revolution negotiations had been commenced by Bishop Carroll, first Bishop of Baltimore, for a settlement of English Benedictines in his diocese, which, however, came to nothing. The Benedictine Order was first established permanently in America by Dom Boniface Wimmer, of the Abbey of Metten, in Bavaria. A number of Bavarians had emigrated to America, and it was suggested that their spiritual wants in the new country should be attended to by Bavarian priests. Dom Wimmer and a few companions accordingly set out in 1846, and on their arrival in America they acquired the church, a house, and

Newark, New Jersey, founded 1857, with a school of 100 boys; Maryhelp Abbey, Belmont, North Carolina, founded 1885, the abbot of which is also vicar-Apostolic of North Carolina; attached to the abbey are two colleges and a school, with over 200 students; St. Procopius's Abbey, Chicago, founded 1887, with a school of 50 boys and an orphanage attached; St. Leo's Abbey, Pasco County, Florida, founded 1889; this abbey has a dependent priory in Cuba; St. Bernard's Abbey, Cullman County, Alabama, founded 1891, with a school of over 100 boys; St. Peter's Priory, established in Illinois in 1892 and transferred to Muenster, Saskatchewan, N. W. T., in 1903; St. Martin's Priory, Lacey, the State of Washington, founded 1895.

(18) *The Swiss American Congregation*.—In 1854 two monks from Einsiedeln in Switzerland came to America and founded the monastery of St. Meinrad, in Indiana, serving the mission and conducting a small school for boys. It became a priory in 1865,

MARYHELP ABBEY, BELMONT, N. C.

some land belonging to the small mission of St. Vincent, Beatty, Pennsylvania, which had been founded some time previously by a Franciscan missionary. Here they set to work, establishing conventual life, as far as was possible under the circumstances, and applying themselves assiduously to the work of the mission. Reinforced by more monks from Bavaria and their poverty relieved by some munificent donations, they accepted additional outlying missions and established a large college. In 1855 St. Vincent's, which had already founded two dependent priories, was made an abbey and the mother-house of a new congregation, Dom Wimmer being appointed first abbot and president. Besides St. Vincent's Arch-Abbey, the following foundations have been made: St. John's Abbey, Collegeville, Minnesota, founded 1856, mainly through the generosity of King Ludwig I of Bavaria; connected with the abbey is a large college for boys, with an attendance of over 300; St. Benedict's Abbey, Atchison, Kansas, founded 1857, said to possess the finest Benedictine church in America, built in the style of the Rhenish churches of the tenth and eleventh centuries; there is in connexion a school with 150 boys; St. Mary's Abbey,

and in 1870 was made an abbey and the centre of the congregation which was canonically erected at the same time. The first abbot, Dom Martin Marty, became, in 1879, first Vicar Apostolic of Dakota, where he had some years previously inaugurated mission work amongst the Indians. The following new foundations were made: Conception Abbey, Conception, Missouri (1873), the abbot of this abbey being president of the congregation; New Subiaco Abbey, Spielerville, Arkansas (1878); St. Benedict's Abbey, Mount Angel, Oregon (1882); St. Joseph's Abbey, Covington, Louisiana (1889); St. Mary's Abbey, Richardton, North Dakota (1899); St. Gall's Priory, Devil's Lake (1893), the last two communities subject to the same abbot. To all these monasteries are attached numerous missions, in which the monks exercise the cure of souls. They also have several seminaries and colleges.

(19) *The Congregation of St. Ottilien*.—This congregation, specially established for the work of foreign missions, was commenced in 1884 in the Abbey of St. Ottilien, in Bavaria, under the title of the "Congregation of the Sacred Heart". It was not then Benedictine, but in 1897 was affiliated to the Cassinese

congregation and in 1904 formally incorporated into the Benedictine Order. The Abbot of St. Ottilien is the superior general and the Beuronese Abbot of Seckau the apostolic visitor. This congregation has been largely recruited from the congregation of Beuron, to which it is bound by close ties. In 1901 it established a cell at Wipfeld, in Bavaria, and it has also ten mission stations in Central Africa, one of its members being Vicar Apostolic of Zanzibar. Its roll of honour was opened in August, 1905, by a bishop, two monks, two lay brothers, and two nuns, who suffered martyrdom for the Faith at the hands of the Central African natives.

(20) *Independent Abbeys*.—Besides the above congregations there also are two independent abbeys, which belong to no congregation, but are immediately subject to the Holy See: (a) The Abbey of Fort Augustus, Scotland. Founded in 1876, as a priory of the English congregation, mainly through the munificence of Lord Lovat, its first community was drawn from the other houses of that body. It was intended partly to continue the community of Sts. Denis and Adrian, originally of Lamspring, which had been dispersed since 1841, and of which there were only one or two surviving members; and partly to preserve continuity with the Scottish monasteries that had from time to time been founded in different parts of Germany and Austria, and of which there was, likewise, only one survivor—Father Anselm Robertson, professed at St. James's, Ratisbon, in 1845. These monks took up residence with the new community and assisted in the clothing of the first novice received for Fort Augustus. In order that its members might be exempt from the external mission work with which the English Benedictines are specially charged, the monastery was, in 1883, separated from the English congregation by the Holy See, and in 1888 was made an independent abbey, directly subject to the pope. A monk of the Beuron congregation, Dom Leo Linse, was at the same time appointed its first abbot. The Beuronese constitutions were first adopted, but these have since been replaced by new constitutions. Of late years the community has undertaken the spiritual care of three parishes in the vicinity of the abbey. (b) St. Anselm's Abbey and International Benedictine College, Rome. This was originally founded in 1687 as a college for Benedictines of the Cassinese congregation, but later on monks of other congregations were also admitted. Having ceased to exist in 1846, it was revived on a small scale by the Abbot of St. Paul's, and reconstituted in 1886 as a college and university for Benedictines from all parts of the world by Leo XIII, who at his own expense erected the present extensive buildings. In 1900 the abbey church was consecrated, in the presence of a great gathering of abbots from all over the world, by Cardinal Rampolla, acting as representative of the pope. St. Anselm's is presided over by Abbot Hildebrand de Hemptinne (who is also Abbot of Maredsous) with the title of "Abbot Primate" of the whole order. It has power to grant degrees in theology, philosophy, and canon law, and both professors and students are drawn from all congregations of the order. There is accommodation for one hundred students, but the full number in residence at one time has not yet exceeded sixty.

II. LAY BROTHERS, OBLATES, CONFRATERS, AND NUNS.—(1) *Lay Brothers*.—Up to the eleventh century in Benedictine houses no distinction of rank was made between the clerical and the lay brethren. All were on an equal footing in the community and at first comparatively few seem to have been advanced to the priesthood. St. Benedict himself was probably only a layman; at any rate it is certain that he was not a priest. A monk not in sacred orders was always considered as eligible as a priest

for any office in the community, even that of abbot, though for purposes of convenience some of the monks were usually ordained for the service of the altar; and until literary and scholastic work, which could only be undertaken by men of some education and culture, began to take the place of manual labour, all shared alike in the daily round of agricultural and domestic duties. St. John Gualbert, the founder of Vallombrosa, was the first to introduce the system of lay brethren, by drawing a line of distinction between the monks who were clerics and those who were not. The latter had no stalls in choir and no vote in chapter; neither were they bound to the daily recitation of the breviary Office as were the choir monks. Lay brothers were entrusted with the more menial work of the monastery, and all those duties that involved intercourse with the outside world, in order that the choir brethren might be free to devote themselves entirely to prayer and other occupations proper to their clerical vocation. The system spread rapidly to all branches of the order and was imitated by almost every other religious order. At the present day there is hardly a congregation, Benedictine or otherwise, that has not its lay brethren, and even amongst numerous orders of nuns a similar distinction is observed, either between the nuns that are bound to choir and those that are not, or between those that keep strict enclosure and those that are not so enclosed. The habit worn by the lay brethren is usually a modification of that of the choir monks, sometimes differing from it in colour as well as in shape; and the vows of the lay brethren are in most congregations only simple, or renewable periodically, in contrast with the solemn vows for life taken by the choir religious. In some communities at the present time the lay brothers equal and even outnumber the priests, especially in those, like Beuron or New Nursia, where farming and agriculture are carried out on a large scale.

(2) *Oblates*.—This term was formerly applied to children offered by their parents in a solemn way to a monastery, a dedication by which they were considered to have embraced the monastic state. The custom led to many abuses in the Middle Ages, because oblates sometimes abandoned the religious life and returned to the world, whilst still looked upon as professed religious. The Church, therefore, in the twelfth century, forbade the dedication of children in this way, and the term *oblate* has since been taken to mean persons, either lay or cleric, who voluntarily attach themselves to some monastery or order without taking the vows of religion. They wear the habit and share all the privileges and exercises of the community they join, but they retain dominion over their property and are free to leave at any time. They usually make a promise of obedience to the superior, which binds them as long as they remain in the monastery, but it only partakes of the nature of a mutual agreement and has none of the properties of a vow or solemn contract.

(3) *Confratres*.—A custom sprang up in the Middle Ages of uniting lay people to a religious community by formal aggregation, through which they participated in all the prayers and good works of the monks, and though living in the world, they could always feel that they were connected in a special way with some religious house or order. There seem to have been Benedictine *confratres* as early as the ninth century. The practice was widely taken up by almost every other order and was developed by the mendicants in the thirteenth century into what are now called "third orders". It was peculiar to Benedictine *confratres* that they were always aggregated to the particular monastery of their selection and not to the whole order in general, as is the case with others. The Benedictines have numbered

kings and emperors and many distinguished persons amongst their *confratres*, and there is hardly a monastery of the present day which has not some lay people connected with it by this spiritual bond of union.

(4) *Nuns*.—Nothing very definite can be said as to the first nuns living under the Rule of St. Benedict. St. Gregory the Great certainly tells us that St. Benedict's sister, Scholastica, presided over such a community of religious women who were established in a monastery situated about five miles from his Abbey of Monte Cassino; but whether that was merely an isolated instance, or whether it may be legitimately regarded as the foundation of the female department of the order, is at least an open question. We do not

even know what rule these nuns followed, though we may conjecture that they were under St. Benedict's spiritual direction and that whatever rule he gave them probably differed but little, except perhaps in minor details, from that for monks which has come down to us bearing his name. It seems tolerably certain, at any rate, that as St. Benedict's Rule began to be diffused abroad, women as well as men formed themselves into communities in order to live a religious life according to its principles, and wherever the Benedictine monks went, there also we

A BENEDICTINE NUN

find monasteries being established for nuns. Nunneries were founded in Gaul by Sts. Cassarius and Aurelian of Arles, St. Martin of Tours, and St. Columbanus of Luxeuil, and up to the sixth century the rules for nuns in most general use were those of St. Cassarius and St. Columbanus, portions of which are still extant. These were, however, eventually supplanted by that of St. Benedict, and amongst the earliest nunneries to make the change were Poitiers, Chelles, Remiremont, and Faremoutier. Mabillon assigns the beginning of the change to the year 620, though more probably the Benedictine Rule was not received in its entirety at so early a date, but was only combined with the other rules then in force. Remiremont became for women what Luxeuil was for men, the centre from which sprang a numerous spiritual family, and though later on it was converted into a convent of noble canonesses, instead of nuns properly so called, a modified form of the Benedictine Rule was still observed there. St. Benedict's Rule was widely propagated by Charlemagne and his son, Louis the Pious, and the Council of Aix-la-Chapelle in 817 enforced its general observance in all the nunneries of the empire. The Abbey of Notre Dame de Ronceray, at Angers, founded in 1028 by Fulke, Count of Anjou, was one of the most influential convents in France in the Middle Ages, and had under its jurisdiction a large number of dependent priories.

The earliest convents for women in England were at Folkestone, founded 630, and St. Mildred's in Thanet, established 670, and it is probable that under the influence of the successors of St. Augustine's monks at Canterbury and elsewhere, these nunneries observed the Benedictine Rule from the first. Other important Anglo-Saxon convents were: Ely, founded by St. Etheldreda in 673, Barking (675), Wimborne

(713), Wilton (800), Ramsey, Hants (967), and Amesbury (980). In Northumbria, Whitby (657) and Coldingham (673) were the chief houses of nuns. St. Hilda was the most celebrated of the abbesses of Whitby, and it was at Whitby that the synod which decided the paschal controversy was held in 664. Most of these convents were destroyed by Danish invaders during the ninth and tenth centuries, but some were subsequently restored and many others were founded in England after the Norman conquest.

The first nuns in Germany came from England in the eighth century, having been brought over by St. Boniface to assist him in his work of conversion and to provide a means of education for their own sex amongst the newly evangelized Teutonic races. Sts. Lioba, Thecla, and Walburga were the earliest of these pioneers, and for them and their companions, who were chiefly from Wimborne, St. Boniface established many convents throughout the countries in which he preached. In other parts of Europe nunneries sprang up as rapidly as the abbeys for men, and in the Middle Ages they were almost, if not quite, as numerous. In later medieval times the names of St. Gertrude, called the "Great", and her sister St. Mechtilde, who flourished in the thirteenth century, shed a lustre on the Benedictine nuns of Germany. In Italy the convents seem to have been very numerous during the Middle Ages. In the thirteenth century several were founded in which the reform of Vallombrosa was adopted, but none of these now exist. There were also convents belonging to the reforms of Camaldoli and Mount Olivet, of which a few still survive.

Except in the Bursfeld Union, which included houses of both sexes, and in the Cistercian reform, where the nuns were always under the Abbot of Cîteaux, and a few others of minor importance, the congregational system was never applied to the houses of women in an organized way. The convents were generally either under the exclusive direction of some particular abbey, through the influence of which they had been established, or else, especially when founded by lay people, they were subject to the jurisdiction of the bishop of the diocese in which they were situated. These two conditions of existence have survived to the present day; there are nine belonging to the first and over two hundred and fifty to the second category.

Early in the twelfth century France was the scene of a somewhat remarkable phase in the history of the Benedictine nuns. Robert of Arbrissel, formerly chancellor to the Duke of Brittany, embraced an eremitical life in which he had many disciples, and having founded a monastery of canons regular, carried out a new idea in 1099 when he established the double Abbey of Fontevrault in Poitou, famous in France for many centuries. The monks and nuns both kept the Benedictine Rule, to which were added some additional austerities. The law of enclosure was very strictly observed. In 1115 the founder placed the entire community, monks as well as nuns, under the rule of the abbess, and he further provided that the person elected to that office should always be chosen from the outside world, as such a one would have more practical knowledge of affairs and capacity for administration than one trained in the cloister. Many noble ladies and royal princesses of France are reckoned amongst the abbesses of Fontevrault. (See FONTEVRAULT.)

Excepting at Fontevrault the nuns seem at first not to have been strictly enclosed, as now, but were free to leave the cloister whenever some special duty or occasion might demand it, as in the case of the English nuns already mentioned, who went to Germany for active missionary work. This freedom with regard to enclosure gave rise, in course of time,

to grave scandals, and the Councils of Constance (1414), Basle (1431), and Trent (1545), amongst others, regulated that all the professedly contemplative orders of nuns should observe strict enclosure, and this has continued to the present time as the normal rule of a Benedictine convent.

The Protestant Reformation in the sixteenth century affected the nuns as well as the monks. Throughout north-western Europe the Benedictine institute was practically obliterated. In England the convents were suppressed and the nuns turned adrift. In Germany, Denmark, and Scandinavia the Lutherans acquired most of the nunneries and ejected their inmates. The wars of religion in France also had a disastrous effect upon the convents of that country, already much enfeebled by the evils consequent on the practice of *commendam*. The last few centuries, however, have witnessed a widespread

A BENEDICTINE ABBESS

revival of the Benedictine life for women as well as for men. In France, especially, during the seventeenth and eighteenth centuries, there sprang up several new congregations of Benedictine nuns, or reforms were instituted among those already existing. These were not strictly congregations in the technical sense, but rather unions or groups of houses which adopted a uniform observance, though the individual convents still remained for the most part subject to their respective bishops. Mention may be made of the reforms of Montmartre, Beauvais, Val-de-Grace, and Douai, and those of the Perpetual Adoration founded at Paris in 1654 and Valdosne in 1701. The French Revolution suppressed all these convents, but many have since been restored and fresh foundations added to their number.

The first convent of English nuns since the Reformation was founded at Brussels in 1598; and another was established at Cambrai in 1623 under the direction of the English Benedictine Fathers of Douai, from which a filiation was made at Paris in 1652. At Ghent in 1624 a convent was founded under Jesuit guidance, and established daughter-houses at Boulogne in 1652, Ypres in 1665, and Dunkirk in 1662. All these communities, except that of Ypres, were expelled at the French Revolution and escaped to England. That of Cambrai is now at Stanbrook and still remains a member of the English congregation under the jurisdiction of its abbot-president. The Brussels community is now at East Bergholt, and the Paris nuns at Colwich, whence an off-shoot has been planted at Atherstone (1842). Those of Ghent are now at Oulton; Boulogne and Dunkirk, having combined, are settled at Teignmouth. The convent of Ypres alone remains at the place of its original foundation, having survived the troublous times of the Revolution. There are also small Benedictine convents of more recent foundation at Minster (Thanet), Ventnor, Dumfries, and Tenby, and one at Princethorpe, originally a French community founded at Montargis in 1630, but driven to England in 1792, and now almost exclusively English. The nuns of Stanbrook, Oulton, Princethorpe, Ventnor, and Dumfries conduct boarding-

schools for the higher education of young ladies, and those of Teignmouth, Colwich, Atherstone, and Dumfries have undertaken the work of perpetual adoration.

In Austria many of the medieval convents have remained undisturbed, and likewise a few in Switzerland. In Belgium there are seven dating from the seventeenth century, and in Germany fourteen, established mostly during the last half century. In Italy, where at one time they were very numerous, there still remain, in spite of recent suppressions, eighty-five Benedictine convents dating from the Middle Ages, with over a thousand nuns. Holland has three convents of modern date, and Poland one, at Warsaw, founded in 1687. The convents of Spain numbered thirty at the time of the suppressions of 1835. The nuns were then robbed of all their possessions, but managed to preserve their corporate existence, though in great poverty and with reduced numbers. Ten of the old convents have since been restored, and eleven new ones founded. It is a peculiarity of the Spanish convents that their abbesses, who are elected triennially, receive no solemn blessing, as elsewhere, nor do they make use of any abbatial insignia.

Benedictine life in America may be said to be in a flourishing condition. There are thirty-four convents with nearly two thousand nuns, all of which have been founded within the last sixty years. The first establishment was at St. Mary's, Pennsylvania, where Abbot Wimmer settled some German nuns from Eichstätt in 1852; this is still one of the most important convents in the United States, and from it many filiations have been made. St. Benedict's convent at St. Joseph, Minnesota, founded in 1857, is the largest Benedictine convent in America. Other important houses are at Allegheny (Pennsylvania), Atchison (Kansas), Chicago (2), Covington (Kentucky), Duluth (Minnesota), Erie (Pennsylvania), Ferdinand (Indiana), Mount Angel (Oregon), Newark (New Jersey), New Orleans (Louisiana), Shoal Creek (Arkansas), and Yankton (South Dakota). The nuns are chiefly occupied with the work of education, which comprises elementary schools as well as boarding schools for secondary education. All the American convents are subject to the bishops of their respective dioceses.

III. INFLUENCE AND WORK OF THE ORDER.—The influence exercised by the Order of St. Benedict has manifested itself chiefly in three directions: (1) the conversion of the Teutonic races and other missionary works; (2) the civilization of north-western Europe; (3) educational work and the cultivation of literature and the arts, the forming of libraries, etc.

(1) *Missionary Work of the Order.*—At the time of St. Benedict's death (c. 543) the only countries of Western Europe which had been Christianized were Italy, Spain, Gaul, and parts of the British Isles. The remaining countries all received the Gospel during the next few centuries, either wholly or partially through the preaching of the Benedictines. Beginning with St. Augustine's arrival in England in 597, the missionary work of the order can be easily traced. The companions of St. Augustine, who is usually called the "Apostle of England", planted the Faith anew throughout the country whence it had been driven out nearly two centuries previously by the Anglo-Saxon and other heathen invaders. St. Augustine and St. Lawrence at Canterbury, St. Justus at Rochester, St. Mellitus at London, and St. Paulinus at York were Benedictine pioneers, and their labours were afterwards supplemented by other monks who, though not strictly Benedictine, were at least assisted by the black monks in establishing the Faith. Thus St. Birinus evangelized Wessex, St. Chad the Midlands, and St. Felix East Anglia,

whilst the Celtic monks from Iona settled at Lindisfarne, whence the work of St. Paulinus in Northumbria was continued by St. Aidan, St. Cuthbert, and many others. In 716 England sent forth Winfrid, afterwards called Boniface, a Benedictine monk trained at Exeter, who preached the Faith in Friesland, Alemannia, Thuringia, and Bavaria, and finally, being made Archbishop of Mentz (Mainz), became the Apostle of central Germany. At Fulda he placed a Bavarian convert named Sturm at the head of a monastery he founded there in 744, from which came many missionaries who carried the Gospel to Prussia and what is now Austria. From Corbie, in Picardy, one of the most famous monasteries in France, St. Ansgar set out in 827 for Denmark, Sweden, and Norway, in each of which countries he founded many monasteries and firmly planted the Benedictine Rule. These in turn spread the Faith and monasticism through Iceland and Greenland. For a short time Friesland was the scene of the labours of St. Wilfrid during a temporary banishment from England in 678, and the work he began there was continued and extended to Holland by the English monks Willibrord and Swithbert. Christianity was first preached in Bavaria by Eustace and Agilus, monks from Luxeuil, early in the seventh century; their work was continued by St. Rupert, who founded the monastery and see of Salzburg, and firmly established by St. Boniface about 739. So rapidly did the Faith spread in this country that between the years 740 and 780 no less than twenty-nine Benedictine abbeys were founded there.

Another phase of Benedictine influence may be found in the work of those monks who, from the sixth to the twelfth century, so frequently acted as the chosen counsellors of kings, and whose wise advice and guidance had much to do with the political history of most of the countries of Europe during that period.

In more recent times the missionary spirit has manifested itself anew amongst the Benedictines. During the penal times the Catholic Church in England was kept alive in great measure by the Benedictine missionaries from abroad, not a few of whom shed their blood for the Faith. Still more recently Australia has been indebted to the order for both its Catholicity and its hierarchy. The English congregation supplied some of its earliest missionaries, as well as its first prelates, in the persons of Archbishop Polding, Archbishop Ullathorne, and others during the first half of the nineteenth century. Later on, the Spanish monks, DD. Serra and Salvado, arrived and successfully evangelized the western portion of the continent from New Nursia as a centre. Mention must also be made of the numerous missions amongst the North American Indians by the monks of the Swiss-American congregation from St. Meinrad's abbey, Indiana; and those of the American-Cassinian congregation in various parts of the United States, from St. Vincent's Arch-Abbey, Beatty, Pennsylvania. Apostolic work was also done by the English Fathers of the Cassinese P. O. congregation amongst the Hindus in Western Bengal, and amongst the Maoris in New Zealand; and French monks of the same congregation laboured in the Apostolic vicariate of the Indian Territory, U. S. A., from the headquarters at the Sacred Heart Abbey, Oklahoma. In Ceylon the Sylvestrine Benedictines have undertaken (1883) missionary work amongst the natives in the Diocese of Kandy, the bishop of which is a member of the order; and still more recently the congregation of St. Ottilien, expressly established to provide workers for the foreign mission field, has established missions amongst the native tribes of Central Africa, where the seeds of the Faith

have already been watered by the blood of its first martyrs.

(2) *Civilizing Influence of the Order.*—Christianity and civilization go hand in hand, and hence we naturally look to North-western Europe for the effects of the civilizing influences exerted by the Benedictine missionaries. St. Benedict himself began by converting and civilizing the barbarians who overran Italy in the sixth century, the best of whom came and learned the Gospel principles at Monte Cassino. Previous to the institution of monasticism labour had been regarded as the symbol of slavery and serfdom, but St. Benedict and his followers taught in the West that lesson of free labour which had first been inculcated by the fathers of the desert. Wherever the monks went, those who were not employed in preaching tilled the ground; thus whilst some sowed in pagan souls the seeds of the Christian Faith, others transformed barren wastes and virgin forests into fruitful fields and verdant meadows. This principle of labour was a powerful instrument in the hands of the monastic pioneers, for it attracted to them the common people who learned from the monasteries thus reared as from object lessons the secrets of organized work, agriculture, the arts and sciences, and the principles of true government. Neander (Eccl. Hist.) points out that the profits accruing from the labour of the monks were employed ungrudgingly for the relief of the distressed, and that in times of famine many thousands were saved from starvation by the charitable foresight of the monks. The accounts of the beginnings of abbey after abbey present the same features with recurring regularity. Not only were the marshes drained, sterile plains rendered fertile, and wild beasts tamed or driven away, but the bandits and outlaws who infested many of the great highways and forests were either put to flight or converted from their evil ways by the industrious and unselfish monks. Around many of the greater monasteries towns grew up which have since become famous in history; Monte Cassino in Italy and Peterborough and St. Alban's in England are examples. Large-hearted abbots, eager to advance the interests of their poorer neighbours, often voluntarily expended considerable annual sums on the building and repairing of bridges, the making of roads, etc., and everywhere exercised a benign influence directed only towards improving the social and material condition of the people amongst whom they found themselves. This spirit, so prevalent during the ages of faith, has been successfully emulated by the monks of later times, of which no more striking instances in our own day can be cited than the wonderful influence for good amongst the aboriginal inhabitants of Western Australia possessed by the Spanish Benedictines of New Nursia, and the great industrial and agricultural work done amongst the native tribes of South Africa by the Trappists at Mariannhill and their numerous mission stations in Natal.

(3) *Educational Work and the Cultivation of Literature.*—The work of education and the cultivation of literature have always been looked upon as belonging by right to the Benedictines. In the earliest days of the order it was the custom to receive children in the monasteries that they might be educated by the monks. At first such children were always destined for the monastic state, and St. Benedict legislated in his Rule for their solemn dedication by their parents to the service of God. St. Placid and St. Maur are examples from St. Benedict's own day and amongst others may be instanced the English saint, Bede, who entered the monastery of Jarrow in his seventh year. The education of these children was the germ out of which afterwards developed the great monastic schools. Although St. Benedict urged upon his monks the duty of systematic read-

ing, it was Cassiodorus, the quondam minister of the Gothic kings, who about the year 538 gave the first real impetus to monastic learning at Viviers (Vivarium) in Calabria. He made his monastery a Christian academy, collected a great number of manuscripts, and introduced an organized plan of study for his disciples. The liberal arts and the study of the Holy Scriptures were given great attention, and a monastic school was established which became the pattern after which many others were subsequently modelled.

In England St. Augustine and his monks opened schools wherever they settled. Up to that time the tradition of the cloister had been opposed to the study of profane literature, but St. Augustine introduced the classics into the English schools, and St. Theodore, who became Archbishop of Canterbury in 668, added still further developments. St. Benedict Biscop, who returned to England with Archbishop Theodore after some years abroad, presided over his school at Canterbury for two years and then, going north, transplanted the new educational system to Wearmouth and Jarrow, whence it spread to Archbishop Egbert's school at York, which was one of the most famous in England in the eighth century. There Alcuin taught the seven sciences of the "trivium" and "quadrivium", i. e. grammar, rhetoric, and logic, arithmetic, music, geometry, and astronomy. (See ARTS, THE SEVEN LIBERAL.) Later on King Alfred, St. Dunstan, and St. Ethelwold did much to foster learning in England, substituting monks for secular canons in several cathedrals and greatly improving the monastic schools. Ramsey Abbey, founded by St. Oswald of Worcester, long enjoyed the reputation of being the most learned of the English monasteries. Glastonbury, Abingdon, St. Alban's, and Westminster were also famous in their day and produced many illustrious scholars.

In France Charlemagne inaugurated a great revival in the world of letters and stimulated the monks of his empire to study, as an essential of their state. To further this end he brought over from England in 782 Alcuin and several of the best scholars of York, to whom he entrusted the direction of the academy established at the royal court, as well as various other schools which he caused to be started in different parts of the empire. Mabillon gives a list of twenty-seven important schools in France established under Charlemagne (*Acta Sanctorum O. S. B.*, sec. IV, præf., 184). Those of Paris, Tours, and Lyons eventually developed into universities. In Normandy, later on, Bec became a great scholastic centre under Lanfranc and St. Anselm, and through them gave a fresh impetus to the English schools. Cluny also took its share in the work and became in turn the custodian and fosterer of learning in France.

In Germany St. Boniface opened a school in every monastery he founded, not only for the younger monks, but also for the benefit of outside scholars. Early in the ninth century two monks of Fulda were sent to Tours by their abbot to study under Alcuin, and through them the revival of learning gradually spread to other houses. One of the two, Rabanus Maurus, returning to Fulda in 813, became *scholasticus* or head of the school there, later abbot, and finally Archbishop of Mainz. He was the author of many books, one of which, his "*De Institutione Clericorum*", is a valuable treatise on the faith and practice of the Church in the ninth century. This work probably exercised a beneficial influence on all the cloister-schools of the Frankish Empire. Hirschau, a colony sent out from Fulda in 830, became a celebrated seat of learning and survived till the seventeenth century, when both the monastery and its library were destroyed during the Thirty Years War. Reichenau, which suffered a similar fate at the same time, owed its early celebrity to its

school under Walafrid Strabo, who had studied at Fulda and on his return became *scholasticus* and subsequently abbot. In Saxony the monastery of New Corbie also possessed a famous school, which sent forth many learned missionaries to diffuse learning over Denmark, Sweden, and Norway. It was founded by Ansgar, the apostle of Scandinavia, who came from Old Corbie in 822, where he had been the favourite disciple of Paschasius Radbertus, a theologian, poet, musician, and author of Scriptural commentaries and an exposition of the doctrine of the Holy Eucharist.

After the death of Charlemagne the revival of secular learning which he had begun waned somewhat, except in the Benedictine abbeys where the study of letters still remained the prerogative of the monks. The Abbey of St. Gall, in particular, during the tenth century drew to its walls numerous students desirous of gaining the knowledge that was imparted there, and produced many celebrated writers. The fame of Reichenau also revived, and from it was founded Einsiedeln (934), which helped to carry on the traditions of the past. Nor was Italy behindhand, as is shown by the history of such monastic schools as Monte Cassino, Pomposia, and Bobbio.

Most of the older universities of Europe have grown out of monastic schools. Paris, Tours, and Lyons have been mentioned; amongst others were Reims and Bologna, and, in England, Cambridge, where the Benedictines of Croyland first set up a school in the twelfth century. At Oxford, the English Benedictines, though they could not claim to be the founders, took an important part in the university life and development. Monks had from time to time been sent from different abbeys to study there, but in 1283 a number of the chief monasteries combined in founding a joint college for their members, called St. Benedict's, or Gloucester Hall, which is now Worcester College. In 1290 the cathedral priory of Durham established for its own monks St. Cuthbert's College, which is now Trinity; and in 1362 another college, now Christ Church, was founded for the monks of Canterbury. The Cistercians had Rewley Abbey just outside the town, founded about 1280, and St. Bernard's College, now St. John's, established in 1436 by Archbishop Chichele. All these colleges flourished until the Reformation, and even after the dissolution of the monasteries many of the ejected monks retired to Oxford on their pensions, to pass the remainder of their days in the peace and seclusion of their Alma Mater. Feckenham, afterwards Abbot of Westminster under Queen Mary, was the last English Benedictine to graduate at Oxford (about 1537) until, in 1897, the community of Ampleforth Abbey opened a hall and sent some of their monks there to study for degrees.

Besides being the chief educational centres during the Middle Ages, the monasteries were, moreover, the workshops where precious manuscripts were collected, preserved, and multiplied. To the monastic transcribers the world is indebted for most of its ancient literature, not only the Scriptures and the writings of the Fathers, but those of the classical authors also. (Numerous examples are cited in Newman, *Essay on the Mission of St. Benedict*, § 10.) The monastic *scriptoria* were the book-manufactories before the invention of printing, and rare MSS. were often circulated amongst the monasteries, each one transcribing copies before passing the original on to another house. Without doubt the copying was often merely mechanical and no sign of real scholarship, and the pride taken by a monastery in the number and beauty of its MSS. sometimes rather that of the collector than of the scholar, yet the result is the same as far as posterity is concerned. The monks preserved and perpetuated the ancient writings which, but for their industry, would undoubtedly have been lost to us. The copy-

ists of Fontanelle, Reims, and Corbie were especially noted for the beauty of their penmanship, and the number of different MSS. transcribed by some of their monks was often very large.

Full particulars are given by Ziegelbauer (*Hist. Lit. O. S. B.*, I) of the most important medieval Benedictine Libraries. The following are some of the chief amongst them: In England: Canterbury, founded by St. Augustine, enlarged by Lanfranc and St. Anselm, containing, according to a catalogue of the thirteenth century, 698 volumes; Durham, catalogues printed by the Surtees Society (VII, 1838); Whitby, catalogues still existing; Glastonbury, catalogues still existing; Wearmouth; Croyland, burnt in 1091, containing 700 volumes; Peterborough. In France: Fleury, MSS. deposited in the town library of Orleans, 1793; Corbie, 400 of the most valuable MSS. removed to Saint-Germain-des-Prés, Paris, 1638, the remainder, partly to the National Library, Paris (1794), and partly to the town library of Amiens; Saint-Germain-des-Prés; Cluny, MSS. dispersed by the Huguenots, except a few which were destroyed at the Revolution; Auxerre; Dijon. In Spain: Montserrat, the majority of the MSS. still existing; Valladolid; Salamanca; Silos, library still existing; Madrid. In Switzerland: Reichenau, destroyed in the seventeenth century; St. Gall, dating from 816, still existing; Einsiedeln, still existing. In Germany: Fulda, much indebted to Charlemagne and Rabanus Maurus, with 400 copyists under Abbot Sturm, and containing, in 1561, 774 volumes; New Corbie, MSS. removed to the University of Marburg in 1811; Hirschau, dating from 837; St. Blaise. In Austria and Bavaria: Salzburg, founded in the sixth century, and containing 60,000 volumes; Kremsmünster, of the eleventh century, with 50,000 volumes; Admont, the eleventh century, 80,000 volumes; Melk, the eleventh century, 60,000 volumes; Lambach, the eleventh century, 22,000 volumes; Garsten; Metten. In Italy: Monte Cassino, three times destroyed, by the Lombards in the sixth century, by the Saracens, and by fire in the ninth, but each time restored and still existing; Bobbio, famous for its palimpsests, of which a tenth-century catalogue is now in the Ambrosian Library, Milan, printed by Muratori (*Antiq. Ital. Med. Aev.*, III); Pomposia, with an eleventh-century catalogue printed by Montfaucon (*Diarium Italicum*, c. xxii).

Besides preserving the writings of the ancient authors, the monks were also the chroniclers of their day, and much of the history of the Middle Ages was written in the cloister. English history is especially fortunate in this respect, the monastic chroniclers including St. Bede, Ordericus Vitalis, William of Malmesbury, Florence of Worcester, Simeon of Durham, Matthew Paris, and Eadmer of Canterbury. The rise of the scholastics, for the most part outside the Benedictine Order, in later medieval times, seems to have checked, or at any rate relegated to the background, both the literary and the educational activity of the black monks, whilst the introduction of the art of printing rendered superfluous the copying of MSS. by hand; at the same time it is worth noticing that many of the earliest printing presses were set up in Benedictine cloisters, e. g. by Caxton at Westminster, and by some authorities the invention of movable types is also ascribed to the sons of St. Benedict.

The most notable revival of learning in post-Reformation times was that effected by the congregation of St.-Maur in France in the seventeenth century. Diligent and profound study in all departments of ecclesiastical literature was one of the professed objects of this reform, and a congregation that produced such men of letters as Mabillon, Montfaucon, d'Achéry, Ménard, Lami, Garnier, Ruinart, Martène, Sainte-Marthe, and Durand needs

no further eulogy than a reference to their literary achievements. Their editions of the Greek and Latin Fathers and their numerous historical, theological, archaeological, and critical works are sufficient evidence of their industry. They were not less successful in the conduct of the schools they established, of which those at Sorèze, Saumur, Auxerre, Beaumont, and Saint-Jean d'Angély were the most important. (See MAURISTS.)

The arts, sciences, and utilitarian crafts also found a home in the Benedictine cloister from the earliest times. The monks of St. Gall and Monte Cassino excelled in illumination and mosaic work, and the latter community are credited with having invented the art of painting on glass. A contemporary life of St. Dunstan states that he was famous for his "writing, painting, moulding in wax, carving of wood and bone, and for work in gold, silver, iron, and brass". Richard of Wallingford at St. Alban's and Peter Lightfoot at Glastonbury were well-known fourteenth-century clockmakers; a clock by the latter, formerly in Wells cathedral, is still to be seen in the South Kensington Museum, London.

In modern times the monks of Beuron have established a school of art where painting and design, especially in the form of polychromatic decoration, have been brought to a high stage of perfection. The printing presses of Solesmes and Ligugé (both now confiscated by the French Government) have produced much excellent typographical work, whilst the study and restoration of the traditional plainchant of the Church in the same monasteries, under DD. Pothier and Mocquereau, is of world-wide reputation. Embroidery and vestment-making are crafts in which many communities of nuns excel, and others, like Stanbrook, maintain a printing office with considerable success.

IV. PRESENT CONDITION OF THE ORDER.—*Development of external organization.*—A brief sketch of the constitution and government of the order is necessary for a proper understanding of its present organization. According to St. Benedict's idea, each monastery constituted a separate, independent, autonomous family, the members of which elected their own superior. The abbots, therefore, of the different houses were equal in rank, but each was the actual head of his own community and held his office for life. The necessities of the times, however, the need for mutual support, the establishment of daughter-houses, and possibly the ambition of individual superiors, all combined in course of time to bring about a modification of this ideal. Although foreshadowed by the Aachen (Aix-la-Chapelle) *capitula* of 817 under St. Benedict of Aniane, the actual results of which died out with their originator, the first real departure from the Benedictine ideal, subjecting the superiors of different houses to one central authority, was made by Cluny in the tenth century. The plan of the Cluniac congregation was that of one grand central monastery with a number of dependencies spread over many lands. It was feudalism applied to the monastic institute. Every prior or subordinate superior was the nominee of the Abbot of Cluny and held office only during his pleasure; the autonomy of the individual communities was destroyed so far, even, that no monk could be professed in any house except by permission of the Abbot of Cluny, and all were obliged usually to spend some years at Cluny itself. But notwithstanding the extent of this departure from Benedictine tradition, the Cluniacs were never considered to have seceded from the main Benedictine body or to have instituted a new order. Hirschau, in Germany, copied Cluny, though with less conspicuous success, and Cîteaux developed the system still further and constituted a new order outside the Benedictine fold, which has ever since been regarded as such.

The example of Cluny produced imitators and many new unions of monasteries subject to a central abbey resulted. The Lateran Council of 1215, perceiving the good points of the system as well as its dangers, set itself to strike the mean between the two. The risks of an ever-widening breach between those which adhered to Benedictine tradition and those which had adopted the Cluniac ideas, were to be minimized, whilst at the same time uniformity of observance and the mutual strength resulting therefrom, were to be fostered. The council decreed that the monasteries of each country should be banded together into a congregation; periodical representative chapters were to ensure systematic government after one pattern; the appointment of definitors and visitors was to secure uniformity and cohesion; and at the same time the independence of the abbots and the autonomy of the individual monasteries were to be preserved. The plan promised well, but England alone seems to have given it a fair trial. In some of the countries it was not until the issue of the Bull "Benedictina" in 1336, or even the Tridentine decrees of two centuries later, that any serious attempt was made towards carrying out the proposals of 1215. Meanwhile certain Italian reforms had produced a number of independent congregations outside the order, differing from each other in organization and spirit, and in each of which the departure from Benedictine principles was carried a stage further. Even in the Cluniac congregation the power of the Abbot of Cluny was, after the twelfth century, somewhat curtailed by the institution of chapters and definitors. The Sylvestrines (1231) preserved the perpetuity of superiors and recognised the advantages of a representative chapter, though its chief superior was something more than a mere *primus inter pares*. The Celestines (1274) adopted a somewhat similar system of centralized authority, but differed from it in that their superior was elected triennially. The Olivetans (1319) marked the furthest point of development by instituting an abbot-general with jurisdiction over all the other abbots as well as their communities. The general chapter nominated the officials of all the houses; the monks belonged to no one monastery in particular, but to the whole congregation; and by thus destroying all community rights, and placing all power in the hands of a small committee, the Olivetan congregation approximated nearest to the later orders like the Dominicans and Jesuits, with their highly centralized systems of government. The congregation of St. Justina of Padua was modelled on similar lines, though afterwards considerably modified, and some centuries later St. Vannes and St. Maur followed in its wake. The Spanish congregation of Valladolid, too, with its abbot-general, and with superiors who were not perpetual and chosen by the general chapter, must be classed with those that represent the line of departure from earlier Benedictine tradition; as must also the resuscitated English congregation of the seventeenth century, which inherited its constitution from that of Spain. In these two latter congregations, however, there were some modifications, which made their dissent from the original ideal less marked than in those previously enumerated. On the other side, as representing those that preserved the traditional autonomy and family spirit in the individual houses, we have the Bursfeld Union which, in the fifteenth century, made an honest attempt to carry out the Lateran decrees and the provisions of the Bull "Benedictina". The Austrian, Bavarian, and Swiss congregations of the same period followed out the same idea, as do also almost all of the more modern congregations, and by the legislation of Leo XIII the traditional principles of government have been revived in the English congregation. In this way the true Benedictine ideal

was restored, whilst by means of general chapters, at which every monastery of the congregation was represented, and by the periodical visitations made by the presidents or others elected for that duty, uniform observance and regular discipline were preserved. The presidents were elected by the other abbots composing the chapter and their office was merely presidential, not that of a superior general or *abbas abbatum*.

*Present System of Government.*—All the congregations of more recent formation have been constituted, with slight variations, on the same plan, which represents the normal and traditional form of government in the order. Uniformity in the various congregations is further secured by what are called *Constitutions*. These are a series of declarations on the holy Rule, defining its interpretation and application, to which are added other regulations on points of discipline and practice not provided for by St. Benedict. The constitutions must be approved at Rome, after which they have binding force upon the congregation for which they are intended. The *capitula* of Aachen and the *Concordia Regularis* were the earliest examples of such constitutions. Amongst others may be mentioned the "Statutes" of Lanfranc, the "Discipline of Farfa", the "Ordo" of Bernard of Cluny, and the "Constitutions" of St. William of Hirschau. (The three latter are printed by Herrgott in "Vetus Disciplina Monastica", Paris, 1726.) Since the thirteenth century every congregation has had its own set of constitutions, in which the principles of the Rule are adapted to the particular work of the congregation to which they apply. Each congregation is composed of a certain number of monasteries, the abbots of which, with other officials and elected representatives, form the general chapter, which exercises legislative and executive authority over the whole body. The power possessed by it is strictly limited and defined in the constitutions. The meetings of the chapter are held usually every two, three, or four years and are presided over by one of the members elected to that office by the rest. Whilst the office of abbot is usually for life, that of the president is generally only for a term of years and the person holding it is not in all cases eligible for continuous re-election. Each president, either by himself or in conjunction with one or more specially elected visitors, holds canonical visitations of all the houses of his congregation, and by this means the chapter is kept informed of the spiritual and temporal condition of each monastery, and discipline is maintained according to the constitutions.

*The Abbot Primate.*—In order the better to bind together the various congregations that constitute the order at the present day, Pope Leo XIII, in 1893, appointed a nominal head over the whole federation, with the title of Abbot Primate. The traditional autonomy of each congregation, and still further of each house, is interfered with in the least possible degree by this appointment, for, as the title itself indicates, the office is in its nature different from that of the general of an order. Apart from matters explicitly defined, the abbot primate's position with regard to the other abbots is to be understood rather from the analogy of a primate in a hierarchy than from that of the general of an order like the Dominicans or Jesuits.

*Methods of Recruiting.*—The recruiting of the various monasteries of the order differs according to the nature and scope of the influence exerted by each individual house. Those that have schools attached to them naturally draw their members more or less from these schools. The English congregation is recruited very largely from the schools attached to its monasteries; and other congregations are similarly recruited. Some educate and train in their

monasteries a number of *alumni*, or pupils provisionally intended for the monastic state, who though not in any way bound to do so, if showing any signs of vocation, are encouraged to receive the habit on reaching the canonical age.

A candidate for admission is usually kept as a *postulant* for at least some weeks in order that the community he seeks to join may judge whether he is a suitable person to be admitted to the probationary stage. Having been accepted as such, he is "clothed" as a *novice*, receiving the religious habit and a religious name, and being placed under the care of the novice-master. According to the Rule he has to be trained and tested during his period of novitiate, and canon law requires that for the most part the novice is to be kept apart from the rest of the community. For this reason the novices' quarters are generally placed, if possible, in a different part of the monastery from those occupied by the professed monks. The canonical novitiate lasts one year, at the end of which, if satisfactory, the novice may be admitted to simple vows, and at the conclusion of another three years, unless rejected for grave reasons, he makes his solemn vows of "Stability, Conversion of manners, and Obedience". (Rule of St. Benedict.)

*Habit*.—With slight modifications in shape in some congregations the habit of the order consists of a tunic, confined at the waist by a girdle of leather or cloth, a scapular, the width of the shoulders and reaching to the knees or ground, and a hood to cover the head. In choir, at chapter, and at certain other ceremonial times, a long full gown with large flowing sleeves, called a "cowl", is worn over the ordinary habit. The colour is not specified in the Rule but it is conjectured that the earliest Benedictines wore white or grey, as being the natural colour of undyed wool. For many centuries, however, black has been the prevailing colour, hence the term "black monk" has come to signify a Benedictine not belonging to one of those separate congregations which has adopted a distinctive colour, e. g. the Camaldolese, Cistercians, and Olivetans, who wear white, or the Sylvestrines, whose habit is blue. The only differences in colour within the Benedictine federation are those of the monks of Monte Vergine, who though now belonging to the Cassinese congregation of Primitive Observance, still retain the white habit adopted by their founder in the twelfth century, and those of the congregation of St. Ottilien, who wear a red girdle to signify their special missionary character.

*Present Work of the Order*.—Parochial work is undertaken by the following congregations: Cassinese, English, Swiss, Bavarian, Gallican, American-Cassinese, Swiss-American, Beuronese, Cassinese P. O., Austrian (both), Hungarian, and the Abbey of Fort Augustus. In the majority of these congregations the missions are attached to certain abbeys and the monks serving them are under the almost exclusive control of their own monastic superiors; in others the monks only supply the place of the secular clergy and are, therefore, for the time being, under their respective diocesan bishops.

The work of education is common to all congregations of the order. It takes the form in different places of seminaries for ecclesiastical studies, schools, and gymnasia for secondary education not strictly ecclesiastical, or of colleges for a higher or university course. In Austria and Bavaria many of the government *lycées* or gymnasia are entrusted to the care of the monks. In England and America the Benedictine schools rank high amongst the educational establishments of those countries, and compete successfully with the non-Catholic schools of a similar class. Those of the American Cassinese congregation have already been enumerated; they include three seminaries, fourteen schools and colleges, and an orphan-

age, with a total of nearly two thousand students. The Swiss American congregation carries on scholastic work at five of its abbeys. At St. Meinrad's, besides the seminary, there is a commercial college; at Spielerville (Arkansas) and Mount Angel (Oregon) are seminaries; and at Conception, Spielerville, Covington (Louisiana), and Mount Angel are colleges. The English Benedictines have large and flourishing colleges attached to each of their abbeys, and belonging to Downside are also two other smaller schools, one a "grammar school" at Ealing, London, and the other a preparatory school recently established at Enniscorthy, Ireland.

*Foreign Missionary Work*.—Besides the congregation of St. Ottilien, which exists specially for the purpose of foreign missionary work, and has ten mission stations in the Apostolic Vicariate of Zanzibar, a few others are also represented in the foreign mission field. Both American congregations labour amongst the Indians, in Saskatchewan (N. W. T., Canada), Dakota, Vancouver's Island, and elsewhere. The Cassinese P. O. congregation has missions in the Apostolic Vicariate of the Indian Territory (U. S. A.) and in Argentina, under the monks of the French province, in New Zealand under the English province, in Western Australia (Diocese of New Nursia and Apostolic Vicariate of Kimberley) and in the Philippines under the Spanish province, and the Belgian province has quite lately made a foundation in the Transvaal, South Africa. The Brazilian congregation has several missions in Brazil, which are under the direction of the Abbot of Rio de Janeiro, who is also a bishop. In the island of Mauritius the Bishop of Port Louis is generally an English Benedictine. Mention has already been made of the work of the Sylvestrine Benedictines in Ceylon and of the Cistercians in Natal, South Africa.

STATISTICS OF THE ORDER

Congregation	Monasteries	Monks	Missions and Churches served	No. of souls administered to	Schools	Students
Cassinese	16	188	274	170,540	6	476
English	4	277	79	87,328	5	380
Swiss	5	355	42	34,319	7	978
Bavarian	11	383	51	78,422	10	1,719

Fort Augustus	1	47	8	430		
St. Anselm's	1	1				
	155	5,940	1,402	1,192,734	114	12,392

Orders and congregations professing the Rule of St. Benedict but not included in the Benedictine Federation are as follows:—

	MONASTERIES	No. OF RELIGIOUS
Camaldolese	19	241
Vallombrosa	3	60
Cistercians (Common Observance)	29	1,040
" (Trappists)	58	3,637
Sylvestrines	9	95
Olivetans	10	122
Mechitarists	14	152
	142	5,347

## Nuns, Benedictine and others:—

	CONVENTS	No. of RELIGIOUS
Benedictine Nuns:		
1. Under Benedictine Abbots.....	9	251
2. Under Bishops....	253	7,156
Camaldolese Nuns.....	5	150
Cistercian Nuns.....	100	2,965
Olivetian Nuns.....	20	200
	387	10,722

The foregoing tables, which are taken from the "Album Benedictinum" of 1906, give a grand aggregate of 684 monasteries, with 22,009 religious of both sexes. The statistics for missions and churches served include those churches and missions over which the monasteries exercise the right of patronage, as well as those actually served by monks.

V. BENEDICTINES OF SPECIAL DISTINCTION.—The following lists are not intended to be in any way exhaustive; they merely profess to include some of the more famous members of the order. The names are classified according to the particular sphere of work in which they are most celebrated, but although many of them might therefore have a just claim to be included in more than one of the different classes, when the same individual was distinguished in several different departments of work, from considerations of space and for the avoidance of unnecessary repetition, his name has been inserted only under one head. The lists are arranged more or less chronologically, except where some connecting features seem to call for special grouping. To most of the names the country to which the individual belonged is added in parenthesis.

*Popes.*—St. Gregory the Great (Rome); born c. 540, d. 604; one of the four Latin Doctors; celebrated for his writings and for his reform of ecclesiastical chant; called the "Apostle of England" because he sent St. Augustine to that country in 596. Sylvester II or Gerbert (France), 999–1003; a monk of Fleury. St. Gregory VII or Hildebrand Aldobrandeschi (Tuscany), 1073–85; a monk of Cluny and afterwards Abbot of St. Paul's, Rome. Bl. Victor III (Benevento), 1086–87; Abbot of Monte Cassino. Paschal II (Tuscany), 1099–1118; a monk of Cluny. Gelasius II or Giovanni da Gaeta, John Cajetan (Gaeta), 1118–19; historian. St. Celestine V or Pietro di Morrone (Apulia), b. 1221, d. 1296; founder of the order of Celestines; was elected pope 1294, but abdicated after reigning only six months. Clement VI (France), 1342–52; a monk of Chaise-Dieu. Bl. Urban V (France), 1362–70; Abbot of St. Victor, Marseilles. Pius VII or Barnaba Chiaramonti (Italy), 1800–23; was taken by force from Rome and imprisoned at Savona and Fontainebleau (1809–14) by Napoleon, whom he had crowned in 1804; returned to Rome in 1814. Gregory XVI or Maurus Cappellari (Venice), 1831–46, a Camaldolese monk and Abbot of St. Andrew's on the Coelian Hill, Rome.

*Apostles and Missionaries.*—St. Augustine (Rome), d. 604; Prior of St. Andrew's on the Coelian Hill; the Apostle of England (596); first Archbishop of Canterbury (597). St. Boniface (England), b. 680, martyred 755; Apostle of Germany and Archbishop of Mainz. St. Willibrord (England), born c. 658, d. 738; the Apostle of Friesland. St. Swithbert (England), d. 713; the Apostle of Holland. St. Rupert (France), d. 718; the Apostle of Bavaria and Bishop of Salzburg. St. Sturm (Bavaria), d. 779; first Abbot of Fulda. St. Anagar (Germany), b. 801, d. 865; monk of Corbie and Apostle of Scandinavia. St. Adalbert, d. 997; the Apostle of Bohemia.

*Founders of Abbeys and Congregations, Reformers, etc.*—St. Erkenwald (England), died c. 693; Bishop of London; founder of Chertsey and Barking abbeys.

St. Benedict Biscop (England), d. 690; founder of Wearmouth and Jarrow. St. Filbert (France), d. 684; founder of Jumièges. St. Benedict of Aniane (France), d. 821; reformer of monasteries under Charlemagne; presided at council of abbots, Aachen (Aix-la-Chapelle), 817. St. Dunstan (England), d. 988; Abbot of Glastonbury (c. 945), and afterwards Archbishop of Canterbury (961); reformer of English monasteries. St. Berno (France), d. 927; founder and first Abbot of Cluny (909). St. Odo or Eudes (France), b. 879, d. 942; second Abbot of Cluny. St. Aymard (France), d. 965; third Abbot of Cluny. St. Majolus or Maleul (France), b. 906, d. 994; fourth Abbot of Cluny; Otto II desired to make him pope in 974 but he refused. St. Odilo (France), d. 1048; fifth Abbot of Cluny. Bernard of Cluny (France), d. 1109; famous in connexion with the eleventh-century "Ordo Cluniacensis" which bears his name. Peter the Venerable (France), d. 1156; ninth Abbot of Cluny; employed by several popes in important affairs of the Church. St. Romuald (Italy), b. 956, d. 1026; founder of the Camaldolese congregation (1009). Herluin (France), d. 1078; founder of Bec (1040). St. Robert of Molesme (France), b. 1018, d. 1110; founder and Abbot of Molesme (1075); joint-founder and first Abbot of Cîteaux (1098). St. Alberic (France), d. 1109; joint-founder and second Abbot of Cîteaux. St. Stephen Harding (England), d. 1134; joint-founder and third Abbot of Cîteaux. St. Bernard (France), b. 1091, d. 1153; joined Cîteaux with thirty other noblemen (1113); founded Clairvaux (1115); wrote many spiritual and theological works; was a statesman and adviser of kings, and a Doctor of the Church; he preached the Second Crusade throughout France and Germany at the request of Eugenius III (1146). St. William of Hirschau (Germany), c. 1090; author of "Constitutions of Hirschau". St. John Gualbert (Italy), b. 999, d. 1073; founder of Vallombrosa (1039). St. Stephen or Etienne (France), d. 1124; founder of Grammont (1076). Bl. Robert of Arbrissel (France), d. 1116; founder of Fontevrault (1099). St. William (Italy), d. 1142; founder of Monte Vergine (1119). St. Sylvester (Italy), b. 1177, d. 1267; founder of the Sylvestrines (1231). St. Bernard Ptolemy (Italy), b. 1272, d. 1348; founder of the Olivetans (1319). Ludovico Barbo (Italy), d. 1443; first a canon regular, then Abbot of St. Justina of Padua and founder of the congregation of the same name (1409). Didier de la Cour (France), b. 1550, d. 1623; founder of the congregation of St.-Vannes (1598). Laurent Bénard (France), b. 1573, d. 1620; Prior of Cluny College, Paris, and founder of the Maurist congregation (1618). José Serra (Spain), b. 1811, died c. 1880; Coadjutor Bishop of Perth, Australia (1848); and Rudesind Salvado (Spain), b. 1814, d. 1900; Bishop of Port Victoria (1849); founders of New Nursia, Australia. Prosper Guéranger (France), b. 1805, d. 1875; founder of the Gallican congregation (1837); restored Solesmes (1837); well known as a liturgical writer. Jean-Baptiste Muard (France), b. 1809, d. 1854; founder of Pierre-qui-Vire and of the French province of the Cassinese Congregation of Primitive Observance (1850). Maurus Wolter (Germany), b. 1825, d. 1900; founder of the Beuronese congregation (1860); Abbot of Beuron (1868). Pietro Francesco Casaretto (Italy), b. 1810, d. 1878; founder and first Abbot-General of Cassinese congregation of Primitive Observance (1851). Boniface Wimmer (Bavaria), b. 1809, d. 1887; founder of American Cassinese congregation (1855). Martin Marty (Switzerland), b. 1834, d. 1896; founder of Swiss American congregation (1870); Abbot of St. Meinrad's, Indiana (1870); Vicar Apostolic of Dakota (1879). Jerome Vaughan (England), b. 1841, d. 1896; founder of Fort Augustus Abbey (1878). Gerard van Caloor

(Belgium), b. 1853; restorer of Brazilian congregation; Abbot of Bahia (1896); titular Bishop of Phœcæ (1906).

*Scholars, Historians, Spiritual Writers, etc.*—St. Bede (England), b. 673, d. 735; monk of Jarrow, Doctor of the Church, historian, and commentator. St. Aldhelm (England), d. 709; Abbot of Malmesbury and Bishop of Sherborne. Alcuin (England), d. 804, monk of York; founder of schools in France under Charlemagne. Rabanus Maurus (Germany), d. 856; Archbishop of Mainz. St. Paschasius Radbertus (Germany), d. 860; Abbot of Corbie. Ratramnus (Germany), d. 866; a monk of Corbie, who took part in Sacramentarian controversy. Walafrid Strabo (Germany), d. 849; a monk of Fulda, and afterwards Abbot of Reichenau. Abbon of Fleury (France), tenth century; at one time a monk at Canterbury. Notker (Switzerland), d. 1022; a monk of St. Gall; theologian, mathematician, and musician. Guido d'Arezzo (Italy), died c. 1028; inventor of the gamut. Hermannus Contractus (Germany), eleventh century; a monk of St. Gall; learned in Eastern languages; author of the "Salve Regina". Paul Warnefrid, or Paul the Deacon (Italy), eighth century; historian and teacher (*scholasticus*) at Monte Cassino. Hincmar (France), d. 882; a monk of St. Denis; Archbishop of Reims (845). St. Peter Damian (Italy), b. 988, d. 1072; a monk of the Camaldolese reform at Fonte Avellano; Cardinal Bishop of Ostia (1057). Lanfranc (Italy), b. 1005 in Lombardy, d. at Canterbury, 1089; a monk at Bec (1042); founder of the school there; Archbishop of Canterbury (1070). St. Anselm (Italy), b. 1033 in Piedmont, d. 1109; a monk at Bec (1060); Abbot of Bec (1078); Archbishop of Canterbury (1093); usually considered the first scholastic. Eadmer (England), d. 1137; a monk of Canterbury and disciple of St. Anselm, whose life he wrote. The English historians: Florence of Worcester, d. 1118; Simeon of Durham, d. 1130; Jocelin de Brakelonde, d. 1200, a monk and chronicler of Bury St. Edmunds; Matthew Paris, d. 1259, a monk of St. Albans; William of Malmesbury, died c. 1143; Gervase of Canterbury, died c. 1205; Roger of Wendover, d. 1237, a monk of St. Albans. Peter the Deacon (Italy), died c. 1140; a monk of Monte Cassino. Adam Easton (England), d. 1397, a monk of Norwich; Cardinal (1380). John Lydgate (England), died c. 1450; a monk of Bury St. Edmunds; poet. John Wheathamstead (England), d. 1440; Abbot of St. Albans. Johannes Trithemius (Germany), b. 1462, d. 1516; Abbot of Spanheim, a voluminous writer and great traveller. Louis Blossius (Belgium), b. 1506, d. 1566; Abbot of Liessies (1530); author of the "Mirror for Monks". Juan de Castaniza (Spain), d. 1599; a monk of St. Saviour's, Onna. Benedict van Haeften (Belgium), b. 1588, d. 1648; Prior of Afflighem. Clement Reyner (England), b. 1589, d. 1651; a monk at Dieulouard (1610); Abbot of Lamspring (1643). Augustine Baker (England), b. 1575, d. 1641; a monk of Dieulouard and author of "Sancta Sophia". Augustine Calmet (France), b. 1672, d. 1757; Abbot of Senones-en-Vosges; best known for his "Dictionary of the Bible". Carolus Meichelbeck (Bavaria), b. 1669; d. 1734; librarian and historian of Benediktbeuern. Magnoald Ziegelbauer (Germany), 1689, d. 1750; author of a literary history of the Order of St. Benedict. Marquard Herrgott (Germany), b. 1694, d. 1762; a monk of St.-Blasien. Suitbert Bäumer (Germany), b. 1845, d. 1894; a monk of Beuron. Luigi Tosti (Italy), b. 1811, d. 1897; abbot; Vice-Archivist to the Holy See. J. B. F. Pitra (France), b. 1812, d. 1889; a monk of Solesmes; Cardinal-Bishop of Frascati (1863); librarian of the Holy Roman Church. Francis Aidan Gasquet (England), b. 1846; a monk of Downside and Abbot-President of the English Bene-

dictine congregation. Fernand Cabrol (France), b. 1856; Abbot of Farnborough (Gallican congregation). Jean Besse (France), b. 1861; a monk of Ligugé. Germain Morin, of the Beuronese congregation, b. 1861. John Chapman, of the Beuronese congregation, b. 1865. Edward Cuthbert Butler (England), b. 1858; Abbot of Downside (1906).

*The Congregation of St.-Maur.*—The following are some of the chief writers of this congregation: Adrien Langlois, d. 1627; one of the first Maurists. Nicolas Ménard, b. 1585, d. 1644. Grégoire Tarrisse, b. 1575, d. 1648; first Superior General of the congregation. Luc d'Achéry, b. 1609, d. 1685. Antoine-Joseph Mège, b. 1625, d. 1691. Louis Bulteau, b. 1625, d. 1693. Michel Germain, b. 1645, d. 1694; a companion of Mabillon. Claude Martin, b. 1619, d. 1696. Claude Estenniot, b. 1639, d. 1699; a companion of Mabillon. Jean Mabillon, b. 1632, d. 1707; the greatest of the Maurists. Thierry Ruinart, b. 1657, d. 1709; a companion and biographer of Mabillon. François Lamy, b. 1636, d. 1711. Pierre Coustant, b. 1654, d. 1721. Denis de Sainte-Marthe, b. 1650, d. 1725. Julien Garnier, b. 1670, d. 1725. Edmond Martène, b. 1654, d. 1739. Ursin Durand, b. 1682, d. 1773. Bernard de Montfaucon, b. 1655, d. 1741. René-Prospér Tassin, d. 1777.

*Bishops, Monks, Martyrs, etc.*—St. Laurence (Italy), d. 619; came to England with St. Augustine (597), whom he succeeded as Archbishop of Canterbury (604). St. Mellitus (Italy), d. 624; a Roman abbot, sent to England with other monks to assist St. Augustine (601); founder of St. Paul's, London, and first Bishop of London (604); Archbishop of Canterbury (619). St. Justus (Italy), d. 627; came to England (601); first Bishop of Rochester (604) and afterwards Archbishop of Canterbury (624). St. Paulinus of York (Italy), d. 644; came to England (601); first Bishop of York (625); Bishop of Rochester (633). St. Odo (England), d. 961; Archbishop of Canterbury. St. Elphege or Ælfheah (England), d. 1012; Archbishop of Canterbury (1006); killed by the Danes. St. Oswald (England), d. 992; nephew of St. Odo of Canterbury; Bishop of Worcester (959); Archbishop of York (972). St. Bertin (France), b. 597, d. 709; Abbot of Saint-Omer. St. Botolph (England), d. 655; abbot. St. Wilfrid, born c. 634, d. 709; Bishop of York. St. Cuthbert, d. 687; Bishop of Lindisfarne. St. John of Beverley, d. 721; Bishop of Hexham. St. Swithun, d. 862; Bishop of Winchester. St. Ethelwold, d. 984; Bishop of Winchester. St. Wulfstan, d. 1095; Bishop of Worcester. St. Ælred, b. 1109, d. 1166; Abbot of Rievaulx, Yorkshire. St. Thomas of Canterbury or Thomas Becket, born c. 1117, martyred 1170; Chancellor of England (1155); Archbishop of Canterbury (1162). St. Edmund Rich, d. 1240; Archbishop of Canterbury (1234); died in exile. Suger (France), b. 1081, d. 1151; Abbot of St. Denis and Regent of France. Bl. Richard Whiting, abbot of Glastonbury, Bl. Roger James, and Bl. John Thorn, monks of Glastonbury; Bl. Hugh Faringdon, Abbot of Reading, Bl. William Eynon, and Bl. John Rugg, monks of Reading; and Bl. John Beche, Abbot of Colchester; all executed (1539) for denying the supremacy of Henry VIII in ecclesiastical matters. John de Feckenham (or Howman), d. 1585; last Abbot of Westminster; died in prison. Sigebert Buckley, born c. 1517, d. 1610; a monk of Westminster; the link between the old and new English congregations. Ven. John Roberts, born c. 1575, martyred 1610; founder of St. Gregory's, Douai. William Gabriel Gifford, b. 1554, d. 1629; professor of theology at Reims (1582); Dean of Lille (1597); a monk at Dieulouard (1609); Archbishop of Reims (1622). Leander of St. Martin (John Jones), b. 1575, d. 1635; President of the Eng-

lish congregation and Prior of St. Gregory's, Douai. Philip Ellis, b. 1653, d. 1726; Vicar Apostolic of the Western District (1688); transferred to Segni, Italy (1708). Charles Walmesley, b. 1722, d. 1797; Vicar Apostolic of the Western District (1764); a Doctor of the Sorbonne and F. R. S. William Placid Morris, b. 1794, d. 1872; a monk of Downside; Vicar Apostolic of Mauritius (1832). John Bede Polding, b. 1794, d. 1877; a monk of Downside; Vicar Apostolic in Australia (1834); first Archbishop of Sydney (1851). William Bernard Ullathorne, b. 1806, d. 1889; a monk of Downside; Vicar Apostolic of the Western District (1846); transferred to Birmingham (1850); resigned (1888). Roger Bede Vaughan, b. 1834, d. 1883; a monk of Downside; Cathedral Prior of Belmont (1863); coadjutor to Archbishop Polding (1872); succeeded as Archbishop of Sydney (1877). Cardinal Sanfelice (Italy), b. 1834, d. 1897; Archbishop of Naples; formerly Abbot of La Cava. Joseph Pothier (France), b. 1835; inaugurator of the Solesmes school of plain-chant; Abbot of Fontanelle (1898). André Mocquereau (France), b. 1849; Prior of Solesmes and successor to Dom Pothier as leader of the school. John Cuthbert Hedley, b. 1837; a monk of Ampleforth; consecrated Coadjutor Bishop of Newport (1873); succeeded as Bishop (1881). Benedetto Bonazzi (Italy), b. 1840; Abbot of La Cava (1894); Archbishop of Benevento (1902). Domenico Serafini (Italy), b. 1852; Abbot General of the Cassinese Congregation of Primitive Observance (1886); Archbishop of Spoleto (1900). Hildebrand de Hemptinne (Belgium), b. 1849; Abbot Primate of the order; Abbot of Maredsous (1890); nominated Abbot Primate by Leo XIII (1893).

*Nuns.*—St. Scholastica, died c. 543; sister to St. Benedict. Among English Benedictine nuns, the most celebrated are: St. Etheldreda, d. 679; Abbess of Ely. St. Ethelburga, died c. 670; Abbess of Barking. St. Hilda, d. 680; Abbess of Whitby. St. Werburgh, d. 699; Abbess of Chester. St. Mildred, seventh century; Abbess in Thanet. St. Walburga, d. 779; a nun of Wimborne; sister to Sts. Willibald and Winnibald; went to Germany with Sts. Lioba and Thecla to assist St. Boniface c. 740. St. Thecla, eighth century; a nun of Wimborne; Abbess of Kitzingen; died in Germany. St. Lioba, d. 779; a nun of Wimborne; cousin to St. Boniface; Abbess of Bischofsheim; died in Germany. Among other Benedictine saints are: St. Hildegard (Germany), b. 1098, d. 1178; Abbess of Mount St. Rupert; St. Gertrude the Great (Germany), d. 1292; Abbess of Eisleben in Saxony (1251). St. Mechtilde, sister to St. Gertrude and nun at Eisleben. St. Frances of Rome, b. 1384, d. 1440; widow; founded order of Oblates (Collatines) in 1425.

VI. FOUNDATIONS ORIGINATING FROM OR BASED UPON THE BENEDICTINE ORDER.—It has already been shown in the first part of this article how the reaction which followed the many relaxations and mitigations that had crept into the Benedictine Order, produced, from the tenth century onwards, a number of reforms and independent congregations, in each of which a return to the strict letter of St. Benedict's Rule was attempted, with certain variations of ideal and differences of external organization. That of Cluny was the first, and it was followed, from time to time, by others, all of which are dealt with in separate articles.

*St. Chrodegang.*—Besides those communities which professedly adhered to the Benedictine Rule in all its strictness, there were others founded for some special work or purpose, which, while not claiming to be Benedictine, took that Rule as the basis upon which to ground their own particular legislation. The earliest example of this was instituted by St. Chrodegang, Bishop of Metz, who in the year 760 brought together his cathedral clergy into a kind

of community life and drew up for their guidance a code of rules, based upon that of St. Benedict. These were the first "regular canons", and the idea thus started spread very rapidly to almost every cathedral of France, Germany, and Italy, as well as to some in England. In the latter country, however, it was not an entirely new idea, for we learn from Bede's "Ecclesiastical History" (I, xxvii) that even in St. Augustine's time some sort of "common life" was in vogue amongst the bishops and their clergy. St. Chrodegang's institute and its imitations prevailed almost universally in the cathedral and collegiate churches until ousted by the introduction of the Austin Canons.

*Carthusians.*—A word must here be said as to the Carthusian Order, which some writers have classed amongst those founded on the Benedictine Rule. This supposition is based chiefly on the fact that they have retained the name of St. Benedict in their *Confiteor*, but this was more probably done out of recognition of that saint's position as the Patriarch of Western Monasticism than from any idea that the order was a filiation from the older body. Confusion may also have arisen on account of the founder of the Carthusians, St. Bruno, being mistaken for another of the same name, who was Abbot of Monte Cassino in the twelfth century and therefore a Benedictine.

*Independent Benedictine Congregations.*—The various reforms, beginning with Cluny in the tenth century and extending to the Olivetans of the fourteenth, have been enumerated in the first part of this article and are described in greater detail in separate articles, under their respective titles. To these must be added the Order of the Humiliati, founded in the twelfth century by certain nobles of Lombardy who, having rebelled against the Emperor Henry V, were taken captive by him into Germany. There they commenced the practice of works of piety and penance, and were for their "humility" allowed to return to Lombardy. The order was definitely established in 1134 under the guidance of St. Bernard, who placed it under the Benedictine Rule. It flourished for some centuries and had ninety-four monasteries, but through popularity and prosperity, corruption and irregularities crept in, and after an ineffectual attempt at reformation, Pope Pius V suppressed the order in 1571. Mention must also be made of the more modern Armenian Benedictine congregation (known as Mechitarists), founded by Mechitar de Petro in the eighteenth century, in communion with the Holy See; this is now reckoned amongst the non-federated congregations of the order. (See HUMILIATI, MECHITARISTS.)

*Quasi-Benedictine Foundations.*—1. Military Orders.—Hélyot enumerates several military orders as having been based upon that of St. Benedict or in some way originating from it. Though founded especially for military objects, as for instance the defence of the holy places at Jerusalem, when not so engaged, these knights lived a kind of a religious life in commanderies or preceptories, established on the estates belonging to their order. They were not in any sense clerics, but they usually took vows of poverty and obedience, and sometimes also of chastity. In some of the Spanish orders, permission to marry was granted in the seventeenth century. The knights practised many of the customary monastic austerities, such as fasting and silence, and they adopted a religious habit with the tunic shortened somewhat for convenience on horseback. Each order was governed by a Grand Master who had jurisdiction over the whole order, and under him were the commanders who ruled over the various houses. The following were the military orders connected with the Benedictine Order, but for fuller details

the reader is referred to separate articles. (a) The Knights Templars, founded in 1118. St. Bernard of Clairvaux drew up their rule, and they always regarded the Cistercians as their brethren. For this reason they adopted a white dress, to which they added a red cross. The order was suppressed in 1312. In Spain there were: (b) The Knights of Calatrava founded in 1158 to assist in protecting Spain against the Moorish invasions. The Knights of Calatrava owed their origin to the abbot and monks of the Cistercian monastery of Fitero. The general chapter of Cîteaux drew up a rule of life and exercised a general supervision over them. The black hood and short scapular which they wore denoted their connexion with Cîteaux. The order possessed fifty-six commanderies, chiefly in Andalusia. The Nuns of Calatrava were established c. 1219. They were cloistered, observing the rule of the Cistercian nuns and wearing a similar habit, but they were under the jurisdiction of the Grand Master of the knights. (c) Knights of Alcántara, or of San Julian del Pereyro, in Castille, founded about the same time and for the same purpose as the Knights of Calatrava. They adopted a mitigated form of St. Benedict's Rule, to which certain observances borrowed from Calatrava were added. They also used the black hood and abbreviated scapular. It was at one time proposed to unite this order with that of Calatrava, but the scheme failed of execution. They possessed thirty-seven commanderies. (d) Knights of Montesa, founded 1316, an offshoot from Calatrava, instituted by ten knights of that order who placed themselves under the abbot of Cîteaux instead of their own Grand Master. (e) Knights of St. George of Alfama, founded in 1201; united to the Order of Montesa in 1399.

In Portugal there were three orders, also founded for purposes of defence against the Moors:—(f) The Knights of Avis, founded 1147; they observed the Benedictine Rule, under the direction of the abbots of Cîteaux and Clairvaux, and had forty commanderies. (g) The Knights of St. Michael's Wing, founded 1167; the name was taken in honour of the archangel whose visible assistance secured a victory against the Moors for King Alphonso I of Portugal. The rule was drawn up by the Cistercian Abbot of Alcobaza. They were never very numerous, and the order did not long survive the king in whose reign it was founded. (h) The Order of Christ, reared upon the ruins of the Templars about 1317; it became very numerous and wealthy. It adopted the Rule of St. Benedict and the constitutions of Cîteaux, and possessed 450 commanderies. In 1550 the office of grand master of this order, as well as that of Avis, was united to the crown. (i) The Monks of the Order of Christ. In 1567 a stricter life was instituted in the convent of Thomar, the principal house of the Order of Christ, under this title, where the full monastic life was observed, with a habit and vows similar to those of the Cistercians, though the monks were under the jurisdiction of the grand master of the Knights. This order now exists as one of the noble orders of knighthood, similar to those of the Garter, Bath, etc., in England. In Savoy there were the two orders: (k) the Knights of St. Maurice, and (l) those of St. Lazarus, which were united in 1572. They observed the Cistercian rule and the object of their existence was the defence of the Catholic Faith against the inroads of the Protestant Reformation. They had many commanderies and their two principal houses were at Turin and Nice. In Switzerland also the Abbots of St. Gall at one time supported (m) the military Order of the Bear, which Frederick II had instituted in 1213.

(2) Hospitallers.—The Order of the Brothers Hospitallers of Burgos originated in a hospital attached to a convent of Cistercian nuns in that

town. There were a dozen Cistercian lay brothers who assisted the nuns in the care of the hospital, and these, in 1474, formed themselves into a new order intended to be independent of Cîteaux. They met with much opposition, and, irregularities having crept in, they were reformed in 1587 and placed under the abbess of the convent.

(3) Oblates.—The Oblates of St. Frances of Rome, called also Collatines, were a congregation of pious women, founded in 1425 and approved as an order in 1433. They first observed the rule of the Franciscan Tertiaries, but this was soon changed for that of St. Benedict. The order consisted chiefly of noble Roman ladies, who lived a semi-religious life and devoted themselves to works of piety and charity. They made no solemn vows, neither were they strictly enclosed, nor forbidden to enjoy the use of their possessions. They were at first under the direction of the Olivetan Benedictines, but after the death of their foundress, in 1440, they became independent.

(4) Orders of Canonesses.—Information is but scanty concerning the chapters of noble canonesses, which were fairly numerous in Lorraine, Flanders, and Germany in medieval times. It seems certain, however, that many of them were originally communities of Benedictine nuns, which, for one reason or another, renounced their solemn vows and assumed the state of canonesses, whilst still observing some form of the Benedictine Rule. The membership of almost all these chapters was restricted to women of noble, and in some cases of royal, descent. In many also, whilst the canonesses were merely seculars, that is, not under vows of religion, and therefore free to leave and marry, the abbesses retained the character and state of religious superiors, and as such were solemnly professed as Benedictine nuns. The following list of houses is taken from Mabillon and Hélyot, but all had ceased to exist by the end of the eighteenth century:—In Lorraine: Remiremont; founded 620; members became canonesses in 1615; Epinal, 983; Pouzay, Bouxieres-aux-Dames, and Metz, of the eleventh or twelfth century. In Germany: Cologne, 689; Homburg and Strasburg, of the seventh century; Lindau, Buchau, and Andlau of the eighth century; Obermünster, Niedermünster, and Essen of the ninth century. In Flanders: Nivelles, Mons, Andenne, Maubeuge, and Belaisie of the seventh century; and Denain, 764. The members of the following houses in Germany having renounced their solemn vows and become canonesses in the sixteenth century, abandoned also the Catholic Faith and accepted the Protestant religion: Gandersheim, Herford, Quedlinburg, Gernrode,

**Benediction, NUPITAL.** See MASS, NUPITAL.

**Benedictional** (*Benedictionale*), a book containing a collection of benedictions or blessings in use in the Church. In the ancient sacramentaries, particularly in the Gregorian, various early forms of blessings are found. In some manuscripts these benedictions are interspersed throughout the book, while in others they are given separately. The blessings collected from the Gregorian Sacramentary constitute the so-called *Benedictionale*. From the very ancient manuscript of the Cæsarean Library, Lambecius edited this *Benedictionale*, believing that he was the first to give it to the public. In this, however, Lambecius erred, since nearly all the blessings contained in this manuscript had been previously published, though under a different order, or arrangement, by Ménard (d. 1644). Pamelius (*Liturgicon Ecclesiæ Lat.*, II) also edited a benedictional from two manuscripts of the time of Charlemagne or a little later, formerly in the library of the Queen of Sweden, now in the Vatican. Many discrepancies, nevertheless, are to be noted between the work of Pamelius and the original manuscripts from which it is supposed to be drawn. The "*Liber Sacramentorum*" of Ratoldus, of the tenth century, likewise contains numerous blessings; but the most complete benedictional is that found in two manuscripts (Nos. 62, 63) of the monastery of St. Theodoric, near Reims, written about 900. From a manuscript in the Abbey of St. Eligius Ménard edited a benedictional, while Angelo Rocca has given us one from a manuscript of the Vatican Library. The pontifical of Egbert, Archbishop of York (732-766), published by the Surtees Society in 1853, contains numerous forms of blessings. The blessings in use in the present day are found for the most part in the Missal and in the Ritual.

**Benediction of Abbots.** See ABBOT.

**Benediction of the Blessed Sacrament.**—One of the most generally popular of Catholic services is Benediction of the Blessed Sacrament, known in France as *Salut* and in Germany as *Segen*. It is ordinarily an afternoon or evening devotion and consists in the singing of certain hymns, or litanies, or canticles, before the Blessed Sacrament, which is exposed upon the altar in a monstrance and is surrounded with lights. At the end, the priest, his shoulders enveloped in a humeral veil, takes the monstrance into his hands and with it makes the sign of the cross (hence the name Benediction) in silence over the kneeling congregation. Benediction is often employed as a conclusion to other services, e. g. Vespers, Compline, the Stations of the Cross, etc., but it is also still more generally treated as a rite complete in itself. There is a good deal of diversity of usage in different countries with regard to details, but some of the elements are constant. The use of incense and wax candles, which even in the poorest churches must not be less than ten in number, the singing of the "Tantum ergo" with its versicle and prayer, and the blessing given with the Blessed Sacrament are obligatory everywhere.

In Rome the principle obtains that the only portion of the service which is to be regarded as strictly liturgical is the singing of the "Tantum ergo" and the giving of the Benediction which immediately follows. This idea is emphasized by the fact that in many Roman churches the celebrant, vested in cope and preceded by thurifier, acolytes, etc., only makes his entry into the sanctuary just before the "Tantum ergo" is begun. Previously to this the Blessed Sacrament is exposed, informally so to speak, by a priest in cotta and stole; and then choir and congregation are left to sing litanies and canticles, or to say prayers and devotions as the occasion may demand, the whole service being of a very popular character.

In English-speaking countries the service generally begins with the entry of the priest and his assistants in procession and with the singing of the "O Salutaris Hostia" as soon as the Blessed Sacrament is taken out of the tabernacle. Indeed in England the singing of the "O Salutaris" is enjoined in the "Ritus servandus", the code of procedure approved by a former synod of the Province of Westminster. On the other hand, the Litany of Our Lady, though usually printed after the "O Salutaris" and very generally sung at Benediction, is nowhere of obligation. It may be added that further solemnity is often given to the service by the presence of deacon and subdeacon in dalmatics. When the bishop of the diocese officiates he uses mitre and crosier in the procession to the altar, and makes the sign of the cross over the people three times in giving the benediction. On the other hand, a very informal sort of service is permitted, where the means for carrying out a more elaborate rite are not available. The priest, wearing cotta and stole, simply opens the tabernacle door. Prayers and devotions are said or sung, and then the priest blesses those present with the veiled ciborium before the tabernacle door is again closed. The permission, general or special, of the bishop of the diocese is necessary for services where Benediction is given with the monstrance.

**HISTORY OF THE DEVOTION.** It is easy to recognize in our ordinary Benediction service, the traces of two distinct elements. There is of course in the first place the direct veneration of the Blessed Sacrament, which appears in the exposition, blessing, "Tantum ergo", etc. But besides this we note the almost invariable presence of what at first sight seems an incongruous element, that of the litany of Loreto, or of popular hymns in honour of Our Lady. Tracing our present service back to its origin we find that these two features are derived from different sources. The idea of exposing the Blessed Sacrament for veneration in a monstrance appears to have been first evolved at the end of the thirteenth or the beginning of the fourteenth century. When the elevation of the Host at Mass was introduced in the early years of the thirteenth century, probably as a form of protest against the theological views of Peter the Chanter, the idea by degrees took firm hold of the popular mind that special virtue and merit were attached to the act of looking at the Blessed Sacrament. To such extremes did this prepossession go, that the seeing of the Host at the moment of the elevation was judged to be the most vital part of attendance at Mass. In certain churches in Spain a screen of black velvet was held up behind the altar in order that the priest's hands and the Host might be more easily seen from afar; in others strict injunctions were given to the thurifer that he should on no account allow the smoke of the thurible to obstruct the view of the Host. Furthermore, we read that when men were dying and were unable on account of vomiting or any other cause to receive Holy Viaticum, the Blessed Sacrament was brought to them and held up before them to look at. Indeed, a virtual prohibition of this practice stands

to this day amongst the rubrics of the "Rituale Romanum".

Under the influence of this idea, the Blessed Sacrament in the processions which became common after the institution of the feast of Corpus Christi in 1246, came by degrees to be carried in transparent vessels, resembling our present monstrances. Moreover, a custom grew up, especially in Germany, of keeping the Blessed Sacrament continually exposed to view in churches. It was forbidden by many synods, but a sort of compromise was arrived at through the construction of the *Sakramentshäuschen* of which so many examples still exist in central Europe. These tabernacles, of great height and imposing appearance, were erected in the most conspicuous part of the church, and there the Blessed Sacrament was reserved in a monstrance behind a metal door of lattice-work which allowed a more or less free view of the interior. It was thus that the practice developed, though partly kept in check by synodal decrees, of adding solemnity to any function, even the Mass itself, by exposing the Blessed Sacrament during its continuance.

Turning now to our second element, we find that from the beginning of the thirteenth century, a custom prevailed among the confraternities and guilds which were established at that period in great numbers, of singing canticles in the evening of the day before a statue of Our Lady. These canticles were called *Laude* and were often composed in the vulgar tongue, becoming in the hands of such poets as the Franciscan Giacomone da Todi, one of the great popular influences which helped to develop a native Italian literature. Confraternities were formed for the express purpose of singing these canticles and their members were called *Laudesi*. It was such a company of *Laudesi* that brought together the seven holy founders who, in the first half of the thirteenth century, established the Order of Servites, or Servants of Mary. Although the *laude* hardly flourished outside Italy, where both the language and the character of the people lent themselves readily to the composition of innumerable canticles, the idea of an evening service of a popular character sung before the statue of Our Lady, spread throughout Europe. In particular, the "Salve Regina", a special devotion of the Servites, Dominicans, Carmelites, and other orders, was consecrated by usage to this rite, and we find traces everywhere of its being sung, often by choirs of boys, for whom a special endowment was provided, as a separate evening service. In France, this service was commonly known as a *Salut*, in the Low Countries as the *Lof*, in England and Germany, simply as the *Salve*.

Now it seems certain that our present Benediction service has resulted from the general adoption of this evening singing of canticles before the statue of Our Lady, enhanced as it often came to be in the course of the sixteenth and seventeenth centuries by the exposition of the Blessed Sacrament, which was employed at first only as an adjunct to lend it additional solemnity. The blessing at the close seems to have been added simply because the custom gained ground of making the sign of the cross over the people whenever the Blessed Sacrament was replaced in the tabernacle after a procession or after being carried to the sick or any kind of an exposition. But in the course of the seventeenth century, we find numberless bequests for *Saluts* in French wills, the items to be sung, often of a most miscellaneous character, being minutely specified, and among these the condition is frequently appended that the Blessed Sacrament should be exposed during the whole time of the *Salut*.

The development which is too intricate to be given here in further detail, may be investigated in the works mentioned below.

To the Rev. V. DE BUCK, the Bollandist, belongs the merit of having first called attention to the true history of this devotion. See *Précis Historiques* (Brussels, 1872), XXI, 59-70. His conclusions have been developed by the present writer in *The Month*, June to September, 1901, October, 1905, and in the book *Corpus Domini* (in preparation, 1907). Useful material may be found in THIERS, *Traité de l'Exposition du S. Sacrement*, written in 1673. The account of Benediction given by such authorities as CORBLIER, *Histoire du Sacrement de l'Eucharistie* (Paris, 1885), II, 419-431, is not satisfactory. For the rubrical aspects of the service see DE MONTAULT, *Œuvres Complètes* (Paris, 1892), VI, 503-531; *Revue Théologique* (Paris, 1867), II, 305, 464, 643; WAPELBORST, *Compendium Sacra Liturgie* (New York, 1904), 6th ed., 218, sq.; O'LOAN, *Ceremonies of some Ecclesiastical Functions* (3d ed., Dublin, 1901), 152-163.

HERBERT THURSTON.

**Benedictis, JACOBUS DE.** See STABAT MATER.

**Benedict Levita** (of Mainz), or **BENEDICT THE DEACON**, is the name given to himself by the author of a forged collection of capitularies which appeared in the ninth century. The collection belongs to the group of pseudo-Isidorian forgeries that includes the pseudo-Isidorian recension of the Spanish collection of canons, the so-called "capitula Angilramni", and the collection of false decretals of the pseudo-Isidore. The name Benedict is, without doubt, an assumed one; the statement that he had been a deacon in the Church of Mainz and that the collection had been made from the archiepiscopal archives of Mainz at the command of the late Archbishop Autgar (825-847) is clearly also untrue. Nothing is known concerning the real author. On internal evidence it may be accepted that these forged capitularies were composed in the western part of the Frankish empire and not at Mainz; the grounds for this belief are, especially, the opposition shown to the institution of "chorepiscopi", and further the circumstance that the collection was first used and found readiest acceptance among the Western Franks. The close relationship between this collection and Pseudo-Isidore lends some probability to the supposition that it arose in the Archdiocese of Reims. As to the time when it appeared there is no reason to doubt the statement of the author that Archbishop Autgar of Mainz was then dead. Consequently the collection was made after 847 (Autgar died 21 April, 847). This is confirmed by a metrical panegyric, prefixed to the collection, in praise of the Carolingian rulers, and in which Louis the German, the Emperor Lothair, and Charles the Bald are described as living, a fact which points to the years following 843. Another clue is offered by "Additamentum" IV in which the forged pseudo-Isidorian decretals have evidently been used. But the way in which these decretals are employed by Benedict shows that the Pseudo-Isidorian collection had not yet reached its completed form. The latest date for the appearance of this collection of canons may, therefore, be given as from 848 to 850. The time of composition cannot be more exactly determined; it was somewhere between the years 847-850.

The author represents his collection as the continuation and completion of the collection of genuine capitularies in four books, "Capitularia regum Francorum", produced in 827 by Ansegisus, Abbot of Fontanelle. He divides it into three books which he designates as "liber quintus", "sextus", and "septimus". Three other writings precede the first book; a prologue in verse, a preface in prose which treats of the origin and contents of the collection, and the aforesaid metrical panegyric on the rulers of the Carolingian line; beginning with Pepin and Carloman and ending with the sons of Louis the Pious. Four supplementary writings (addimenta) are annexed to the last book; (I) The Aachen capitulary of 817 concerning the monasteries; (II) the report of the bishops (August, 829) to the Emperor Louis the Pious; (III) a few genuine capitularies and a large number of forged ones, just as in the main body of the collec-

tion; (IV) a large number (170) of extracts taken from various sources, among which are also forgeries of the Pseudo-Isidore. The work of Abbot Ansegisus was taken as a model for the collection. As to the sources of the collection, about one-fourth of it consists of genuine capitularies (a certain kind of royal decrees customary in the Frankish Empire); in fact, the genuine materials used by the author surpass sometimes those used by Ansegisus. Most of the pretended capitularies are, however, not genuine. Among the genuine sources, from which the larger portion of them are drawn, are: the Holy Scriptures; the decrees of councils; papal decrees; the collection of Irish canons; the ordinances of the Roman law, the "leges Visigothorum" and "Baiuvariorum"; the "Libri Penitenciales" or penitential books; the writings of the Church Fathers, and letters of bishops. He repeats himself frequently; a number of chapters are duplicated literally or nearly word for word. The chief aim of the forger was to enable the Church to maintain its independence in face of the assaults of the secular power. The author stands for the contemporary movement in favour of ecclesiastical reform, and in opposition to the rule of the Church by the laity. The first two editions (Tilius, Paris, 1548, and Pithou, Paris, 1588) are incomplete; the collection is found complete in Baluze, *Capitularia regum Francorum* (Paris, 1677), I, col. 801-1232, and in Perts, *Monumenta Germaniae Hist.: Leges*, II (Hanover, 1837), 2, 39-168 (cf. Migne, P. L., XCVII, col. 699-912). E. Seckel is preparing a new edition for the *Monum. Germ. Hist.: Capitularia*, III).

J. P. KIRSCH.

**Benedict of Aniane**, SAINT, b. about 745-750; d. at Cornelimünster, 11 February, 821. Benedict, originally known as Witiza, son of the Goth, Aigulf, Count of Maguelone in Southern France, was educated at the Frankish court of Pepin, and entered the royal service. He took part in the Italian campaign of Charlemagne (773), after which he left his royal master to enter the religious life, and was received into the monastery of St. Sequanus (Saint-Seine). He gave himself most zealously to practices of asceticism, and learned to value the Rule of St. Benedict as the best foundation for the monastic life. Returning home in 779, he established on his own land near the little river of Aniane a new monastic settlement, which soon developed into a great monastery, under the name of Aniane, and became the model and centre of the monastic reform in France, introduced by Louis the Pious. The emperor's chief adviser was Benedict, and the general adoption of the Rule of St. Benedict in the monasteries of the Empire was the most important step towards the reform. Benedict took a prominent part in the synods held in Aachen in 816 and 817, the results of which were embodied in the important prescriptions for the restoration of monastic discipline, dated 10 July, 817; he was the enthusiastic leader of these assemblies, and he himself reformed many monasteries on the lines laid down in the ordinances promulgated there. In order to have him in the vicinity of his royal residence, Louis in 814 had founded on the Inde, a stream near Aachen, the Abbey of Cornelimünster, which was to be an exemplar for all other abbeys, and to be under the guidance of Benedict. In the dogmatic controversy over Adoptionism, under the leadership of Felix of Urgel, Benedict took the part of orthodoxy. To promote the monastic reforms, he compiled a collection of monastic rules. A pupil of

his, the monk Ardo, wrote a biography of the great abbot.

For Benedict's writings see *Codex regularum monasticarum et canonicarum* in P. L., CIII, 398-702; *Concordia regularum*, loc. cit.; *Letters*, loc. cit., 703-1380. Other treatises (loc. cit., 1381 sqq.) ascribed to him are probably not authentic. ARDO, *SMARAGDUS Life*, op. cit., CIII, 353 sqq.; *Mon. Germ. J. P. KIRSCH.

**Benedict of Nursia**, SAINT, founder of western monasticism, b. at Nursia, c. 480; d. at Monte Cassino, 543. The only authentic life of Benedict of Nursia is that contained in the second book of St. Gregory's "Dialogues". It is rather a character sketch than a biography and consists, for the most part, of a number of miraculous incidents, which, although they illustrate the life of the saint, give little help towards a chronological account of his career. St. Gregory's authorities for all that he relates were apparently trustworthy, being, as he says, four of the saint's own disciples, viz.: Constantinus, who succeeded him as Abbot of Monte Cassino; Valentinian, who for many years was head of the monastery attached to the Lateran Basilica; Simplicius, who was the third Abbot of Monte Cassino; and Honoratus, who was Abbot of Subiaco when St. Gregory wrote his "Dialogues".

Benedict was the son of a Roman noble of Nursia, a small town near Spoleto, and a tradition, which St. Bede accepts, makes him a twin with his sister Scholastica. His boyhood was spent in Rome, where he lived with his parents and attended the schools until he had reached his higher studies. Then "giving over his books, and forsaking his father's house and wealth, with a mind only to serve God, he sought for some place where he might attain to the desire of his holy purpose; and in this sort he departed [from Rome], instructed with learned ignorance and furnished with unlearned wisdom" (Dial. St. Greg., II, Introd. in Migne, P. L., LXVI). There is much difference of opinion as to Benedict's age at this time. It has been very generally stated as fourteen, but a careful examination of St. Gregory's narrative makes it impossible to suppose him younger than nineteen or twenty. He was old enough to be in the midst of his literary studies, to understand the real meaning and worth of the dissolute and licentious lives of his companions, and to have been deeply affected himself by the love of a woman (ibid., II, ii). He was capable of weighing all these things in comparison with the life taught in the Gospels, and he chose the latter. He was at the beginning of life, and had at his disposal the means to a career as a Roman noble; clearly he was not a child. As St. Gregory expresses it, "he was in the world and was free to enjoy the advantages which the world offers, but drew back his foot which he had, as it were, already set forth in the world" (ibid., Introd.). If we accept the date 480 for his birth, we may fix the date of his abandoning the schools and quitting home at about A. D. 500.

Benedict does not seem to have left Rome for the purpose of becoming a hermit, but only to find some place away from the life of the great city; moreover, he took his old nurse with him as a servant and they settled down to live at Enfide, near a church dedicated to St. Peter, in some kind of association with "a company of virtuous men" who were in sympathy with his feelings and his views of life. Enfide, which the tradition of Subiaco identifies with the modern Affile, is in the Simbrucini mountains, about forty miles from Rome and two from Subiaco. It stands on the crest of a ridge which rises rapidly

from the valley to the higher range of mountains, and seen from the lower ground the village has the appearance of a fortress. As St. Gregory's account indicates, and as is confirmed by remains of the old town and by the inscriptions found in the neighbourhood, Enfide was a place of greater importance than is the present town. At Enfide Benedict worked his first miracle by restoring to perfect condition an earthenware wheat-sifter (*capisterium*) which his old servant had accidentally broken. The notoriety which this miracle brought upon Benedict drove him to escape still farther from social life, and "he fled secretly from his nurse and sought the more retired district of Subiaco". His purpose of life had also been modified. He had left Rome to escape the evils of a great city; he now determined to be poor and to live by his own work. "For God's sake he deliberately chose the hardships of life and the weariness of labour" (*ibid.*, i).

A short distance from Enfide is the entrance to a narrow, gloomy valley, penetrating the mountains and leading directly to Subiaco. Crossing the Anio and turning to the right, the path rises along the left face of the ravine and soon reaches the site of Nero's villa and of the huge mole which formed the lower end of the middle lake; across the valley were ruins of the Roman baths, of which a few great arches and detached masses of wall still stand. Rising from the mole upon twenty-five low arches, the foundations of which can even yet be traced, was the bridge from the villa to the baths, under which the waters of the middle lake poured in a wide fall into the lake below. The ruins of these vast buildings and the wide sheet of falling water closed up the entrance of the valley to St. Benedict as he came from Enfide; to-day the narrow valley lies open before us, closed only by the far-off mountains. The path continues to ascend, and the side of the ravine, on which it runs, becomes steeper, until we reach a cave above which the mountain now rises almost perpendicularly; while on the right hand it strikes in a rapid descent down to where, in St. Benedict's day, five hundred feet below, lay the blue waters of the lake. The cave has a large triangular-shaped opening and is about ten feet deep. On his way from Enfide, Benedict had met a monk, Romanus, whose monastery was on the mountain above the cliff overhanging the cave. Romanus had discussed with Benedict the purpose which had brought him to Subiaco, and had given him the monk's habit. By his advice Benedict became a hermit and for three years, unknown to men, lived in this cave above the lake. St. Gregory tells us little of these years. He now speaks of Benedict no longer as a youth (*puer*), but as a man (*vir*) of God. Romanus, he twice tells us, served the saint in every way he could. The monk apparently visited him frequently, and on fixed days brought him food.

During these three years of solitude, broken only by occasional communications with the outer world and by the visits of Romanus, he matured both in mind and character, in knowledge of himself and of his fellow-man, and at the same time he became not merely known to, but secured the respect of, those about him; so much so that on the death of the abbot of a monastery in the neighbourhood (identified by some with Vicovaro), the community came to him and begged him to become its abbot. Benedict was acquainted with the life and discipline of the monastery, and knew that "their manners were diverse from his and therefore that they would never agree together: yet, at length, overcome with their entreaty, he gave his consent" (*ibid.*, iii). The experiment failed; the monks tried to poison him, and he returned to his cave. From this time his miracles seem to have become frequent, and many people, attracted by his sanctity and character,

came to Subiaco to be under his guidance. For them he built in the valley twelve monasteries, in each of which he placed a superior with twelve monks. In a thirteenth he lived with "a few, such as he thought would more profit and be better instructed by his own presence" (*ibid.*, iii). He remained, however, the father or abbot of all. With the establishment of these monasteries began the schools for children; and amongst the first to be brought were Maurus and Placid.

The remainder of Benedict's life was spent in realizing the ideal of monasticism which he has left us drawn out in his Rule, and before we follow the slight chronological story given by St. Gregory, it will be better to examine the ideal, which, as St. Gregory says, is Benedict's real biography (*ibid.*, xxxvi). We deal here with the Rule only so far as it is an element in St. Benedict's life. For the relations which it bore to the monasticism of previous centuries, and for its influence throughout the West on civil and religious government, and upon the spiritual life of Christians, the reader is referred to the articles MONASTICISM and BENEDICT, SAINT, RULE OF.

THE BENEDICTINE RULE.—1. Before studying St. Benedict's Rule it is necessary to point out that it is written for laymen, not for clerics. The saint's purpose was not to institute an order of clerics with clerical duties and offices, but an organization and a set of rules for the domestic life of such laymen as wished to live as fully as possible the type of life presented in the Gospel. "My words", he says, "are addressed to thee, whoever thou art, that, renouncing thine own will, dost put on the strong and bright armour of obedience in order to fight for the Lord Christ, our true King." (*Prolog.* to Rule.) Later, the Church imposed the clerical state upon Benedictines, and with the state came a preponderance of clerical and sacerdotal duties, but the impress of the lay origin of the Benedictines has remained, and is perhaps the source of some of the characteristics which mark them off from later orders.

2. Another characteristic feature of the saint's Rule is its view of work. His so-called order was not established to carry on any particular work or to meet any special crisis in the Church, as has been the case with other orders. With Benedict the work of his monks was only a means to goodness of life. The great disciplinary force for human nature is work; idleness is its ruin. The purpose of his Rule was to bring men "back to God by the labour of obedience, from whom they had departed by the idleness of disobedience". Work was the first condition of all growth in goodness. It was in order that his own life might be "wearied with labours for God's sake" that St. Benedict left Enfide for the cave at Subiaco. It is necessary, comments St. Gregory, that God's elect should at the beginning, when life and temptations are strong in them, "be wearied with labour and pains". In the regeneration of human nature in the order of discipline, even prayer comes after work, for grace meets with no co-operation in the soul and heart of an idler. When the Goth "gave over the world" and went to Subiaco, St. Benedict gave him a bill-hook and set him to clear away briars for the making of a garden. "*Eccce labora!*" go and work. Work is not, as the civilization of the time taught, the condition peculiar to slaves; it is the universal lot of man, necessary for his well-being as a man, and essential for him as a Christian.

3. The religious life, as conceived by St. Benedict, is essentially social. Life apart from one's fellows, the life of a hermit, if it is to be wholesome and sane, is possible only for the few, and these few must have reached an advanced stage of self-discipline while living with others (Rule, i). The Rule, therefore, is entirely occupied with regulating the life of a community of men who live and work and pray and eat

together, and this not merely for a course of training, but as a permanent element of life at its best. The Rule conceives the superiors as always present and in constant touch with every member of the household. This explains its characteristic form of government, which is best described as patriarchal, or paternal (*ibid.*, ii, iii, lxiv). The superior is the head of a family; all are the permanent members of a household. Hence, too, much of the spiritual teaching of the Rule is concealed under legislation which seems purely social and domestic organization (*ibid.*, xxii-xxxii, xxxv-xli). So intimately connected with domestic life is the whole framework and teaching of the Rule that a Benedictine may be more truly said to enter or join a particular household than to join an order. The social character of Benedictine life has found expression in a fixed type for monasteries and in the kind of works which Benedictines undertake, and it is secured by an absolute communism in possessions (*ibid.*, xxxiii, xxxiv, liv, lv), by the rigorous suppression of all differences of worldly rank—"no one of noble birth may [for that reason] be put before him that was formerly a slave" (*ibid.*, ii), and by the enforced presence of everyone at the routine duties of the household.

4. Although private ownership is most strictly forbidden by the Rule, it was no part of St. Benedict's conception of monastic life that his monks, as a body, should strip themselves of all wealth and live upon the alms of the charitable; rather his purpose was to restrict the requirements of the individual to what was necessary and simple, and to secure that the use and administration of the corporate possessions should be in strict accord with the teaching of the Gospel. The Benedictine ideal of poverty is quite different from the Franciscan. The Benedictine takes no explicit vow of poverty; he only vows obedience according to the Rule. The Rule allows all that is necessary to each individual, together with sufficient and varied clothing, abundant food (excluding only the flesh of quadrupeds), wine, and ample sleep (*ibid.*, xxxix, xl, xli, lv). Possessions could be held in common, they might be large, but they were to be administered for the furtherance of the work of the community and for the benefit of others. While the individual monk was poor, the monastery was to be in a position to give alms, not to be compelled to seek them. It was to relieve the poor, to clothe the naked, to visit the sick, to bury the dead, to help the afflicted (*ibid.*, iv), to entertain all strangers (*ibid.*, liii). The poor came to Benedict to get help to pay their debts (*Dial. St. Greg.*, xxvii); they came for food (*ibid.*, xxi, xxviii).

5. St. Benedict originated a form of government which is deserving of study. It is contained in chapters ii, iii, xxxi, lxiv, lxv of the Rule and in certain pregnant phrases scattered through other chapters. As with the Rule itself, so also his scheme of government is intended not for an order but for a single community. He presupposes that the community have bound themselves, by their promise of stability, to spend their lives together under the Rule. The superior is then elected by a free and universal suffrage. The government may be described as a monarchy, with the Rule as its constitution. Within the four corners of the Rule everything is left to the discretion of the abbot, the abuse of whose authority is checked by religion (Rule, ii), by open debate with the community on all important matters, and with its representative elders in smaller concerns (*ibid.*, iii). The reality of these checks upon the wilfulness of the ruler can be appreciated only when it is remembered that ruler and community were bound together for life, that all were inspired by the single purpose of carrying out the conception of life taught in the Gospel, and that the relations of the members

of the community to one another and to the abbot, and of the abbot to them, were elevated and spiritualized by a mysticism which set before itself the acceptance of the teachings of the Sermon on the Mount as real and work-a-day truths.

6. (a) When a Christian household, a community, has been organized by the willing acceptance of its social duties and responsibilities, by obedience to an authority, and, further, is under the continuous discipline of work and self-denial, the next step in the regeneration of its members in their return to God is prayer. The Rule deals directly and explicitly only with public prayer. For this Benedict assigns the Psalms and Canticles, with readings from the Scriptures and Fathers. He devotes eleven chapters out of the seventy-three of his Rule to regulating this public prayer, and it is characteristic of the freedom of his Rule and of the "moderation" of the saint, that he concludes his very careful directions by saying that if any superior does not like his arrangement he is free to make another; this only he says he will insist on, that the whole Psalter shall be said in the course of a week. The practice of the holy Fathers, he adds, was resolutely "to say in a single day what I pray we tepid monks may get through in a whole week" (*ibid.*, xviii). On the other hand, he checks indiscreet zeal by laying down the general rule "that prayer made in common must always be short" (*ibid.*, xx). It is very difficult to reduce St. Benedict's teaching on prayer to a system, for this reason, that in his conception of the Christian character, prayer is coextensive with the whole life, and life is not complete at any point unless penetrated by prayer.

(b) The form of prayer which thus covers the whole of our waking hours, St. Benedict calls the first degree of humility. It consists in realizing the presence of God (*ibid.*, vii). The first step begins when the spiritual is joined to the merely human, or, as the saint expresses it, it is the first step in a ladder, the rungs of which rest at one end in the body and at the other in the soul. The ability to exercise this form of prayer is fostered by that care of the "heart" on which the saint so often insists; and the heart is saved from the dissipation that would result from social intercourse by the habit of mind which sees in every one Christ Himself. "Let the sick be served in very deed as Christ Himself" (*ibid.*, xxxvi). "Let all guests that come be received as Christ" (*ibid.*, liii). "Whether we be slaves or freemen, we are all one in Christ and bear an equal rank in the service of Our Lord" (*ibid.*, ii).

(c) Secondly, there is public prayer. This is short and to be said at intervals, at night and at seven distinct hours during the day, so that, when possible, there shall be no great interval without a call to formal, vocal, public prayer (*ibid.*, xvi). The position which St. Benedict gave to public, common prayer can be best described by saying that he established it as the centre of the common life to which he bound his monks. It was the consecration, not only of the individual, but of the whole community to God by the oft-repeated daily public acts of faith, and of praise and adoration of the Creator; and this public worship of God, the *opus Dei*, was to form the chief work of his monks, and to be the source from which all other works took their inspiration, their direction, and their strength.

(d) Lastly, there is private prayer, for which the saint does not legislate. It follows individual gifts—"If anyone wishes to pray in private, let him go quietly into the oratory and pray, not with a loud voice, but with tears and fervour of heart" (*ibid.*, lii). "Our prayer ought to be short and with purity of heart, except it be perchance prolonged by the inspiration of divine grace" (*ibid.*, xx). But if St. Benedict gives no further directions on private

prayer, it is because the whole condition and mode of life secured by the Rule, and the character formed by its observance, lead naturally to the higher states of prayer. As the saint writes: "Whoever, therefore, thou art that hastenest to thy heavenly country, fulfil by the help of Christ this little Rule which we have written for beginners; and then at length thou shalt arrive, under God's protection, at the lofty summits of doctrine and virtue of which we have spoken above" (*ibid.*, lxxiii). For guidance in these higher states the saint refers to the Fathers, Basil and Cassian.

From this short examination of the Rule and its system of prayer, it will be obvious that to describe the Benedictine as a contemplative order is misleading, if the word is used in its modern technical sense as excluding active work; the "contemplative" is a form of life framed for different circumstances and with a different object from St. Benedict's. The

We can now take up again the story of Benedict's life. How long he remained at Subiaco we do not know. Abbot Tosti conjectures it was until the year 529. Of these years St. Gregory is content to tell no more than a few stories descriptive of the life of the monks, and of the character and government of St. Benedict. The latter was making his first attempt to realize in these twelve monasteries his conception of the monastic life. We can fill in many of the details from the Rule. By his own experiment and his knowledge of the history of monasticism the saint had learnt that the regeneration of the individual, except in abnormal cases, is not reached by the path of solitude, nor by that of austerity, but by the beaten track of man's social instinct, with its necessary conditions of obedience and work; and that neither the body nor the mind can be safely overstrained in the effort to avoid evil (*ibid.*, lxiv). Thus at Subiaco we find no solitaries, no conventual her-

THE ABBEY OF MONTE CASSINO

Rule, including its system of prayer and public psalmody, is meant for every class of mind and every degree of learning. It is framed not only for the educated and for souls advanced in perfection, but it organizes and directs a complete life which is adapted for simple folk and for sinners, for the observance of the Commandments and for the beginnings of goodness. "We have written this Rule", writes St. Benedict, "that by observing it in monasteries, we may shew ourselves to have some degree of goodness in life and a beginning of holiness. But for him who would hasten to the perfection of religion there are the teachings of the holy Fathers, the following whereof bringeth a man to the height of perfection" (*ibid.*, lxxiii). Before leaving the subject of prayer it will be well to point out again that by ordering the public recitation and singing of the Psalter, St. Benedict was not putting upon his monks a distinctively clerical obligation. The Psalter was the common form of prayer of all Christians; we must not read into his Rule characteristics which a later age and discipline have made inseparable from the public recitation of the Divine Office.

mits, no great austerities, but men living together in organized communities for the purpose of leading good lives, doing such work as came to their hand—carrying water up the steep mountain-side, doing the other household work, raising the twelve cloisters, clearing the ground, making gardens, teaching children, preaching to the country people, reading and studying at least four hours a day, receiving strangers, accepting and training new-comers, attending the regular hours of prayer, reciting and chanting the Psalter. The life at Subiaco and the character of St. Benedict attracted many to the new monasteries, and with their increasing numbers and growing influence came the inevitable jealousy and persecution, which culminated with a vile attempt of a neighbouring priest to scandalize the monks by an exhibition of naked women, dancing in the courtyard of the saint's monastery (*Dial. St. Greg.*, viii). To save his followers from further persecution Benedict left Subiaco and went to Monte Cassino.

Upon the crest of Monte Cassino "there was an ancient chapel in which the foolish and simple country people, according to the custom of the old

Gentiles, worshipped the god Apollo. Round about it likewise upon all sides there were woods for the service of devils, in which, even to that very time, the mad multitudes of infidels did offer most wicked sacrifice. The man of God, coming hither, beat in pieces the idol, overthrew the altar, set fire on the woods, and in the temple of Apollo built the oratory of St. Martin: and where the altar of the same Apollo was, he made an oratory of St. John: and by his continual preaching he brought the people dwelling in those parts to embrace the faith of Christ" (Rule, viii). On this spot the saint built his monastery. His experience at Subiaco had led him to alter his plans, and now, instead of building several houses with a small community in each, he kept all his monks in one monastery and provided for its government by appointing a prior and deans (Rule, lxxv, xxi). We find no trace in his Rule, which was most probably written at Monte Cassino, of the view which guided him when he built the twelve small monasteries at Subiaco. The life which we have witnessed at Subiaco was renewed at Monte Cassino, but the change in the situation and local conditions brought a corresponding modification in the work undertaken by the monks. Subiaco was a retired valley away in the mountains and difficult of access; Cassino was on one of the great highways to the south of Italy, and at no great distance from Capua. This brought the new monastery into more frequent communication with the outside world. It soon became a centre of influence in a district in which there was a large population, with several dioceses and other monasteries. Abbots came to see and advise with Benedict. Men of all classes were frequent visitors, and he numbered nobles and bishops among his intimate friends. There were nuns in the neighbourhood whom the monks went to preach to and to teach. There was a village nearby in which St. Benedict preached and made many converts (Dial. St. Greg., xix). The monastery became the protector of the poor, their trustee (ibid., xxxi), their refuge in sickness, in trial, in accidents, in want.

Thus during the life of the saint we find what has ever since remained a characteristic feature of Benedictine houses, i. e. the members take up any work which is adapted to their peculiar circumstances, any work which may be dictated by their necessities. Thus we find Benedictines teaching in poor schools and in the universities, practising the arts and following agriculture, undertaking the care of souls, or devoting themselves wholly to study. No work is foreign to the Benedictine, provided only it is compatible with living in community and with the performance of the Divine Office. This freedom in the choice of work was necessary in a Rule which was to be suited to all times and places, but it was primarily the natural result of the end which St. Benedict had in view, and in which he differs from the founders of later orders. These latter had in view some special work to which they wished their disciples to devote themselves; St. Benedict's purpose was only to provide a Rule by which anyone might follow the Gospel counsels, and live, and work, and pray, and save his soul. St. Gregory's narrative of the establishment of Monte Cassino does little more for us than supply disconnected incidents which illustrate the daily life of the monastery. We gain only a few biographical facts. From Monte Cassino St. Benedict founded another monastery near Terracina, on the coast, about forty miles distant (ibid., xxii). To the wisdom of long experience and to the mature virtues of the saint, was now added the gift of prophecy, of which St. Gregory gives many examples. Celebrated among these is the story of the visit of Totila, King of the Goths, in the year 543, when the saint "rebuked him for his wicked deeds, and in few words told him all

that should befall him, saying: 'Much wickedness do you daily commit, and many great sins have you done: now at length give over your sinful life. Into the city of Rome shall you enter, and over the sea shall you pass: nine years shall you reign, and in the tenth shall you leave this mortal life.' The king, hearing these things, was wonderfully afraid, and desiring the holy man to commend him to God in his prayers he departed: and from that time forward he was nothing so cruel as before he had been. Not long after he went to Rome, sailed over into Sicily, and in the tenth year of his reign he lost his kingdom together with his life." (ibid., xv).

Totila's visit to Monte Cassino in 543 is the only certain date we have in the saint's life. It must have occurred when Benedict was advanced in age. Abbot Tosti, following others, puts the saint's death in the same year. Just before his death we hear

(Designed by Bramante)

for the first time of his sister Scholastica. "She had been dedicated from her infancy to Our Lord, and used to come once a year to visit her brother. To whom the man of God went not far from the gate to a place that did belong to the abbey, there to give her entertainment" (ibid., xxxiii). They met for the last time three days before Scholastica's death, on a day "when the sky was so clear that no cloud was to be seen". The sister begged her brother to stay the night, "but by no persuasion would he agree unto that, saying that he might not by any means tarry all night out of his abbey. . . . The nun receiving this denial of her brother, joining her hands together, laid them upon the table; and so, bowing down her head upon them, she made her prayers to Almighty God, and lifting her head from the table, there fell suddenly such a tempest of lightning and thundering, and such abundance of rain, that neither venerable Bennet nor his monks that were with him, could put their head out of door" (ibid., xxxiii). Three days later, "Benedict beheld the soul of his sister, which was departed from her body, in the likeness of a dove, to ascend into heaven: who rejoicing much to see her great glory, with hymns and lauds gave thanks to Almighty God, and did impart the news of this her death to his monks whom also he sent presently to bring her corpse to his abbey, to have it buried in that grave which he had provided for himself" (ibid., xxxiv).

It would seem to have been about this time that St. Benedict had that wonderful vision in which he came as near to seeing God as is possible for man in this life. St. Gregory and St. Bonaventure say that Benedict saw God and in that vision of God saw the whole world. St. Thomas will not allow that this could have been. Urban VIII, however, does not hesitate to say that "the saint merited, whilst

still in this mortal life, to see God Himself and in God all that is below Him". If he did not see the Creator, he saw that light which is in the Creator, and in that light, as St. Gregory says, "saw the whole world gathered together as it were under one beam of the sun. At the same time he saw the soul of Germanus, Bishop of Capua, in a fiery globe carried up by angels to heaven" (ibid., xxxv). Once more the hidden things of God were shown to him, and he warned his brethren, both "those that lived daily with him and those that dwelt far off" of his approaching death. "Six days before he left this world he gave orders to have his sepulchre opened, and forthwith falling into an ague, he began with burning heat to wax faint; and when as the sickness daily increased, upon the sixth day he commanded his monks to carry him into the oratory, where he did arm himself receiving the Body and Blood of Our Saviour Christ; and having his weak body holden up betwixt the hands of his disciples, he stood with his own hands lifted up to heaven; and as he was in that manner praying, he gave up the ghost" (ibid., xxxvii). He was buried in the same grave with his sister "in the oratory of St. John the Baptist, which [he] himself had built when he overthrew the altar of Apollo" (ibid.). There is some doubt whether the relics of the saint are still at Monte Cassino, or whether they were moved in the seventh century to Fleury. Abbot Tosti, in his life of St. Benedict, discusses the question at length (chap. xi) and decides the controversy in favour of Monte Cassino.

Perhaps the most striking characteristics in St. Benedict are his deep and wide human feeling and his moderation. The former reveals itself in the many anecdotes recorded by St. Gregory. We see it in his sympathy and care for the simplest of his monks; his hastening to the help of the poor Goth who had lost his bill-hook; spending the hours of the night in prayer on the mountain to save his monks the labour of carrying water, and to remove from their lives a "just cause of grumbling"; staying three days in a monastery to help to induce one of the monks to "remain quietly at his prayers as the other monks did", instead of going forth from the chapel and wandering about "busying himself with some earthly and transitory things". He lets the crow from the neighbouring woods come daily when all are at dinner to be fed by himself. His mind is always with those who are absent; sitting in his cell he knows that Placid has fallen into the lake; he foresees the accident to the builders and sends a warning to them; in spirit and some kind of real presence he is with the monks "eating and refreshing themselves" on their journey, with his friend Valentinian on his way to the monastery, with the monk taking a present from the nuns, with the new community at Terracina. Throughout St. Gregory's narrative he is always the same quiet, gentle, dignified, strong, peace-loving man who by the subtle power of sympathy becomes the centre of the lives and interests of all about him. We see him with his monks in the church, at their reading, sometimes in the fields, but more commonly in his cell, where frequent messengers find him "weeping silently in his prayers", and in the night hours standing at "the window of his cell in the tower, offering up his prayers to God"; and often, as Totila found him, sitting outside the door of his cell, or "before the gate of the monastery reading upon a book". He has given his own portrait in his ideal picture of an abbot (Rule, lxiv):—

"It becometh the abbot to be ever doing some good for his brethren rather than to be presiding over them. He must, therefore, be learned in the law of God, that he may know whence to bring forth things new and old; he must be chaste, sober, and merciful, ever preferring mercy to justice, that he

himself may obtain mercy. Let him hate sin and love the brethren. And even in his corrections, let him act with prudence, and not go too far, lest while he seeketh too eagerly to scrape off the rust, the vessel be broken. Let him keep his own frailty ever before his eyes, and remember that the bruised reed must not be broken. And by this we do not mean that he should suffer vices to grow up; but that prudently and with charity he should cut them off, in the way he shall see best for each, as we have already said; and let him study rather to be loved than feared. Let him not be violent nor over anxious, not exacting nor obstinate, not jealous nor prone to suspicion, or else he will never be at rest. In all his commands, whether spiritual or temporal, let him be prudent and considerate. In the works which he imposeth, let him be discreet and moderate, bearing in mind the discretion of holy Jacob, when he said: 'If I cause my flocks to be overdriven, they will all perish in one day'. Taking, then, such testimonies as are borne by these and the like words to discretion, the mother of virtues, let him so temper all things, that the strong may have something to strive after, and the weak nothing at which to take alarm."

HUGH EDMUND FORD.

**Benedict of Peterborough**, abbot and writer, place and date of birth unknown; d. 1193. He was educated at Oxford, and was appointed in 1174 chancellor to Richard, Archbishop of Canterbury, and in 1175 became Prior of Christ Church, Canterbury. As Abbot of Peterborough from 1177 to his death in 1193, he was a learned and able executive. He restored the abbey finances to a sound basis, and was active till his death in completing and beautifying the buildings. Through his personal favour with Richard I he secured for his abbey various rights and privileges. He has been sometimes confused with Benedict of Sansetun, later Bishop of Rochester, vice-chancellor during the absence of King Richard. He had the library enriched by transcriptions of standard works in theology, exegesis, law, science, and poetry. He wrote a history of Becket's "Passion", preserved in part in the work on Becket known as "Quadrilogus", and also, a first-hand account of Becket's "Miracles" (Robertson, "Materials for the History of Thomas Becket", Rolls Series, 1876). He was formerly regarded as the author of "Gesta Henrici II", which Stubbs would identify with the lost "Tricolumnis" of Richard Fitz-Neal, author of the "Dialogus de Scaccario".

**Benedict of San Philadelphia** (or BENEDICT THE MOOR), SAINT, b. at San Philadelphia or San Fradello, a village of the Diocese of Messina in Sicily, in 1526; d. 4 April, 1589. The parents of St. Benedict were slaves from Ethiopia who were, nevertheless, pious Christians. On account of their faithfulness their master freed Benedict, the first-born child. From his earliest years Benedict was very religious and while still very young he joined a newly formed

association of hermits. When Pope Pius IV dissolved this association, Benedict, called from his origin Æthiops or Niger, entered the Reformed Recollects of the Franciscan Order. Owing to his virtues he was made superior of the monastery of Santa Maria de Jesus at Palermo three years after his entrance, although he was only a lay brother. He reformed the monastery and ruled it with great success until his death. He was pronounced Blessed in 1743 and was canonized in 1807. His feast is celebrated 3 April.

**Benedictus**, (CANTICLE OF ZACHARY), THE, given in Luke, i, 68-79, is one of the three great canticles in the opening chapters of this Gospel, the other two being the *Magnificat* and *Nunc dimittis*. The *Benedictus* was the song of thanksgiving uttered by Zachary on the occasion of the birth of his son, St. John Baptist. It is Jewish in form, but Christian in sentiment. The local colouring and nationalistic character of the first half are so noticeable that Loisy has conjectured that it existed previously as a simple psalm, which Zachary adapted, his additions being, he contends, easily discernible. (*Revue d'hist. et de lit. relig.*, May-June, 1903, p. 289.) There are, however, grave objections to this view, and an opposite theory has been put forth, that the *Benedictus* was composed with special reference to the names of Elizabeth, Zachary, and John, for Elizabeth, *Jusjurandum quod juravit*; Zachary, *Memorari (testamenti sui sancti)*; and John, *Ad faciendam misericordiam*.

The whole canticle naturally falls into two parts. The first (verses 68-75) is a song of thanksgiving for the realization of the Messianic hopes of the Jewish nation; but to such realization is given a characteristically Christian tone. As of old, in the family of David, there was power to defend the nation against their enemies, now again that of which they had been so long deprived, and for which they had been yearning, was to be restored to them, but in a higher and spiritual sense. The horn is a sign of power, and the "horn of salvation" signified the power of delivering or "a mighty deliverance". While the Jews had impatiently borne the yoke of the Romans, they had continually sighed for the time when the House of David was to be their deliverer. The deliverance was now at hand, and was pointed to by Zachary as the fulfilment of God's Oath to Abraham; but the fulfilment is described as a deliverance not for the sake of worldly power, but that "we may serve him without fear, in holiness and justice all our days".

The second part of the canticle is an address by Zachary to his own son, who was to take so important a part in the scheme of the Redemption; for he was to be a prophet, and to preach the remission of sins before the coming of the Orient, or Dawn, from on high. The prophecy that he was to "go before the face of the Lord to prepare his ways" (v. 76) was of course an allusion to the well-known words of Isaiah (xl, 3) which St. John himself afterwards applied to his own mission (John, i, 23); and which all the three Synoptics adopt (Matt., iii, 3; Mark, i, 2; Luke, iii, 4). It is probably due to the first part of the canticle, as a song of thanksgiving for the coming of the Redeemer, that it finds an appropriate place in the office of the Church every morning at Lauds. It is believed to have been first introduced by St. Benedict (Beaume, I, 253). According to Durandus, the allusion to Christ's coming under the figure of the rising sun had also some influence on its adoption. It is also used in various other liturgical offices, notably at a funeral, at the moment of interment, when words of

thanksgiving for the Redemption are specially in place as an expression of Christian hope.

THOMAS J. SEAHAN.

**Benefice** (Lat. *Beneficium*, a benefit).—Popularly the term benefice is often understood to denote either certain property destined for the support of ministers of religion, or a spiritual office or function, such as the care of souls, but in the strict sense it signifies a right, i. e. the right given permanently by the Church to a cleric to receive ecclesiastical revenues on account of the performance of some spiritual service. Four characteristics are essential to every benefice: (a) the right to revenue from church property, the beneficed cleric being the usufructuary and not the proprietor of the source of his support; (b) a twofold perpetuity, objective and subjective, inasmuch as the source of income must be permanently established and at the same time the appointment to the benefice must be for life, and not subject to revocation, save for the causes and in the cases specified by law; (c) a formal decree of ecclesiastical authority giving to certain funds or property the character or title of a benefice; (d) an annexed office or spiritual function of some kind, such as the care of souls, the exercise of jurisdiction, the celebration of Mass or the recitation of the Divine Office. This last mentioned element is fundamental, since a benefice exists only for the sake of securing the performance of duties connected with the worship of God, and is based on the Scriptural teaching that they who serve the altar should live by the altar. In fact, as Innocent III declares, the sole purpose of the foundation of benefices was to enable the church to have at her command clerics who might devote themselves freely to works of religion.

**HISTORY**.—The need which benefices are intended to meet was in the earlier centuries of the life of the Church satisfied in other ways. From the beginning, the clergy was supported by the liberality of the faithful, but originally all offerings were transmitted to the bishop, who took charge of their administration and distribution. Usually the mass of donations was divided into four portions, of which one went to the support of the bishop, another to the maintenance of the clergy, a third to the repair and construction of churches, and a fourth to the relief of the needy and afflicted. Under this system even those clerics who ministered in rural parishes were obliged to send the oblations received in their churches to the bishop, to swell the common fund and to be submitted to the ordinary rule of allotment. The inconvenience attending this method, especially because the offerings were frequently in kind, increased with the growth of the Church, particularly with the multiplication of country parishes. Moreover the Church came to possess considerable real property. Hence early in the sixth century we find in some places the practice of allowing some of the clergy to retain for themselves and for their churches the

gifts which they had received or even the income from property which the Church had acquired. The latter form of grant, in connexion with lands or permanent endowments, was known as *precaria*, a name which indicates its unstable tenure; on the death of the possessor the source of his revenue reverted to the common fund of church property, and could not serve for the support of a cleric unless devoted anew to this purpose by a formal act of ecclesiastical authority. Though these *precaria* were in the beginning contrary to the canons, circumstances justified their increasing employment, and they paved the way for the recognition of the modern benefice.

All that was needed to transform the *precaria* into benefices, was to do away with the need of a new episcopal decree assigning the income from certain lands or other property to the support of a priest on the occurrence of a vacancy, and to recognize in the source of income a perpetual foundation for this specific purpose. When this was done and the incumbent was given permanency in office, the modern benefice came into being. It was of gradual growth, its beginning dating from the sixth century and its universal adoption being delayed until the eleventh century. Since the usufruct allowed to clerics resembled the grants of land which sovereigns were accustomed to make to subjects who had distinguished themselves by military or political service, and which the Church was at times compelled to concede to powerful lay lords in order to secure necessary protection in troubled times, it was natural that the term benefice, which had been applied to these grants, should be employed to denote the similar practice in regard to ecclesiastics. Wherever the common law of the Church holds sway the establishment of benefices is the rule. In more than one country a system developed by centuries of piety has fallen before decrees of secularization, but if the usurping government makes a pretence of compensation by stipends to the clergy, such stipends are regarded by the Church as beneficiary revenue, and those who receive them retain the status of beneficed clerics. In the United States benefices are almost unknown. A solitary example in New Orleans figured as a notable exception in the decree of the Second Plenary Council. A few parochial benefices are found in the province of San Francisco, and there is good ground for the opinion which sees in permanent rectorships all the requisites of a benefice; but these instances, with the episcopates, are in marked contrast with the general organization of the Church in the United States. In England, also, benefices are the exception, but in Canada they are more common (Gignac, *Compend. Jur. Eccl.*, Quebec, 1906). The beneficiary system plays an important part in the discipline of the evangelical churches on the continent of Europe, and of the State church of England. In 1900, out of 22,800 clergymen at work in the Anglican Church, 13,872 were beneficed. (For benefices or "livings" in the Anglican Church see Phillimore, "*Ecclesiastical Law*"; Idem, "*Book of Church Law*", London, 1899, 227; *ibid.* the Benefices Act of 1898. For the Evangelical Churches see Hinschius, "*Kirchenrecht*", Berlin, 1869 sq.; Friedberg, "*Lehrbuch des Kirchenrechts*", 4th ed., 1895; *Real Encyk. f. Prot. Theol. und Kirche*, 3d ed., 1897, II, 596.)

**DIVISION.**—Benefices are divided into simple and double; major and minor; elective, presentative, and collative; residential and non-residential; perpetual and manual; secular and regular. Simple benefices are those which involve only the duty of reciting the Divine Office or of celebrating Mass. Double benefices imply the care of souls or jurisdiction in the external forum or administrative functions, and, if they be episcopal or supra-episcopal in rank, are

styled major benefices. A benefice is elective when the appointing authority may collate only after some electoral body has named the future incumbent; presentative when such nomination belongs to a patron; collative when the bishop or other superior appoints independently of any election or presentation. The distinction between residential and non-residential benefices is based upon the fact that in some cases the canons or articles of foundation impose the obligation of residence in the locality of the benefice while in other cases no such obligation is annexed. Manual benefices are not benefices in the strict sense, since their distinctive note is that appointments to them are revocable at the will of the collating authority. A legal presumption exists that all benefices are secular, but those which exist in churches or houses of religious orders or which by custom or by the will of the founder have been appropriated to religious are known as regular benefices. This last distinction has at times a special importance because of the rule requiring that secular benefices be conferred only on secular clerics, regular benefices only on regulars.

**CREATION.**—Benefices can be created only by ecclesiastical authority, since the right to revenue which they suppose is always necessarily connected with some spiritual function, and is therefore reckoned among the *jura spiritualia* controlled by the Church. The competent authority may be the pope or a bishop or one possessing quasi-episcopal authority, it being always understood that the pope has exclusive control of all major benefices. A benefice must be erected in a church or at an altar, under the title of some saint or mystery, and with the annexed obligation of rendering some spiritual service. Since the idea of compensation is always implied, a sufficient endowment must in every case be guaranteed, the amount varying with the character of the benefice, the locality of the foundation, and the nature of the services which are to be rendered. In some countries, as in Austria, the consent of the civil authorities is a necessary preliminary to the creation of a benefice.

**MODIFICATION.**—A benefice once erected is understood to be perpetual, but the law must and does provide for circumstances which may require an alteration of the status of a benefice by union or division, or even its entire suppression or extinction. Sometimes, owing to changed conditions, especially to a diminution of revenue, it becomes necessary to unite two or more benefices. This union may be effected in two ways, either so that an entirely new individual entity is brought into being, or so that the original titles remain, but are conferred on one cleric instead of several. In this latter case a distinction has to be made between a union in which both benefices retain their legal autonomy and a union in which one benefice is made legally dependent on the other. The pope alone can unite major benefices; minor benefices are subject in this respect to episcopal authority, with very few exceptions. A bishop is not allowed to proceed to the union of benefices unless such action be justified by reasons of necessity or of advantage, and unless a hearing be first granted to all interested persons. The patron, if there be one, and the cathedral chapter are the only parties whose consent, as distinguished from mere opinion, is required. The division of benefices, which is most frequently verified in connexion with parishes, is authorized when the incumbent is unable on account of increasing obligations to meet the requirements of his office, even with the help of such auxiliaries as the law allows. The formalities are generally the same as for a union. The term "dis-membration" is frequently employed as a synonym for division, but strictly speaking it denotes an act by which a part of the goods or revenues of one

benefice is given perpetually to another benefice or to some other ecclesiastical entity. In this case no new benefice is set up, and the act in question is in reality simply an alienation of church property, and is therefore governed by the rules applicable to alienation. Dismemberment is also used at times to signify the separation of a certain territory with its inhabitants from one parish and its incorporation in another, which may be effected for sufficient reason. The extinction of benefices occurs when both the benefice and the church to which it is attached are utterly destroyed or cease completely to have any connexion with Catholic worship, as happened in the past when certain countries were overrun by infidels or heretics, and in more recent times on the occasion of acts of usurpation by the civil power. Suppression differs from extinction in that it simply terminates the existence of a benefice, leaving intact the church and any other benefices which may be connected with it. Suppression involves a diminution of religious service, and is consequently regarded as odious in law. Nevertheless a bishop may for good reasons and with the consent of his chapter proceed to suppression, and at times such action is rendered necessary by a considerable depreciation in the value of the beneficiary property or by the departure of the population to whose spiritual needs the benefice was intended to minister. Suppression is not infrequently requested by patrons. In such cases the practice is not to consent to absolute suppression, at least of the religious service depending on the benefice, but simply to the exoneration of the patron and his renunciation of the *ius patronatus*.

**COLLATION.**—The collation or granting of benefices may be ordinary or extraordinary, free or necessary. The distinction between ordinary and extraordinary collation is based upon the fact that while ordinarily major benefices are disposed of by the pope and minor benefices by bishops, it may occasionally happen that this rule suffers an exception in so far as it relates to bishops, either because of a special provision of the law in favour of the pope or of some other authority, or because, on the failure of the bishop to act, the right to appoint devolves on his superior. These exceptions are known as extraordinary collations. From the eleventh century, extraordinary collations by the pope became more and more common, usually taking the form of *mandata de providendo*, *litteræ expectative*, and reservations. The *mandata de providendo* were intended to give to the cleric named therein a right to a benefice already vacant in the diocese of the bishop to whom the mandate was directed. *Litteræ expectative* were similar papal interventions in regard to diocesan benefices, but affected benefices not yet vacant, the recipient of the letter being given a claim on a benefice as soon as it should be at the disposal of the bishop. These two methods of extraordinary collation were not productive of happy results; they proved to be prejudicial to episcopal authority; they were taken advantage of by unworthy aspirants for ecclesiastical offices; and at times they were fraudulently obtained and offered for sale. Hence their reprobation by the Council of Trent (Sess. XXIV, cap. xix De ref). This animadversion of Trent was not, it is needless to say, a limitation of any papal prerogative; its sole purpose being to forestall possible abuses on the part of petitioners for favours from the Holy See. Reservations are still in operation, and consist in this, that the pope reserves to himself in specified cases the collation of certain diocesan benefices. After serving for centuries as a cause of much controversy, they were finally regulated by laws defining accurately the instances in which collation was to be reserved to the pope. One of the most important reservations which may serve as an example is contained in the ninth rule of the

Apostolic Chancery (see ROMAN CURIA), which provides that those diocesan benefices which fall vacant during eight months of the year are to be at the disposal of the pope, but that bishops who observe the law of residence may freely dispose of all benefices vacated during the six alternate months beginning with February. To-day reservations are in effect to some extent throughout the Church; for example, they affect the first dignities in chapters in the Province of Quebec and canonries in England; but Italy is the only country in which they are in full operation. Apart from cases provided for in reservations, the pope rarely, if ever, exercises his right of extraordinary collation. A collation, whether made by the pope or by a bishop, is said to be free when it is not conditioned by any act of an elector or of a patron; necessary when it follows election or nomination by competent persons or presentation by patrons. In many countries, concordats have secured to the representatives of civil authority an important part in appointments to benefices. Thus in Bavaria the king nominates to all archiepiscopal and episcopal sees; and a similar right has been granted to the Emperor of Austria and to the King of Portugal; in Hanover the chapter, before proceeding to the election of a bishop, must allow the Government to cancel the names of those candidates whom it judges unacceptable. Secular intervention in the collation of minor benefices varies from the royal nomination of the King of Portugal to the governmental exequatur required by Italian law. The interests of religion are safeguarded by the canonical requirement that in every case the candidate must be confirmed by ecclesiastical authority before he can lawfully begin his incumbency. (For abuses in the collation of benefices, see PATRONAGE, COMMENDATORY ABBOTS, INVESTITURES.)

**CONDITION OF COLLATION.**—In order that benefices may the more effectually fulfill the purposes for which they were instituted, various laws have been enacted governing the act of collation. Whether the collation be free or necessary it must always be gratuitous, to avoid simony; free, that is without coercion; unconditional; public, so that it may be readily proved; and granted within six months from the date of vacancy. Moreover no benefice can be conferred before it is vacant, nor can seculars receive the benefices of regulars, nor regulars those which are secular in character. Plurality of benefices also is forbidden. This last regulation was introduced very early in the history of benefices to assure the faithful execution of the trust attached to ecclesiastical foundations, as well as to guard against the evils which follow luxury; but in the course of time its effectiveness was considerably diminished by a distinction drawn between compatible and incompatible benefices. It was claimed that a benefice which does not require residence is perfectly compatible with one which does, and also that several simple benefices might very properly be held at the same time. This view held sway down to the time of the Council of Trent, which ordained that the possession of more than one benefice is lawful only when the first benefice obtained does not suffice for the support of the incumbent, and that in no case should both be residential. The Holy See alone can dispense from the observance of this law. The act of collation is further conditioned by canons requiring certain qualities in the appointee: (a) *The clerical state and celibacy.*—Tonsure is necessary for all benefices, and higher orders must be received by aspirants to important charges; thus cardinals are obliged to receive within the year the order corresponding to their rank in the sacred college; archbishops and bishops must have been subdeacons for at least six months; parish priests must receive the priesthood within a year. (b) *Age.*—Before the

Council of Trent a simple benefice could lawfully be conferred on a cleric as early as his seventh year, but since that council the recipient of a simple benefice must be in his fourteenth year, and for double benefices the age of twenty-four years completed is always required. A greater maturity is demanded for certain offices, e. g. thirty years completed for the episcopate, and forty years for the post of canon penitentiary. (c) *Character*.—The appointee must be of legitimate birth and of good reputation, and free from censure and irregularity. (d) *Relative worthiness*.—In the case of a choice between several candidates for a bishopric or for a parish, the collator must appoint the most worthy, i. e. the one who possesses in the highest degree the qualities necessary for a successful discharge of the duties connected with the benefice in question. The same rule applies to prelates with quæsepiscopal jurisdiction, to the canon theologian and to the canon penitentiary. As to other benefices authorities differ, the preferable opinion maintaining that in all cases the most worthy is to be chosen. (e) *Science*.—According to a law of Trent (Sess. VII, c. xiii, De ref.) no one can be collated to a benefice unless his fitness has been demonstrated in an examination conducted by the ordinary. In the case of parochial benefices, this examination must take the form of a concursus. (See CONCURSUS.) For some appointments the possession of a degree in theology or in canon law is demanded, as evidence of requisite learning; a bishop must be a doctor or a licentiate in canon law or in theology, or have the public testimony of a university as to his fitness to teach others; an archdeacon also must be a doctor or a licentiate in canon law or in theology; and similar qualifications are demanded for other offices. The Holy See, is, at the present time, insisting that the law concerning degrees be faithfully observed. (f) *Extraordinary requirements*.—These may be imposed by the articles of foundation or by secular law. Founders of benefices are given a great deal of liberty in attaching conditions to the act of collation, provided that these conditions be approved by ecclesiastical authority. In consequence, it happens at times that only members of a certain family or citizens of some town or city are eligible, or even, in some few instances, persons of noble birth. More onerous, and not always acceptable to the church, is the interference of civil authorities in the matter of collation. In many places only a person declared acceptable to the Government, or a citizen, or a native, or one who swears fidelity to the Government at the time of appointment, or who receives the royal exequatur, can hope to be collated. In Portugal and in Bavaria, the permission of the Government is necessary for ordination, and without this permission, which is given after an examination by secular authorities, a cleric is incapacitated for benefices in these two kingdoms. The Bavarian law also contains the curious provision that no subject is to enter the German College at Rome so long as it is conducted by the Fathers of the Society of Jesus, or by any similar order, and that all who contravene this ordinance are to be considered as *personæ non græte* to the Government and excluded from all benefices and posts at its disposal.

**OBLIGATIONS**.—All beneficed clerics are bound to make a profession of faith within two months from the date of taking possession, to perform faithfully the duties pertaining to their charge, to recite the canonical hours, and if the benefice held be double, to reside in the place in which their benefice is located. Violation of the law of residence is punished by loss of revenues during the time of absence, and if persisted in, by privation.

**VACANCY**.—The tenure of the incumbent of a benefice is perpetual, in the sense that it can be terminated only by death or for causes specified in

the law. It is provided in the law that in the event of certain acts vacancy shall occur *ipso facto*; as when the incumbent marries or attempts marriage, when he takes solemn vows in a religious order, when he violates the canon forbidding plurality, when he fails to receive within the prescribed time the necessary ordination, when he obtains episcopal consecration, when he is guilty of any crime to which penalty of deprivation is expressly attached. In other cases deprivation follows a judicial process, instituted in virtue of laws authorizing the bishop to punish certain offences in this manner. Moreover a cleric has the right to resign his benefice provided the resignation be offered freely and for just reasons, and be accepted by a competent superior, and he may also, with certain conditions, exchange benefices with another incumbent.

**REVENUES**.—The holder of a benefice is not the owner of the foundation from which he derives his support; he occupies in reference to it the position of a tutor or guardian who must defend its interests. His chief duty is to maintain it as a perpetual means of support for ministers of religion. Its fruits or revenues, however, belong to him, but with the obligation of devoting to pious causes, and especially to the relief of the poor, all that is not needed for his own support. Formerly, this superfluous revenue could not be disposed of by will, but a universal custom has long since authorized such testamentary disposal, provided it be made in favour of pious causes or of the poor. In fact, in most places on account of the difficulty of distinguishing a cleric's patrimonial property from his beneficiary revenue, the right is recognized to dispose freely by will of all property. JOHN T. CREAGH.

**Benefit of Clergy**, the exemption from the jurisdiction of the secular courts, which in England, in the Middle Ages, was accorded to clergymen. This exemption included all who had been tonsured and wore the ecclesiastical dress, and was shared in by monks and nuns. In Saxon days ecclesiastical and civil cases were decided in shire and hundred courts where the bishop sat side by side with the ealdorman or sheriff. From the days of the Conqueror ecclesiastical courts were held distinct from the secular courts. Gratian (cap. xlvii, 11<sup>a</sup> pars Dec., Causa XI, ix 1) sums up the privilege of the clergy thus: "From the above it is to be understood that a clergyman is not to be brought before the public courts either in a civil or criminal case, unless perhaps the bishop should not wish to decide the civil case, or unless he should, in a criminal case, degrade him". William forbade his judges and ministers and every layman to meddle with the laws regarding the bishop. These privileges of the clergy were substantially respected by the Norman kings, though their tendency to arbitrariness caused them in special cases to seek to override them. They were at the root of the controversy between Henry II and St. Thomas Becket. Henry alleged that the old customs of the kingdom required that a criminal clerk should be accused in a lay court, whence he was to be transferred to

the ecclesiastical court, and, if found guilty, to be degraded and returned for punishment to the lay court. St. Thomas objected, in the name of the Church law, to the first accusation in the lay court. Fitzstephen (*Materials* III, 47, quoted in Pollock and Maitland, *History of English Law*) says of the alleged customs: "They had never been previously written, nor were there any such customs in the Kingdom". The author of the "*Leges Henrici*" (*ibid.*) says plainly that no accusation, be it for grave crime, be it for light offence, is to be brought against any ordained clerk save before his bishop. (*Leg. Hen. I*, 57, § 9.) When a clerk was brought before a lay court, he proved his claim to benefit of clergy by reading, and he was turned over to the ecclesiastical court, as only the clergy were generally able to read. This gave rise to the extension of the benefit of clergy to all who could read. By statute in the reign of Edward III (25 Edw. III, c. 4) it was enacted that all manner of clerks, secular and religious, should enjoy the privilege of Holy Church for all treasons and felonies, except those immediately affecting his Majesty. This provision was applicable also to all who could read. In the reign of Henry VII a distinction was drawn between persons actually in Holy orders and those who in other respects secular, were able to read, by which the latter were allowed the benefit of the clergy only once, and on receiving it were to be branded on the left thumb with a hot iron in order to afford evidence against them on a future occasion. Henry VIII (28 Hen. VIII, c. 1, § 32, Hen. VIII, c. iii, § 8) had even the clergy branded for the first time, but Edward VI abolished this, and excepted atrocious crimes, murder, poisoning, burglary, highway robbery, and sacrilege from benefit of clergy (1 Edw. VI, c. xii § 10), but peers of the realm were to be discharged in every case for the first offence, except murder and poisoning, even though unable to read. After a layman was burnt on the hand, a clerk discharged on reading, a peer without either burning or penalty, they were delivered to the ordinary to be dealt with according to the ecclesiastical canons. The clerical authorities instituted a kind of purgation. The party was required to take an oath of innocence, twelve compurgators were called to testify to their belief in the falsehood of the charges. Afterwards he brought forward witnesses to completely establish his innocence. If found guilty, the culprit was degraded if a clerk, and all were compelled to do penance. Many escaped by perjury and leniency; hence steps were taken in the more atrocious crimes to annul the privilege. Later this privilege was allowed only after conviction for men who claimed it because able to read, and then they knelt to the court praying for their clergy and (18 Elizabeth, c. vii, § 2) the party was burnt on the hand, and discharged without any interference of the Church to annul his conviction. The judges were empowered (18 Elizabeth, c. vii) to direct the prisoner to be imprisoned for a year or a shorter period. Women in the reign of William and Mary were admitted to the privileges of men in clergyable felonies, on praying the benefit of the statute (3 and 4 Will. and M. c. ix, § 5). The idle ceremony of reading was abolished by 5 Anne c. vi, and all before entitled were now admitted to its benefit. Branding was abolished and the offenders could be committed to a house of correction for six to twenty-four months. (*Geo. IV*, c. xi; 6 *Geo. I*, c. xxiii provides for felonious thefts the transportation of offenders to America for seven years.) The privilege of benefit of clergy was entirely abolished in England in 1827, by Statutes 7 and 8 *Geo. IV*, c. xxviii, § 6. In the colonies it had been recognized, but by Act of Congress of 30 April, 1790, it was taken away in the federal courts of the United States.

Traces of it are found in some courts of different states, but it has been practically outlawed by statute or by adjudication. It is now universally obsolete in English and American law.

R. L. BURTSELL.

**Benettis, JEREMIAH**, a Friar Minor Capuchin and historical writer, d. in 1774. He belonged to the Province of Piedmont in Italy, and left two valuable historical treatises. The first, entitled "*Chronica et critica historiae sacrae et profanae*" (Rome, 1766), deals with various astronomical questions and the religious rites and ceremonies of ancient peoples, and was written with a view to facilitate the study of Sacred Scripture. In the second work, entitled "*Privilegium S. Petri vindicia*" (Rome, 1756-66), he gives a history of the primacy of the Roman Pontiff.

HURTER, *Nomenclator*, III, 111.

STEPHEN M. DONOVAN.

**Benevento (BENEVENTANA)**, ARCHDIOCESE OF.—Benevento, the ancient *Beneventum*, the principal city of the province of the same name in Campania, is situated on the River Calore, and contains a population of 25,000. It was founded at a very early period by the Samnites, who named it *Maleventum*. In 275 B. C. the Romans, having conquered Pyrrhus not far from there, took possession of the city and changed its name to the present form. In 268 B. C. a Roman colony was established at *Beneventum*, which was enlarged and beautified by Augustus and other emperors. The arch of Trajan (*porta aurea*), entirely of Parian marble, still bears eloquent witness to the munificence of that emperor. In 545 the city was captured and destroyed by Totila, King of the Goths, but was rebuilt in 589 by the Lombard King Autharis, and made the seat of a duchy. In 1047 it fell into the hands of the Normans, who, however, were forced to relinquish it by Emperor Henry III in 1053.

The city, with the surrounding territory, was then turned over to Pope Leo IX, a relative of the emperor, in payment of the annual tribute rendered the Holy See by the Church of Bamberg; but shortly afterwards it was reoccupied by the Normans. The pope thereupon placed himself at the head of a powerful army "*ut saltem humano terrore respicerent, qui divina iudicia minime formidant*" (that those who fear not the judgments of God may at least repent through human dread; Ep. VII ad Constantin. Monomach.). The opposing forces met at the Dragonara, and after a severe struggle the papal troops were put to flight, and the pope himself was forced to retire to Civitella. There Leo wrought more by word of mouth than the arms of all his soldiers had been able to accomplish. The Norman leaders swore fealty to the sovereign pontiff, conducted him back to Benevento with great honour, and continued from that time forward the most devoted and loyal champions of the Holy See. This warlike expedition of Leo IX called forth the severe criticism of St. Peter Damian. Thenceforward Benevento was a part of the territory of the Holy See, which was always represented there by a delegate. From 1769 to 1774 it was in the possession of Ferdinand I of Naples, and in 1806 Napoleon made Talleyrand Duke of Benevento. In 1814 it again came under the jurisdiction of the Holy See; and from 1838 to 1841 Joachim Pecci, later Leo XIII, was civil delegate to this part of the papal state in the heart of the Kingdom of Naples, and won great praise for his wise administration and his stern repression of brigandage. In 1860 Benevento was annexed to the Kingdom of Italy. Most noted among the citizens of Benevento during ancient times are: Papinianus, the

jurisconsult, and Arbilius, the grammarian; Popes Felix IV, Victor III (Daferio), and Gregory VIII (Alberto di Morra) who were natives of Benevento; Cardinal Pietro Morra, Giovanni da Castrocello, Dionisio Lorero, Nicolò Coscia, Camillo Domenio, Gennaro de Simone, Bartolommeo Pacca, and Carlo Maria Pedicini.

Benevento is the seat of an archdiocese, which has as suffragans the Dioceses of Alife, Ariano, Ascoli, and Cerignola, Avellino, Boiano, Bovino, Larino, Lucera, San Severo, Sant'Agata de' Goti, Telesse, and Termoli. According to local tradition, the Christian Faith was first preached there by St. Potinus, at the command of St. Peter the Apostle. At a later period, during the persecution of Diocletian, we find mentioned as bishop of this city St. Januarius, who together with Proculus, his deacon, and two laymen, was imprisoned and beheaded at Pozzuoli in 305. His relics are preserved in the Cathedral of Naples, which also contains the remains of St. Agrippinus who was Bishop of Benevento. In 929 Benevento was raised to the dignity of a metropolitan see.

The cathedral, founded at a very early period, was rebuilt in 1692, after being destroyed in the earthquake of 1688. The interior, divided into five naves, has fifty-four marble columns, which furnish a magnificent perspective. Mention should also be made of the two thrones near the high altar, carved about 1311 by a sculptor named Nicola. Of special historical interest is the so-called "altar of peace", erected in memory of the peace concluded at Benevento between Clement VII and Charles V, after the famous sack of Rome (1527). The façade is entirely of a yellowish marble; the great central door is of bronze, of Byzantine workmanship, brought from Constantinople in the twelfth century. In the spacious vestibule are the tombs of the Lombard dukes. The bell tower, constructed almost entirely of the fragments of ancient monuments, was begun by Bishop Capo di Ferro (1254). The church of St. Sophia, in form a great rotunda, is also deserving of mention. It dates back to the Lombard epoch, if indeed it is not a pagan temple converted into a church. The cupola is particularly remarkable, being set upon six antique Corinthian columns. The church of Santa Maria delle Grazie is held in great veneration; adjoining it is a monastery, the abode first of Benedictines, but since 1450 of monks of the Minor Observance. The statue of the Madonna with the Child in her arms is said to have been brought from Greece by St. Artales, niece of Narses, general of the army of Justinian.

A number of councils were held at Benevento: those of 1059, 1061, and 1087, in the last of which Victor III excommunicated Guibert, the Antipope; that of 1091, in which the excommunication was renewed, and a number of disciplinary canons formulated; that of 1108 against lay investitures; those of 1113 and 1117, the latter against the Antipope Burdinus; others in 1119, 1314, 1470, 1545, as recorded by Harduin, in the seventh volume of his collection of the Councils. In the following centuries the Archbishops of Benevento frequently held provincial synods. Gian Battista Foppa (1643) and Vincenzo Maria Orsini, O. P. (1686), later Pope Benedict XIII, did much to restore and beautify the churches of the city.

Among the bishops famous in the history of the Church of Benevento, passing over some saints of uncertain date, are: St. Marcianus (533), St. Zenoe (543), St. Barbatus (663), who had a golden serpent, an object of idolatrous worship of the Lombards, melted and made into a sacred paten which was preserved up to the time of the French invasion in 1799; Arnaldo, a Franciscan monk (1533); Gaspare Colonna, generous in the decoration of churches, who, at the time of the Colonna conspiracy against Pope Eugenius IV, was imprisoned with the others, but quickly released; Giovanni della Casa, a distinguished writer

and Italian orator (1544); Cardinal Giacomo Savelli (1560), founder of the seminary; Cardinal Pompeo Arrigoni (1607); Cardinal Sinibaldo Doria (1731) who suffered much from the intrigues of Nicolò Coscia, administrator under the above-mentioned Archbishop Orsini. Doria founded a great library, subsequently enlarged by Cardinal Francesco Maria Banditi in 1775; Cardinal Domenico Spinucci (1796); Cardinal Camillo Siciliano di Rende (1879).

The Archdiocese of Benevento has a population of 590,500 Catholics, with 138 parishes, 460 churches and chapels, 839 secular priests, 70 priests belonging to religious orders, 350 seminarists, 40 lay brothers, and 120 members of female religious orders.

U. BENIGNI.

**Bengtsson, JÖNS OXENSTJERNA** (JOANNES BENEDICTI), Archbishop of Upsala, Sweden, b. 1417; d. in 1467. He was a member of the illustrious Oxenstjerna family, various representatives of which had already become prominent in the public life of Sweden. At the time of his appointment to the archbishopric (1448) Bengtsson was archpriest of the chapter of Upsala. He asked the Council of Basle for a confirmation of his election, and he had himself consecrated (30 June, 1448) by his suffragans, the day after they had crowned Karl Knutsson Bonde as king. On 1 July, Archbishop Bengtsson crowned the queen. The confirmation of his appointment by Pope Nicholas V did not reach him until the ensuing year.

The importance of Archbishop Bengtsson is political rather than ecclesiastical, though his pastoral visitations show that he was not unmindful of the spiritual welfare of those under his care. In 1457, as Archbishop of Upsala, he received from the pope the title of Primate of Sweden; the Archbishops of Lund, however, were permitted to retain their title of Primate of the Church of Sweden. The life of Archbishop Bengtsson fell in Sweden's most troublous days. By the Union of Calmar (1397) the three kingdoms of Sweden, Denmark, and Norway, while preserving their individual independence, were to be ruled by one king, and the foreign affairs of all three were to be regulated as those of a united country. The advantages of this union were lost sight of on the death of its promoter, Queen Margaret (1412). Her successor, Erik of Pomerania, by a change of policy, aroused in Sweden a spirit of discontent, which, after successive revolutions and the election of Karl Knutsson as viceroy (1438), resulted in the deposing of Erik. His successor, Christopher of Bavaria, died in 1448. In Sweden, which was torn by the strife between the partisans of a national kingdom and those of a government in union with Denmark and Norway, the national party elected Karl Knutsson king. A few months later Christian I became King of Denmark, and two years afterwards also King of Norway. Meanwhile, dissensions increased in Sweden. As King Karl Knutsson, to escape from money troubles, increased taxes and confiscated church property, dissatisfaction spread among clergy and people, and Archbishop Bengtsson placed himself at the head of the opposition (1457). Entering his cathedral, he laid aside his pontifical insignia, took up helmet, breastplate, and sword, and announced his intention not to resume his pontifical robes until Karl Knutsson should be banished from the country. Knutsson was forced to yield and fled to Germany. Thereupon Christian I came from Denmark and was formally recognized King

of Sweden, and crowned at Stockholm by Archbishop Bengtsson.

General discontent soon followed, especially when Christian I, on becoming heir to his uncle, Duke Adolph of Holstein, found himself in great financial straits. To meet his obligations, he levied enormous taxes, even in Sweden, without exempting ecclesiastics, religious foundations, or the moneys collected by papal mandate to defray the expenses of a crusade against the Turks. During a temporary absence of Christian I in Finland, the archbishop held the regency of Sweden; seeing the people in revolt against him and the heavy imposts, he took up their cause and suspended the collection of taxes. The king showed his displeasure by arresting the archbishop and sending him to Denmark. A revolution broke out afresh in Sweden, Karl Knutsson was recalled to the throne, and Christian I, to recover the country, became reconciled with his prisoner. Bengtsson went at once to Sweden, where he roused the people against King Karl Knutsson, whom he excommunicated. The archbishop succeeded finally in bringing about Knutsson's abdication, and the recognition of Christian I once more as King of Sweden. In reality, however, the archbishop held the reins of power and administered affairs as though he were the actual sovereign. He was unable to sustain this rôle. Discontented factions combined against him and, in 1466, elected Erik Axelsson Thott as regent, whereupon Archbishop Bengtsson was compelled to retire. Dissensions continued, and the king of the Swedish party, Knutsson, once more took the place of the king who represented the union of the three countries. The archbishop found an asylum with his friend Magnus Gren, on the island of Öland, where he died 15 December, 1467, "poor and exiled, regretted by no one, hated by many, and feared by all".

The key to the political activity of Bengtsson is to be found in the ambition that was a part of his character—ambition for his family and his country. There was a strong antagonism between the great Oxenstjerna family, to which the archbishop belonged, and the Bonde family, of which the king, supported by the national party, was a member. Moreover, the archbishop was aware that the nobility and the leading men of Sweden, before the Union of Calmar, had in general failed to respect the clergy and the property of the Church. In a union of Sweden with Denmark and Norway, he foresaw a limitation of the power of the Swedish nobles; in his character of archbishop, it was clear to him that such curtailment would be a safeguard to the temporalities of the Church.

**Bengy**, ANATOLE DE, a martyr of the French Commune, b. at Bourges, 19 September, 1824; d. in Paris, 26 May, 1871. He spent nine years in residence at the Jesuit College of Bruges, and in 1843 entered the Society of Jesus. During the Crimean War he served as chaplain to the French soldiery and thereafter until 1870 devoted his life to college work. When the Franco-Prussian War broke out, he again sought and obtained the post of chaplain. He rendered signal service to the sick and wounded during the siege of Paris. After the war he retired to the school of Sainte-Geneviève to resume his work as pro-

fessor, but he did not long enjoy the tranquillity of school-life. At midnight, 3 April, a battalion of National Guards surrounded the school and placed all the Jesuit inmates under arrest as hostages of the Commune. De Bengy cheered his companions during the dark days of anticipated death. On Friday, 26 May, with two Jesuit companions and some forty other victims, he was led to the court of the Cité Vincennes, Rue Haxo, where he met his death joyfully amid the frenzied shouts of the maddened Communists.

D. J. KAVANAGH.

**Benignus** (BENEN), SAINT, date of birth unknown; d. 467, son of Seenen, an Irish chieftain in that part of Ireland which is now County Meath. He was baptized by St. Patrick, and became his favourite disciple and his coadjutor in the See of Armagh (450). His gentle and lovable disposition suggested the name Benen, which has been Latinized as Benignus. He followed his master in all his travels, and assisted him in his missionary labours, giving most valuable assistance in the formation of choral services. From his musical acquirements he was known as "Patrick's psalm-singer", and he drew thousands of souls to Christ by his sweet voice. St. Benignus is said not only to have assisted in compiling the great Irish code of Laws, or *Senchus Mor*, but also to have contributed materials for the "Psalter of Cashel", and the "Book of Rights". He was present at the famous synod which passed the canon recognizing "the See of the Apostle Peter" as the final court of appeal in difficult cases, which canon is to be found in the Book of Armagh. St. Benignus resigned his coadjutorship in 467 and died at the close of the same year. His feast is celebrated on the 9th of November. Most authorities have identified St. Patrick's psalm-singer with the St. Benignus who founded Kilbannon, near Tuam, but it is certain, from Tirechan's collections in the Book of Armagh, that St. Benignus of Armagh and St. Benignus of Kilbannon were two distinct persons. The former is described as son of Seenen of County Meath, whilst the latter was son of Lugni of Connaught, yet both were contemporaries. St. Benignus of Kilbannon had a famous monastery, where St. Jarlath was educated, and he also presided over Drumlease. His sister, Mathona, was Abbess of Tawney, in Tirerrill.

CAPGRAVE, *Nova Legenda Anglia* (1516), fol. 36, for the oldest lives of the saint; see also HARDY, *Descriptive Catalogue*, etc., I, 89; WARE-HARRIS, *Antiquities of Ireland*, I, 24, II, 6; O'HANLON, *Lives of Irish Saints* (9 November), XI; WHITLEY STOKES (ed.), *Tripartite Life of St. Patrick*, Rolls Series (London, 1887), in index s. v. BENEN, BENIGNUS; *Bibl. Hagiogr. Lat.* (1898), 172, 1324; FORBES in *Dict. of Christ. Biogr.*, I, 312. The very ancient *Leabhar-na-geart* or *Book of Rights*, said to have been compiled by BENIGNUS was edited by O'DONOVAN for the Celtic Society (Dublin, 1847). BENIGNUS is also said to have been the original compiler of the *Psalter of Cashel* (see CASHEL).

W. H. GRATTAN FLOOD.

**Benignus of Dijon**, SAINT, Martyr, honoured as the patron saint and first herald of Christianity of Dijon (Divio), an old city in the territory of the Gallic tribe of the Lingones (*civitas Lingunum*, Langres). It is an historical fact that Benignus suffered martyrdom in a persecution of the third century and was publicly honoured as a martyr. His feast falls on 1 November; his name stands under this date in the so-called Martyrology of St. Jerome (ed. Rossi-Duchene; cf. *Acta SS.*, November, II, 138). Early in the sixth century no particulars concerning the person and life of Benignus were known at Dijon. According to Gregory of Tours the common people revered his grave; but Bishop Gregory of Langres (507-539 or 540) wished to put an end to this veneration, because he believed the grave to belong to a heathen. Having learned in a vision at night

that the burial spot was that of the holy martyr Benignus, he had the tomb in which the sarcophagus lay restored, and he built a basilica over it. About this date there was a sudden appearance of Acts of the martyrdom of the saint, which were brought to Dijon by a pilgrim on the way to Italy (Gregor. Tur., *De gloriâ martyrum*, I, li; Migne, P. L., LXXI, 752). These accounts have no historical basis; according to them St. Polycarp of Smyrna had sent Benignus as a missionary to Dijon, where he had laboured as a priest and had finally died a martyr. For some unknown reason his death is placed in the persecution under Aurelian (270-275). The author had not noticed that the sending by Polycarp and the martyrdom under Aurelian are chronologically irreconcilable. Duchesne has proved that these "Acts" belong to a whole group of legends which arose in the early years of the sixth century and were intended to describe the beginnings of Christianity in the cities of that region (Besançon, Autun, Langres, Valence). They are all falsifications by the same hand and possess no historical value.

Bénigne* (Autun, 1859); BEAUNE, *De la mission de S. Bénigne et du martyre des SS. Jumeaux à Langres* (Langres, 1861).

J. P. KIRSCH.

**Benin**, VICARIATE APOSTOLIC OF THE COAST OF (ORÆ BENINI), includes an extensive negro country and the former kingdom of Western Equatorial Africa, in Upper Guinea, on the Bight of Benin, or Gulf of Guinea. In 1860 a mission was founded in the former Kingdom of Dahomey, but as this name was disliked by the inhabitants the title was changed to "Vicariate of the Coast of Benin". The mission of Dahomey was separated from Benin in 1882 and made a Prefecture Apostolic, in 1901 a Vicariate Apostolic. On 10 May, 1894, the Niger mission was also cut off. Since the latter date the Vicariate of the Coast of Benin has been bounded by Dahomey, the Niger, and the Bight of Benin; it includes the British colony of Lagos (Southern Nigeria), the native Kingdom of Porto Novo (under French protection), and the native kingdoms of Yoruba, Isebou, Ibadan, etc.

The region is rich in vegetable resources. Cotton is indigenous and is woven by the women. Among the pagan blacks human sacrifices are frequent; cruelty in atrocious forms is characteristic of these natives. The coast is indented with estuaries, some of considerable breadth and studded with islands. Behind the flat shores plateaux rise to heights of 2000 and 3000 feet. There is an extensive traffic in salt, palm oil, and other staples. The area is about 55,985 square miles, about one-half of which belongs to Great Britain; the population in 1901 numbered 1,500,000, and there were in the territory about 308 Europeans. The appointment of a vicar Apostolic dates from 1891; the residence is at Lagos, which in 1901 had a population of 41,847, of whom 233 were Europeans. The vicar Apostolic is chosen from the members of the Society for African missions of Lyons to whom the mission has been entrusted. The development of this mission has been greater than that of Dahomey, as the British Government grants the missionaries greater freedom for their spiritual labours and gives subsidies to the mission schools when this course furthers British interests. The first converts among the blacks were ex-slaves returned from Brazil; for a long time they were catechized by one of their own race, known as "Padre Antonio", who kept alive the Faith till the arrival of the Fathers from Lyons (Louvè, 291). The missionaries number 26 regular clergy and 1 lay brother; they have charge of about 15,500 Catholics. The

chief stations are: Lagos, situated on an island at the mouth of the Ogun, and known as the "African Liverpool", Titolo, Toco, Abeokuta, Oyo, Ibadan, Ishurè, Ibowon. Less important and more irregularly served are Ebouté-Meta, Bada-gri, Iboaké, Awé, Ishwo. The vicariate has a number of flourishing schools with 2,059 pupils, of whom 800 are in the school at Lagos. There are 25 catechists. Orphanages and hospitals have also been founded, and a promising agricultural school exists at Toco. The principal hospital is the one conducted at Abeokuta by Father Coquard, commonly called Dr. Coquard; he is consulted as a physician as far as Lagos, a town where there are English physicians. The King of Aqué, the head of the federation of Abeokuta, grants a subsidy to the hospital and, although a heathen, is present with his followers at the chief festivals of the Catholic mission. The mission territory includes three large cities: Abeokuta, Ilorin, and Ibadan. Constrained to defend themselves against raids from Dahomey, the native blacks have gathered in Abeokuta, on the left bank of the Ogun, in large numbers, variously estimated from 150,000 to 200,000, and have surrounded the city, or collection of 140 villages, with a wall twenty-four miles in circuit. Ibadan has a reputed population of 150,000 and Ilorin 60,000 to 80,000. As yet no Catholic missions have been established in them.

ALBERT BATTANDIER.

**Benito**, MARCUS. See MIJES.

**Benjamin** (Heb. בְּנִימִן, *binjāmin*, "son of the right hand"). (1) The youngest son of Jacob born of Rachel. His original name was Ben-oni (Heb. בְּנֵי אֹנִי, "son of my sorrow"), given to him by his mother just before she died in child-birth, but was changed to Benjamin by Jacob (Gen., xxxv, 18). The Samaritan reading, *Benjāmin*, i. e. "son of days", would refer to the advanced age of Jacob at the time of Benjamin's birth. Upon the loss of Joseph, Benjamin's full-brother, Jacob's affections were bestowed upon Benjamin, and it was only with great reluctance that he permitted his beloved child to accompany his brethren to Egypt to purchase corn (Gen., xlii, 36; xliii, 15). Joseph, too, showed a marked preference of Benjamin to his other brethren and puts the latter's mind concerning him to a rather severe test (Gen., xlii, xlii). (2) The son of Balan and grandson of Benjamin, Jacob's son (I Paralip., vii, 10). (3) One of the sons of Herem who had married a foreign wife in the days of Esdras (I Esdras, x, 32). (4) One of those who took part in the rebuilding of the walls of Jerusalem at the time of Nehemias (II Esdras, iii, 23; cf. xii, 33). (5) The name of a gate in the northern wall of Jerusalem (Jer., xxxvii, 12; Zach., xiv, 10). It is not mentioned by Nehemias in his enumeration of the gates of Jerusalem (II Esdras, iii). (6) The name of the northern gate of the Temple, where Jeremiah was imprisoned (Jer., xx, 2; xxxviii, 7, 14), probably the same as "watch-gate" (II Esdras, xii, 38) and as the one spoken of in Jeremiah (viii, 3, 5, 16; ix, 2). (7) Name of eastern gate of the ideal Jerusalem as drawn by Ezechiel (Ezech., xlviii, 32). (8) Name of one of the twelve tribes of Israel which during the sojourn in Egypt numbered 35,400 warriors, and according to a second census 45,600 (Num., i, 36; xxvi, 41). The territory assigned to it is defined in Josue, xviii, 11 sqq. It was about twenty-five miles in length and twelve in breadth, and was bounded on the north by Ephraim, on the east by

the Jordan, on the south by Juda, and on the west by Dan. The nature of the territory was conducive to breed a race of hardy warriors such as the Benjamites who are depicted by Jacob as "a ravenous wolf, in the morning [he] shall eat the prey, and in the evening shall divide the spoil" (Gen., xlix, 27). During the period of the Judges the tribe was well nigh exterminated on account of a crime committed within its territory (Jud., xix-xxi). It was from this tribe that Saul, the first king of the monarchy, was chosen (I Sam., ix, 1, 2, 19; x, 1, 20 sqq.). After the death of Saul the tribe of Benjamin remained loyal to his son, Ishboseth (II Sam., ii, 9 sqq.), until David became king of all Israel (II Sam., v, 1-5). At the time of the revolt from Rehoboam the tribes of Benjamin, Juda, and Simeon remained true and formed the Kingdom of Juda (III Kings, xii, 21), which also constituted the nucleus of the restored nation. St. Paul glories in belonging to the tribe of Benjamin (Philipp., iii, 5). F. X. E. ALBERT.

**Benkert, FRANZ GEORG**, a German theologian and historical writer, b. 25 September, 1790, at Nordheim, near the mountain district of Rhön, Germany; d. 20 May, 1859, at Coburg. After finishing his studies at the gymnasium in Münnerstadt he studied theology at Würzburg and was ordained priest in 1816. He was first a curate at Gauretersheim and, in 1821, was made vice-principal of the theological seminary at Würzburg. While holding these positions Benkert continued his studies. In 1823 he received a doctorate, having offered the dissertation: "De Duplici Missæ Catechumenorum et Fidelium". From 1823 to 1838 he had the position of principal, and in 1838 he was made a cathedral canon and cathedral dean.

At that time, in common with the ecclesiastics of other dioceses, the clergy of the Diocese of Würzburg suffered greatly from the religious disease of the age, "Josephinism", and were inclined to a sickly and enervating rationalism. The destructive effects of these rationalistic tendencies showed themselves everywhere in the life of the Church. Even when acting as vice-principal Benkert showed himself deserving of much praise in that he sought to re-awaken in the younger clergy the spirit of the Church and to cultivate in them an interest in, and a knowledge of, the old theological schools. In 1822 he founded the periodical: "Der Religionsfreund für Katholiken mit Beiträgen religiös gesinnter Männer". He issued the periodical in the desire to increase the influence of his efforts and also to win over the older ecclesiastics.

The periodical appeared in six volumes, 1822-28. It attracted much attention and was copied in France in the "Ami de la Religion". In connexion with G. J. Saffenrevter he issued, 1828-40, a continuation of this, his first, periodical, entitled: "Allgemeiner Religions- und Kirchenfreund und Kirchenkorrespondent, eine theologische und kirchenhistorische Zeitschrift". At the same time he published, 1828-34, a periodical entitled: "Athanasia, eine theologische Zeitschrift, besonders für die gesamte Pastoral, für Kirchengeschichte, auch für Pädagogik". This appeared in sixteen volumes. He continued the same publication from 1835 to 1840 in connexion with J. M. Düx. As Benkert was more apt to be swayed by his zeal for the right than by prudence, he made many enemies, especially among the older clergy. He therefore severed his connexion with his periodicals in 1840, and devoted himself to the study of the history of his native district. His historical writings have only a local interest. A larger and more important work which he undertook on the Rhön was never completed.

KREZ, *Litteraturzeitung* (1824), II, 101 sqq.

PATRICIUS SCHLAGER.

**Benno, SAINT**, Bishop of Meissen, b. as is given in biographies written after his lifetime, about 1010; d., probably, 16 June, 1106. He is said to have been the son of a Count Frederick von Woldenberg (Bulenburg) and to have been educated by his relative St. Bernward of Hildesheim. But these statements and the date of his birth cannot be proved to be historically correct. It is, however, certain that he was a canon of Goslar about the middle of the eleventh century, and that he was made Bishop of Meissen in 1066. At that time the great struggle between the Emperor Henry IV and the papacy over investiture, which involved the independence of the Church, was raging. Benno took part in the revolt of the Saxon nobles against Henry (1073). In 1075 he was taken prisoner by the emperor, who was then victorious, and kept in prison for a year. As, later, he upheld the party of Pope Gregory VII he was deposed at the synod of Mainz, 1085, by the prelates belonging to the imperial party and Felix, a partisan of the emperor, received the bishopric. Three years later Benno recognized the Antipope Wibert (Clement III) and obtained his see again; at a later date, however, he separated himself from his schismatical party and recognized Urban II (1088-99) as the rightful pope. The authorities of the eleventh and twelfth centuries contain no further information as to his life.

The Diocese of Meissen extended towards the east as far as the River Bober and included Upper and Lower Lausitz, which were inhabited by Slavs. According to later tradition Benno devoted the last years of his life to missions among these heathen tribes. He was reputed to be the founder of the cathedral of Meissen and in after-ages was the most venerated bishop of the diocese. He was canonized by Pope Adrian VI in 1523 (Bull "Excelsus Dominus" in Bullarium Romanum, Turin ed., VI, 18 sqq.), and his relics were, with great solemnity, exposed for veneration, 16 May, 1524. Luther took this occasion to publish his lampoon "Wider den neuen Abgott und alten Teufel, der zu Meissen soll erhoben werden". After Saxony had adopted Protestantism Duke Albert V of Bavaria had the relics of the saintly bishop transferred to Munich and placed in the church of Our Lady (now the cathedral). Since this time Benno had been the patron saint of Munich; his feast is celebrated 16 June. He is represented with a fish and a key; according to a legend he gave the key of the cathedral of Meissen, when starting on his journey to Rome, to one of the canons with the command to throw it into the Elbe as soon as Henry IV should be excommunicated. This was done; after Benno's return a large fish was caught in the Elbe and the key was found hanging to one of its fins, so that the bishop received it again.

*Acta SS.*, June, III, 148 sqq., contains the *Epitome Vetus* and the *Vita* by EMBER; the *Vita* was first published at Leipzig, 1512, and claims to be founded on an older life which has been lost, but this is disputed with good reason; LANGER, *Kritik der Quellen zur Geschichte des hl. Benno*, in the publications of the Historical Society of the city of Meissen (1884), I, 3, pp. 70-95; IDEM, *Bischof Benno von Meissen in op. cit.* (1886), I, 5, pp. 1-38; (1888), II, 2, pp. 99-144; DÖRNER, *Aktenstücke zur Gesch. der Vita Benno's ep. Misnensis in Neues Archiv für adels. Gesch.* (1886), 131 sqq.; SEYFFART, *Ossilegium Benno's seu vita et acta spiritus* (Munich, 1765); CRAMMER, *Apologia Benno's sive S. Benno vindicatus* (Munich, 1773); MACHAT-SCHKE, *Gesch. der Bischöfe des Hochstifts Meissen* (Dresden, 1884); WILL, *St. Benno Bischof von Meissen* (Dresden, 1887); KLEIN, *Der hl. Benno* (Munich, 1904).

J. P. KIRSCH.

**Benno II**, Bishop of Osnabrück, b. at Lünigen in Swabia; d. 27 July, 1088, in the Benedictine monastery of Iburg near Osnabrück. His parents sent him at an early age to the monastic school of Strasburg where the learned Herman (Contractus) of Reichenau was then teaching. Having completed his education and made a pilgrimage to the Holy Land, he taught for some time at Speyer in Rhenish Bavaria. On account of his skill in architecture he

was made imperial architect by Emperor Henry III and, as such, supervised the construction of numerous castles and churches in the empire. When the Rhine, which flowed close to the Cathedral of Speyer, threatened to undermine the foundation of that building, Benno saved the majestic structure by changing the course of the river. In 1047 he became teacher at the Benedictine school of Goslar (Hanover) and, shortly after, was made head master of the cathedral school at Hildesheim. In 1051 he accompanied Azelin, bishop of that see, on the emperor's Hungarian campaign and upon his return was made provost of the Cathedral of Hildesheim and archpriest at Goslar.

In 1069 Benno was consecrated Bishop of Osnabrück, then vacant through the death of Benno I. During the conflict between Gregory VII and Henry IV, Benno for a long time sided with the emperor. When, at the Synod of Worms, in 1076, Gregory VII was deposed, Benno, like most other German bishops, signed the formula of deposition and incurred ecclesiastical excommunication. With some other well-meaning excommunicated bishops, Benno hastened to Italy, where the pope freed them from the ban at Canossa, before Henry himself arrived there to feign repentance. After the emperor's second excommunication, Benno tried to bring about a reconciliation, but, seeing the insincerity of the emperor, gave up in despair and retired to the monastery of Iburg, which he had founded in 1070. In a little house near the monastery he lived according to the rule of the monks during the week, while on Sundays and holydays he assisted at his cathedral in Osnabrück. Benno's piety and justice made him much beloved by his flock. Strunck (*Westphalia Sancta*, Paderborn, 1855) and Heitemeyer (*Die Heiligen Deutschlands*, Paderborn, 1889) include him in the list of saints. Kerler (*Die Patronate der Heiligen*, Ulm, 1905) says that he is invoked against grasshoppers, because he once dispersed them by his prayers.

THYEN, *Mittelalt. des hist. Vereins zu Osnabrück*, IX, 1-243; WATTENBACH, *Geschichtsquellen im Mittelalter* (Berlin, 1894), II, iii. The most important source is *Vita Bennonis*, by NORBERT, a contemporary of Benno and third Abbot of Iburg (1085-1117). It is published in *Mon. Germ. Hist.: Script.*, XII, 58-84. See also BRESLAU, *Die echte und interpolierte Vita Bennonis in Neues Archiv der Gesellschaft für ältere deutsche Geschichtskunde* (Strasburg, 1902), 77-135.

MICHAEL OTT.

**Benoît, MICHEL**, b. at Autun (or Dijon), France, 8 October, 1715; d. at Peking, 23 October, 1774, a Jesuit scientist, for thirty years in the service of Kien Lung, Emperor of China. He studied at Dijon and at St. Sulpice, Paris, and entered the Jesuit Novitiate at Nancy, 18 March, 1737. After three years of renewed entreaties he was granted his desire of the Chinese mission, but before his departure completed his astronomical studies at Paris under De l'Isle, de la Caille, and Le Monnier, who attached much importance to his later correspondence. On his arrival at Peking, in 1774 (or 1775), a persecution was raging against the missionaries in the provinces; still, as their scientific ability made them indispensable to the government, Father Benoît was retained at court and entrusted with the task of designing and carrying out a great system of decorative fountains in the royal gardens. He spent many years in this work, for which he evinced rare talent. He built European houses within the enclosure of these gardens and in front of one, in the Italian style of architecture, he constructed a curious water clock. The Manchus characterize the twelve hours of their day (twenty-four hours, European time) by twelve animals of different species. On two sides of a large triangular basin of water Father Benoît placed figures of these animals, through the mouths of each of which successively, for two hours, was forced a jet of water by some ingenious mechanical device.

While applying himself to his astronomical studies he taught the emperor the use of the reflecting telescope. Among his numerous works were: (1) A large map of the world (twelve and a half by six and a half feet), to which he added valuable astronomical and geographical details.—(2) A general chart of the Empire and surrounding country, engraved on copper, though at the outset he was as little versed in this art as were his Chinese collaborators, whom he had chosen from the best wood-engravers in the country. The work was done on 104 plates (two feet two inches by one foot two inches, Chinese measure). Sixteen designs of the emperor's battles had been engraved on copper in France, at the expense of Louis XV, and when these were sent to China, with numerous prints made from them, the emperor immediately desired Father Benoît to print further copies. This required new presses for these delicately wrought French plates, new methods of wetting paper, distributing ink, etc. The result was successful, even rivaling the work done in France, but it was Father Benoît's last service. He died of apoplexy, ripe in religious and apostolic virtues. The emperor said of him, "This was a good man and generous in his service"; a missionary remarked, on hearing this, that, had the words been said of a Tatar or Chinese, they would have rendered illustrious a long line of descendants. Father Benoît was the author of many letters preserved in the "Lettres édifiantes"; he translated into Chinese "The Imitation of Christ", while in the "Mémoires sur les Chinois" are many memoirs, descriptions, and sketches ascribed to him, but unsigned.

**Benoît de Canfield.** See FYTCHE, WILLIAM BENEDICT.

**Benthamism.**—Jeremy Bentham, an English jurist and reformer, b. at Houndsditch, London, 15 February, 1748; d. in London 6 June, 1832, was of middle-class parentage. After passing through Westminster school he went to Oxford, where he took his Bachelor's degree in 1763 and his Master's degree in 1776. He qualified for the Bar, but soon, disgusted with what he called the "Demon of Chicanery", he abandoned the practice of law and devoted himself to the study of philosophers then in favour, chiefly Locke, Hume, Montesquieu, Helvétius, Beccaria, and Barrington. Under the influence of these writers, he entered upon what proved to be a lifelong and fruitful career of speculation upon the principles of legislation and political government. Bentham's primary purpose was not the construction of theories or the establishment of abstract principles. He first attacked specific abuses in the English system of penal legislation. In tracing these abuses to their source he was led to investigate the ultimate principles of law; and subsequently he undertook to construct a complete science of legislation. In like manner, his efforts to lay bare the evils existing in the legislative machinery carried him on to assail the defects of the British Constitution itself.

He published anonymously, in 1776, his first noticeable work, "A Fragment on Government", in the preface of which he formulated his celebrated utilitarian principle, "the greatest happiness of the greatest number", which he borrowed from Beccaria or Priestly. It is the use which he makes of this principle that characterizes Bentham among philosophers. By it exclusively he would estimate the value of juridical, political, social, ethical, and religious systems and institutions; does utility justify their existence? In 1779 Bentham's chief work, "Introduction to the Principles of Morals and Legislation", appeared. It is the only important one that was published by himself alone; all the others

were compiled with more or less co-operation from his followers. One of these disciples, E. Dumont, helped to secure for Bentham, at the opening of the nineteenth century, international fame as a legal and social reformer by arranging Bentham's writings and publishing them in French. About this period he was engaged in many philanthropic schemes, the chief of which was one for the reform of the convict prison system. This undertaking, though aided by the British Government, proved a failure. After the peace of 1815, when the codification of laws was occupying a large place in the attention of statesmen, Bentham's writings were studied, and he himself consulted, by jurists of Russia, Spain, Germany, and some South American countries. He also exerted an influence upon legislation in the United States, notably Pennsylvania and Louisiana. In England his ideas of political reform were taken up by the leaders of the rising radicalism, Cobbett, George Grote, the two Mills, and others. With them, in 1823, he established the "Westminster Review" as the organ of the party. He maintained a correspondence with many prominent men of his day, including Madison and Adams, Presidents of the United States.

Bentham attacked the Established Church as a factor in the general system of abuse, and from the Church he passed, characteristically, to the Catechism, then to the New Testament, and finally to Religion itself. In the "Analysis of Religion", published by George Grote under the pseudonym of Philip Beauchamp, he applies the utilitarian test to religion, and finds religion wanting. True to this same principle in ethics, Bentham maintained happiness to be the sole end of conduct; pleasure and pain, the discriminating norm of right and wrong; and he reduced moral obligation to the mere sanction inherent in the pleasant or painful results of action.

The patriarch of utilitarianism, as Bentham has been called, was of upright character and simple in his manner of life. His bent of mind was for the abstract; and he was singularly deficient in the wisdom of the practical man of the world. Nevertheless, circumstances turned him to grapple with intensely practical problems; and, with the help of his followers, he has wielded on political development and philosophic thought in England a powerful influence which is far from exhausted. The spread of his ideas contributed signally to the carrying of Catholic Emancipation in 1829 and the beneficent parliamentary reform of 1832. At the same time they helped to open the way in English ethical and theological speculation for the positivism and agnosticism of the last half of the nineteenth century. One of his principal works, "Deontology, or the Science of Morality", was published after the author's death by his disciple Sir J. Bowring, who also edited Bentham's collected works in eleven volumes (1838-43). This edition has not been superseded. A good edition of the "Fragment on Government" was issued by the Clarendon Press in 1891.

JAMES J. FOX.

**Bentivoglio**, FAMILY OF, originally from the castle of that name in the neighbourhood of Bologna, Italy. They claimed descent from Enzo (c. 1224-72), King of Sardinia, a natural son of Frederick II. During the fourteenth century the family belonged to one of the workingmen's guilds at Bologna, where it became all-powerful in the fifteenth century. It contracted alliances with the Kings of Aragon, the Dukes of Milan and other sovereigns; and in its later history,

became one of the prominent families of Ferrara. The following are the principal ecclesiastical members: (1) GUIDO, Cardinal, b. at Ferrara 1579; d. at Rome 1644. He studied at Padua, went to Rome and was subsequently sent by Paul V as nuncio to Flanders (1607) and France (1617). He successfully settled the differences that arose between Catholics and Huguenots, was created cardinal in 1621, and appointed by King Louis XIII protector of French interests at Rome. He held the latter position until 1641, the date of his appointment to the episcopal See of Palestrina. He was the most trusted friend of Pope Urban VIII and would undoubtedly have become his successor, had he not died during the conclave. He left several historical works, dealing chiefly with affairs in Flanders and France; they were translated into French, and published as a collection (Venice, 1668). (2) CORNELIO, Cardinal, b. at Ferrara 1668; d. at Rome 1732. He went at an early age to Rome, was appointed Archbishop of Carthage, and in 1712 nuncio to Paris. He showed more zeal than discretion in his dealings with the Jansenists and had to be recalled at the death of Louis XIV (1715). He became cardinal in 1719, and Spanish Minister Plenipotentiary at Rome in 1726, a position which he held until his death.

N. A. WEBER.

**Bentley**, JOHN FRANCIS, English architect, b. at Doncaster, Yorkshire, in 1839; d. in London, February, 1902. From early days he exhibited a strong inclination towards the profession in which he was to make so great a mark. His parents were not in sympathy with him, so, at the age of sixteen,

he placed himself voluntarily with the Clerk of the Works at Loversall Church. In 1855 he began his probation with Sharpe, Stewart & Co., of Manchester, going to London, in 1858, where he was associated with Holland & Hannan and then with Henry Clutton. He started for himself in 1868. He was a firm believer in the architectural principles and

JOHN FRANCIS BENTLEY

methods of the Middle Ages, giving to every detail in his work, from foundation to furniture, his personal attention. He was an apt modeller and had tried his hand with success at stone carving. As a draughtsman, and especially as a colourist, he was very successful, his designs for marble and metal work, jewellery, stained glass, and heraldic decorations being of great beauty.

His first important commission was from Cardinal Manning, for the seminary at Hammersmith, and amongst his buildings should be mentioned the Church of the Holy Rood, at Watford; the convent chapel, at Braintree; the chapel of Beaumont College, Old Windsor; St. Anne's Cathedral, Leeds; and St. Mary's, Cadogan Place, Chelsea. He was also responsible for the baptistery, font, and monstrance at St. Francis, Notting Hill; the reredos and altar at St. Charles, Ogle Street, Marylebone, sedilia and Sacred

Heart chapel in the church of the Jesuit Fathers at Farm Street; and the decoration at Carlton Towers. In 1894, he received his commission to build the cathedral at Westminster, and at once started for Italy to make a careful study of the various great basilicas, and the mosaic work at Ravenna. He devoted himself with great concentration to this, his life memorial, producing the most remarkable ecclesiastical building erected in England since the Reformation, and receiving high praise all over Europe on his extraordinary success.

He was a person of brusque, reserved manner, but kind and friendly to those who really knew him. He had the strongest dislike to the preparation of show drawings and to the system of architectural competition and, being a man wholly lacking in self-assertion, and reticent in conversation, was never as well known in general circles as he deserved to be. His great characteristics as an architect were his careful attention to detail, his solicitude that all the fittings should be in perfect harmony with the building, and the sparing use he made of iron. He was awarded the gold medal of the Institute of Architects in February, 1902, but never received it, as on the 1st of March he was seized with paralysis and died the following morning. He was present at the trial of acoustic qualities made in his cathedral, but was not spared to see its formal opening. He was buried at Mortlake. *Architectural Review*, XI, XII; *The Builder*, LXXXII; *Journal of the Royal Institute of British Architects*, IX; *Obituary Notice in The Times* (London, March, 1902).

GEORGE CHARLES WILLIAMSON.

**Bentney** (alias BENNET), WILLIAM, an English Jesuit priest b. in Cheshire, 1609; d. 30 October, 1692. He entered the Society of Jesus 7 September, 1630, was sent to the English mission in 1640, and laboured there with great zeal and success for forty-two years. He was then arrested, at the instigation of a nobleman to whose sisters he was administering the sacraments, and was taken to Leicester gaol. No one in those parts being willing to bear witness against him, Bentney was at once transferred to Derby, where he was tried and sentenced to death at the spring assizes of 1682. His execution was delayed for unknown reasons, and on the accession of James II he was released. He was rearrested, however, tried, and condemned after the Revolution, but the sentence remained suspended, and in 1692 he died in Leicester gaol.

SYDNEY F. SMITH.

**Benziger**, ALOYSIUS. See QUILON, DIOCESE OF.

**Benziger**, JOSEPH CHARLES, founder of the Catholic publishing house that bears his name, b. at Einsiedeln, Switzerland, 1762; d. there, 1841. In 1792 he started a small business in religious articles, but he soon felt the effects of the French Revolution. The French invasion forced him to take flight with his family, and for about a year they resided at Feldkirch, Austria, where his eldest son, Charles, was born. In 1800 they returned to Einsiedeln, which had been devastated by pillage and army requisitions. All Mr. Benziger's modest fortune was gone, but with redoubled efforts he set about repairing his losses, and started in business as a bookseller. He was made president of the county, and his credit and personal financial sacrifices proved of great help, especially during the famine of 1817. In 1833, Charles and Nicholas Benziger succeeded their father under the firm name of "Charles and Nicholas Benziger Brothers", and two years later, in addition to their book publishing business began the lithographing of religious pictures, as well as the colouring of them by hand, before the introduction of chromolithography.

Charles Benziger, son of the founder, b. 1799, d. 1873, a man of unusual strength and energy, with a good classical education, devoted himself especially to the literary end of the business. In 1840 the "Einsiedler Kalender" was founded; it is still published and furnishes an interesting illustration of the development of the art of printing. "The Pilgrim", a popular Catholic periodical established at the same time, lasted only ten years. Charles, too, took an active part in public life, and showed moderation and energy as President of the Canton of Schwyz. His health failed and in 1860 he retired from business.

Nicholas Benziger, brother of the preceding, b. 1808, d. 1864, who took charge of the technical part of the business, proved himself a pioneer, introducing to the mountain village of Einsiedeln a series of improved trades methods as they appeared from time to time in the great centres of Europe and America. Under his guidance the work of book-binding, which was formerly carried on in the family at home, was systematized. In 1844 the old hand-press was superseded by the first power press. Stereotyping was introduced in 1846; in 1856 steel and copper printing; and in 1858 electrotyping. In 1853, a house was opened in New York. By this time the two brothers had built up a business in Catholic books and prints that was known the world over. They also took an active part in charitable work, and started a fund for a hospital, which has since been erected.

On the retirement of Charles and Nicholas Benziger (1860) the business was continued by Charles, Martin, and J. N. Adelrich, sons of the former, and Nicholas, Adelrich, and Louis, sons of the latter. Under this third generation, the different branches of the house were still further developed, chromolithography and other modern printing methods being added. In 1867, the "Alte und Neue Welt", the first illustrated popular Catholic German magazine on a large scale, was begun, and then appeared a number of illustrated family books of devout reading and a series of school books, including a Bible history in twelve languages, together with prayer books by well-known authors. Between 1880 and 1895 a fourth generation succeeded to the business, and the firm name was changed to Benziger and Company.

The house of Benziger Brothers in the United States was established in New York in 1853 by the Swiss house, but its development as a publishing house did not begin until 1860 when J. N. Adelrich Benziger (d. 1878) and Louis Benziger (d. 1896) took charge. In 1860, a house was opened in Cincinnati and in 1887 one in Chicago. The publishing of English Catholic books was vigorously undertaken, and to-day the catalogue covers the field of devotional, educational, and juvenile literature, besides works of a theological character. Since 1864 the firm has manufactured sacred vessels and church furniture. The American firm of Benziger Brothers is now independent of the Swiss house. The Holy See conferred on the firm the title "Printers to the Holy Apostolic See" in 1867, and "The Pontifical Institute of Christian Art" in 1888.

THOMAS F. MEEHAN.

**Benzoni**, GIROLAMO, b. at Milan about 1519. He went to America in 1541 and successively visited the Antilles and the Isthmus, Guatemala, and the west coast of South America. He returned to Spain and thence to Italy, in 1556. Of his subsequent life nothing is known. Some hints in his book suggest that his main purpose in the New World was commerce, which he often had to carry on with difficulty, as trading by foreigners in the Spanish colonies was not looked upon with favour by the Span-

ards. Benzoni, while not unsuccessful in what he undertook, conceived an inveterate hatred of the Spanish people and Government and in return for the protection given him and for favours which he was compelled reluctantly to acknowledge, wrote and published a book of diatribes and accusations against Spain in America. It contains interesting details about the countries he visited, but abounds in errors and often in intentional misstatements. What Benzoni states about the Antilles is a clumsy rehash of Las Casas. His reports on the conquests of Mexico, and Peru bristle with errors.

The book of Benzoni "*Historia del Mondo Nuovo*," was published at Venice in 1565. He dedicated it to Pope Pius IV. It was at the time when the controversy concerning the treatment of the Indians was hottest, and a work, written by one who had just returned from the New World after a stay of fifteen years, could not fail to attract attention. In writing it, no standard of criticism was applied; this was not in the spirit of the times. The ultra-philanthropists found Benzoni a welcome auxiliary, and foreign nations, all more or less leagued against Spain for the sake of supplanting its mastery of the Indies, eagerly adopted his extreme statements and sweeping accusations. Several editions were published in rapid succession; translations were made into English as well as into several other languages. Intrinsically, the book has small merit, except in as far as it presents and describes facts witnessed by the author. Even these are not always faithfully reported. It might be called a controversial document because of its violent partiality and hostility. It does not notice mitigating circumstances, and ignores what is good when it does not suit the author. Benzoni writes sometimes like a disappointed trader, and always as a man of limited education and very narrow views. His "*Historia del Mondo Nuovo*" (Venice, 1565) was reprinted in 1572, and translated into French by Eustace Vignon, 1579. Aside from the annotations which are often trivial and as partial as the book itself, the English translation, "*History of the New World* by Girolamo Benzoni" (London, 1857), by the Hakluyt Society, is certainly the best.

**Berach, SAINT,** of Termonbarry, d. 595; a disciple of St. Kevin and a celebrated Irish saint, whose memory is still fresh in County Roscommon. He was of the tribe of Cinel Dobtha, or O'Hanley of Doohy Hanley, to which also belong the MacCoilidh family. Most of his long life was spent in the Diocese of Elphin, and he built his church at Cluain Coirpthe since known as Termonbarry or Kilbarry. His sister, St. Midabaria, was abbess of a nunnery at Bumlin (Strokes-town), of which she is venerated as patroness on 22 February. Her ancient conventual church and graveyard are still to be seen. Under the title of "Berach of Cluain Coirpthe" St. Berach is honoured in several martyrologies, and his holy life attracted pilgrims to Kilbarry from all parts of Ireland. The MacCoilidh family, whose name was anglicized to Cox in the early years of the seventeenth century, were hereditary custodians of St. Berach's crossier, and were *coarbs*, or lay abbots, of Kilbarry. The crossier is now in the Dublin Museum. In 1890, Dr. M. F. Cox, of Dublin, the lineal representative of the MacCoilidhs, unearthed St. Berach's boat, and had it placed beside the present Catholic church of Whitehall, near Kilbarry. St. Berach's oratory at Cluain Coirpthe was replaced by a fine *damhliag* (stone church), built by MacCoilidh and O'Hanley in 916, and acquired the name of Termon Barry, or Kilbarry, that is the church of St. Berach. Some authorities give his feast as 11 February, but most martyrologists assign him

15 February. Kilbarrack Church, County Dublin, was also called after this saint, as in his early days he spent some time there and performed many miracles, duly recorded in his life. His bell was long preserved at the Abbey of Glendalough, but has disappeared since the sixteenth century.

Hib.* (15 February); HEALY, *Ireland's Ancient Schools and Scholars* (4th ed., 1902); COX, *MS. MacCoilidhana*; KELLY, *Patron Saints of the Diocese of Elphin* (1904).

W. H. GRATTAN FLOOD.

**Berard of Carbio** (or BERALDUS), SAINT, Friar Minor and martyr; d. 16 January, 1220. Of the noble family of Leopardi, and a native of Carbio in Umbria, Berard was received into the Franciscan Order by the Seraphic Patriarch himself, in 1213. He was well versed in Arabic, an eloquent preacher, and was chosen by St. Francis, together with two other priests, Peter and Otho, and two lay-brothers, Accursius and Adjutus, to evangelize the infidels of the East. On the conclusion of the Second General Chapter in 1219, St. Francis believed that the time had then come for the religious of his order to extend their apostolic labours beyond the Italian peninsula and Northern Europe; and, choosing for himself and twelve other religious the greater part of Syria and Egypt, he allotted to Berard and his companions the missions of Morocco. The five missionaries set sail from Italy, and after sojourning some time in Spain and Portugal finally arrived in the Kingdom of Morocco. Their open preaching of the Gospel there and their bold denunciation of the religion of Mahomet soon caused them to be apprehended and cast into prison. Having vainly endeavoured to persuade them to abandon the true religion, the Moorish king in a fit of rage opened their heads with his scimitar, and thus were offered to God the first fruits of the blood of the Friars Minor. Berard and his companions were canonized by Sixtus V, in 1481. The feast of the martyrs of Morocco is kept in the order on the 16th of January.

LEO, *Lives of the Saints and Blessed of the Three Orders of St. Francis* (Taunton, 1885), I, 90-111; WADDING, *Annales Minorum*, I, 155, 318, 320 et passim; *Analecta Franciscana* (Quaracchi, 1885), II, 13; *Passio Sanctorum Martyrum Fratrum Beraldi, etc.*, in *Anal. STEPHEN M. DONOVAN.

**Berardi, CARLO SEBASTIANO**, a canonist, b. at Oneglia, Italy, 26 August, 1719; d. 1768. Having studied theology at Savona under the Piarists, he was promoted to the priesthood and then began the study of law at Turin, paying particular attention to canonical jurisprudence. In 1749 he was appointed prefect of the law-faculty of the University of Turin, while from 1754 till his death he was professor of canon law in the same institution.

Berardi's works are: (1) "*Gratiani canones genuini ab apocryphis discreti, corrupti ad emendationum codicum fidem exacti, difficiliores commodâ interpretatione illustrati*" (4 vols. quarto, Turin, 1752-57; Venice, 1777, 1783). Richter (in *Proleg. ad Gratiani Decretum*) says of this work that one knows not whether to admire more the knowledge or diligence evidenced in it, while all unanimously declare that, as a critical exposition of Gratian's Decretum, it is surpassed by Antonio Agostino's work alone. The great value of the work lies in this, that it sets forth the original authorities of the Decretum, though carelessness is apparent at times in the author's endeavours to distinguish genuine sources from those that are spurious. Berardi, moreover, is occasionally hypercritical. A compendium of this work by an unknown writer, published at Venice, 1778, is entitled, "*Compendium*

Commentariorum Caroli Sebastiani Berardi in Canones Gratiani. (2) "De Variis Sacrorum Canonum Collectionibus ante Gratianum", published together with his first work. (3) "Commentaria in Jus Ecclesiasticum Universum", four vols. quarto, Turin, 1766; two vols. octavo, Venice, 1778, 1789; 1847).—This is an excellent treatise from the viewpoint both of theory and practice. (4) "Institutiones Juris Ecclesiastici" (2 vols. Turin, 1769), a work that is to be read with caution.

WEURNEZ, *Jus Decretalium* (Rome, 1898), I, n. 315, 396, 397; SCHÖLTE, *Die Geschichte d. Quellen*, III, par. 1, 524; VALLAURI, *Storia della Università degli Studi del Piemonte*, III, 219.

A. B. MEEHAN.

**Bérault-Bercastel**, ANTOINE HENRI DE, a writer of church history, b. 22 November, 1720, at Briey, Lorraine; d. about 1794 at Noyon, France. At an early age he entered the Society of Jesus, but left it after his ordination to the priesthood. He was made parish priest of Omerville and later a canon of Noyon. His most important work is entitled "Histoire de l'église" and was issued at Paris, 1778-90, in twenty-four volumes. The history gives a circumstantial account of the Church from the time of its founding up to the year 1721. It is not so much intended for students and learned investigators as for educated Christians, and especially for those priests whose professional cares do not allow them time to carry on higher studies. On account of its general usefulness his work has had a large circulation; in spite of many defects, especially in the later volumes, it has often been republished, as at Maastricht (1780-91), at Toulouse (1811). It has also been translated into foreign languages; it was published in Italian at Venice (1793), and in German at Vienna (1784). Various scholars have continued the history or have issued it in a condensed form. Instances are the edition of Guillon (Besançon, and Paris, 1820-21), that of Pelier de la Croix (Ghent, 1829-33), and that of Robiano (Lyons and Paris, 1835 and 1842). The best edition, with a continuation up to 1844, was edited by Henrion (Paris, 1844). The best condensed edition was edited by Gams (Innsbruck, 1854-60).

HURTER, *Nomenclator*, III, 347.

PATRICIUS SCHLAGER.

**Bercharius** (BERERUS), SAINT, Abbot of Hautvillers in Champagne, b. 636; d. 28 March, 696. Descended from a distinguished Aquitanian family, he received his instruction from St. Nivard (Nivo), Archbishop of Reims, under whose charge he advanced rapidly in virtue and learning. Believing himself called to the sacred ministry, he entered the monastery of Luxeuil under St. Walbert, and by his humble and faithful performance of duty soon excelled his fellow-novices. Upon his return to Reims he induced St. Nivard to erect the cloister of Hautvillers, of which Bercharius himself became the first abbot. Wholly given up to prayer and meditation he also instructed his brethren to lead a contemplative life. Ever zealous for the propagation of the Faith, he founded two cloisters in the Diocese of Châlons-sur-Marne, the one (Puisye or Moutier-en-Der) for men, the other (Pellmoutier, *Puellarum Monasterium*) for women. These institutions he enriched by donations of valuable relics, procured on a journey to Rome and the Holy Land.

The monk Daguin, provoked by a reprimand from Bercharius, stabbed him during the night. No word of complaint or censure did he utter when the murderer was led before him; but he gloried in exhorting the transgressor to penance and in requesting him to make a pilgrimage to Rome to obtain pardon and absolution. Daguin left the monastery never to return. After two days of severe suffering, the saint succumbed to his wound, a martyr not for the Faith, indeed, but for charity and justice. His

remains were preserved at Moutier-en-Der until the suppression of religious orders at the close of the eighteenth century. The commemoration of his name occurs in the martyrology on the 16th of October.

BUTLER, XV, 252; ADÃO, *Vita S. Bercharii*; STRIUS, X, 481. BARNABAS DIERRINGER.

**Bercheure** (BERCHOIRE, BERSUIRE), PIERRE, a learned French Benedictine, b. 1290 at St. Pierre du Chemin (Vendée); d. 1362 at Paris. He joined the Order of St. Benedict at Maillezais, later lived at Avignon for a period of twelve years with Cardinal Peter de Pratis, Bishop of Præneste, and in 1354 was made prior of St. Eligius at Paris. He was an eloquent preacher and a voluminous homiletical writer. His most important work is the "Repertorium morale", for the use of preachers, a kind of Biblico-moral dictionary, in which the principal words of Scripture are arranged alphabetically and moral reflections attached thereto. It appeared some time before 1355 and was dedicated to Cardinal de Pratis. The "Repertorium" proved to be one of the most popular books of its kind and was frequently printed—first at Cologne in 1477, and again at Nuremberg (1489), Lyons (1517), Paris (1521), Venice (1589), Antwerp (1609), etc. A French translation by Richard Leblanc appeared at Paris in 1584. Other works of Bercheure are: "Reductorium morale" to the Sacred Scriptures in thirty-four books, embracing all the books of the Bible, printed at Strasburg in 1474, Basle (1515), Lyons (1536); "Inductorium morale biblicum"; sixteen books on God and the world; and a French translation (the earliest) of Livy, made about 1350 at the request of King John the Good—published at Paris in 1514 in three volumes. His "Inductorium morale biblicum", commentaries, discourses, letters, and other treatises, have never been printed. Editions of his collected works appeared at Lyons (1520), Venice (1583, 1631), Cologne (1650, 1669), etc.

**Berchmans**, SAINT JOHN. See JOHN BERCHMANS, SAINT.

**Berchtold** (BERTHOLD), BLESSED, Abbot of the Benedictine Monastery of Engelberg in Switzerland; date of birth unknown; d. 3 November, 1197. Before becoming abbot he was a monk at Engelberg and a favourite disciple of the learned abbot, Blessed Frowin. When Frowin was on the point of dying he advised his monks to elect the pious Berchtold as his successor. Accordingly, after Frowin's death, which occurred 27 March, 1178, Berchtold was chosen abbot. Following in Frowin's footsteps, he was intent on maintaining strict monastic discipline, the importance of which he inculcated by his own example. Nor did he neglect, at the same time, to encourage his monks in the pursuit of Divine and human knowledge. By his order they reproduced many old writings, some of which are still extant in the library of Engelberg. The more learned monks were encouraged to write original works. When Abbot Burchard openly taught that the souls of the just had gone to heaven before the Resurrection of Christ, Berchtold himself wrote "Apologia contra errorem Burchardi Abbatis S. Joannis in Thurthal seu Vallis Taurinæ", in which he shows himself not only well versed in Holy Scriptures and the writings of the Fathers, but also a master in theological knowledge and dialectical skill. Abbot Burchard became convinced of his error, retracted, and died a saintly death. Though especially mindful of the spiritual and intellectual advancement of his monks, Berch-

told did not omit to provide also for the temporal welfare of Engelberg. He procured for his monastery many financial privileges, among which was the right to levy tithes upon the churches of Stanz and Buocha, which were under his jurisdiction. The contemporaneous annals of Engelberg, which are published in "Mon. Germ. Hist., SS.," XVII, 280, relate that Berchtold foretold the death of Emperor Frederick Barbarossa. Later chronicles state that, through his blessing, the lake near Stanzstad was stocked with fish, and that shortly before his death he three times changed water into wine. He is generally represented in the act of blessing fish. His miracle of turning water into wine is corroborated by an epigram beneath a representation of him which was kept in the choir of Engelberg up to the seventeenth century. At Engelberg his feast is celebrated on the anniversary of his death.

**Berea.** See BERCEA.

**Berengar, FREDOLI.** See FREDOLI.

**Berengarius of Tours,** b. at Tours about 990; d. on the island of St. Cosme, near that city, in 1088. Having completed his elementary studies in his native city, he went to the school of Chartres in order to study arts and theology under the direction of the famous Fulbert. There he was distinguished for his curious and quick intelligence. It seems that even at this early time his bent of mind and singular opinions were a source of anxiety to his master. (M. Clerval, *Les Ecoles de Chartres au Moyen Age*, Chartres, 1895.) After the death of Fulbert (1029) Berengarius left Chartres and took charge, as *scholasticus*, of the school of St. Martin of Tours. His reputation spread rapidly and attracted from all parts of France numerous and distinguished disciples, who afterwards held positions of importance in the Church. Among them are mentioned, though there is some doubt about the first two, Hildebert of Lavardin who became Bishop of Le Mans and Archbishop of Tours, St. Bruno, the founder of the Carthusians, Eusebius Bruno, afterwards Bishop of Angers, Frolland, Bishop of Senlis, Paulinus, dean of Metz. In 1039 Berengarius was chosen archdeacon of Angers by Hubert, bishop of that city. Berengarius accepted this office, but continued to live at Tours and direct his school.

It was about 1047 that the teaching of Berengarius touching the Holy Eucharist began to attract attention. In the Eucharistic controversy of the ninth century, Radbert Paschasius, afterwards abbot of Corbie, in his "De Corpore et Sanguine Domini" (831), had maintained the doctrine that in the Holy Eucharist the bread is converted into the real body of Christ, into the very body which was born of Mary and crucified. Ratramnus, a monk of the same abbey, defended the opinion that in the Holy Eucharist there is no conversion of the bread; that the body of Christ is, nevertheless, present, but in a spiritual way; that it is not therefore the same as that born of Mary and crucified. John Scotus Erigena had supported the view that the sacraments of the altar are figures of the body of Christ; that they are a memorial of the true body and blood of Christ. (P. Batiffol, *Etudes d'histoire et de théologie positive*, 2d series, Paris, 1905.) When, therefore, Hugues, Bishop of Langres, and Adelman *écoldtre* of Liège, discussed Berengarius's teaching on this subject, the latter answered by appealing to the authority of Erigena. It was at this point that Lanfranc, abbot of the monastery of Le Bec, attacked as hereti-

cal the opinion of Erigena and defended the doctrine of Radbert Paschasius. Berengarius, in his defence, wrote a letter which Lanfranc received in Rome whither he had gone to take part in a council. The letter was read in this council (1050); Berengarius was condemned, and was ordered to appear at a council which was to be held the same year at Vercelli. King Henry I being titular Abbot of St. Martin of Tours, Berengarius applied to him for permission to go to the council. It is probable that at this time the conferences of Brionne and Chartres were held in which Berengarius unsuccessfully defended his opinions. (Cf. Durand of Troarn, *Liber de Corpore et Sanguine Christi*, xxxiii, in Migne, P. L., CXLIX, 1422.) The king, for reasons which are not exactly known, ordered Berengarius to be imprisoned, and at the Council of Vercelli (1050) his doctrine was examined and condemned.

The imprisonment, however, did not last long. The Bishop of Angers, Eusebius Bruno, was his disciple and supporter, and the Count of Anjou, Geoffrey Martel, his protector. The following year, by order of Henry I, a national synod was held in Paris to judge Berengarius and Eusebius Bruno; neither was present, and both were condemned. At the Council of Tours (1055), presided over by the papal legate Hildebrand, Berengarius signed a profession of faith wherein he confessed that after consecration the bread and wine are truly the body and blood of Christ. At another council held in Rome in 1059, Berengarius was present, retracted his opinions, and signed a formula of faith, drawn up by Cardinal Humbert, affirming the real and sensible presence of the true body of Christ in the Holy Eucharist. (Mansi, XIX, 900.) On his return, however, Berengarius attacked this formula. Eusebius Bruno abandoned him, and the Count of Anjou, Geoffrey the Bearded, vigorously opposed him. Berengarius appealed to Pope Alexander II, who, though he intervened in his behalf, asked him to renounce his erroneous opinions. This Berengarius contemptuously refused to do. He then wrote his "De Sacra Cena adversus Lanfrancum Liber Posterior", the first book of which—now lost—had been written against the Council of Rome held in 1059. He was again condemned in the Councils of Poitiers (1075), and of St. Maixent (1076), and in 1078, by order of Pope Gregory VII, he came to Rome, and in a council held in St. John Lateran signed a profession of faith affirming the conversion of the bread into the body of Christ, born of the Virgin Mary. The following year, in a council held in the same place Berengarius signed a formula affirming the same doctrine in a more explicit way. Gregory VII then recommended him to the bishops of Tours and Angers, forbidding that any penalty should be inflicted on him or that anyone should call him a heretic. Berengarius, on his return, again attacked the formula he had signed, but as a consequence of the Council of Bordeaux (1080) he made a final retraction. He then retired into solitude on the island of St. Cosme, where he died in union with the Church.

**DOCTRINES AND THEIR CONDEMNATION.**—According to some of his contemporaries, Berengarius held erroneous opinions about the spiritual power, marriage, the baptism of children, and other points of doctrine. (Bernold of Constance, *De Berengerii hæresiarchæ damnatione multiplici* in P. L., CXLVIII, 1456; Guitmond, *De Corpore et Sanguine Christi veritate in Eucharistia*, P. L., CXLIX, 1429, 1480.) But Berengarius's fundamental doctrine concerns the Holy Eucharist.

In order to understand his opinion, we must observe that, in philosophy, Berengarius had rationalistic tendencies and was a nominalist. Even in the study of the questions of faith, he held that reason

is the best guide. Reason, however, is dependent upon and is limited by sense-perception. Authority, therefore, is not conclusive; we must reason according to the data of our senses. There is no doubt that Berengarius denied transubstantiation (we mean the substantial conversion expressed by the word; the word itself was used for the first time by Hildebert of Lavardin); it is not absolutely certain that he denied the Real Presence, though he certainly held false views regarding it. Is the body of Christ present in the Eucharist, and in what manner? On this question the authorities appealed to by Berengarius are, besides Scotus Erigena, St. Jerome, St. Ambrose, and St. Augustine. These fathers taught that the Sacrament of the Altar is the figure, the sign, the token of the body and blood of the Lord. These terms, in their mind, apply directly to what is external and sensible in the Holy Eucharist and do not, in any way, imply the negation of the real presence of the true body of Christ. (St. Aug. Sermon 143, n. 3; Gerbert, *Libellus De Corp. et Sang. Domini*, n. 4, P. L., CXXXIX, 177.) For Berengarius the body and the blood of Christ are really present in the Holy Eucharist; but this presence is an intellectual or spiritual presence. The substance of the bread and the substance of the wine remain unchanged in their nature, but by consecration they become spiritually the very body and blood of Christ. This spiritual body and blood of Christ is the *res sacramenti*; the bread and the wine are the figure, the sign, the token, *sacramentum*.

Such is the doctrine of Berengarius in his various discussions, letters, and writings up to the Council of Rome in 1059. (Migne P. L., CXLII, 1327; CL, 66; Martène and Durand, *Thessaurus Novus Anecdotorum*, Paris, 1717, IV.) At this council, Berengarius signed a profession of faith affirming that the bread and wine after consecration are not only a sign, but the true body and blood of Christ which can be perceived in a sensible and real manner. (Lanfranc, *De Corp. et Sang. Domini*, ii, in P. L., CL, 410.) As already said, Berengarius retracted this confession. He maintained that the bread and wine, without any change in their nature, become by consecration the sacrament of the body and blood of Christ, a memorial of the body crucified and of the blood shed on the cross. It is not, however, the body of Christ as it is in heaven; for how could the body of Christ which is now in heaven, necessarily limited by space, be in another place, on several altars, and in numerous hosts? Yet the bread and wine are the sign of the actual and real presence of the body and blood of Christ. (De *Sacrâ Cœnâ*; Lanfranc, op. cit.)

In the two councils of Lateran (1078 and 1079) Berengarius accepts and signs this profession of faith that "after the consecration, the bread is the true body of Christ, the very body born of the Virgin";—that "the bread and wine on the altar, by the mystery of the sacred prayer and words of our Redeemer, are substantially converted into the very flesh and blood of our Lord Jesus Christ, true and life-giving", etc. (Martène et Durand, op. cit., IV, 103; Denzinger, *Enchiridion*, Würzburg, 1900, n. 298.) In his explanation of this profession of faith, written after the council, Berengarius again clearly denies transubstantiation. He declares that, at the Last Supper, by virtue of the Lord's blessing, the bread and wine, keeping their natural properties, received a power of sanctification and became the sacrament of His body and blood; that the bread and wine on the altar are the very body of Christ, His true and human body. (Martène et Durand, op. cit., IV, 107.) From all of which we conclude that, during his life, and before his final profession of faith, Berengarius certainly denied transubstantiation. As to the real presence, his thought is rather obscure and his

attitude hesitating. There is much divergence of opinion among historians and theologians on the interpretation of Berengarius's doctrine about this point, if it does not appear clearly that he denies the Real Presence, if perhaps the difficulty for him is in the mode rather than in the fact of the real presence; yet his exposition of it, together with his principles of philosophy, endanger the fact itself of the Real Presence and sounds very much like a negation of it.

**INFLUENCES.**—Outside of Eusebius Bruno who supported Berengarius, at least for a time, no theologian of importance systematically defended his doctrine. We know, however, from ecclesiastical writers of his own and the following period that the influence of his principles was widespread and caused serious disturbance. (Guitmund, op. cit. in P. L., CXLIX, 1429 sqq.; Durand of Troarn, *Liber de Corp. et Sang. Christi*, in P. L., CXLIX, 1421.) The writers of the following century continue their dissertations against the "New Berengarians" (cf. Gregorius Barbarigo in Hurter's *Sanctorum Patrum opuscula selecta*, XXXIX); they find traces of his influence in various current phrases and sometimes warn against expressions which might be understood in the Berengarian sense. The Council of Piacenza (1095) again condemned Berengarius' doctrine. His teachings favoured, at least to some extent, the diverse heresies of the Middle Ages about the Holy Eucharist, as also the views of the Sacramentarians of the sixteenth century. The great theologians of the time were unanimous in protesting against his principles, attacking his opinion as contrary to the teaching of tradition and the doctrine of the Church. Among them we may mention especially Adelman, Scholasticus of Liège; Hugues, Bishop of Langres; Lanfranc, then Abbot of Le Bec; Guitmund, a disciple of Lanfranc who became Bishop of Aversa; Durand, Abbot of St. Martin of Troarn; Bernold of Constance, and others, most of them Benedictines. (L. Bignelli, *I benedettini e gli studi eucaristici nel medio evo*, Turin, 1895.)

The error of Berengarius, as is the case with other heresies was the occasion which favoured and even necessitated, a more explicit presentation, and a more precise formulation of Catholic doctrine about the Holy Eucharist. Some expressions, among those used even by the adversaries of the Berengarian doctrine, were corrected. It was Hildebert of Lavardin, a contemporary of Berengarius if not his pupil, who first used the word "transubstantiation". (Sermones xciii; P. L., CLXXI, 776.) The Council of Rome in 1079 in its condemnation of Berengarius, expresses more clearly than any document before it, the nature of this substantial change; and St. Thomas, in his definition of Transubstantiation uses almost the same terms as the council. (Sum. Theol., III, Q. lxxv, a. 4.) Though the feast of Corpus Christi was officially established only in the thirteenth century, its institution was probably occasioned by these eucharistic controversies. The same may be said of the ceremony of the elevation of the Host after the consecration in the Holy Sacrifice of the Mass.

There is no complete edition of the works of Berengarius. Only one volume has been published by Visher in Berlin (1834) containing the second part of his "*De Sacrâ Cœnâ*", under the title: "*Berengarii Turonensis opera quæ Supersunt tam inedita quam edita, I, De Sacrâ Cœnâ adversus Lanfrancum liber posterior*". Others of his opinions and writings are to be found in the works quoted above and in P. L., CL, 63, 66; H. Sudendorf, "*Berengarius Turonensis oder eine Sammlung ihn betreffender Briefe*" (Hamburg, 1850).

GEORGE M. SAUVAGE.

**Bérenger, PIERRE** (PETER OF POITIERS, PETRUS SCHOLASTICUS), a French writer who flourished about the middle of the twelfth century. From the second name we may, perhaps, infer that Poitiers was his native place. He was a disciple of Abelard, and is celebrated chiefly for his vigorous defence of his master in a letter which he addressed to St. Bernard after Abelard's condemnation at the Council of Soissons in 1141. Later on he wandered through the Cévennes Mountains, hunted, he tells us, not by wild beasts, but by the Christian faithful of the Diocese of Mende, who apparently took sides with St. Bernard. Those attacks were the occasion of a letter which he directed to the Bishop of Mende, and in which he retracted all that he had said against "the man of God" in his former epistle. There is also extant a letter of Bérenger's against the monks of the Grand Chartreux (Contra Carthusienses). Finally, we find mention of a treatise, now lost, in which he discussed the doctrine of the Incarnation. The three letters are published by Migne (P. L., CLXXVIII, 1857 sqq.). That addressed to St. Bernard, while not wanting in grace and elegance of style, is altogether too intemperate in tone to deserve serious consideration as an historical document. In it occurs the well-known description of an informal meeting of the bishops on the eve of the Council of Soissons. If we are to believe Pierre, the prelates were primed in a most disgraceful manner in St. Bernard's interests, and the condemnation of Abelard was decided before the council actually opened. Even if the author of this story had not afterwards excused it on the ground that it was the work of an inconsiderate youth, overcome by the ardour of his devotion to his teacher, the violent tone of the letter itself would be enough to condemn it. In the letter to the Bishop of Mende Pierre protests that he would recall all that he has written against St. Bernard were it possible to suppress all the copies of the letter, and begs that what he wrote be taken as a jest. He goes even farther when he says that his more mature judgment condemns the doctrines attributed by St. Bernard to Abelard—not, indeed, because they are untrue, but because they are unsafe. The invective against the Carthusians pays high tribute to the rule of the order, but finds fault with the proclivity of the members of the order to indulge in malicious gossip. Pierre exhibited many of the traits of his master. He was by nature a lover of contention, totally devoid of respect for the prestige of either person or institution. His sole merit was the undeniable vivacity and brilliancy of his style and his unusually extensive acquaintance with the poets of classical antiquity. He professed his devotion to Catholic dogma and apparently maintained that Abelard, though he had spoken of matters of faith in a manner novel and unsafe, had not been guilty of formal heresy, and had not been treated with that mercy to which his love of Catholic truth, as he saw it, entitled him.

RÉMUSAT, *Abélard* (Paris, 1855), I, 234 sqq.; COUSIN, *Petri Abélardi opera* (Paris, 1859), II, 771 sqq.; VACANDARD in *Dict. de théol. cath.*, s. v.

WILLIAM TURNER.

**Berenice**, a titular see of Egypt which was situated at the end of Major Syrtis where Bengazi

stands to-day. Its old name was Euhesperides, or Hesperides, for which Ptolemy III Evergetes substituted Berenice in honour of his wife (Droysen, *Geschichte des Hellenismus*, III, 2, 331). Like the other cities of Cyrenaica, it had received a Jewish colony, so it became early an important Christian centre. Dionysius of Alexandria (264–282) wrote a letter to its bishop, Ammonas (Eusebius, H. E. VII, 26), who is also spoken of in the "Aphrothegmata Patrum" (Cotelier, *Monum. eccles. græc.* I, 385; Migne, P. G., LXV, 119). Daces was present at the Council of Nicea in 325 (H. Gelzer, *Patrum Nicæen. nomina*, 219). In 394, Probatius followed to Constantinople the Patriarch of Alexandria, Theophilus (Mansi, III, 852). The city was restored by Justinian (Procopius, *De Aedif.* VI, 2). It is mentioned with the wrong spelling "Beronice", by Hierocles (733, 3) and by Georgius Cyprius (n. 794) among the bishoprics of the Lybian Pentapolis, but is omitted by the later "Notitia". It must have disappeared, like so many other sees, at the time of the Arab invasion in the seventh century.

LEQUIN, *Oriens Christ.*, II, 623–626; GAMS, *Series episcoporum*, 462.

L. PETIT.

**Beretta.** See BIRETTA.

**Bergamo, DIOCESE OF.**—The city, called by the ancients Bergonum, is capital of the province of that name in Lombardy, and contains 45,000 inhabitants. It is said to be of Etruscan foundation. During the anarchy that reigned in Italy in the eleventh century, Bergamo set itself up as a commune, and as such joined the various leagues of Lombard communes formed to resist the power of the German emperors. At a later period, however, a number of powerful families succeeded each other in the mastery of the city, e. g. the Turriani, the Visconti, and the Suardi. From 1797 to 1859 Bergamo passed through all the political vicissitudes of Northern Italy. It has always been a city of great industrial and commercial importance. The neighbouring territory is rich in minerals, chiefly iron; there are also extensive quarries of choice marble. Among the celebrities of Bergamo are the poet, Bernardo Tasso, father of Torquato; the Jesuit Maffei, known for his history of Italian literature; Donizetti, the musical composer; Cardinal Angelo Mai, etc.

Bergamo is the seat of a bishop, suffragan to the Archbishop of Milan; the diocese contains a population of 430,000. Legend traces the beginnings of Christianity in this city back to St. Barnabas, said to have ordained St. Narnus who became first Bishop of Bergamo. More trustworthy is the account of the martyrdom of St. Alexander, said to have been tribune of the Theban Legion. Whatever the value of the details of the legend, the fact has been proved that long before Diocletian proclaimed the great persecution in 303, both Galerius and Maximian in the West inaugurated, on their own responsibility, a crusade against Christianity and sought particularly to remove all Christians from the armies (Allard, *La persécution de Dioclétien*, I, 101–146). St. Alexander was one of the victims of this persecution, and his martyrdom may well have taken place in 287. To this martyr was dedicated the first cathedral of the city, richly endowed by the Lombard king, Grimoaldus, and by Charlemagne.

In 1561 this was destroyed by the Venetians on account of its adaptability to the purposes of a fortress, and the church of San Vincenzo was raised to the dignity of a cathedral under the title of San Alessandro. This is a magnificent church adorned with a cupola of unusual size, rebuilt in 1689 after the designs of Carlo Fontana. It contains paintings by Previtali, Tiepolo, Ferrari, Moroni, Palma il Giovine, and Colghetti who decorated the interior of

the cupola in the nineteenth century; likewise bass-reliefs of Fantoni, of exquisite workmanship. Worthy of special note is the octagonal baptistery formed of eight pieces of rosso antico (old red marble), the work of Giovanni da Campione, originally placed in the church of Santa Maria Maggiore, the most beautiful of the churches of Bergamo. The interior is decorated with wonderful frescoes by Cavagna, Procaccini, Luca Giordano, Ciro Ferri, etc. Remarkable also are the tombs of Cardinal Longo, of the Alessandri, and of Bartolommeo Colleoni, the last a work of the sculptor Amedeo. The chapel of this tomb is adorned with paintings by Tiepolo, Angelica Kaufmann, and Giuseppe Crespi. Other churches are those of San Alessandro in Colonna, with a beautiful "Last Supper" by Calligarino; San Alessandro della Croce, adorned by Palma il Vecchio, Bramantino, and others; San Andrea with paintings of Padovanino and Moretto; San Grata; San Bartolomeo; Santa Maria del Sepolcro with a wonderful picture of St. Sigismund, the masterpiece of Previtali. Among the shrines of the diocese may be mentioned that of the Blessed Virgin della Cornabusa, formed by a great natural cavern, extending between three and four hundred feet into Monte Albena, not far from the Jura Pass. Within recent times Bergamo has become the centre of important and far-reaching Catholic movements of a popular character.

The diocese contains 350 parishes, 512 churches, chapels, and oratories, 1,157 secular and 58 regular clergy, 400 seminarists, 84 lay brothers, 478 members of female religious orders, 8 schools for boys, 34 for girls, and a population of 430,000.

CAPPELLETTI, *Le chiese d'Italia* (Venice, 1844), XI, 445; MUTIO, *Sacra storia di Bergamo* (1618); GERRINO, *Synopsis ecc. bergomensis* (1734); LUPI, *Codex diplomaticus civilis et ecclesie bergomensis* (1784).

U. BENIGNI.

**Bergier**, NICOLAS-SYLVESTRE, French theologian, b. 31 December, 1715 at Darney in Lorraine; d. at Versailles, 9 April, 1790. After a course of theology in the University of Besançon, he received the degree of doctor, was ordained priest, and went to Paris to finish his studies. Returning to Besançon in 1748, he was given charge of a parish and later became president of the college of the city, which had formerly been under the direction of the Jesuits. In 1769 the Archbishop of Paris, M. de Beaumont, appointed him canon of the cathedral, and thenceforth Bergier resided at Paris. A pious priest and an energetic student, he devoted a great part of his time to writing in defence of religion. He agreed to correct certain articles of the "Encyclopédie", but found himself obliged to write entirely original articles which then formed the "Dictionnaire de théologie" as a part of the "Encyclopédie".

The works of Bergier are in the fields of apologetics and theology, except "Les éléments primitifs des langues" (Besançon, 1764) and "L'origine des dieux du paganisme" (Paris, 1767). Among his apologetical and theological works, the most important are: "Le déisme réfuté par lui-même" (Paris, 1765); "La certitude des preuves du christianisme" (Paris, 1767, also published in Migne's "Démonstrations évangéliques", XI); "Réponses aux Conseils raisonnables de Voltaire" (Paris, 1771, also in Migne, *ibid.*); "Apologie de la religion chrétienne"—against d'Holbach's "Christianisme dévoilé" (Paris, 1769); "Réfutation des principaux articles du dictionnaire philosophique"; "Examen du matérialisme" (Paris, 1771); "Traité historique et dogmatique de la vraie religion" (Paris, 1780, and 8 vols. 8vo., 1820). The "Dictionnaire théologique" has been often edited, especially by Gousset in 8 vols. (Besançon, 1838) and Migne (Paris, 1850). Some of his writings concerning divorce, the question of the mercy of God,

and the origin of evil, and one volume of sermons were published after his death. Though on certain points, as on the questions of grace and the supernatural necessity of revelation, the doctrine of Bergier lacks precision and completeness, the value of his theological and apologetical work cannot be denied.

*Notice historique*, as an introduction to the *Dictionnaire théologique*, ed. by MIGNÉ (Paris, 1850); JANNER in *Kirchenlex.*, II, 408; HURTER, *Nomenclator* (Innsbruck, 1895), III; DUBLANCHET in *Dict. de théol. cath.*, s. v.

G. M. SAUVAGE.

**Bergomensis PETRUS.** See PETER OF BERGAMO.

**Berington**, CHARLES, titular Bishop of Hiero-Cæsarea, b. at Stock, Essex, England, 1748; d. 8 June, 1798. His life is a continued story of disappointed hopes and expectations. At thirteen he was sent to the English College at Douai, where his abilities at once showed themselves; but he never applied himself to his work. His progress was so unsatisfactory that four years later he was removed and sent to St. Gregory's Seminary, Paris. According to his cousin, the Rev. Joseph Berington, he did very little better at Paris than at Douai, though he succeeded at last in taking his doctorate at the Sorbonne in 1776. On his return to England, he became chaplain at Ingatestone Hall, a few miles from his birthplace. After travelling for two years with young Mr. Giffard of Chillington, on his return, Berington was appointed coadjutor to Bishop Thomas Talbot, Vicar Apostolic of the Midland District, becoming at the same time titular Bishop of Hiero-Cæsarea.

The Midland District, one of the four into which for ecclesiastical purposes England was then divided, was at that time the stronghold of "Cisalpine" opinions. With these Charles Berington was in full sympathy, in consequence of which, in 1788, he was elected a member of the Catholic Committee, who were then agitating for the repeal of the Penal Laws, for which end they were unfortunately willing to minimize some of their Catholic principles. Two other ecclesiastics were elected at the same time, the Rev. Joseph Wilkes, O. S. B., and Bishop James Talbot, Vicar Apostolic of the London District, though the latter's appointment was merely nominal, for he never attended the meetings. Berington took a leading part in the disputes which followed between the Committee and the bishops, and though his sympathies were chiefly with the former, he exerted a restraining influence on them, and was ever trying to bring about an understanding between the two contending parties. Nevertheless, he did not scruple to sign his name to the most extreme documents which appeared in the official publications of the Committee known as the "Blue Books", and he defended the oath intended to be imposed by the legislature on Catholics, which was afterwards condemned by the Holy See. In the midst of these disputes Bishop James Talbot died, and endeavours were made by the Committee to secure the appointment of Berington in his place, so that he might reside in London and exert the influence attached to the position. These endeavours failed, and Dr. Douglass was appointed Vicar Apostolic. Some of the more extreme laymen, however, maintained that they had a right to choose their own bishop, and called upon the Catholic body to disavow the prelate appointed by Rome, and to rally round Berington; but on this occasion the latter showed his sound sense by publishing a letter in which he refused to have anything to do with these machinations, by which action he practically put an end to them.

Bishop Thomas Talbot died in 1795, and Charles Berington succeeded as Vicar Apostolic of the Midland District. Again he appeared to have a career

before him. Before giving him his special faculties, however, Rome called upon him to withdraw his signature from the Blue Books. For several years he demurred, being still under "Cisalpine" influence. At length, through the intervention of Monsignor Erskine, who was living in England as an informal papal envoy, Berington was induced to sign the necessary retraction, on 11 October, 1797. After some delay due to the disturbed state of Rome, his faculties were sent, but they never reached him, for he died suddenly of apoplexy while riding home from Sedgley Park.

#### BERNARD WARD.

**Berington, JOSEPH**, one of the best known Catholic writers of his day, b. at Winsley, in Herefordshire, 16 January, 1743; d. at Buckland, 1 December, 1827. He was educated at the English College at Douai, showing such talent and originality of mind that after his ordination to the priesthood he was promoted to the chair of philosophy in the university. In this position his inclination towards liberal opinions became apparent, and his theses, prepared for the exhibition of his pupils, created such a stir that he thought it prudent to resign. On his return to England, he occupied several positions in turn, each intended to give him leisure to pursue his studies. From 1776 to 1782 he was chaplain to Mr. Thomas Stapleton, of Carlton, Yorkshire, acting at the same time as tutor to his son, with whom he afterwards travelled around Europe. We next find him at Oscott, then a lonely country mission, where his cousin, Charles Berington, who had been appointed coadjutor bishop, joined him. Both the Beringtons were of the same cast of mind; both were favourers of the committee appointed to represent the Catholics in their struggle for emancipation, which gained for itself an unfortunate notoriety for its liberalizing principles, and the generally anti-episcopal tendency of its action. The Midland District was the chief centre of these opinions, and fifteen of the clergy of Staffordshire formed themselves into an association of which Joseph Berington was the leader, the primary object being to stand by their bishop, Thomas Talbot, who was partly on that side. Afterwards, however, they were led into other action, especially in taking up the case of Rev. Joseph Wilkes, who had been suspended by his bishop in consequence of his action on the committee, which laid them open to criticism.

Joseph Berington was by this time becoming well known as an author with an attractive style of writing, but of very advanced views. His "State and Behaviour of English Catholics" (1780) contained more than one passage of doubtful orthodoxy; his "History of Abelard" (1784) brought into prominence the same philosophical tendencies which he had before manifested at Douai; and his "Reflections", addressed to Rev. J. Hawkins, an apostate priest (1785 and 1788), were much criticized; while perhaps more than all, the "Memoirs of Panzani", which he edited with an Introduction and Supplement (1793), gave him the reputation of being a disloyal Catholic. Under these circumstances, when Sir John Throckmorton of Buckland in Berkshire, appointed Berington his chaplain, Dr. Douglass, Bishop of the London District (in which Buckland was situated), refused to give him faculties, till in 1797 he printed a letter explaining his views, which the bishop considered satisfactory. A year or two later, Dr. Douglass again suspended him, until he signed a further declaration in 1801.

Berington passed the remainder of his life at Buckland, where he wrote the most extensive of all

his works, "The Literary History of the Middle Ages" (1811). He published many other books at different times; but some of his writings remained in manuscript, lest their publication should give offence. In private life Joseph Berington was a model priest, exact in the discharge of his duties, and noted for his charity to the poor. He was respected by all who knew him, Catholic and Protestant alike, and after his death a slab was erected in his memory in the Protestant church at Buckland with an inscription written by his friend, Rev. John Bew, formerly President of Oscott. The only likeness extant is a silhouette, in the Catholic Directory for 1832. Berington's works (besides those mentioned in the text) are: "Present State of Caths." (1787); "Rights of Dissenters" (1789); "Henry II, Richard and John" (1790); "Examination of Events termed Miraculous" (1796); "Gother's Prayers" (1800); "Faith of Catholics" (1813); "Decline and Fall of Cath. Relig. in Eng." (1813, a reprint of *Memoirs of Panzani*); numerous letters and pamphlets and many other works in MS.

#### BERNARD WARD.

**Berisford, HUMPHREY**, Confessor (c. 1588) of whom the only extant account occurs in the MS. marked "F", compiled during the seventeenth century by Father Christopher Grene. This MS. which is now at the English College in Rome has been partly printed in Foley's "Records" (III). Of Humphrey Berisford it states that he was a gentleman of the county of Derby, whose father, an esquire, was a Protestant. The account continues: "He studied at Douay about two years. Returning from thence, his father employed him about his suit in law, and having once a suit against one, who fearing to be cast by his means, accused him before the judge for a recusant. When the cause should have been heard the judge examined him. He constantly professed his faith. Then the judge offered both favour to his cause and liberty if he would but only say he would go to their church; which he utterly refused. Therefore he was committed to prison where he remained seven [blank in original] then died a prisoner". Gillow conjectures that the missing word was years and states that he died in Derby Gaol about 1588. To this account nothing can with certainty be added. The "Douay Diaries", mention one "Beresfordus" among other "sons of men of position" (*nobilium filii*) as leaving the college in November, 1576. On 31 May, 1577, he is spoken of as returning from Paris and is then alluded to as *clarus adolescens*. But this young man cannot be certainly identified with Humphrey Berisford as there were at this time other Catholics of the same name, three of whom, James, Oswald, and Frederick Beresford, were prisoners in the Poultry Counter in London, in this very year.

#### EDWIN BURTON.

**Berissa** (BERISA or VERISSA), a titular see of Pontus Polemoniacus, in Asia Minor which Kiepert and Ramsay have rightly identified with the modern village of Baulus or Bolus, south-west of Tokat. In the time of St. Basil it was included in the Diocese of Iбора, as appears from letters LXXXVI and LXXXVII of the great bishop, but soon after became an independent bishopric in Armenia Prima, with Sebasteia as metropolis. This important change took place before 458, when its bishop, Maxentius (written wrongly Auxentius), subscribed with his colleagues of Armenia Prima the synodal letter to the Emperor Leo (Mansi, XII, 587-589). Hierocles, at the beginning of the sixth century

does not treat it as an independent city; but it is mentioned as such by Justinian in a Novella of 536, among the cities of Armenia Secunda. It must be remembered that this emperor, when creating the province of Armenia Quarta in 536, gave to Armenia Prima the name of Armenia Secunda, without altering, however, the established ecclesiastical organization, so that Berissa remained a suffragan see of Sebasteia. Among its bishops may be mentioned Thomas, who was present at the fifth œcumenical council, in 553 (Mansi, IX, 175), and another at the sixth in 680 (ibid., XI, 676). It appears still later in the "Notitiæ Episcopatum" as suffragan to Sebasteia, and its name is written sometimes Βηρίσση, sometimes Βερίσση; Μερίσση and Κηρίσση are merely palæographical mistakes. Berissa was a Latin bishopric as late as the fifteenth century, when Paul II appointed the Franciscan Libertus de Broehun to succeed the deceased bishop, John (Wadding, *Annales Minorum*, VI, 708).

L. PETTIT.

**Beristain y Martin de Sousa, JOSÉ MARIANO**, Mexican bibliographer, b. in Puebla, Mexico, 22 May, 1756; d. at Mexico, 23 March, 1817. He went to Spain and spent some time in the family of the former Bishop of Puebla, then Archbishop of Toledo. Returning to Mexico (1811) he was made Archdeacon of the Metropolitan church of Mexico (1813), and was afterwards its Dean. Beristain was a secular priest who had made thorough studies at Mexico and perfected them in Spain under the most favourable circumstances. He wrote a number of treatises, some of them on economic subjects, but hardly any were published, the manuscripts being mostly lost through carelessness in sending them to Europe. His great work is the "Biblioteca hispano-americana septentrional," the last part of which was published after his death. For this he used as a basis the "Biblioteca mexicana" of Bishop Juan José de Eguíara y Eguen of which only the first volume (as far as "J") appeared in print. Beristain at first intended to republish Eguíara, completing the alphabet by means of sketches and notes left by the author, but, as he proceeded to carry out the idea, he found that it would be preferable to compose an independent bibliography, incorporating in it the material Eguíara had collected. The "Biblioteca" of Beristain is, thus far, the most complete work on the subject that exists, but it contains many errors in names and dates. Still, if we take into account the time when he wrote, and the great obstacles he had to overcome in the shape of distances from sources and their frequent inaccessibility, it must be considered a monumental work and, up to this day, the principal source of knowledge of the bibliography of Mexico and Central America.

AD. F. BANDELIER.

**Berlage, ANTON**, dogmatic theologian, b. 21 December, 1805, at Münster, Westphalia; d. there, 6 December, 1881. He studied philosophy and theology in the same city, after completing his course at the Gymnasium, and proceeded to the University of Bonn in 1826. Esser, at Münster, and especially Hermes, at Bonn, led him to such speculations in theology as would have proved detrimental, had he not prosecuted his studies at Tübingen, during 1829 and 1830, under Drey, Hirscher, and Möhler, who influenced him by their historic method, thus saving him from the danger of philosophical systems then prevalent in Germany. He graduated as Doctor of Theology at the University of Munich while yet a

deacon, and soon after began his long career as professor in the Academy of Münster, his native town, where he taught till his death. In 1832 he was ordained priest without ever having taken a course in any ecclesiastical seminary. His first book, "Apologetik der Kirche", was published in 1835, and favourably noticed by Protestant critics. He was appointed, first, associate professor, then regular professor, lecturing on apologetics and moral theology, but he ultimately restricted himself to dogmatic theology. His influence on the theological faculty of the Academy was so marked that its spirit may be said to be his. He became dean of the faculty in 1849 and, with Bisping, Schwane, and others, established the fame of his Alma Mater, excelling less in speculation than in argument and in positive exposition of dogma. Kihn numbers him among those who discussed theological matters philosophically, while Knöpfler regards him as belonging to the Tübingen school. Brück, in his history of the Catholic Church in the nineteenth century, declares, "Berlage's writings excel in correct expression of dogmatic principles, in elegance of language, and in clearness of diction". Those who have been his pupils say that as a lecturer he was concise, direct, and refined. He garnered the fruit of his studies in seven volumes, "Katholische Dogmatik", published 1839-64.

JOS. SELINGER.

**Berland, PIERRE**, Archbishop of Bordeaux, b. 1375 in Médoc; d. 1457 at Bordeaux. Being of humble extraction, it was only through the liberality of friends that he was able to study the humanities at Bordeaux and canon law at Toulouse. Ordained priest, he was, first, secretary to the Archbishop of Bordeaux, then canon of St. Andrew's, and afterwards pastor of Soliac. In 1430 he was made Archbishop of Bordeaux. During his incumbency, he took a great interest in educational matters, founded the University of Bordeaux, endowed St. Raphael's College with twelve scholarships for indigent students, and in general won the character of a highly cultured and saintly prelate. His position as archbishop was most delicate. During the Hundred Years' War, the province of Guyenne had showed marked preference for the English Crown. On the other hand, the conduct of the English toward Joan of Arc, martyred shortly after Berland's preferment, coupled with the ambition of Henry VI, who had himself solemnly crowned King of France at Paris, could not meet the approval of the worthy archbishop. Twice he went north in an endeavour to bring his suzerain to greater moderation. Having failed in this, he transferred his allegiance to Charles VII, King of France, and was instrumental in bringing about the submission of the whole province to the French Crown, and with it the termination of the Hundred Years' War. Berland, old and infirm, resigned his see in 1457 and died shortly afterwards, venerated by his people. His remains were laid at rest in the vault of the cathedral, and his name is yet honoured at Bordeaux. The tower he caused to be built at St. Andrew's church in 1440, is called in his honour "Pey Berland" or "Père Berland" even to this day. Louis XI had obtained from Sixtus IV the appointment of a commission with a view towards Berland's beatification, but the cause fell through at that prince's death. This fact, coupled with the veneration of the people, accounts for the appellation "Bienheureux Berland" by which he is known.

J. F. SOLLIER.

**Berlanga**, FRAY TOMÁS DE, Bishop of Panama, b. at Berlanga in Spain, date uncertain; d. there 8 August, 1551. He was professed at the convent of San Esteban de Salamanca, 10 March, 1608, in the Dominican Order, and in time was elected prior of the convent on the Island of Hispaniola (Santo Domingo). The Dominicans of Hispaniola then depended on the province of Andalusia, but Berlanga obtained at Rome, in 1528, the establishment of a separate province, under the name of Santa Cruz, of which he was made provincial in 1530. From Santo Domingo he claimed the newly founded province of Santiago de México as being under his jurisdiction, but was successfully opposed by Fray Domingo de Betanzos. About the same time he was proposed for the Bishopric of Panama, and went thither. His vast and indefinite diocese embraced everything discovered, and to be discovered, on the South-American west coast, from which but a few years previous had come the news of the discovery of Peru by Pizarro. When, therefore, the Spanish crown began to notice signs of trouble between Pizarro and Almagro, about their respective territorial limits, it sent Bishop Berlanga to Peru with power to arbitrate between the two on any question at issue. At the same time the Spanish monarch, the Emperor Charles V, by a decree (*cédula*) dated 19 July, 1534, ordered Berlanga to make a report on the condition and prospects of Peru, its geographical and ethnographic peculiarities. The arbitration failed. Pizarro had (perhaps because he had been secretly informed of the bishop's mission) settled for the time being with Almagro and sent him off to Chile, so that no communication from Berlanga reached him. The latter's office as arbitrator was thereby practically vacated, and he returned to his see, refusing all advances made to him by Pizarro. The latter displayed considerable feeling, complaining that, as long as the conquest was in doubt, he had been left alone, but that now that it had been achieved "a step-father had been sent to him". Berlanga sent to the crown a description of what he saw, a brief and unvarnished report from the standpoint of a cool-headed observer. His mission was well intended, but practically impossible. Pizarro had artfully removed the other party to the proposed arbitration, and Berlanga was too honest to yield to insinuations of a one-sided investigation. Of the gifts tendered he accepted for himself a dozen silver spoons valued at twelve ducats, 600 pesos for the hospital of Panama, and 400 for the hospital of Nicaragua. After promoting the construction of the convent of Santo Domingo at Lima, Berlanga returned, in 1537, to Spain where he died in his native town.

JIMÉNEZ DE LA ESPADA, in the same introduction, mentions a report by BERLANGA, *Relación de la calidad de la tierra, puertos y población del Perú* (dated February 3, 1538, printed on page 41 of the Introduction); *Libro primero de Cabildos de Lima* (Lima, 1888).

AD. F. BANDELIER.

**Berlin**, capital of the German Empire and of the Kingdom of Prussia, and residence of the German Emperor and Prussian King. It is situated in the heart of the Mark of Brandenburg, on both sides of the Spree above its entrance into the Havel. The city covers an area of 24½ sq. miles and had, 1 December, 1906, 2,040,148 inhabitants, not including the population of the suburbs which are virtually parts of the city. Of the inhabitants of Berlin 223,948 are Catho-

lic; 1,695,251 are Protestants; 98,893 Jews, and 22,056 belong to other denominations.

**HISTORY.**—The present city of Berlin has grown out of two settlements of the Wends: Kölln, lying on an island in the Spree, and Berlin, opposite, on the right bank of the Spree. Kölln is mentioned for the first time in an official document dated 1237; Berlin, in 1244. Even at this date both places possessed the rights of Brandenburgian cities, but were not equal in importance to other cities of the Mark. A number of old churches, which are still among the most important ones of the city, testify to the active religious life prevalent at this early date, as: the church of St. Mary, erected at the end of the thirteenth century; the church of St. Nicholas; the church of the Grey Monastery (*Kirche des grauen Klosters*), a Gothic edifice built at the end of the thirteenth century. Altogether there were about eighteen church-buildings in Berlin before the Reformation. It was not until the two towns were united into one community, in 1307, that the place grew to be of some importance. In the tumultuous times which prevailed in the Mark of Brandenburg during the fourteenth century, Berlin and Frankfort-on-the-Oder became the leaders of the confederation of the cities against the nobles, and joined the Hanseatic League. When the Emperor Charles IV obtained the Mark from the house of Wittelsbach, Berlin rose against him, but was defeated and compelled to open its gates to the emperor. Berlin paid an unwilling obedience to Frederick I of Hohenzollern who made his entry into the city in 1415. When the Elector Frederick II again separated the two cities and erected a fortified castle between Berlin and Kölln, on the site of the present royal residence, the inhabitants, under the leadership of Bernd Ryke, revolted, stormed the house in which the elector was accustomed to live when in Berlin, and destroyed the public records. Frederick conquered the rebels and took from the city its jurisdiction and other privileges. In 1451 the castle was completed; Elector John Cicero chose it for his usual residence, which greatly increased the importance of Berlin. The Reformation found ready acceptance in Berlin, and after the death of the Elector Joachim I (see BRANDENBURG) it triumphed over the old Faith. The nobility living in the neighbourhood of Berlin accepted the new doctrine at Teltow, April, 1539, and the Elector Joachim II, in the same year, followed their example. On the 2d of November the first celebration of the Lord's Supper according to the Lutheran Rite took place at Berlin in the Dominican church, which was later transformed into a Protestant cathedral. In 1540 the new church ritual for the Mark was settled and printed at Berlin. The Reformation in a short time gained a complete ascendancy, the monasteries were suppressed, and the Franciscan Father Petrus (d. 1571) was the last Catholic priest in Berlin until the coming of the Dominicans about one hundred and fifty years later.

The city suffered greatly during the Thirty Years War, its population sinking to 4,000 in consequence of a plague. It slowly recovered from the injuries inflicted by this war during the reign of Frederick William, the Great Elector, grew in size, and was surrounded by new fortifications. Immigrants from the Low Countries and French Huguenots, who brought many branches of industry with them, raised the number of inhabitants to 20,000. Frederick I made Berlin the royal residence and adorned it with many fine buildings, the most famous architect and sculptor of the time being Schlüter. In 1709 Frederick introduced a common government for the five divisions of the city which had gradually grown up. In 1696 he founded the Academy of Fine Arts, and in 1700 the Academy of Sciences, of which Leibnitz was the first president. Berlin suffered greatly during the Seven Years War, in the course of which it was

seized and plundered in 1757 by the Austrians, and in 1760 by the Russians; but under the wise rule of Frederick the Great (Frederick II) it rapidly recovered from the damage done to it and became an important centre of commerce, industry, and intellectual life. The number of inhabitants increased to 115,000. Frederick William II also spent large sums of money in beautifying the royal city. Under Frederick William III there was a temporary check to its development during the era of the Napoleonic ascendancy. In 1808 the city acquired the right of self-government to a limited degree, and in 1809 the University of Berlin was founded. During the long period of peace which followed the downfall of Napoleon a new development of the city began and its artistic embellishment by Schinkel, Rauch, Schadow, and others made rapid progress. In 1838 the first railway, from Berlin to Potsdam, was opened; the railway traffic increased the industrial importance of the city, and in 1844 the first large industrial exhibition of the German States belonging to the customs-union was held here. On the 15th of March, 1848, a revolution broke out; more than 1,000 barricades were erected, and encounters between the soldiers and the populace occurred; on the 18th of March a bloody struggle took place in the streets of Berlin in which the soldiers were victorious, but they afterwards withdrew from the city at the order of the king. In 1871 Berlin became the capital of the new German Empire. From 13 June to 13 July, 1878, were held the sessions of the Berlin Congress; since this date Berlin has developed into a great metropolis; it has become the most important industrial city of the European continent, the most important railway centre, and one of the chief commercial cities of the empire.

For about one hundred and fifty years after the Reformation Catholicism was suppressed in Berlin; public Catholic church services were forbidden; Mass could be said only in the private chapels of the Catholic embassies. As late as 1653 the elector was obliged to promise the Protestant diet that he would not allow private or public Catholic church services. In order to be able to raise troops more easily in Catholic districts Frederick William I in 1720 gave the first permission for the holding of public Catholic services in a private house in Berlin; soon after this the first Catholic chapel was fitted up. The pastoral care was exercised by Dominicans from Halberstadt; the saintly Father Bruhns being particularly successful in his labours. The conquest of Catholic Silesia by Frederick the Great drew many Catholics to Berlin, and the church of St. Hedwig was built for the Catholic community (1747-73), Frederick the Great giving the ground. He also built a small church at the home for disabled soldiers, for the Catholic pensioners. The addition of large Catholic territories in consequence of the partition of Poland, the secularization of 1802-03, and that of 1815 by the Vienna Congress likewise increased the number of Catholics in Berlin, but it was not until 1848 that they obtained more freedom. Since then the growth of the Catholic population has kept pace with the development of the municipality. Under Frederick the Great the Catholic population was about 5,000 in 1707, 107,000 inhabitants; in 1817 there were 186,570 Protestants to 6,157 Catholics; in 1843, 16,453 Catholics to 328,253 Protestants; 1853, 19,075 Catholics; 1871, 51,517; 1885, 99,579; 1900, 188,440 Catholics in Berlin proper. Church buildings did not increase in the same ratio, and the need of more edifices grew continually greater. With the aid of the whole of Catholic Germany a number of Catholic churches was erected in the decade beginning with 1890 to meet this want, but the construction of new church buildings, especially in the rapidly growing environs and suburbs of Berlin is still one of the most impera-

tive needs of Catholicism in the capital of the German Empire.

**STATISTICS.**—Ecclesiastically, Berlin belongs to the Delegation of the Mark of Brandenburg, which is under a delegate of the Prince-Bishop of Breslau; the delegate is the Provost of St. Hedwig's in Berlin. The Archpresbyterate of Berlin embraces the city of Berlin with the exception of a small part of Friedrichsberg (2,686 Catholics), and includes also the suburbs called Treptow, Stralau, Schöneberg, and a part of Charlottenburg (as far as the parish of St. Matthias); the Catholics in the presbyterate numbered in 1907, 239,666, of whom 221,262 lived in Berlin proper. The other suburbs, both large and small, belong to the Archpresbyterate of Charlottenburg. In 1907 the Catholic clergy of Berlin consisted of 13 clergy of higher rank (the provost, 7 parish priests, and 5 military chaplains), 31 assistant clergy, 7 priests in other positions, and 15 living in community—altogether 66 priests, of whom 26 do not come from the Diocese of Breslau. The archpresbyterate is divided for the cure of souls into 14 districts composed of 8 parishes and 6 vicariates; in 1907 another vicariate was in process of erection. The Catholic soldiers are formed into 5 church communities or parishes; Berlin is also the seat of the Catholic field-provostship for the Prussian army and the imperial navy. In 1907 Berlin had 8 Catholic parish churches and 18 chapels where public church services were held; these with the private chapels made 31 church edifices; 1 church building and 1 chapel were then in process of construction. With the exception of the church of St. Hedwig and the church in the home for invalided soldiers, all of the Catholic church buildings of Berlin were erected in more recent times. The principal churches are: St. Hedwig (1747-73—see above); in the style of the Pantheon at Rome; St. Michael, the first Catholic garrison-church of Berlin (1851-61) in early Renaissance style; St. Sebastian, the largest Catholic church of Berlin (1890-93) in Gothic style, tower 269 feet high; St. Paul, a Dominican church (1892-93) in Gothic style; St. Matthew, a Gothic building (1893-95), tower 302 feet high; St. Pius (1893-94), rather tasteless Gothic; St. John, the second Catholic garrison church and one of the largest church buildings of Berlin (1894-97), in Romanesque style; church of the Heart of Jesus (*Herz-Jesukirche*), Romanesque style (1897-98).

**SCHOOLS.**—There has been no public Catholic higher school for boys in Berlin since the struggle between the Catholic Church and the State (*Kulturkampf*) swept away the Catholic Progymnasium; there is, however, a private higher school for boys with about 130 pupils. The Catholic boys who attend the state and city high-schools are divided, for purposes of religious instruction, into twelve groups of four sections each. There are 3 higher Catholic schools for girls; two of these prepare teachers, and one is conducted by the Ursulines and includes a conservatory of music. There are 30 Catholic schools for primary instruction, attended by over 20,000 Catholic children, namely the parish school of St. Hedwig and 29 Catholic town-district schools.

**ORDERS, CONGREGATIONS, AND CHARITABLE INSTITUTIONS.**—The male orders in Berlin are: Dominicans, 1 house with 10 priests and 7 brothers; the Poor Brothers of St. Francis, 1 house with 17 brothers who carry on an orphan asylum for boys. The female orders and congregations in Berlin proper had, in 1907, 18 houses and 387 inmates: the Ursulines, a house with 37 inmates, carry on a boarding-school for girls, a higher school for girls united to a private seminary for teachers and a conservatory of music; the Sisters of St. Charles Borromeo, a house with 56 Sisters, have charge of St. Hedwig's hospital, which has an average of 530 patients and 160 con-

valets; Dominican nuns, 4 houses with 95 sisters, carry on the St. Katharine Home, which includes a day-nursery and home for women servants, the St. Antonius Home, which includes a kindergarten and nursery for small children, a home for women servants, and an institution of visiting nurses for the sick and poor, the Maria-Victoria Sanatorium, a hospital and institution for visiting-nurses for the sick and poor, and the St. Vincent Ferrer Home, a dispensary and home of nurses for the sick and poor and a home for women servants; the Grey Sisters, 7 houses with 137 sisters, have in charge 4 dispensaries and homes for visiting-nurses, St. Joseph's Hospital, and the St. Afra Home, which includes a rescue and orphan asylum, a home for women servants, and a crèche; these sisters are also the nurses in 2 garrison hospitals. The Sisters of St. Mary, 58 sisters in 4 houses, 1 of which is in Berlin-Rixdorf, conduct the Hospital of St. Mary, 3 homes for visiting-nurses, and a house-keeping and needlework school combined with a kindergarten. The Sisters of St. Joseph, 13 sisters in 1 house, conduct a hospice or boarding-home for single women and young girls, a boarding-school where housekeeping is taught, and a house for retreats. St. Joseph's Orphan Asylum, housing 200 children, is conducted by ladies, not professed religious, who lead a kind of conventual life. Taking these and other Catholic institutions together, there are in Berlin proper 4 Catholic hospitals, 12 dispensaries and homes for visiting-nurses, 4 institutions for convalescents, 3 institutions for the care of small children, 9 day-nurseries, 5 homes for children of school-age, 3 hospices for young men, 6 hospices, or boarding-homes, for ladies—for self-supporting women who are bookkeepers, telephone employees, and the like—8 homes for girls who are out of employment, 7 housekeeping and needlework schools, 3 orphan asylums and institutions for first communicants, 1 rescue home for girls.

**ASSOCIATIONS.**—There is much activity among the Catholic societies of Berlin. In 1907 the religious associations were: 21 brotherhoods and confraternities of the Rosary; 9 societies of the Childhood of Jesus; 8 societies of Christian mothers; 7 confraternities of the Holy Family; 7 altar societies for the making of vestments; 11 St. Charles Borromeo societies; 9 societies for collecting funds, especially for the Boniface associations; 12 sodalities of the B. V. M., 10 youths' or St. Aloysius sodalities. Among the local charitable associations are: the Catholic charity organization of Berlin and its suburbs, an association of all the Catholic benevolent institutions, endowments, and societies of Berlin and its environs; Societies of St. Vincent de Paul, including 16 conferences for men and 16 conferences for women; the St. Hedwig's women's association; the society of the B. V. M. for the protection of girls; 4 societies for the care of lying-in women; the Catholic burial association; the society for the care of the Catholic deaf and dumb of Berlin, its environs, and the whole delegature. The most important associations in connexion with the various callings are: the Catholic Journeymen's Union, having a building of its own; the Catholic Apprentices' Union; the Master-Workmen's Union; 13 Catholic workmen's unions, with about 2800 working-men members, which belong to the district organization for Berlin; 11 associations, having 1500 members, which belong to the Berlin district organization, and are composed of working-women, unmarried, and married women; the unions of the organized Catholic Workingmen's associations (28); the Christian unions, 32 groups with over 4000 workingmen members; the Catholic business men's society with 400 members; 2 societies of Catholic male and female teachers; 9 associations of Catholic students; 2 *Philister* societies. Among the political associations should be named: the People's

Union of Catholic Germany with about 4000 members; 13 organized groups in Berlin proper of the Centre Party; the Windthorst Union. Besides these there are some 20 singing, and church-choir, societies, and about 25 social societies. The most important of the 6 Catholic papers are: "The Germania", and the "Märkische Zeitung".

JOSEPH LINS.

**Berlioz, HECTOR**, French composer, b. at La Côte Saint-André, near Grenoble, 11 December, 1803; d. at Paris, 8 March, 1869. His father, a physician, wished Hector to follow his own profession, and for that purpose sent him to the Medical School in Paris. Young Berlioz soon changed the dissecting room for the library of the Conservatoire, where he sought to acquaint himself with the scores of the masters of music. Heretofore his musical studies had been confined to a rudimentary knowledge of the flute and of the guitar. After studying harmony with Leaveur for a few months, Berlioz composed a mass, which was performed in the church of St. Roch. Being admitted to the Conservatoire in 1823, he became noted not only for his great talent, but also for his rebellion against academic traditions. For the pure classicism of Cherubini, the head of the school, he had no respect, nor did he ever learn to understand and appreciate Palestrina, Händel, or Bach. Bent on giving expression to his teeming ideas in his own fashion, Berlioz, like the romanticists in literature, proceeded by violating or ignoring every established rule. As a consequence he never fully mastered the various forms of composition. With his "Fantastic Symphony", a cantata called "La mort de Sardanapale" which won for him the "Prix de Rome" (carrying with it a five years' pension), and a number of lesser works, Berlioz laid the foundation of the new school of composition which is known as the school of programme music. It is the endeavour of composers of this school to express by means of music definite ideas and moods and even to relate definite events. Although Berlioz has written a number of works on liturgical texts, hardly any of them have the liturgical character. His "Requiem", written for double chorus, an enormous orchestra, four military bands, and organ, suggests Michelangelo in its gigantic conception. While it strikes terror into the heart of the hearer, it does not inspire devotion. A "Te Deum" is built on equally large scale, and is more notable for its pomp and splendour than for its prayerfulness. Although Berlioz was a child of his time and in his music gave expression to every passion of man, he did not lose the Catholic sense, as is shown by the attraction liturgical texts had for him, and also by numerous other traits. Thus in his "Damnation de Faust" he sends Faust to eternal perdition accompanied by most gruesome music, instead of ultimately saving him in accordance with the pantheistic creed of Goethe. Berlioz is one of the most striking examples of modern subjectivism, and the numerous works he has left behind—symphonies with and without chorus, operas, an oratorio, "The Childhood of Christ", songs, choruses, etc.—give us an idea of what he might have been had he remained faithful to Catholic ideals.

JOSEPH OTTEN.

**Bernal, AGOSTINO**, Spanish theologian, b. at Magallon in Aragon in 1587; d. at Saragossa, 13 Sep-

tember, 1642. He entered the Society of Jesus in 1603 when sixteen years old. Being a finished classical scholar he taught humanities and rhetoric with success. The greater part of his life, however, he spent as professor of philosophy and theology at Saragossa, where he died. He was a man of rare innocence and candour of soul; so great was his love of prayer that it would be hard to say to which he devoted more time, to meditation or to study. He was looked upon by many as one of the most learned men of his age. His published works are: "Disputationes de Divini Verbi Incarnatione" (Saragossa, 1639); "Disputationes de Sacramentis in genere, Eucharistiâ et Ordine" (Lyons, 1651) a posthumous work.

SOUTHWELL, *Bibliotheca*, 93; HURTER, *Nomenclator*, 380.  
TIMOTHY B. BARRETT.

**Bernard** (or BARNARD), SAINT, Archbishop of Vienne, France, b. in 778; d. at Vienne, 23 January, 842. His parents, who lived near Lyons and had large possessions, gave him an excellent education, and Bernard, in obedience to the paternal wish, married and became a military officer under Charlemagne. After seven years as a soldier the death of his father and mother recalled him. Dividing his property into three parts, one for the Church, one for the poor, and one for his children, he retired to the wilderness of Ambronay, where there was a poor monastery. Bernard bought the monastery, enlarged it, and become one of its inmates. Upon the death of the abbot he was elected (805) to the vacant position. In 810 he was chosen Archbishop of Vienne to succeed Volfère, but it was only upon the command of Pope Leo III and of Charlemagne that he accepted the honour. He was consecrated by Leidrade, Archbishop of Lyons, and distinguished himself by his piety and learning. He took part in drawing up the Capitularies of Charlemagne and aided Agobard in a work upon Jewish superstitions.

Bernard was a member of the Council of Paris (824) convoked by Louis the Pious, at the request of Eugenius II, in the hope of bringing about an agreement between the Church of France and that of the East as to the devotion to be paid to images. Bernard took an unfortunate position in the quarrels between Louis the Pious and his sons over the partition of the empire between the three sons of his first marriage, to which the monarch had agreed. Like Agobard of Lyons, Bernard sided with the oldest son, Lothair, and was one of the prelates who deposed the emperor at Compiègne and condemned him to make a public penance. Louis soon regained his authority and another council of bishops annulled the action of the one of Compiègne. Agobard and Bernard were deposed, but the sentence of deposition was never carried out, owing to the intervention of Lothair, who had been reconciled to his father. From this time on, the archbishop devoted himself entirely to the duties of his pastoral office. Towards the end of his life he loved to retire to a solitary spot on the banks of the Isère where stands to-day the town of Romans which owes its origin to him. On the approach of death he had himself removed to Vienne. He is honoured in Dauphiny as the patron saint of agricultural labourers.

*Acta SS.* (3d ed.), January, III, 157-187; *Bibl. hag. lat.* (1898), 149-150; CHAPPEL, *St. Bernard, Archevêque de Vienne* (Grenoble, 1898).

A. FOURNET.

**Bernard**, ALEXIS-XYSTE, Bishop of St. Hyacinth, P. Q., Canada, b. at Belœil, P. Q., 29 December, 1847. He made his classical and theological studies under the Sulpician Fathers in Montreal, and was ordained priest 1 October, 1871. After a year as curate he became successively President of Sorel College, Canon of the Cathedral, Archdeacon, Secre-

tary for the diocese, Vicar-General, Provost of the Chapter, and Prothonotary Apostolic. After the death of Bishop Moreau, in 1901, Mgr. Bernard was continued in the office of Vicar-General by Bishop Decelles, and, when the latter died, in 1905, was elected Vicar-Capitular. The Institute of the Sisters of St. Joseph, owe to him their organization, and formation as a teaching body. Besides "Synodal Decrees" and a summary of the "Clerical Conferences", he edited the "Pastoral Letters" of the bishops of the diocese, in nine volumes. He declined the See of St. Hyacinth on the plea of his enfeebled health, until he received from Pope Pius X a peremptory order to accept. He was consecrated 15 February, 1906.

L. O. ROBERGE.

**Bernard Carvajal.** See CARVAJAL.

**Bernard Circa.** See BERNARD OF PAVIA.

**Bernard**, CLAUDE, a French ecclesiastic known as "the poor priest" (le pauvre prêtre), b. at Dijon, 23 December, 1588; d. in Paris, 23 March, 1641. His father was a distinguished lawyer, and filled successively offices of honour and responsibility. Young Bernard was educated at the Jesuit college of Dôle and was remarked for his brilliant imagination and wit. Pierre Le Camus Bishop of Belley urged him to enter the priesthood, but he declined, saying that he preferred the life of a poor gentleman to that of a poor priest. Shortly afterwards he went to Paris as a protégé of M. de Bellegarde, Governor of Bourgogne. For a while the social life of the capital attracted him; gradually, however, some disappointments, together with the death of an intimate friend who was killed in a duel, brought about a decided change in his mode of life and led up to his entrance into the priesthood. He was ordained by the above-mentioned Bishop Le Camus, and invited to his first Mass the poor of the city, distributing to them all his possessions, and, later on, an inheritance of 400,000 livres, or about eighty thousand dollars.

Henceforth Bernard devoted himself to the service of the poor, and delighted in the name of "the poor priest". The poor, the sick, and the prisoners were his special care; he fed, nursed, consoled, and instructed them with more than motherly tenderness. This life of self-sacrifice seemed rather to increase his personal charms. Wealthy and distinguished persons sought his company, and for the honour of entertainment at his modest table contributed abundantly to his charities. His kindly wit never deserted him. When Cardinal Richelieu once pressed upon him the acceptance of some favours he replied that he would be pleased if stronger boards were placed in the tumbril, or cart, on which the condemned were taken to execution. "It is a pity", said he, "that the constant dread of falling through the vehicle should distract our attention from God".

Bernard's methods were characterized by some as odd and reprehensible. He continued, however, to enjoy the friendship and admiration of saintly priests like Bourdoise, Olier, and St. Vincent de Paul, an ample justification of his character and sacerdotal ministry. In the history of charity he bears a striking resemblance to St. Francis of Assisi and St. Vincent de Paul, and his beatification has often been urged by the royal court and by the clergy of France. He founded at Paris, for the education of poor candidates for the priesthood, the seminary of the Trente-Trois, which still exists. He contributed much to popularize the beautiful prayer to the Blessed Virgin known as the *Memorare*, sometimes attributed to him, but certainly of an earlier date.

The life of Bernard has been written by GAUFFRE (1680) *LEMPEREUR* (1708); RIOM (1834); FELLER, *Biog. univ.* (Paris 1834), II, 244; ROHRBACHER, *Hist. de l'Eglise* (Paris, 1850) XXV, 251-261.

CHARLES B. SCHRANTZ.

**Bernard, CLAUDE.**—French physiologist, b. 12 July, 1813 at Saint Julien near Villefranche, France; d. at Paris, 10 February, 1878. His father was the proprietor of a vineyard and his early education, which was begun by the village curé, was obtained at the Jesuit college in Villefranche. Going to Lyons

CLAUDE BERNARD

to continue his studies, he became instead a pharmacist's assistant. While here, his literary ambitions led him to write a comedy, "*La rose du Rhône*", which was put on the stage. Encouraged by its reception, he wrote a five act drama and setting out in 1834 for Paris, submitted it to Saint Marc Girardin, the well-known critic. The latter found

evidence of literary ability in the young author's work, but advised him to study medicine as a more certain means of securing a livelihood than literature. Bernard followed this counsel, which proved the turning point in his career, and the play "*Arthur de Bretagne*" was not published until long after his death in 1886.

Bernard devoted himself particularly to anatomy and physiology but, being of a retiring disposition and somewhat awkward in manner, he did not impress his professors or fellow students with the power of which he was later to give proof. In 1839, he was appointed interne to Magendie, professor of medicine at the Collège de France, and one of the physicians of the Hôtel Dieu, noticing his skill in dissection, soon made him his *préparateur*, or lecture assistant. This latter appointment, in spite of many disadvantages, proved a fortunate one, and Bernard now began the researches in physiology which made him famous. His first important work was a study of the pancreas and its functions. This was followed by the discovery of the glycogenic function of the liver—perhaps his most noteworthy achievement, particularly on account of its bearing on current views in biology. It had been supposed by biologists that the animal, unlike the plant, could not build up complex compounds within itself, but could only utilize those furnished by the plant such as carbohydrates, proteids, etc., resolving them into constituents suited to its own needs. Bernard undertook the task of tracing out the various transformations of food stuffs within the animal organism, beginning with the carbohydrates; and he not only found, contrary to the accepted view, that sugar was formed in the liver, but he was also able to isolate a substance from the hepatic tissue which, though not sugar, was converted by fermentation into dextrose. He made a special study of its properties and called it "glycogen".

Bernard did not pursue his investigations in this field any farther, but took up the study of the influence of the nervous system on animal heat. This led to the discovery of the vaso-motor system. He found that severing the cervical sympathetic on one side of the neck of a rabbit caused a sensible rise in the temperature of the affected region. Further experiments on the sub-maxillary and other glands showed, as he announced to the Académie des Sciences, in 1858, that when the gland is actively

secreting, the venous blood issuing from it is red. Two sets of nerves control the action of the gland, stimulation of the chorda tympani making the venous blood red, while stimulation of the sympathetic nerve makes it darker than usual. He was thus able to formulate the statement: "the sympathetic nerve is the constrictor of the blood vessels; the chorda tympani is their dilator", and it may be said with truth that all subsequent work on the vaso-motor system has been based on these researches. The physiological effects of poisons, particularly of curare and carbon monoxide, also engaged Bernard's attention. He found that the former—an arrow poison employed by South American Indians—rendered the motor nerves inactive, while the sensory and central nervous system remained intact. His analysis of the action of the latter showed that it instantly replaces the oxygen of the red blood corpuscles, while it cannot of itself be subsequently replaced by oxygen.

In 1855 Bernard succeeded Magendie as professor at the Collège de France, having been appointed his deputy as early as 1847. In 1862 his health failed and it was not until 1870 that he fully recovered. In his later years he made the acquaintance of Napoleon III, who was much impressed by him and established two well-equipped laboratories for him—one at the Sorbonne, the other at the Musée d'Histoire Naturelle. In 1867 the emperor made him a member of the Senate, and in 1868 he was admitted to the Académie des Sciences. He devoted himself to scientific work and the revision of his published lectures until shortly before his death. He received a public funeral, at the expense of the State, from the Cathedral of Notre Dame, being the first Frenchman of science to be thus honoured. A statue was erected in his honour in 1886 in the court of the Collège de France, and also, in 1894, in the court of the Faculty of Medicine at Lyons. Bernard's chief contribution to physiological literature, apart from his original papers presented to various societies, are his "*Leçons*", in seventeen volumes, upon various topics in physiology. These comprise his lecture courses which were reported by his students and revised by himself.

FOSTER, *Claude Bernard* (New York, 1899); WALSH, *Makers of Modern Medicine* (New York, 1907).

HENRY M. BROCK.

**Bernard Guidonis**, Inquisitor of Toulouse against the Albigenes and Bishop of Lodève, b. at Royères (Limousin) in 1261; d. at Lauroux (Hérault), 30 December, 1331. He was one of the most prolific writers of the Middle Ages. He entered the Dominican Convent at Limoges, and made his profession in 1280. Ten years later he was made Prior of Albi, and subsequently at Carcassonne, at Castres, and at Limoges. In recompense for his services as Inquisitor he was made Bishop of Tuy in Galicia, by Pope John XXII, and a year later Bishop of Lodève. In spite of his manifold occupations he wrote numerous works of great importance such as: "*Flours des chroniques*", which is a universal chronicle from the time of Our Lord to 1331; "*Chronique abrégée des empereurs*"; "*Chronique des rois de France*"; "*Catalogue des Evêques de Limoges*"; "*Traité sur les saints du Limousin*"; "*Traité sur l'histoire de l'abbaye de St. Augustin de Limoges*"; "*Chronique des Prieurs de Grandmont*" (as far as 1318); "*Chronique des Prieurs d'Artige*" (as far as 1313); "*Chronique des évêques de Toulouse*" (as far as 1327); "*Sanctoral ou Miroir des saints*"; "*Vie des saints*"; "*Traité sur les soixante-douze disciples et sur les apôtres*"; "*Traité sur l'époque de la célébration des conciles*"; "*Compilation historique sur l'ordre des Dominicains*"; "*Pratique de l'inquisition*". This last is practically his most important work. It is an exposé of the prerogatives and duties of the inquisitor; its

citations, its forms of condemnation, its instructions for examinations, constitute a unique document for the study of the Inquisition during the first period of its existence. This work, lost for a time, was published later in *extenso* by l'abbé Douais, "Practica Inquisitionis hæreticæ pravitatis, auctore Bernardo Guidonis (Toulouse, 1886). Bernard is also the author of a number of theological treatises; "Abrégé de la doctrine chrétienne", "Traité de la messe", "Traité sur la conception de la Vierge", and also of different sermons.

DELIBLE, *Notice sur les manuscrits de Bernard-Guy in Coll.* (Paris, 1879), XXVII; MOLINIER, *L'inquisition dans le midi de la France au XIII et au XIV siècle* (Paris, 1880).

M. DE MOREIRA.

**Bernard of Besse**, Friar Minor and chronicler, a native of Aquitaine, date of birth uncertain; he belonged to the custody of Cahors and was secretary to St. Bonaventure. He took up the pen after the Seraphic Doctor, he tells us, to gather the ears the latter had dropped from his sheaf, lest anything of so great a memory as that of St. Francis might perish. His "Liber de Laudibus Beati Francisci" composed about 1280, besides a résumé of some of the earlier legends, contains brief and valuable information about the companions of St. Francis and the foundation of the three Franciscan Orders, and is the only thirteenth-century document which specifies the first biographies of St. Francis. About 1297-1300 he compiled a catalogue of the ministers general up to his time, which is also a source of much importance for the study of Franciscan history. Critical editions of both these works have been published by the Friars Minor of Quaracchi [In *Analecta Franciscana*, III (1897), 666-707] and by Father Hilarin Felder of Lucerne, O. M. Cap. "Liber de Laudibus" etc. (Rome, 1897). Bernard also wrote the life of Blessed Christopher of Cahors inserted in the "Chronica XXIV Generalium" (ed. Quaracchi, 1897, 161-173) and is very probably the author of the "Speculum Disciplinæ" and of the "Epistola ad Quendam Novitum" erroneously attributed to St. Bonaventure (See Bonav. Opera Omnia ed. Quaracchi, 1898, VIII, 583 sqq. and 663 sqq.).

WADDING, *Scriptores Ord. Minorum* (1650), 59, and SBARALEA, *Supplementum* (1806), 135; FABRICIUS, *Bib. Med. Aev.* (1734), 218; DANOU, *Hist. Litt. France* (1838), XIX, 437; EHRLKE in *Zeitschr. f. kath. Theol.* (1883), VII, 767-774; DENIFLE, *Archiv. f. Litt. und Kirchengesch. des M. A.* (1885), I, 145 sqq. and 680 sqq., also *Misc. Franciscana* (1886), I, 1 sqq.; OTHON, *L'Aquitaine Séraphique* (1900), I, passim.

PASCHAL ROBINSON.

**Bernard** (or BERNARDINE) of Bologna (FLOVIANO TOSELLI), Friar Minor Capuchin and Scotist theologian, b. at Bologna, 17 December, 1701; d. 19 February, 1768. In 1717 he entered the Capuchin Order and some years later filled successively the offices of professor of moral and dogmatic theology and several times held positions of responsibility. Perhaps the best known of Bernard of Bologna's writings is the "Bibliotheca Scriptorum O. Min. S. Francisci Cap.", a work which resembles Wadding's well-known "Scriptores Ord. Min." It was published at Venice in 1747, and an appendix appeared at Rome in 1852. Besides this work Bernard wrote an elementary treatise on philosophy according to Duns Scotus entitled "Institutio Philosophica præmittenda theologiæ" (Venice, 1766), and a treatise on dogmatic theology, "Institutio Theologica" (Venice, 1746). He is also the author of a "Phrasarium S. Scripturæ" composed for the use of preachers and authors.

HURTER, *Nomenclator*, III, 6.

STEPHEN M. DONOVAN.

**Bernard of Botone**, generally called PARMENSIS from his birthplace, Parma in Italy, a noted canonist of the thirteenth century; date of birth unknown; d. 1263, or, according to Hurter, 24 March, 1266.

Under Tancred he studied in Bologna, where later he accepted the chair of canon law. Here Durantius was his disciple. Bernard obtained a canonry in the Cathedral of Bologna, and was also named chaplain to Popes Innocent IV and Alexander IV, by whom he was employed in solving questions of weight. According to the inscription on his tombstone he was Chancellor of the University of Bologna. Bernard found ample scope for his literary activity in his chosen branch, canon law. From glosses, summaries, and similar works, which had appeared on the Decretals of Gregory IX and other collections, he completed, just before his death, a work on the Gregorian Decretals. This, owing to his exact knowledge of former collections and thorough grasp of his subject, won for him the admiration of his contemporaries; so that he was styled "Glossator", and his work, commonly known as "Glossa Ordinaria", became the fruitful source of later glosses, which were printed with Gregory's collection. Bernard was careful to note what he had taken from others, while his own comments were signed "Bern." The "Glossa Ordinaria" was given to the press in Mainz in 1472, 1473, and in Rome in 1474. In this Roman edition there are additions, especially from the "Novella Commentaria" of Giovanni Andrea (d. 1348). Bernard's "Casus Longi" on separate chapters of the same Gregorian Decretals is equally meritorious. It was frequently edited: Paris, 1475; Venice, 1477; Bologna, 1487; Strasburg, 1488, 1493; Lyons, 1500. Another work, entitled "Summa super Titulis Decretalium", was based on similar writings of his master, Tancred, of Bernard of Pavia and others. It is a clear, concise treatise, found in the works of Nicolaus de Tudeschis (Milan, five volumes in folio).

HURTER, *Nomenclator*, IV, coll. 290, 291; LEURIN, *Introductio in Corpus Juris Canonici* (Freiburg, 1889), 149, 150; SCHULTE, *Die Geschichte der Quellen und Lit. des kanonischen Rechts* (Stuttgart, 1875-80), II, 114-117.

ANDREW B. MEEHAN.

**Bernard of Clairvaux**, SAINT, b. in 1090, at Fontaines, near Dijon, France; d. at Clairvaux, 21 August, 1153. His parents were Tescelin, Lord of Fontaines, and Aleth of Montbard, both belonging to the highest nobility of Burgundy. Bernard, the third of a family of seven children, six of whom were sons, was educated with particular care, because, while yet unborn, a devout man had foretold his great destiny. At the age of nine years, Bernard was sent to a much renowned school at Chatillon-sur-Seine, kept by the Secular Canons of Saint-Vorles. He had a great taste for literature and devoted himself for some time to poetry. His success in his studies won the admiration of his masters, and his growth in virtue was no less marked. Bernard's great desire was to excel in literature in order to take up the study of Sacred Scripture, which later on became, as it were, his own tongue. "Piety was his all", says Bossuet. He had a special devotion to the Blessed Virgin, and there is no one who speaks more sublimely of the Queen of Heaven. Bernard was scarcely nineteen years of age when his mother died. During his youth, he did not escape trying temptations, but his virtue triumphed over them, in many instances in a heroic manner, and from this time he thought of retiring from the world and living a life of solitude and prayer.

St. Robert, Abbot of Molesmes, had founded, in 1098, the monastery of Cîteaux, about four leagues from Dijon, with the purpose of restoring the Rule of St. Benedict in all its rigour. Returning to Molesmes, he left the government of the new abbey to St. Alberic, who died in the year 1109. St. Stephen had just succeeded him (1113) as third Abbot of Cîteaux, when Bernard with thirty young noblemen of Burgundy, sought admission into the order. Three

APPARITION OF THE B VIRGIN TO ST. BERNARD—FILIPPINO LIPPI

BADIA, FLORENCE

years later, St. Stephen sent the young Bernard, at the head of a band of monks, the third to leave Cîteaux, to found a new house at Vallée d'Absinthe, or Valley of Bitterness, in the Diocese of Langres. This Bernard named Claire Vallée, or Clairvaux, on the 25th of June, 1115, and the names of Bernard and Clairvaux thence become inseparable. During the absence of the Bishop of Langres, Bernard was blessed as abbot by William of Champeaux, Bishop of Châlons-sur-Marne, who saw in him the predestined man, *servum Dei*. From that moment a strong friendship sprang up between the abbot and the bishop, who was professor of theology at Notre Dame, of Paris, and the founder of the cloister of St. Victor.

The beginnings of Clairvaux were trying and painful. The regime was so austere that Bernard's health was impaired by it, and only the influence of his friend William of Champeaux, and the authority of the General Chapter could make him mitigate his

VESTMENT OF ST. BERNARD OF CLAIRVAUX

austerities. The monastery, however, made rapid progress. Disciples flocked to it in great numbers, desirous of putting themselves under the direction of Bernard. His father, the aged Tescelin, and all his brothers entered Clairvaux as religious, leaving only Humbeline, his sister, in the world and she, with the consent of her husband, soon took the veil in the Benedictine Convent of Jully. Clairvaux becoming too small for the religious who crowded there, it was necessary to send out bands to found new houses. In 1118, the monastery of the Three Fountains was founded in the Diocese of Châlons; in 1119, that of Fontenay in the Diocese of Autun (now Dijon) and in 1121, that of Foigny, near Veirins, in the Diocese of Lain (now Soisson). Notwithstanding this prosperity, the Abbot of Clairvaux had his trials. During an absence from Clairvaux, the Grand Prior of Cluny, Bernard of Uxells, sent by the Prince of Priors, to use the expression of Bernard, went to Clairvaux and enticed away the abbot's cousin, Robert of Châtillon. This was the occasion of the longest, and most touching of Bernard's letters.

In the year 1119, Bernard was present at the first general chapter of the order convoked by Stephen of Cîteaux. Though not yet thirty years old, Bernard was listened to with the greatest attention and respect, especially when he developed his thoughts upon the revival of the primitive spirit of regularity and fervour in all the monastic orders. It was this general chapter that gave definitive form to the constitutions of the order and the regulations of the "Charter of Charity" which Pope Calixtus II confirmed 23 December, 1119. In 1120 Bernard composed his first work "De Gradibus Superbiæ et Humilitatis" and his homilies which he entitles "De Laudibus Mariæ". The monks of Cluny had not seen, with satisfaction, those of Cîteaux take the first place among the religious orders for regularity and fervour. For this reason there was a temptation on the part of the "Black Monks" to make it appear that the rules of the new order were impracticable. At the solicitation of William of St. Thierry, Bernard defended himself by publishing his "Apology" which is divided into two parts. In the first he proves himself innocent of the invectives against Cluny, which had been attributed to him, and in the second he gives the reasons for his attack upon averred abuses. He protests his profound esteem for the Benedictines of Cluny whom he declares he loves equally as well as the other religious orders. Peter the Venerable, Abbot of Cluny, answered the Abbot of Clairvaux without wounding charity in the least, and assured him of his great admiration and sincere friendship. In the meantime Cluny established a reform, and Suger himself, the minister of Louis le Gros, and Abbot of St. Denis, was converted by the apology of Bernard. He hastened to terminate his worldly life and restore discipline in his monastery. The zeal of Bernard did not stop here; it extended to the bishops, the clergy, and the faithful, and remarkable conversions of persons engaged in worldly pursuits were among the fruits of his labours. Bernard's letter to the Archbishop of Sens is a real treatise "De Officiis Episcoporum". About the same time he wrote his work on "Grace and Free Will".

In the year 1128, Bernard assisted at the Council of Troyes, which had been convoked by Pope Honorius II, and was presided over by Cardinal Matthew, Bishop of Albano. The purpose of this council was to settle certain disputes of the bishops of Paris, and regulate other matters of the Church of France. The bishops made Bernard secretary of the council, and charged him with drawing up the synodal statutes. After the council, the Bishop of Verdun was deposed. There then arose against Bernard unjust reproaches and he was denounced even in Rome, as a monk who meddled with matters that did not concern him. Cardinal Harmeric, on behalf of the pope, wrote Bernard a sharp letter of remonstrance. "It is not fitting", he said "that noisy and troublesome frogs should come out of their marshes to trouble the Holy See and the cardinals". Bernard answered the letter by saying that, if he had assisted at the council, it was because he had been dragged to it, as it were, by force. "Now illustrious Harmeric", he added, "if you so wished, who would have been more capable of freeing me from the necessity of assisting at the council than yourself? Forbid those noisy troublesome frogs to come out of their holes, to leave their marshes . . . Then your friend will no longer be exposed to the accusations of pride and presumption". This letter made a great impression upon the cardinal, and justified its author both in his eyes and before the Holy See. It was at this council that Bernard traced the outlines of the Rule of the Knights Templars who soon became the ideal of the French nobility. Bernard praises it in his "De Laudibus Novæ Militiæ".

The influence of the Abbot of Clairvaux was soon felt in provincial affairs. He defended the rights of the Church against the encroachments of kings and princes, and recalled to their duty Henry, Archbishop of Sens, and Stephen de Senlis, Bishop of Paris. On the death of Honorius II, which occurred on the 14th of February, 1130, a schism broke out in the Church by the election of two popes, Innocent II and Anacletus II. Innocent II having been banished from Rome by Anacletus took refuge in France. King Louis le Gros convened a national council of the French bishops at Etampes, and Bernard, summoned thither by consent of the bishops, was chosen to judge between the rival popes. He decided in favour of Innocent II, caused him to be recognized by all the great Catholic powers, went with him into Italy, calmed the troubles that agitated the country, reconciled Pisa with Genoa, and Milan with the pope and Lothaire. According to the desire of the latter, the pope went to Liège to consult with the emperor upon the best means to be taken for his return to Rome, for it was there that Lothaire was to receive the imperial crown from the hands of the pope. From Liège, the pope returned to France, paid a visit to the Abbey of St. Denis, and then to Clairvaux where his reception was of a simple and purely religious character. The whole pontifical court was touched by the saintly demeanour of this band of monks. In the refectory only a few common fishes were found for the pope, and instead of wine, the juice of herbs was served for drink, says an annalist of Cliteaux. It was not a table feast that was served to the pope and his followers, but a feast of virtues. The same year Bernard was again at the Council of Reims at the side of Innocent II, whose oracle he was; and then in Aquitaine where he succeeded for the time in detaching William, Count of Poitiers, from the cause of Anacletus.

In 1132, Bernard accompanied Innocent II into Italy, and at Cluny the pope abolished the dues which Clairvaux used to pay to this celebrated abbey—an action which gave rise to a quarrel between the "White Monks" and the "Black Monks" which lasted twenty years. In the month of May the pope, supported by the army of Lothaire, entered Rome, but Lothaire, feeling himself too weak to resist the partisans of Anacletus, retired beyond the Alps, and Innocent sought refuge in Pisa in September, 1133. In the meantime the abbot had returned to France in June, and was continuing the work of peacemaking which he had commenced in 1130. Towards the end of 1134, he made a second journey into Aquitaine, where William X had relapsed into schism. This would have died out of itself if William could have been detached from the cause of Gerard, who had usurped the See of Bordeaux and retained that of Angoulême. Bernard invited William to the Mass which he celebrated in the Church of La Coudre. At the moment of the Communion, placing the Sacred Host upon the paten, he went to the door of the church where William was, and pointing to the Host, he adjured the Duke not to despise God as he did His servants. William yielded and the schism ended. Bernard went again to Italy, where Roger of Sicily was endeavouring to withdraw the Pisans from their allegiance to Innocent. He recalled the city of Milan, which had been deceived and misled by the ambitious prelate Anselm, Archbishop of Milan, to obedience to the pope, refused the Archbishopric of Milan, and returned finally to Clairvaux. Believing himself at last secure in his cloister Bernard devoted himself with renewed vigour to the composition of those pious and learned works which have won for him the title of "Doctor of the Church". He wrote at this time his sermons on the "Cantic of Canticles".

In 1137 he was again forced to leave his solitude by order of the pope to put an end to the quarrel between Lothaire and Roger of Sicily. At the conference held at Palermo, Bernard succeeded in convincing Roger of the rights of Innocent II and in silencing Peter of Pisa who sustained Anacletus. The latter died of grief and disappointment in 1133, and with him the schism. Returning to Clairvaux, Bernard occupied himself in sending bands of monks from his too-crowded monastery into Germany, Sweden, England, Ireland, Portugal, Switzerland, and Italy. Some of these, at the command of Innocent II, took possession of Three Fountains Abbey, near the Salvia Waters in Rome, from which Pope Eugenius III was chosen. Bernard resumed his commentary on the "Cantic of Canticles", assisted in 1139, at the Second General Lateran Council and the Tenth Œcumenical, in which the surviving adherents of the schism were definitively condemned. About the same time, Bernard was visited at Clairvaux by St. Malachi, metropolitan of the Church in Ireland, and a very close friendship was formed between them. St. Malachi would gladly have taken the Cistercian habit, but the sovereign pontiff would not give his permission. He died, however, at Clairvaux in 1148.

In the year 1140, we find Bernard engaged in other matters which disturbed the peace of the Church. Towards the close of the eleventh century, the schools of philosophy and theology, dominated by the passion for discussion and a spirit of independence which had introduced itself into political and religious questions, became a veritable public arena, with no other motive than that of ambition. This exaltation of human reason and rationalism found an ardent and powerful adherent in Abelard, the most eloquent and learned man of the age after Bernard. "The history of the calamities and the refutation of his doctrine by St. Bernard", says Ratisbonne, "form the greatest episode of the twelfth century". Abelard's treatise on the Trinity had been condemned in 1121, and he himself had thrown his book into the fire. But in 1139 he advocated new errors. Bernard, informed of this by William of St. Thierry, wrote to Abelard who answered in an insulting manner. Bernard then denounced him to the pope who caused a general council to be held at Sens. Abelard asked for a public discussion with Bernard; the latter showed his opponent's errors with such clearness and force of logic that he was unable to make any reply, and was obliged, after being condemned, to retire. The pope confirmed the judgment of the council, Abelard submitted without resistance, and retired to Cluny to live under Peter the Venerable, where he died two years later.

Innocent II died in 1143. His two successors, Celestin II and Lucius, reigned only a short time, and then Bernard saw one of his disciples, Bernard of Pisa, Abbot of Three Fountains, and known thereafter as Eugenius III, raised to the Chair of St. Peter. Bernard sent him, at his own request, various instructions which compose the "Book of Consideration", the predominating idea of which is that the reformation of the Church ought to commence with the sanctity of its head. Temporal matters are merely accessories; the principal are piety, meditation, or consideration, which ought to precede action. The book contains a most beautiful page on the papacy, and has always been greatly esteemed by the sovereign pontiffs, many of whom used it for their ordinary reading.

Alarming news came at this time from the East. Edessa had fallen into the hands of the Turks, and Jerusalem and Antioch were threatened with similar disaster. Deputations of the bishops of Armenia solicited aid from the pope, and the King of France also sent ambassadors. The pope commissioned

Bernard to preach a new Crusade and granted the same indulgences for it which Urban II had accorded to the first. A parliament was convoked at Velzeley in Burgundy in 1134, and Bernard preached before the assembly. The King, Louis le Jeune, Queen Eleanor, and the princes and lords present prostrated themselves at the feet of the Abbot of Clairvaux to receive the cross. The saint was obliged to use portions of his habit to make crosses to satisfy the zeal and ardour of the multitude who wished to take part in the Crusade. Bernard passed into Germany, and the miracles which multiplied almost at his every step undoubtedly contributed to the success of his mission. The Emperor Conrad and his nephew Frederick Barbarossa, received the pilgrims' cross from the hand of Bernard, and Pope Eugenius, to encourage the enterprise, came in person to France. It was on the occasion of this visit, 1147, that a council was held at Paris, at which the errors of Gilbert de la Porée, Bishop of Poitiers, were examined. He advanced among other absurdities that the essence and the attributes of God are not God, that the properties of the Persons of the Trinity are not the persons themselves, in fine that the Divine Nature did not become incarnate. The discussion was warm on both sides. The decision was left for the council which was held at Reims the following year (1148), and in which Eon de l'Etoile was one of the judges. Bernard was chosen by the council to draw up a profession of faith directly opposed to that of Gilbert, who concluded by stating to the Fathers: "If you believe and assert differently than I have done I am willing to believe and speak as you do". The consequence of this declaration was that the pope condemned the assertions of Gilbert without denouncing him personally. After the council the pope paid a visit to Clairvaux, where he held a general chapter of the order and was able to realize the prosperity of which Bernard was the soul.

The last years of Bernard's life were saddened by the failure of the Crusade he had preached, the entire responsibility for which was thrown upon him. He had accredited the enterprise by miracles, but he had not guaranteed its success against the misconduct and perfidy of those who participated in it. Lack of discipline and the over-confidence of the German troops, the intrigues of the Prince of Antioch and Queen Eleanor, and finally the avarice and evident treason of the Christian nobles of Syria, who prevented the capture of Damascus, appear to have been the cause of disaster. Bernard considered it his duty to send an apology to the pope and it is inserted in the second part of his "Book of Consideration". There he explains how, with the crusaders as with the Hebrew people, in whose favour the Lord had multiplied His prodigies, their sins were the cause of their misfortunes and miseries. The death of his contemporaries served as a warning to Bernard of his own approaching end. The first to die was Suger (1152), of whom the Abbot wrote to Eugenius III: "If there is any precious vase adorning the palace of the King of Kings it is the soul of the Venerable Suger". Thibaud, Count of Champagne, Conrad, Emperor of Germany, and his son Henry died the same year. From the beginning of the year 1153, Bernard felt his death approaching. The passing of Pope Eugenius had struck the fatal blow by taking from him one whom he considered his greatest friend and consoler. Bernard died in the sixty-third year of his age, after forty years spent in the cloister. He founded one hundred and sixty-three monasteries in different parts of Europe; at his death they numbered three hundred and forty-three. He was the first Cistercian monk placed on the calendar of saints and was canonized by Alexander III, 18 January, 1174. Pope Pius VIII bestowed on him the

title of Doctor of the Church. The Cistercians honour him as only the founders of orders are honoured, because of the wonderful and widespread activity which he gave to the Order of Cîteaux.

The works of St. Bernard are as follows: "De Gradibus Superbiae", his first treatise; "Homilies on the Gospel 'Missus est'" (1120); "Apology to William of St. Thierry" against the claims of the monks of Cluny; "On the Conversion of Clerics", a book addressed to the young ecclesiastics of Paris (1122); "De Laudibus Novæ Militiæ", addressed to Hughes de Payns, first Grand Master and Prior of Jerusalem (1129). This is a eulogy of the military order instituted in 1118, and an exhortation to the knights to conduct themselves with courage in their several stations. "De amore Dei" wherein St. Bernard shows that the manner of loving God is to love Him without measure and gives the different degrees of this love; "Book of Precepts and Dispensations" (1131), which contains answers to questions upon certain points of the Rule of St. Benedict from which the abbot can, or cannot, dispense; "De Gratiâ et Libero Arbitrio" in which the Catholic dogma of grace and free will is proved according to the principles of St. Augustine; "Book of Consideration", addressed to Pope Eugenius III; "De Officiis Episcoporum", addressed to Henry, Archbishop of Sens.

His sermons are also numerous: "On Psalm XC, 'Qui habitat'" (about 1125); "On the Canticle of Canticles". St. Bernard explained in eighty-six sermons only the first two chapters of the Canticle of Canticles and the first verse of the third chapter. There are also eighty-six "Sermons for the Whole Year"; his "Letters" number 530. Many other letters, treatises, etc., falsely attributed to him are found among his works, such as the "l'Echelle du Cloître", which is the work of Guigues, Prior of La Grande Chartreuse, les Méditations, l'Édification de la Maison intérieure, etc.

*Works of St. Bernard*, ed. MABILLON, 2 vols. fol. (1667, 1690), the latter edition forming the basis of MIGNÉ's ed.; EALES and HODGES, tr. (London, 1889), in MIGNÉ, P. L. This contains three lives of the saint: *Vita Prima* by WILLIAM OF ST. THIERRY, ERNAUD DE BONNEVAL, and GEOFFROY OF AUXERRE; *Vita Secunda* by ALAIN OF AUXERRE; and *Vita Bernardi* by JOHN L'ERMIT. Besides these there are in the same edition the *Liber Miraculorum* of HERBERT, the *Exordium Magnum Cisterciense*, and the *Chronicon Claravallense* (Paris, 1839-40, 4 vols. fol.; Milan, 1892, 3 vols. quarto); ABBÉ DE RATISBONNE, *Life of St. Bernard* (1842); HUFFER, *Der heilige Bernard von Clairvaux* (Münster, 1886); NEANDER, *Der heilige Bernard* (Gotha, 1889); ABBÉ VACANDARD, *St. Bernard, Orator* (1877), who also published a life (Paris, 1896-97).

M. GILDAS.

**Bernard of Oluny** (or OF MORLAIX), a Benedictine monk of the first half of the twelfth century, poet, satirist, and hymn-writer, author of the famous verses "On the Contempt of the World". His parentage, native land, and education are hidden in obscurity. The sixteenth-century writer John Pits (*Scriptores Angliæ*, Sæc. XII) says that he was of English birth. He is frequently called *Morlanensis*, which title most writers have interpreted to mean that he was a native of Morlaix in Brittany, though some credit him to Murlas near Puy in Béarn. A writer in the "Journal of Theological Studies" (1907), VIII, 354-359 contends that he belonged to the family of the Seigneurs of Montpellier in Languedoc, and was born at Murles, a possession of that distinguished family; also that he was at first a monk of St. Sauveur d'Aniane, whence he entered Cluny under Abbot Pons (1109-22). It is certain that he was a monk at Cluny in the time of Peter the Venerable (1122-56), for his famous poem is dedicated to that abbot. It may have been written about 1140. He left some sermons and is said to be the author of certain monastic regulations known as the "Consuetudines Cluniacenses" (Hergott, *Vetus Discipl. Monast.*, Paris, 1726; Albers, *Consuet. Cluniac. antiquiores*, Monte Cassino, 1906), also of a

dialogue (Colloquium) on the Trinity. The "De Contemptu Mundi" contains about 3,000 verses, and is for the most part a very bitter satire against the moral disorders of the monastic poet's time. He spares no one; priests, nuns, bishops, monks, and even Rome itself are mercilessly scourged for their shortcomings. For this reason it was first printed by Matthias Flaccus as one of his *testes veritatis*, or witnesses of the deep-seated corruption of the medieval Church (*Varia poemata de corrupto ecclesie statu*, Basle, 1557), and was often reprinted by Protestants in the course of the seventeenth and eighteenth centuries. Its complete Latin text is found in Thomas Wright (*Anglo-Latin Satirical Poets of the Twelfth Century*, London, 1872). This Christian Juvenal does not proceed in an orderly manner against the vices and follies of his age. It has been well said that he seems to eddy about two main points: the transitory character of all material pleasures and the permanency of spiritual joys. Bernard of Cluny is indeed a lyrical writer, swept from one theme to another by the intense force of ascetic meditation and by the majestic power of his own verse, in which there lingers yet a certain fierce intoxication of poetic wrath. His highly wrought pictures of heaven and hell were probably known to Dante; the roasting cold, the freezing fire, the devouring worm, the fiery floods, and again the glorious idyl of the Golden Age and the splendours of the Heavenly Kingdom are couched in a diction that rises at times to the height of Dante's genius. The enormity of sin, the charm of virtue, the torture of an evil conscience, the sweetness of a God-fearing life alternate with heaven and hell as the themes of his majestic dithyramb. Nor does he dwell in generalities; he returns again and again to the wickedness of woman (one of the fiercest arraignments of the sex), the evils of wine, money, learning, perjury, soothsaying, etc.; this master of an elegant, forceful, and abundant latinity cannot find words strong enough to convey his prophetic rage at the moral apostasy of his generation, in almost none of whom does he find spiritual soundness. Youthful and simoniacal bishops, oppressive agents of ecclesiastical corporations, the officers of the Curia, papal legates, and the pope himself are treated with no less severity than in Dante or in the sculptures of medieval cathedrals. Only those who do not know the utter frankness of certain medieval moralists could borrow scandal from his verses. It may be added that in medieval times "the more pious the chronicler the blacker his colours". The early half of the twelfth century saw the appearance of several new factors of secularism unknown to an earlier and more simply religious time: the increase of commerce and industry resultant from the Crusades, the growing independence of medieval cities, the secularization of Benedictine life, the development of pageantry and luxury in a hitherto rude feudal world, the reaction from the terrific conflict of State and Church in the latter half of the eleventh century. The song of the Cluniac is a great cry of pain wrung from a deeply religious and even mystical soul at the first dawning consciousness of a new order of human ideals and aspirations. The turbid and irregular flow of his denunciation is halted occasionally in a dramatic way by glimpses of a Divine order of things, either in the faraway past or in the near future. This poet-preacher is also a prophet; Antichrist, he says, is born in Spain; Elijah has come to life again in the Orient. The last days are at hand, and it behoves the true Christian to awake and be ready for the dissolution of an order now grown intolerable, in which religion itself is henceforth represented by cant and hypocrisy.

The metre of this poem is no less unique than its diction; it is a dactylic hexameter in three sections,

devoid of *cæsura*, with tailed rhymes and a feminine leonine rhyme between the two first sections; the verses are technically known as *leonini cristati tritiles dactylici*, and are so difficult to construct in great numbers that the writer claims Divine inspiration (the impulse and inflow of the Spirit of Wisdom and Understanding) as the chief agency in the execution of so long an effort of this kind. To Archbishop (then Dean) Trench, who first translated about one hundred lines (*Sacred Latin Poetry*, London, 1849, 1864), the metre seemed repulsive and awkward; to the famous liturgiologist Dr. Neale (*The Rhythm of Bernard of Morlaix*, 8th ed., London, 1868) it seems "one of the loveliest of mediæval measures". It is, indeed, a solemn and stately verse, rich and sonorous, not meant, however, to be read at one sitting, at the risk of surfeiting the appetite. Bernard of Cluny is an erudite writer, and his poem leaves an excellent impression of the Latin culture of the Benedictine monasteries of France and England in the first half of the twelfth century (Bishop Stubbs, *Seventeen Lectures on Mediæval History*, London, 1893). The modern interest of English-speaking circles in this semi-obscure poet centres in the lovely hymns of exceptional piety, warmth, and delicacy of sentiment dispersed through his lurid satire; one of them, in particular, "Jerusalem the Golden", has been made universally famous in the translation of the above-mentioned Dr. Neale, first printed in his "Mediæval Hymns and Sequences" (London, 1851). Other translations of the brief portion made known in English by the aforesaid writers are owing to S. G. Duffeld (1867) and Charles Lawrence Ford (1898). A complete English translation (in prose) appeared from the pen of Henry Preble, in the "American Journal of Theology" (1906, 72-101, 286-308, 495-516), with a biographical note by Samuel Macauley Jackson.

THOMAS J. SHAHAN.

**Bernard of Compostella** (1) **ANTIQUUS**, a canonist of the early thirteenth century, a native of Compostella in Spain. He is called Antiquus to distinguish him from another, as below. He became a professor of canon law in the University of Bologna. Bernard compiled a collection of the decrees promulgated by Innocent III during the first ten years of his pontificate (1198-1208). This work, often called by the scholars of Bologna "Compilatio Romana", because the author took his documents from the Roman archives, was not of much practical worth, since an official or authentic collection, extending to 1210, rendered Bernard's compilation superfluous. Only portions of either of these collections were printed (ed. "Ant. Augustini Opera", Lucca, 1769, IV, 600-608).—(2) **JUNIOR** or **MODERNUS**, a canonist who lived in the middle of the thirteenth century, called Compostellanus from the fact that he possessed an ecclesiastical benefice in Compostella. He was known also as Brigantius from his birthplace in Galicia, Spain; later of Monte Mirato. Bernard was chaplain to Innocent IV, a noted canonist, at whose exhortation he wrote a work entitled "Margarita", an index of Innocent's "Apparatus", or commentary on the five books of the Decretals of Gregory IX. The "Margarita" was published in Paris, 1516. Bernard was the first to write a commentary on the constitutions of Innocent IV (not published). A third work was entitled "Casus seu Notabilia" on the five books of Decretals, which was intended as a complete and practical commentary, but which owing to the author's death, did not go beyond title sixth of the first book, consequently not published.

**Bernard of Luxemburg**, Dominican theologian, controversialist, and Inquisitor of the Archdioceses of Cologne, Mainz, and Trier; b. at Strassen near Cologne; d. at Cologne, 5 October, 1535. He studied at the latter place where he entered the Order of Preachers, received the baccalaureate at Louvain, 1499, and was appointed Master of Students at Cologne, 1505, 1506. In 1507 he became Regent of Studies at Louvain; fellow of the college of Doctors at Cologne, in 1516; and served twice as Prior of Cologne. As the author of the "*Catalogus hæreticorum*", he has been described as somewhat lacking in critical judgment; but he was otherwise a safe and indefatigable defender of the Faith against the heretics of his time. His important works are: "*Catalogus hæreticorum omnium*", etc. (Erfurt,

to devote himself to their conversion. For forty-two years he continued to preach the Gospel to these people and carried the light of faith even into many cantons of Lombardy, effecting numerous conversions and working many miracles.

For another reason, however, Bernard's name will forever be famous in history. Since the most ancient times there was a path across the Pennine Alps leading from the valley of Aosta to the Swiss canton of Valais, over what is now the pass of the Great St. Bernard. This pass is covered with perpetual snow from seven to eight feet deep, and drifts sometimes accumulate to the height of forty feet. Though the pass was extremely dangerous, especially in the springtime on account of avalanches, yet it was often used by French and German pilgrims on their way to Rome. For the convenience and protection of travellers St. Bernard founded a monastery and hospice at the highest point of the pass, 8,000

THE HOSPICE OF ST. BERNARD

J. R. VOLZ.

**Bernard of Menthon, SAINT**, b. in 923, probably in the castle Menthon near Annecy, in Savoy; d. at Novara, 1008. He was descended from a rich, noble family and received a thorough education. He refused to enter an honourable marriage proposed by his father and decided to devote himself to the service of the Church. Placing himself under the direction of Peter, Archdeacon of Aosta, under whose guidance he rapidly progressed, Bernard was ordained priest and on account of his learning and virtue was made Archdeacon of Aosta (966), having charge of the government of the diocese under the bishop. Seeing the ignorance and idolatry still prevailing among the people of the Alps, he resolved

feet above sea-level, in the year 962. A few years later he established another hospice on the Little St. Bernard, a mountain of the Graian Alps, 7,076 feet above sea-level. Both were placed in charge of Augustinian monks after pontifical approval had been obtained by him during a visit to Rome.

These hospices are renowned for the generous hospitality extended to all travellers over the Great and Little St. Bernard, so called in honour of the founder of these charitable institutions. At all seasons of the year, but especially during heavy snow-storms, the heroic monks accompanied by their well-trained dogs, go out in search of victims who may have succumbed to the severity of the weather. They offer food, clothing, and shelter to the unfortunate travellers and take care of the dead. They depend on gifts and collections for sustenance. At present, the order consists of about forty members, the majority of whom live at the hospice while some have charge of neighbouring parishes.

The last act of St. Bernard's life was the reconcilia-

tion of two noblemen whose strife threatened a fatal issue. He was interred in the cloister of St. Lawrence. Venerated as a saint from the twelfth century in many places of Piedmont (Aosta, Novara, Brescia), he was not canonized until 1681, by Innocent XI. His feast is celebrated on the 15th of June.

BARNABAS DIERINGER.

**Bernard of Pavia**, a noted canonist, provost of the cathedral chapter of Pavia, and, in 1190, promoted to the Bishopric of Faenza, became Bishop of Pavia in 1198; d. 18 September, 1213. About 1190 he compiled a work entitled "Breviarium Extravagantium" to complete and bring down to his own day Gratian's "Decretum". Bernard quotes authorities in an abbreviated form; hence the title. With the exception of a small fragment of a letter of St. Gregory the Great, he took nothing from Gratian. Later decrees and a few fragments of Roman and German civil law are found in the work. The "Breviarium" soon found favour in the University of Bologna, and from the time of Tancred (d. about 1235) was termed "Compilatio Prima"—the first collection of canon law after Gratian's—while other collections are styled "Compilatio Secunda", "Tertia", etc.

The "Breviarium" is divided into five books, the books into 152 titles, the titles into 912 chapters, the chronological order being observed as far as possible. The first book treats of persons who exercise ecclesiastical jurisdiction, the second of civil judicial processes, the third of matters pertaining to clerics and regulars, the fourth of matrimony, the fifth of ecclesiastical crimes and criminal procedure. While no rubrics are prefixed to the books of Bernard, his titles and chapters have their own peculiar inscriptions. The "Breviarium" was published in a work entitled "Antiquæ Collectiones Decretalium, cum Ant. Augustini, Episcopi Ilerdensis, notis" (Lerida, 1576; Paris, 1609); also in the work: "Ant. Augustini Opera" (Lucca, 1765—; 4 vols.) Joseph Anthony de Rieger, a professor in the University of Prague (d. 1795) published an incomplete edition of the "Breviarium" (Freiburg, 1778) in which he attempted to harmonize Bernard's work with the Decretals of Gregory IX.

Bernard wrote a "Summa Decretalium", a compendium of his "Breviarium", which for a long time constituted the chief text-book of the schools and was edited by Laspeyres (Ratisbon, 1860). Bernard's first work was entitled: "Summa de Matrimonio", which was followed by another: "Summa de Electione". Both are short treatises (see Laspeyres, op. cit., 287-323). His last work, begun in Faenza and finished after he became Bishop of Pavia, bears the title, "Casus Decretalium", part of which Laspeyres edited. Bernard also wrote a glossary on his "Breviarium", a life of St. Lanfranc, Bishop of Ticino, and commentaries on Ecclesiasticus and the Canticle of Canticles.

ANDREW B. MEEHAN.

**Bernard Tolomeo**, SAINT, founder of the congregation of the Blessed Virgin of Monte Oliveto. b. at Siena in Tuscany in 1272; d. in 1348. He received at baptism the name of Giovanni, but took that of Bernard out of admiration for the saintly Abbot of Clairvaux. He was educated by his uncle, Christopher Tolomeo, a Dominican, and desired to enter the religious life, but his father's opposition prevented, and he continued his studies in secular surroundings. After a course in philosophy and mathematics he

devoted himself to the study of civil and canon law and of theology. For a time Bernard served in the armies of Rudolph of Hapsburg. After his return to Siena he was appointed by his fellow-citizens to the highest positions in the town government. While thus occupied he was struck with blindness. Having recovered his sight through the intervention of the Blessed Virgin he retired (1313) to a solitary spot about ten miles from Siena, where he led a life of the greatest austerity.

The fame of his virtues soon attracted many visitors, and Bernard was accused of heresy. He went to Avignon and cleared himself of this charge before John XXII without difficulty. Upon his return he founded the congregation of the Blessed Virgin of Monte Oliveto, giving it the Rule of St. Benedict. The purpose of the new religious institute was a special devotion to the Blessed Virgin. Guido, Bishop of Arezzo, within whose diocese the congregation was formed, confirmed its constitutions (1319), and many favours were granted by Popes John XXII, Clement VI (1344), and Gregory XI. Upon the appearance of the pest in the district of Arezzo, Bernard and his monks devoted themselves to the care of the sick without any personal ill-effects. After having ruled the religious body he had founded for twenty-seven years Bernard died, at the age of seventy-six. His death was followed by many miracles and the congregation became a nursery of saints. In 1634 the Congregation of Rites declared that the Blessed Bernard Tolomeo was deserving of veneration among the saints. In the Roman Martyrology he is commemorated on 21 August.

**Bernardin de Picquigny.** See PICONIO (A PICONIO).

**Bernardine of Feltre**, BLESSED, Friar Minor and missionary, b. at Feltre, Italy, in 1439 and d. at Pavia, 28 September, 1494. He belonged to the noble family of Tomitano and was the eldest of nine children. In 1456 St. James of the Marches preached the Lenten course at Padua, and inspired to enter the Franciscan order, Bernardine was clothed with the habit of the Friars Minor in May of the same year. He completed successfully his studies at Mantua and was ordained priest in 1463. Cured miraculously of an impediment in his speech, Bernardine began the long and fruitful apostolate which has caused him to be ranked as one of the greatest Franciscan missionaries of the fifteenth century. Every city of note and every province from Lombardy in the north to Sardinia and the provinces of the south became successively the scene of his missionary labours; and the fruits of his apostolate were both marvellous and enduring. Bernardine, however, will be best remembered in history in connexion with the *monti di pietà* of which he was the reorganizer, and, in a certain sense, the founder. The word *mons* which literally means an accumulation of wealth or money, now called capital, seems to have been a generic term used in the fifteenth century to signify lending-houses in general; and hence the *montes pietatis* or *monti di pietà* were a species of charitable lending-houses not, perhaps, unlike our modern pawnbrokers' establishments, but possessing, of course, none of the sinister features of the latter. As originally instituted the *monti di pietà* were intended as a timely and effectual remedy for the evils occasioned by the usury then practiced by the Jews upon the people of Christian Italy; and Blessed Bernardine's zeal in reorganizing them and in founding them in places where they had not previously existed affords an explanation of the fact that he is generally represented carrying in his hand a *monte di pietà*, that is, a little green hill composed of three mounds and on

the top either a cross or a standard with the inscription: *Curam illius habet*. As an author Bernardine has left us little if anything of importance, but it is interesting to note that the authorship of the well-known *Anima Christi* has as often as not been ascribed to Blessed Bernardine of Feltre. The fact, however, that the *Anima Christi* was composed sometime before the birth of Blessed Bernardine disproves any claim that he might have of being its author. As in the case of St. Ignatius, Bernardine also made frequent use of it and recommended it to his brethren. The feast of Blessed Bernardine is kept in the Order of Friars Minor on the 28th of September. (See MONTI DI PIETÀ.)

STEPHEN M. DONOVAN.

**Bernardine of Fossa**, BLESSED, of the Order of Friars Minor, historian and ascetical writer, b. at Fossa, in the Diocese of Aquila, Italy, in 1420; d. at Aquila, 27 November, 1503. Blessed Bernardine belonged to the ancient and noble family of the Amici, and sometimes bears the name of Aquilanus on account of his long residence and death in the town of Aquila. He received his early training at Aquila and thence went to Perugia to study canon and civil law. On the 12th of March in the year 1445, he received the Seraphic habit from St. James of the Marches who was then preaching a course of lenten sermons at Perugia. From the time of his entrance into religion, Bernardine never ceased to advance in religious perfection, and the success which crowned his missionary labours throughout Italy, as well as in Dalmatia and Serigonia, bears witness to the eminent sanctity of his life. Bernardine fulfilled the office of provincial of the province of St. Bernardine and of the province of Dalmatia and Bosnia, and would have been chosen Bishop of Aquila had not his humility forbidden him to accept this dignity. His cult was approved by Leo XII, 26 March, 1828. His feast is kept in the Franciscan Order on the 7th of November. The writings of Blessed Bernardine include several sermons and divers ascetical and historical opuscles; among the latter, the "*Chronica Fratrum Minorum Observantiae*" deserves special mention. This interesting chronicle was first edited by Leonard Lemmens, O. F. M., from the autograph manuscript, and is prefaced by an interesting life of Blessed Bernardine and a critical estimate of his writings. It may also be mentioned that Bernardine is the author of the first life of his patron, St. Bernardine of Siena.

STEPHEN M. DONOVAN.

**Bernardine of Siena**, SAINT, Friar Minor, missionary, and reformer, often called the "Apostle of Italy", b. of the noble family of Albizeschi at Massa, a Siennese town of which his father was then governor, 8 September, 1380; d. at Aquila in the Abruzzi, 20 May, 1444. Left an orphan at six Bernardine was brought up with great care by his pious aunts. His youth was blameless and engaging. In 1397 after a course of civil and canon law, he joined the Confraternity of Our Lady attached to the great hospital of Santa Maria della Scala. Three years later, when the pestilence revisited Siena, he came forth from the life of seclusion and prayer he had embraced, to minister to the plague-stricken, and, assisted by ten companions, took upon himself for

four months entire charge of this hospital. Despite his youth Bernardine proved fully equal to this task, but the heroic and unremitting labour it involved so far shattered his health that he never completely recovered. Having distributed his patrimony in charity, Bernardine received the habit of the Friars Minor at San Francesco in Siena, 8 September, 1402, but soon withdrew to the Observantine convent of Columbaio outside the city. He was professed 8 September, 1403 and ordained 8 September, 1404. About 1406 St. Vincent Ferrer, while preaching at Alexandria in Piedmont, foretold that his mantle should descend upon one who was then listening to him, and said that he would return to France and Spain leaving to Bernardine the task of evangelizing the remaining peoples of Italy.

Nearly twelve years passed before this prediction was fulfilled. During this period, of which we have no details, Bernardine seems to have lived in retirement at Capriola. It was in 1417 that his gift of eloquence was made manifest and his missionary life really began at Milan at the close of that year. Thenceforth, various cities contended for the honour of hearing him, and he was often compelled to preach in the market places, his auditors sometimes numbering thirty thousand. Bernardine gradually gained an immense influence over the turbulent, luxurious Italian cities. Pius II, who as a youth had been a spellbound auditor of Bernardine, records that the saint was listened to as another Paul, and Vespasiano da Bisticci, a well-known Florentine biographer, says that by his sermons Bernardine "cleansed all Italy from sins of every kind in which she abounded". The penitents, we are told, flocked to confession "like ants" and in several cities the reforms urged by the saint were embodied in the laws under the name of *Riformazioni di frate Bernardino*. Indeed, the success which crowned Bernardine's labours to promote morality and regenerate society, can scarcely be exaggerated. He preached with apostolic freedom, openly censuring Visconti, Duke of Milan, and elsewhere fearlessly rebuking the evil in high places which undermined the *Quattrocento*. In each city he denounced the reigning vice so effectively that bonfires were kindled and "vanities" were cast upon them by the cartload. Usury was one of the principal objects of the saint's attacks, and he did much to prepare the way for the establishment of the beneficial loan societies, known as *Monti di Pietà*. But Bernardine's watchword, like that of St. Francis, was "Peace". On foot he traversed the length and breadth of Italy peace-making, and his eloquence was exercised with great effect towards reconciling the mutual hatred of Guelphs and Ghibellines. At Crema, as a result of his preaching, the political exiles were recalled and even reinstated in their confiscated possessions. Everywhere Bernardine persuaded the cities to take down the arms of their warring factions from the church and palace walls and to inscribe there, instead, the initials I. H. S. He thus gave a new impulse and a tangible form to the devotion to the Holy Name of Jesus which was ever a favourite topic with him and which he came to regard as a potent means of rekindling popular fervour. He used to hold a board in front of him while preaching, with the sacred monogram painted on it in the midst of rays and afterwards expose it for veneration. This custom he appears to have introduced at Volterra in 1424. At Bologna Bernardine induced a card-painter, who had been ruined by his sermons against gambling, to make a living by designing these tablets, and such was the desire to possess them that the man soon realized a small fortune.

In spite of his popularity—perhaps rather on account of it—Bernardine had to suffer both opposition and persecution. He was accused of heresy, the

tablets he had used to promote devotion to the Holy Name being made the basis of a clever attack by the adherents of the Dominican, Manfred of Vercelli, whose false preaching about Antichrist Bernardine had combated. The saint was charged with having introduced a profane, new devotion which exposed the people to the danger of idolatry, and he was cited to appear before the pope. This was in 1427. Martin V received Bernardine coldly and forbade him to preach or exhibit his tablets until his conduct had been examined. The saint humbly submitted, his sermons and writings being handed over to a commission and a day set for his trial. The latter took place at St. Peter's in presence of the pope, 8 June, St. John Capistran having charge of the saint's defence. The malice and futility of the charges against Bernardine were so completely demonstrated that the pope not only justified and commended the saint's teaching, but urged him to preach in Rome. Martin V subsequently approved Bernardine's election as Bishop of Siena. The saint, however, declined this honour as well as the Sees of Ferrara and Urbino, offered to him in 1431 and 1435, respectively, saying playfully that all Italy was already his diocese. After the accession of Eugene IV Bernardine's enemies renewed their accusations against him, but the pope by a Bull, 7 January, 1432, annulled their high-handed, secret proceedings and thus reduced the saint's calumniators to silence, nor does the question seem to have been reopened during the Council of Basle as some have asserted. The vindication of Bernardine's teaching was perpetuated by the feast of the Triumph of the Holy Name, conceded to the Friars Minor in 1530 and extended to the Universal Church in 1722.

In 1433 Bernardine accompanied the Emperor Sigismund to Rome for the latter's coronation. Soon after he withdrew to Capriola to compose a series of sermons. He resumed his missionary labours in 1436, but was forced to abandon them in 1438 on his election as Vicar-General of the Observants throughout Italy. Bernardine had laboured strenuously to spread this branch of the Friars Minor from the outset of his religious life, but it is erroneous to style him its founder since the origin of the Observants may be traced back to the middle of the fourteenth century. Although not the immediate founder of this reform, Bernardine became to the Observants what St. Bernard was to the Cistercians—their principal support and indefatigable propagator. Some idea of his zeal may be gathered from the fact that, instead of the one hundred and thirty Friars constituting the Observance in Italy at Bernardine's reception into the order, it counted over four thousand before his death. In addition to the number he received into the order, Bernardine himself founded, or reformed, at least three hundred convents of Friars. Not content with extending his religious family at home, Bernardine sent missionaries to different parts of the Orient and it was largely through his efforts that so many ambassadors from different schismatical nations attended the Council of Florence in which we find the saint addressing the assembled Fathers in Greek. Having in 1442 persuaded the pope to accept his resignation as vicar-general so that he might give himself more undividedly to preaching, Bernardine resumed his missionary labours. Although a Bull was issued by Eugene IV, 26 May, 1443, charging Bernardine to preach the indulgence for the Crusade against the Turks, there is no record of his having done so. There is, moreover, no good reason to believe that the saint ever preached outside Italy, and the missionary journey to Palestine mentioned by one of his early biographers may perhaps be traced to a confusion of names.

In 1444, notwithstanding his increasing infirmities, Bernardine, desirous that there should be no

part of Italy which had not heard his voice, set out to evangelize the Kingdom of Naples. Being too weak to walk, he was compelled to ride an ass. But worn out by his laborious apostolate of forty years the saint was taken down with fever and reached Aquila in a dying state. There lying on the bare ground he passed away on Ascension eve, the 20th of May, just as the Friars in choir were chanting the anthem: *Pater manifestavi nomen Tuum hominibus . . . ad Te venio*. The magistrates refused to allow Bernardine's body to be removed to Siena, and after a funeral of unprecedented splendour laid it in the church of the Conventuals. Miracles multiplied after the saint's death, and he was canonized by Nicholas V, 24 May, 1450. On 17 May, 1472, Bernardine's body was solemnly translated to the new church of the Observants at Aquila, especially erected to receive it, and enclosed in a costly shrine presented by Louis XI of France. This church having been completely destroyed by earthquake in 1703, was replaced by another edifice where the precious relics of St. Bernardine are still venerated. His feast is celebrated on 20 May.

St. Bernardine is accounted the foremost Italian missionary of the fifteenth century, the greatest preacher of his day, the Apostle of the Holy Name, and the restorer of the Order of Friars Minor. He remains one of the most popular of Italian saints, more especially in his own Siena. With both painters and sculptors he has ever been a favourite figure. He frequently finds a place in della Robbia groups; perhaps the best series of pictures of his life is that by Pinturicchio at Ara Coeli in Rome, while the carved reliefs on the façade of the Oratory of Perugia, built in 1461 by the magistrates of that faction-rent city in gratitude for Bernardine's efforts for peace among them, are considered one of the loveliest productions of Renaissance art. But the best portrait of Bernardine is to be found in his own sermons and this is especially true of those in the vernacular. That we are able to enter so thoroughly into the spirit of these *Prediche volgari* is due to the pious industry of one Benedetto, a Siennese fuller, who took down word for word, with a style on wax tablets, a complete course of Bernardine's Lenten sermons delivered in 1427, and afterwards transcribed them on parchment. Benedetto's original MS. is lost, but several very ancient copies of it are extant. All the forty-five sermons it comprises have been printed (*Le Prediche Volgari di San Bernardino di Siena*. Edite da Luciano Banchi, Siena, 1880-88, 3 vols.). These sermons which often lasted three or four hours, throw much light on the fifteenth-century preaching and on the customs and manners of the time. Couched in the simplest and most popular language—for Bernardine everywhere adapted himself to the local dialect and parlance—they abound in illustrations, anecdotes, digressions, and asides. The saint often resorted to mimicry and was much given to making jokes. But his native Siennese gayety and characteristic Franciscan playfulness detracted nothing from the effect of his sermons, and his exhortations to the people to avert God's wrath by penance, are as powerful as his appeals for peace and charity are pathetic. Very different from these popular Italian sermons taken down *della viva voce* are the series of Latin sermons written by Bernardine, which are in fact formal dissertations with minute divisions and subdivisions, intended to elucidate his teaching and to serve rather as a guide to himself and others than for practical delivery. Besides these Latin sermons which reveal profound theological knowledge, Bernardine left a number of other writings which enjoy a high reputation—dissertations, essays, and letters on practical, ascetical, and mystical theology, and on religious discipline, including treatises on the Blessed Virgin and St. Joseph, used in the Breviary lessons, and a

commentary on the Apocalypse. Bernardine's writings were first collected and published at Lyons in 1501. De la Haye's edition, "Sti. Bernardini Senensis Ordinis Seraphici Minorum Opera Omnia", issued at Paris and Lyons in 1536, was reprinted there in 1650, and at Venice in 1745. As a result of the petition addressed to the Holy See in 1882 by the General Chapter of the Friars Minor, requesting that St. Bernardine be declared a Doctor of the Church, a careful inquiry was instituted as to the authenticity of the works attributed to the saint. Some of these are certainly spurious and others are doubtful or interpolated, while not all the saint's genuine works are contained in the editions we possess. A complete and critical edition of St. Bernardine's writings is much needed. An excellent selection from his ascetical works was recently issued by Cardinal Vives (Sti. Bernardini Senensis de Dominicâ Passione, Resurrectione et SS. Nomine Jesu Contemplationes, Rome, 1903).

We are fortunate in possessing several detailed lives of St. Bernardine written by his contemporaries. Three of these are given in full in the *Acta Sanctorum Maji*, V, with Comm. Præv. by Henschen. The earliest by Bernabæus Senensis, an eyewitness of much he records, was compiled in 1445 shortly after the saint's death. The second by the celebrated humanist, Maphæus Vegius, who knew the saint personally, was printed in 1453. The third by Fra Ludovicus Vincentinus of Aquila was issued after the translation of the saint's body in 1472. A fourth contemporary biography by a Friar Minor, hitherto unedited, has lately been printed both by Father Van Ortro, S.J., in the *Anal. Bolland.* (XXV, 1906, pp. 304-389) and by Father Ferdinand M. d'Ardules, O.F.M. (Rome, 1906). The life of St. Bernardine written in Italian by his namesake, Bl. Bernardine of Fossa (d. 1503), and mentioned by Sbaralea and others does not appear to have come down to us. But the latter's "*Chronica Fratrum Minorum Observantiæ*", edited by Lemmens (Rome, 1902), contains several important references. A valuable account of Bernardine's youth is furnished by Leonardus (Benvoglienti) Senensis, Siennese ambassador to the pope. This work which was edited by Father Van Ortro in *Anal. Bolland.*, XXI (1902), 53-80, was compiled in 1446 at the instance of St. John Capistran. The "Life" of St. Bernardine attributed to St. John himself, and the one transcribed by Surius in his "*Vita SS.*" (1618), V, 267-281, as well as the tributes to Bernardine of Pius II and St. Antoninus and the acts of his canonization are found in vol. I of de la Haye's edition of Bernardine's works.

Wadding, *Annales*, XII, ad ann. 1450, n. I and *Scriptores* (1650), 57-58; Sbaralea, *Supplementum* (1806), 131-134, 725; AMADIO LUZZO, *Vita di S. Bernardino* (Venice, 1744; Rome, 1826; Siena, 1854; Monza, 1873); BERTHAUMIER, *Hist. de S. Bernardin* (Paris, 1862); TOUSSAINT, *Das Leben des h. Bernardin von Siena* (Ratisbon, 1873); *Life of St. Bernardine of Siena* (London, 1873); LEO DE CLARY, *Lives of the Saints of the Three Orders of St. Francis* (Taunton, 1886), II, 220-275; LEON, *Vie de St. Bernardin* (Vanves, 1893); ALESSIO, *Storia di S. Bernardino e del suo tempo* (Mondovì, 1899); RONZONI, *L'Eloquenza di S. Bernardino* (Siena, 1899). Undoubtedly the best modern life of St. Bernardine is that by Paul Thureau-Dangin of the French Academy: *Un prédicateur populaire dans l'Italie de la Renaissance: S. Bernardin de Sienne* (Paris, 1896). This brilliant monograph has been translated into Italian (1897), German (1904), and English (1906).

PASCHAL ROBINSON.

**Bernardines, THE**, title of certain sisters of the order of Cîteaux who at the end of the sixteenth and in the seventeenth century, made energetic efforts to restore the primitive observance of their rule. They were the Bernardine Recollects (*Bernardas Recoletas*) in Spain; the Bernardines of Divine Providence, the Bernardines of the Precious Blood; and the Bernardines of Flines and of Lille, in France and Savoy; and some isolated foundations in Belgium and in Peru. The first reform was due to the Abbesses of Las Huel-

gas of Burgos, who towards the end of the sixteenth century, had reformed the Abbeys of Gradedes, Perales, and St. Anne of Valladolid, where Jane de Ayala introduced the true spirit of Cîteaux. In 1601 St. Anne of Valladolid became the mother-house of the new reform, and in 1606 the constitutions were approved by Paul V. This reform extended as far as the Indies and the Canary Islands.

In 1622 Louise-Therese-Blanche de Ballon, daughter of Charles-Emmanuel de Ballon, chamberlain of the Duke of Savoy and later ambassador of this prince in France and Spain, began, under the direction of St. Francis of Sales, her near relative, the reform of the monastery of St. Catherine (Savoy). She afterwards went with five sisters to Rumilly and founded the Congregation of Bernardines of Divine Providence. This reform spread into Savoy and France. The constitutions were printed in 1631. In 1634 Mother de Ponconnas, who with four other Cistercian sisters of Grenoble had embraced the reform, having gone to Paris to found a new house, had the constitutions reprinted with some changes. Louise de Ballon then had them again printed so as to conform to the first constitutions—an action which caused the separation of the convents of France and Savoy. The convents of France formed what is known as the congregation "of St. Bernard". Mother Baudet de Beauregard who succeeded Mother de Ponconnas in the government of the monastery of Paris, changed the name from Bernardines of Divine Providence to Bernardines of the Precious Blood (1654). Their rules were approved by the Abbot of Prières, Vicar General of the Strict Observance of Cîteaux, and the Prior of St. Germain-des-Près, as Vicar General of the Cardinal de Bourbon, received the vows of the new community on the 27th of August of the same year.

The monasteries of the congregation now number (I) Bernardine Recollects, 13; (II) Bernardines founded by Mother de Ballon, 2; (III) Bernardines of Flines, 2; (IV) Bernardines of Lille, 3; (V) Bernardines isolated in Belgium and Peru, 6. The houses of France have been closed by the Government. The Bernardines of to-day are engaged in teaching and follow a somewhat modified rule.

The Bernardines of Spain rise every day at three o'clock, and on days of great solemnities at two o'clock. For the office they follow the Cistercian Breviary. They fast two days a week from Pentecost to the 14th of September, four days a week from the 14th of September to Easter Sunday, and every day during Advent, Septuagesima time, and Lent. Meat is allowed three times a week except during Advent and the nine weeks before Easter Sunday. Their habit consists of a woollen robe and their bed is conformable to the regulations. They live in community in sickness as well as in health. With the Bernardines of Mother de Ballon this rule is still more mitigated. They rise at five o'clock summer and winter. Silence is kept except during the recreation which follows dinner and supper. They fast two days a week from Easter Sunday to Pentecost, and on Saturday also during Advent. They abstain from meat on the Wednesdays, Fridays, and Saturdays of the whole year. M. GILDAS.

**Berne**, the fourth city of Switzerland in population, capital of a canton of the same name which is the second of the Swiss cantons in size and first in population, and since 1848, capital of the Swiss Confederation, is situated at a point 1,788 feet above the sea level, in Lat. 46° 57' N., and Long. 7° 26' E. The larger part of the city is built on a peninsula that projects into the Aar from its left bank. In the Middle Ages Berne contained over 5,000 inhabitants; in 1764, 13,681; in 1850, 27,558; in 1900, 64,064. This last number includes 60,622 Germans, 3,087 French, 902 Italians, 762 of mixed Romance blood;

divided as to religion, there are 57,946 Protestants, 6,278 Catholics, 668 Jews, and 481 persons belonging to other creeds. As capital of the Swiss Confederation, Berne is the seat of the national, as well as of the cantonal, government, and the official residence of all representatives of foreign Powers. Being the point of junction of seven different lines of railroad, Berne is visited annually by some 200,000 tourists and is the headquarters of a number of international unions and associations, such as the International Postal Union; the International Telegraph Union; the International Patent Office; the International Express Union; the International Publishers' Congress; the International Peace Society; the Blue Cross Society. It is the residence of a "Christian-Catholic" (Old-Catholic) bishop, and a Catholic parish priest, the centre of a large trade in agricultural produce and of considerable manufactures (chiefly spun silk, machinery, and scientific and musical instruments). It is one of the best built cities in Switzerland, having broad streets and large squares, while it has preserved, more than most of the larger Swiss cities, the old national characteristics in its domestic and municipal architecture. There are six bridges across the Aar, of which the two most important are the iron Kirchenfeldbrücke, 217 yards long, built in 1882-83, and the Kornhausbrücke, 388 yards long, and 157 feet above the River Aar, built in 1896-98. The city contains 7 churches and several chapels. The Catholic church of the Holy Trinity, built in 1896-1900, with a tower 147 feet high, is in the style of an early Christian basilica. The church of Sts. Peter and Paul, originally Catholic, was turned over to the Old Catholics in 1874. The most important of the secular buildings are: the Rathaus of the Canton, built 1406-16; the old and new Federal Buildings; the Parliament Building (*Parlamentsgebäude*), erected 1895-1902; and the new University Buildings (1900-03).

The University of the Canton of Berne was founded in 1834 by the reorganization of the academy already in existence; it has a Protestant theological faculty, an Old Catholic theological faculty, and faculties of philosophy, law, medicine, and veterinary medicine; its yearly expenses are 880,000 francs (\$176,000), and the endowment amounts to over a million francs (\$200,000). Connected with the university are an observatory, a botanical garden, and numerous institutes and clinics; the University Library was, in 1905, united with the City Library, the joint collection amounting to some 200,000 volumes, including many valuable manuscripts. Besides these there are a public and a private gymnasium, a secondary school for boys, a public and a private secondary school for girls, a normal school (at Muristalden), an industrial art school, which is combined with the cantonal industrial art museum, students' workshops, and schools for mechanics, art, and music. Among the numerous learned societies established at Berne are the Swiss Society for the Natural Sciences, founded in 1815, and the Historical Research Society of Switzerland, founded in 1840; the Cantonal Hospital contains 360 beds and has an endowment of over eight million francs (\$1,600,000); it was founded in 1354, and since 1884 has been situated on the Kreuzmatte in Holligen. Other hospitals are: a hospital for infectious diseases, founded in 1284, and containing 128 beds; a hospital for women, with maternity department, 1781; the city *Burgerspital*, founded in 1742, and having an endowment of some 7 million francs (\$1,400,000); the city *Zieglerspital*, founded in 1867, and having an endowment of some 3 million francs (\$600,000); the *Jennerspital* for Children; the Cantonal Insane Asylum; a town orphan asylum for boys and girls, Magdalen asylum, and numerous private institutions. Among the Catholic societies and associations are: the Catholic

Journeymen's Union (*Gesellenverein*), founded in 1868; the Association of St. Vincent de Paul for aiding the poor, 1868; Women's Society for the Encouragement of Religious Life and Aid of the Poor, 1875; Congregation of the Children of Mary, for young girls, 1881; the parish Cecilia Association (since 1878) a church-choir society; Men's Society, founded in 1872, reorganized in 1899 as the Catholic Association of the City of Berne, for the protection of Catholic interests, and united with the social union. Bernia, founded in 1887.

**HISTORY.**—The many remains discovered show that the territory surrounding Berne was occupied in prehistoric times. After the Romans had been driven out, the region was occupied by the Alemanni and Burgundians; in A. D. 534 it belonged to the Franks, in 888 it formed part of the second Burgundian empire, together with which it was absorbed into the Holy Roman Empire in 1032. The Dukes of Zähringen received the territory as a fief from the empire, and the last duke of this line, Berthold V, founded the city of Berne in 1191. At his death (1218) it was made a free city of the empire. With but few interruptions the city was able to preserve its independence during its long and frequent wars with the Counts of Kyburg, the Emperor Rudolph of Hapsburg, the Burgundian ruler, Charles the Bold, and so on. It was also able by a clever and consistent policy to increase the size of its territory; in 1415 it conquered Aargau, and Vaud was annexed in 1536. The Disputation of Berne, held in January, 1528, through the efforts of Berthold Haller, Valerius Anshelm, Franz Kolb, and other friends of Zwingli, resulted in the adoption of the Reformation by the city and the increase of the possessions of the State by the confiscation of church property; the land thus acquired amounted to 186 square miles. During the many religious wars which followed (1529, 1531, 1656, 1712) Berne suppressed all forms of Catholic life; in this it followed the example of, and acted in concert with, Zurich, which, with Berne, occupied the most prominent position in the Confederation. The extreme oligarchical rule of the few patrician families caused a rebellion of the peasants in 1653, and the conspiracy of Samuel Henzi in 1749, both of which uprisings were suppressed with much bloodshed, and the power of the Government became more absolute. It was not until the French Revolution that the oligarchy was swept away. After a brave struggle, Berne was taken and plundered by the French (5 March, 1798); it lost the Aargau and Vaud and became the capital of the newly founded Helvetic Republic. As compensation for the loss of the Aargau and Vaud, the Congress of Vienna (1815) gave Berne the greater part of the suppressed Bishopric of Basle and the cities of Biel and Neuenstadt. The oligarchical government, which was re-established, was obliged to abdicate at the outbreak of the Revolution of July, and a new Constitution was adopted (21 July, 1831) which granted democratic representation. This Constitution was amended in a radical direction in 1848 by the adoption of direct voting without property qualification; in 1896 a new Constitution was accepted which granted initiative by the people.

It was not until 1798 that the Catholics, in virtue of section 6 of the Constitution of the Helvetic Republic, were able to re-establish their church organization. In 1799 the Franciscan Father Girard became the first parish priest, being at the same time vicar-general to the Bishop of Lausanne; in 1804 he retired from Berne to become a teacher at Freiburg and Lucerne. Relations with the cantonal government were fairly good during the pastorates of his numerous successors, yet the Catholic community remained a private association and was not recognized by the authorities, although the Constitution of 1848 guar-

anted freedom of public worship. The Catholic community made use of the French Protestant church until Father Baud (1832-67) built a Catholic church (1858-64); in 1864 the parish, together with the old part of the canton, was included in the Diocese of Basle. The Catholics refused to recognize the deposition of Bishop Lachat of Basle and rejected the laws of 1873-74, which were unfavourable to the Church; these included the laws concerning parish elections, the cantonal synod as the highest church authority, and civil marriage. In the consequent religious struggle (*Kulturkampf*) they were obliged to give up their church and all church-endowments to the Old Catholics, who were favoured in every way by the authorities, as was shown by the erection of an Old Catholic theological faculty in 1874, etc. It was not until the decade beginning with 1880 that, during the pastorate of Father Jacob Stammli, a truce was established between Church and State. Father Stammli built a new church, 1896-1900, and was raised to the See of Basle-Lugano in 1906.

The chronicles of VALERIUS ANSHELM (d. 1540) and other medieval writers have been edited (1884-1901) by the Historical Society of the Canton of Berne. GREGOR REINHOLD.

**Berne, ABBEY OF.** See HEESWIJK.

**Berni, FRANCESCO**, an Italian comic poet, b. at Lamporecchio (Florence) 1497 or 1498; d. at Florence, 26 May, 1535. The son of noble but impoverished parents, he spent his early years in the Tuscan capital fighting want. At twenty better luck awaited him in Rome, where Cardinal Bibbiena, his relative the Cardinal's nephew, Angelo Dovizi, and Giovanni Mattia Giberti, Bishop of Verona and Datary to Leo X, successively employed him. In the datary, however, he had found a hard taskmaster, who kept him at his correspondence all day long and would not countenance the buffooneries in which the young clerk took huge delight. So, in 1531 we find Berni at Padua in rapturous freedom, gaily bent on bandying insults with the notorious Aretino. Still, the autumn of the same year saw him back at his desk in the episcopal residence of Verona, penning letters with a reluctant hand. Not until 1533, when Cardinal Ippolito dei Medici, who had engaged him the year before, made him a canon of the Florentine cathedral, did he find a position that pleased him. But that long dreamed of life, with its unbridled frolic and happy idleness, was not to last, for, becoming involved in the feud then raging between Ippolito and Alessandro dei Medici, he fell a victim to poison under very mysterious circumstances two years afterwards.

Berni's most extensive work, the refashioning of Matteo Maria Boiardo's chivalric poem, "*L'Orlando innamorato*", was published at Milan seven years after his death and again at Venice, 1545. Leaving the original plot and detailed *dénouement* entirely unchanged, the jovial Florentine sought to enliven with a smooth diction, and colour with many a quip and prank what he thought offensive on account of its ruggedness of form and dullness of style. Thus he unwittingly made a parody of a creation strong

and noble in its native simplicity. Undoubtedly Berni's fame is more deservedly due to his "*Rime*", embracing "*Sonetti*", "*Sonettesse*", and "*Capitoli*", wherein the Bernesque manner found its inception as well as highest achievement, and snivelling Petrarchists were pitilessly flouted. In spite of numberless imitators, including such men as Benedetto Varchi, Ercole Bentivoglio, Giovanni Mauro, Matteo Franzesi, and Ludovico Dolce, Berni's easy flowing tercets, fairly bubbling over with graceful raillery and capering mirth, dwarfed all his rivals. The "*Rime, Poesie latine, e Lettere*" were edited by A. Virgili at Florence, in 1885. Nor are the Latin poems, a rustic farce known as "*Catrina*" (Florence, 1567), and the "*Dialogo contro i poeti*" (Ferrara, 1527) unworthy productions of his facile pen. The morality of Berni's writings is far from commendable.

VIRGILI, *Francesco Berni, con documenti inediti* (Florence, 1881). About the Bernesque type of poetry see: MAZZONI, *Fra libri e carte* (Rome, 1887); GASPARY, *Geschichte der ital. Lit.* (Strasbourg, 1888), II, 514.

EDOARDO SAN GIOVANNI.

**Bernier, ETIENNE-ALEXANDRE**, French Bishop, b. at Daon (Mayenne), 31 October, 1762; d. at Paris, 1 October, 1827. He was at first professor of theology in the higher seminary and in the University of Angers, then pastor of St. Laud's parish, in that city. During the Revolution he refused to take the Civil Oath, and succeeded by his eloquence in arousing the peasants of Anjou and Vendée into insurrection. He then became one of the most important leaders of the whole movement by his personal influence both with the chiefs and on the different military councils. He was called "*L'Apôtre de la Vendée*". As to what was his real conduct during this insurrection, towards the end of it especially, its various historians do not agree. At any rate, after the 18th Brumaire, Bernier played the part of negotiator between the First Consul and the insurgents. When Bonaparte had resolved, in spite of all difficulties and opposition, to unite the French nation and the Catholic Church, he chose the Abbé Bernier to represent the French Government in the preparatory negotiations. This choice was a happy one, on the part of the First Consul, for, despite how widely historians differ in their appreciations of Bernier's character, none of them denies him a deep and subtle intelligence, an untiring and resourceful activity, and a seductive influence—all qualities which made him a clever politician.

As soon as Mgr. Spina and Caselli, the pope's envoys, arrived at Paris, in November, 1800, Bernier entered into relations with them, and, at once began, with Mgr. Spina, the preparatory negotiations on the important points which were to be discussed, namely, the resignation of the bishops, the reduction of the number of dioceses, the alienation of ecclesiastical properties, nomination to the bishoprics, and the taking of the oath of fidelity to the constitution. They successively presented four projects of reduction, followed by another project drawn up by Napoleon himself. Difficulties arose, necessitating the presence in Paris of the Papal Secretary of State, Consalvi, in June, 1801. The Concordat was to be signed on 13 July, and Bernier had been appointed by a decree of the preceding day (Messidor 23, an. IX) as one of the three representatives of the French Government, to conclude the Concordat and sign it. In the meantime, the project agreed upon had been changed by Bonaparte; letters were exchanged between Consalvi and Bernier; Consalvi refused to sign the new project. Negotiations continued until the 16th of July, when an agreement was reached and the Concordat signed at 2 o'clock in the morning. (See CONCORDAT.) In 1802 Bernier was named Bishop of Orléans, by Bonaparte.

G. M. SAUVAGE.

**Bernini, DOMENICO**, son of the famous artist Giovanni Lorenzo Bernini, lived in the early part of the eighteenth century. He became a prelate and canon of Santa Maria Maggiore in Rome. He devoted himself to the study of ecclesiastical history and wrote an extensive history of the heresies, "Istoria di tutte l'heresie", 4 vols. fol. (Rome, 1705-17); also, "Memorie istoriche di ciò che hanno operato i sommi pontefici nelle guerre contra i Turchi" in quarto (Rome, 1685); "Il tribunale della S. Ruota Romana (Rome, 1717).

*Acta Eruditorum* (Leipzig, 1708), 494; HURTER, *Nomenclator*, II.

G. M. SAUVAGE.

**Bernini, GIOVANNI LORENZO**, one of the most vigorous and fertile of Italian architects and sculptors, b. at Naples in 1598; d. at Rome in 1680. Bernini in his art is the most industrious of Roman artists, and his work tends largely to the baroque. In addition to his abilities as sculptor and architect he possessed those of a painter and even of a poet. His father, a painter and sculptor of moderate skill, gave him his first lessons in art. In 1608 the father was called to Rome and took Lorenzo with him. It is said that the boy even in his eighth year had carved a beautiful marble head of a child; in his fifteenth year he produced the "David with a Sling" which is now in the Villa Borghese. Paul V employed him, and under the five following popes he rose to great fame and importance. He was the favourite of Urban VIII (Barberini). In 1629 he became the architect of St. Peter's and superintendent of Public Works in Rome. He ruled in art like a second Michaelangelo, although his style bore little resemblance to that of the latter. Mazarin tried in 1664 to persuade him to come to Paris, but he did not visit that city until 1665 when he accepted an invitation from Louis XIV. A son named Paul and a numerous suite accompanied him to Paris and Versailles. Jealousy, however, prevented the carrying out of his plans for the Louvre, nor was he able to maintain himself long in Paris. His pupil, Mathias Rossi, was also forced, not long after the master's departure, to leave the city. The king, however, treated Bernini with great honour during his stay and rewarded him munificently. Bernini made a bust and an equestrian statue of Louis XIV which were in a style agreeable to the taste of that monarch. Queen Christina of Sweden visited Bernini during her stay in Rome; and on an order of King Philip IV he made a huge crucifix for the royal mortuary chapel. He also carved busts of Charles I of England and his wife Henrietta. Bernini triumphed over all his detractors and became in the end as rich as he was famous.

It is not necessary to speak here of his writings and of his comedies in verse. Nor need mention be made of his paintings which amount to some two hundred canvases. He owes his fame to his architectural work, for which he had in Rome great and inspiring examples. He never lacked imagination, inventive power, or courage in undertaking a task. He did not copy the simplicity of the antique and often deliberately departed from the canons of art in the hope of excelling them (*chi non esce talvolta*

*della regola, non la passa mai*). The art of this period in aiming at outward effect lost all moderation and went to too great an extreme. In completing the church of St. Peter Bernini was naturally obliged to exert all his powers. As the seventh architect engaged in the work he gave the finishing touches to the great undertaking. With sound judgment he followed the plan of Maderna—to increase the effect of the façade by means of flanking towers. He wished, however, to make the towers a more important feature than in Maderna's scheme, keeping them though in such proportion that in the distance they should appear some thirty metres below the dome. As one tower was well under way it fell down on account of the weakness of the foundation laid by Maderna. One of the most brilliant works of Bernini is the colonnade before St. Peter's. It proves the truth of the axiom he laid down: "An architect proves his skill by turning the defects of a site into advantages". The slope of the ground from the doorway of the basilica to the bridge over the Tiber suggested the scheme of laying out the great stairway of twenty-two steps and the great and equally well-conceived terrace. The ground available being limited on two sides by neighbouring houses, Bernini avoided the danger of coming too close to the buildings by adopting the beautiful elliptic form of the colonnade, which encloses, nevertheless, as large a ground-surface as the Colosseum.

The avenue thus formed is perhaps the most beautiful one in the world. When the piazza is approached from the distance a fine view is at first obtained of the dome; unfortunately the dome is more and more obscured, on nearer approach, by the portico and the façade of the church. Four rows of Tuscan columns, placed to right and left and having altogether the form of an ellipse, traverse the piazza from one end to the other. Between the middle rows of columns two carriages can pass. The slope of the ground without being sharp enough to produce fatigue causes the eye to look steadily upward. In the middle of the ellipse, which is 895x741 feet, stands the obelisk, 84 feet high, which was placed here in 1586 by Sixtus V. Back of the ellipse rises the terrace. Two galleries unite the ellipse with the portico, the height of which is best realized by comparing it with these galleries. Everything here is on a great scale. When, however, the pope gives the blessing from the balcony, the convergence of the lines in the arrangement of the piazza causes the space to appear much greater than it really is. The stairway (Scala Regia), which ascends from the portico to the Sala Regia, offers a fine perspective. Limitation was here turned into a source of beauty. Bernini had a large share in the erection of the stately Barberini palace at Rome. He built the beautiful Odescalchi palace, took part in adorning the Piazza Navona with the obelisk, and designed the pleasing statues of the river-gods for the great fountain.

In speaking of Bernini's work as a sculptor it may be said that in this field the decadence of his art makes itself apparent. The skeleton representing Death on the tomb of Urban VIII, in the church of St. Peter, is placed in the midst of ideal and really beautiful figures. Weaker still, with the exception of the portrait, is the tomb of Alexander VII. "St. Theresa pierced by an Arrow" is exceedingly effective, the "Rape of Proserpine", as well as his "Apollo and Daphne", are weak and sensuous. On the other hand, the equestrian statue of Constantine in St. Peter's suffers from its size, as the heroic proportions do not appear to be united with the necessary intrinsic worth. To-day the canopy (*baldacchino*) is as universally condemned as it was then (1633) admired. Neither is approval now given to

COLONNADE OF ST. PETER'S, DESIGNED BY LORENZO BERNINI (1667)

the "Chair of St. Peter" in the tribune of the basilica. Viewed as a sculptor Bernini is at times extreme, without force, theatrical in the pose, affected in details, or over-luxuriant in physical graces. He was entirely in accord with the spirit of his time and countenanced it with all the authority of his ability and fame. He attached more importance to grace of outward form than to intrinsic merit, and aimed more at external effect than at the real artistic completeness of the work. Yet among his productions as a sculptor are many excellent works. As examples may be given the tomb of the Countess Matilda in St. Peter's, and the statues of St. Ludovica Albertoni and St. Bibiana in the niches of the colonnade of St. Peter's. In the niches of these columns are 162 statues made after designs by Bernini. In his work on the Bridge of Sant' Angelo he shows at least wonderful richness of design. He by no means failed in designs for tombs and in portrait busts; for example, the bust of his daughter and that of Innocent X.

He often spoiled the pure plastic effect of his work by two or three false conceptions. He held that the antique repose of sculpture, which, it must be acknowledged, at times nearly degenerates into stiffness, must be transformed into effective action at any cost. The naturalistic painting of the time drove the sculptors into this course. But in the plastic arts the reason for extreme action is often not clear and it appears weak, sentimental, and theatrical. When the work is executed in polished marble, for which Bernini had a strong predilection, over-action is apt to degenerate into the opposite of what is intended and to become an extreme ugliness, or a miscarried attempt at grandeur. On account of these misconceptions of art Bernini's work was often a failure. The style of sculpture which aims solely at outward effect is seen to best advantage when it is used in connexion with architecture. The statues designed by Bernini for the façade of St. Peter's and of the Lateran belong to this form of art. Action appears at its best in sculpture when used as decoration and on a small scale. The decorative architectural style is better suited, therefore, for relief work than for sculpture in the round.

G. GIETMANN.

**Bernini, GIUSEPPE MARIA**, a Capuchin missionary and Orientalist, b. near Carignan in Piedmont; d. in Hindustan in 1753. For many years he was a missionary in the East Indies, and acquired a remarkable knowledge of the languages and dialects of India. In his travels through the country he made a special and careful study of the manners, customs, and religious beliefs and practices of the people. The results of his studies were collected in his work: "Notizie laconiche di alcuni usi, sacrifici, ed idoli nel regno di Neipal, raccolte nel anno 1747". This work has never been published, but is preserved in manuscript in the library of the Propaganda at Rome, and in the museum of Cardinal Borgia. Bernini also wrote "Dialogues", in one of the Indian languages, also preserved in manuscript in the Propaganda; a translation of "Adhiatma Ramayana"; one of "Djana Sagara", and a collection of historical studies under the title, "Mémoires historiques" (Verona).

*Dizionario Biografico Universale* (Florence, 1840). A very mediocre translation of the *Notizie* into English has been published in *Asiatic Researches*, II.

Eneas B. GOODWIN.

**Bernis, FRANÇOIS-JOACHIM-PIERRE DE**, a French cardinal and statesman, b. 1715 at Saint-Marcel-d'Ardeche; d. at Rome, 1794. The Bernis family

possessed many titles of nobility but was almost reduced to poverty. François, the youngest son, was destined for an ecclesiastical career and sent to St. Sulpice. He left that institution at the age of nineteen to go into the world to retrieve the family fortune. The title of Abbé, by which he was known, meant in those days little more than the tonsure and the black gown; it certainly meant only that to him. Young Bernis was a worldling in the full sense of the word, but success was slow in coming. His noble birth gave him access to the chapters of Brioude and Lyons; his ready wit and courteous manners opened to him the mansions of the wealthy, and the French Academy admitted him in recognition of certain literary essays whose principal merit was gallantry; but all this only concealed, without relieving, his poverty. It was at this time that Bernis was introduced to the future Madame de Pompadour, an acquaintance which soon meant a pension of 1500 livres and, later, the appointment as ambassador to Venice.

Once at Venice, Bernis rapidly rose. He succeeded in adjusting some differences between the Venetians and Pope Benedict XIV, and thus won the favour of the latter. The knowledge he had acquired of European diplomacy made him valuable to his Government, and partly in view of possible preferment in the Church and partly through a desire of breaking with the past, Bernis received the subdeaconship at the hands of the Patriarch of Venice. In 1756 Louis XV recalled him to make him his minister of foreign affairs, but his tenure of office was short and full of trials. The alliance of France with Austria against England and Prussia resulted in the Seven Years' War in which France was the loser, and Bernis was held responsible for both the alliance and its consequences. It is true that this new policy had been practically inaugurated by Rouillé, Bernis's predecessor in the foreign office; that the worthlessness of the French generals, all creatures of Madame de Pompadour, and not Bernis's carelessness or incompetency, was the true cause of the defeats of the French; that the treaty of Paris, which terminated the war, insured to the French some appreciable advantages; yet, despite this, Bernis lost the favour of the people and, along with it, the friendship of Madame de Pompadour. He tendered his resignation, and was, by a harsh letter of Louis XV, banished to the Abbey of Vic-sur-Aisne, near Soissons. Pope Clement XIII was the only one to remember him. Just as the fallen minister was going into exile, he received a papal *motu proprio* making him cardinal (1758).

Bernis profited by his six years of enforced retirement, receiving the diaconate and the priesthood. In 1764, after the anger of the king and Madame de Pompadour had subsided, he was sent to Albi as archbishop. His zeal there won him the esteem of all and prepared him for a still higher position, that of ambassador of France at Rome (1769). Bernis's influence in Rome was considerable. It was felt in the conclave of 1769, which elected Ganganelli, and in that of 1774, which elected Braschi. In the suppression of the Jesuits by Clement XIV, Bernis is far from deserving all the blame that is put on him. It is well known that he personally regretted the measure, and that as ambassador he tried to avert it by assisting the wavering pope in securing the delays for which he had asked. But the pressure exercised by the Bourbons of Spain, Naples, and France, and the passive attitude and tacit consent of Austria brought the negotiations to an abrupt termination. When the French Revolution broke out, Bernis held, in the national church of St. Louis des Français, a solemn funeral for the martyred Louis XVI; he also placed his palace at the disposal of the princesses of France who had sought refuge

in Rome, and finally resigned his post rather than take the constitutional oath. The last three years of his life he spent in Rome in comparative poverty, devoting himself to the French exiles and fully justifying the epithet, "Protector of the Church of France", bestowed upon him by Pius Pope VI. The French colony in Rome erected a magnificent mausoleum in his honour, and the church of St. Louis received his remains.

Bernis's life has too long received but scant appreciation because of the levity of his youth, which he was the first to regret and called the *delicta iuventutis meae*. The publication of his "Mémoires" in 1878 has put a new construction on many things and given us a truer and better opinion of him. Although the first part of his life cannot be defended, still, from the time of his ordination at Venice and Soissons, the courtier took a higher view of the sanctity of the priestly character, and was no discredit to it. Bernis was a writer of no mean talent. His "Poésies" show a bright imagination and a facile pen; his "Letters" are not inferior to Voltaire's; and the poem "Religion vengée", though lacking the calm beauty of Racine's similar production, still has inspiring passages. Didot published Bernis's "Œuvres mêlées en prose et en vers" (Paris, 1797), and Masson edited his "Mémoires" (1878).

J. F. SOLLIER.

**Berno** (ABBOT OF REICHENAU), famous as orator, poet, philosopher, and musician, born (date unknown) at Prüm near Trier; d. 7 June, 1048. He became Abbot of Reichenau in 1008. Educated in the school of St. Gall, Berno visited Rome with the Emperor Henry II, and upon his return introduced many reforms in the liturgical music of his native land. Among his books are the "Tonarium", "De variâ psalmodiarum atque cantuum modulatione", and "De consonâ tonorum diversitate", all of which are contained in Migne's "Patrology" and in Gerbert's "Scriptores". Another work attributed to him, but less known, is entitled "De instrumentis musicalibus".

Living and writing at a time when the traditions of Rome and St. Gall were still fresh, Berno has left, in his works on music, a fruitful source of information to those who are interested in ascertaining and restoring the rhythmical form in which the Gregorian melodies were originally sung. Berno's testimony, with that of other early writers, supports the view of those who hold that the Gregorian melodies consist of long and short note-values, as against the theory that all notes in the chant are of equal length.

JOSEPH OTTEN.

**Berno** (APOSTLE OF THE OBOTRITES), in the latter half of the twelfth century. The Obotrites were one of the Slav tribes known under the common name of Wends, and dwelt along the Baltic in Mecklenburg. Three bishoprics had been erected in their country as early as the tenth century, Oldenburg (transferred to Lübeck in the twelfth century), Ratzeburg, and Mecklenburg, but they remained vacant during the greater part of the eleventh century. Duke Henry the Lion, of Saxony, having partly subdued the Obotrites, re-established the three bishoprics, and in 1155 selected Berno as Bishop of Mecklenburg. He was a Cistercian monk of the flourishing monastery of Amelungsborn on the Weser, and was conse-

crated in Rome by Pope Adrian IV. As these sees were not only episcopal residences but also political centres and strongholds of foreign power, the Obotrites identified the Christian with the German name and detested both. No wonder that Berno at first met with small success in his missionary labours. The Obotrite Prince Niklot, the fiercest enemy both of the Germans and of the Christian religion, had not yet submitted to German ascendancy and was the greatest obstacle to the conversion of the people. Berno was even obliged in 1158 to transfer his episcopal see from Mecklenburg to Schwerin, whither German colonists had already penetrated. From Schwerin as a centre, the zealous and intrepid missionary bishop began his work of preaching, destroying idols, baptizing, and building churches, and penetrated as far as Demmin in hither Pomerania. Here, in 1163, he converted the powerful Prince Pribislav, son of Niklot, who, however, fell away again the very next year, made war upon the Germans, and attacked, and nearly killed the bishop at the altar. In the end he had to acknowledge the German supremacy and remained henceforth loyal to the Christian religion.

In 1168 Berno undertook a missionary expedition to the island of Rügen and destroyed the temple and the great idol of the pagan inhabitants, whom by patience and kindness he won over to the Christian religion. In the year 1171 he consecrated the Cathedral of Schwerin, where in 1177, he held the first synod. The greatest service which this apostolic man rendered to those countries was the introduction of his religious brethren, the Cistercian monks. The monastery of Doberan, which through the bishop's efforts was founded by Pribislav in 1171, soon became a centre from which radiated Christian civilization far and wide. The monks had been brought from his own monastery of Amelungsborn. Two years later Dargun was founded and entrusted to Danish monks. This monastery, however, did not flourish until the Danish monks were replaced by monks from Doberan. During the schism caused by Frederick Barbarossa, Berno, like all the Cistercians, never wavered in his loyalty to the legitimate pope, though his metropolitan, the Archbishop of Bremen, had joined the cause of the antipope. When at last Frederick made his peace with Alexander III, Berno was enabled to make a journey to Rome (1178) to pay his homage to the pope, who confirmed the erection of his diocese. During the Lent of the following year he took part in the General Council of the Lateran. During his absence in Rome, the Wends had risen against the Germans, the great monastery of Doberan had been destroyed and its seventy-eight inmates massacred. When peace was re-established Doberan was rebuilt and again peopled by monks from Amelungsborn in 1186. Berno died in 1191 (1190?) having laboured as bishop in Mecklenburg for over thirty years.

B. GULDNER.

**Bernold of Constance**, historian and theologian, b. in Swabia about 1054; d. at Schaffhausen, 16 September, 1100. He entered the school of Constance under the renowned Bernard of Constance, and made rapid progress in study. He attended the Lenten Synod of Rome, in 1079, at which Berengarius retracted his errors. Remaining in Italy till 1084 he returned to Constance for the episcopal consecration of Gebhard, whose action in enforcing the reform decrees of Gregory VII he later on defended. In the same year he was ordained priest by the papal legate, Cardinal Otto of Ostia. In 1086 he went with Bishop Gebhard as counsellor to King Herman, to

the battle of Bleichfeld. About the same time he entered the Benedictine Abbey of St. Blasien in the Black Forest near Schaffhausen, and in 1091 the Abbey of All Saints in the city itself, where he died. His name has ever been associated with the reforms of Gregory VII. The seventeen tracts that have reached us are mostly apologies for the pope's policy, or vindications of men who advocated or enforced it in Germany. Chief among these are: "De prohibendâ sacerdotum incontinentiâ", written against the married clergy; "De damnatione schismaticorum", wherein he justified the pope's condemnation of that abuse; "Apologeticus super excommunicationem Gregorii VII", a defence of the pope's excommunication of Henry IV and his partisans. Bernold is the author of a chronicle (*Mon. Germ. Hist., Script., V*) which is still highly esteemed. The latter part is a terse record of contemporary events by a knowing and intelligent observer. Dom Morin has shown (*Revue Bénédictine*, VIII, 385-395) that Bernold is the author of the "Micrologus", an important medieval liturgical treatise. Several other works are ascribed to him, but without sufficient evidence.

Germ. Hist., Script., V*; TRÄNER, *ibid.*, II; WATTENBACH, *Deutschlands Geschichtsquellen im Mittelalter* (Berlin, 1877), II, 43.

THOS. M. SCHWERTNER.

**Bernward, SAINT**, thirteenth Bishop of Hildesheim, Germany, b. about the middle of the tenth century; d. 20 November, 1022. He claimed descent from a noble Saxon family, which counted among its members men of distinction in Church and State. His grandfather was Athelbero, Count Palatine of Saxony. Having lost his parents at an early age, he came under the care of his uncle Volkmar, Bishop of Utrecht, who entrusted his education to Thangmar, the pious and learned director of the cathedral school

at Heidelberg. Under this master, Bernward made rapid progress in Christian piety as well as in the sciences and in the liberal and even mechanical arts. He became very proficient in mathematics, painting, architecture, and particularly in the manufacture of ecclesiastical vessels and ornaments of silver and gold. He completed his studies at Mainz, where he was ordained priest by Archbishop Willigis, Chancellor of the Empire (975-1011). He declined a valuable preferment in the diocese of his uncle, Bishop Volkmar, and chose to remain with his grandfather, Athelbero, to comfort him in his old age. Upon the death of the latter, in 987, he became chaplain at the imperial court, and was shortly afterwards appointed by the Empress-Regent Theophano, tutor to her son Otto III, then six years of age. The youthful emperor is known to have been a learned and religious prince, for which he

was indebted in no small degree to his instructor.

Bernward remained at the imperial court until 993, when he was elected Bishop of Hildesheim. His long episcopate of nearly thirty years was prolific of great results for the Diocese of Hildesheim. Thangmar, his former tutor, who subsequently became his biographer,

describes in eloquent terms, how the saint, after performing his episcopal functions in the cathedral, was wont to visit the various workshops connected with the cathedral school, and with his own hands manufactured gold and silver vessels for the enrichment of the altars. Under his direction arose numerous churches and other edifices, including even fortifications for the defence of his episcopal city against the invasions of the pagan Normans. As evidences of his skill in the practice of the mechanical arts there are still preserved in Hildesheim a cross of rich and exquisite workmanship, known as the "Bernward Cross", the famous Bernward column, with winding reliefs representing scenes from the life of Christ,

THE BERNWARD CROSS

two bronze doors of the Cathedral of Hildesheim, showing Scriptural scenes, and two candlesticks symbolic of Christ, the light of the world. A monument of his zeal and skill is St. Michael's abbey-church at Hildesheim—now Protestant—one of the most magnificent basilicas in Germany. His knowledge and practice of the arts were wholly employed in the service of the Church. A man of extraordinary piety, he was much given to prayer and the practice of mortification. Shortly before his death in 1022 he had himself invested with the Benedictine habit. He was canonized by Pope Celestine III in 1193. His feast occurs on 20 November.

J. A. BIRKHAUSER.

**Berea** (later, BERRHCEA, BEROIE, and BEROE), a titular see of Macedonia, at the foot of Mount Bermios, now Doxa; it still preserves its ancient name, pronounced Veria by the Greeks (Turkish *Kara-Feria*, Slav *Ber*). The Romans captured it after the battle of Pydna (168 B. C.) and from 49 to 48 Pompey took up his winter quarters there (Plutarch, *Pomp.* 64). In its Jewish synagogue St. Paul preached successfully (Acts, xvii, 10, 13); on withdrawing he left at Berea his disciples Silas and Timothy. Onesimus, formerly Philemon's slave, was its first bishop according to the Apostolic Constitutions (VII 46). At the time of the last partition

A BERNWARD  
CANDLESTICK

of the empire, it was allotted to Macedonia Prima (Hierocles, *Synecdemus*, 638), and its see made suffragan to Thessalonica. Amongst its bishops, Gerontius was present at Sardica in 344, Luke at the Latrocinium of Ephesus in 449, Timothy at the Council of Constantinople under the Patriarch Menas in 536, Joseph at the Eighth (Ecumenical Council in 869. Under Andronicus II (1283-1328) Bercea was made a metropolis. The actual Greek metropolitans add the title of Naoussa, a neighbouring city. It has now about 10,000 inhabitants.

Besides this Bercea, there was in Thracia a Berce, or Augusta Trajana (Hierocles, 635), whither Pope Liberius (355-358) was exiled (Sozomen, IV, 11). It is called Berrhoea, or Berce, in episcopal lists (Georgius Cyprius, 53; Parthey, *Notit. episc.*, VI, 57; VII, 53; VIII, 57). Its Turkish name was *Eski-Zagra*, for which the present Bulgarian substitute is *Slara-Zagora*. For its episcopal list see Lequien, I, 1165-68; Gams, 427. Bercea is also an ancient name of Aleppo.

LEQUIEN, *Or. Christ.*, II, 71-74; GAMS, *Series episcop.*, 429; LEAKE, *Northern Greece*, III, 290 sqq.; COUSINÉRY, *Voyage en Macédoine*, I, 57 sqq.

L. PETIT.

**Berosus** (Βηρωσός or Βηρωστός), the name of a native historian of Babylonia and a priest of the great god Bel (Bel-Marduk). He flourished during and after the lifetime of Alexander the Great, although the exact dates of his birth and death are unknown. It is certain, however, that he lived in the days of Alexander (356-326 B. C.) and continued to live at least as late as Antiochus I Soter (280-261 B. C.), to whom he dedicated his famous history of Babylonia. The meaning of his name is uncertain, notwithstanding the fanciful etymology of Scaliger and others who claim it is composed of *Bar* and *Hosea*, "Son of Hosea". Concerning his personality very little is known with certainty. According to Vitruvius and Pliny (whose testimony, taken as a whole, is to be accepted with caution), Berosus was profoundly versed in the science of astronomy and astrology; that much is certain. Leaving Babylonia, he settled for awhile in Greece, on the island of Cos, where he opened a school of astronomy and astrology. From there he passed to Athens where his wonderful learning and remarkable astronomical predictions brought him such fame that a statue with a gilt tongue was erected in his honour in the public gymnasium. Vitruvius attributes to him the invention of a semi-circular sundial. Justin Martyr, undoubtedly through a misunderstanding, affirms that the Babylonian Sibyl who gave oracles at Cumæ in the time of the Tarquins was a daughter of Berosus. Tatian, the disciple of Justin, and himself a Mesopotamian by birth, rightly calls Berosus the most learned historian of Western Asia. It is doubtful, however, whether the Babylonian Berosus is the same personage as the astronomer Berosus of whom many Greek and Latin historians make mention.

Berosus wrote a history of Babylonia, probably under title of "Babyloniaca", though it is referred to under the title of "Chaldaica" by Josephus and Clement of Alexandria. The work was divided into three books, or parts, of which the first dealt with human history from the beginning of the world to the Flood, the second from the Flood to Nabonassar (747 B. C.), and the third from Nabonassar to Alexander the Great and even as far down as the reign of his patron Antiochus. The materials of this history, written in Greek, he professes to have derived from ancient Babylonian chronicles and inscriptions preserved in the temple of Bel in Babylon, and there is every reason to believe in the truth of his assertion, as most of his statements, notwithstanding the manifold and unconscientious handlings which his work underwent at the hands of later Greek and

Roman writers, show a remarkable agreement with the cuneiform records and inscriptions found in the libraries and temples of Babylonia and Assyria. Unfortunately, however, by far the greater part of this priceless work has perished. What has come down is in the form of fragments preserved principally by late Greek historians and writers, such as Alexander Polyhistor, Abydenus, and Apollodorus, whose writings are quoted by Josephus, Nicholas of Damascus, Julius Africanus, Eusebius, Syncellus, and a few others. So it is apparent that the views put forth by Berosus come down in a very round-about manner. In places his statements have been so garbled as to seem absurd, and yet, fragmentary as his work is, it is of great importance.

Of the origin of the gods and of the world, according to the cosmology and mythology of the Babylonians, Berosus has the following account, preserved by Damascius, which shows a remarkable agreement with the Babylonian Creation epic discovered recently and masterly discussed and studied by Smith, Delitzsch, Jenson, Zimmern, Jastrow, King, Dhorme, and others. "Among the barbarians, the Babylonians seem to pass over the first of all principles in silence, imagining two to begin with, Tavathe (Tiamat, the Hebrew Tehôm) and Apason (Apsu), making Apason the consort of Tavathe, whom they called the 'mother of the gods'. The issue of their union, as they said, was an only son, Myomis (Mummu), who seems to me to stand for the visible world, offspring of the first two principles, from whom are subsequently produced another generation, Dache and Dachos (should be Lachme and Lachmos=Lahamu and Luhmu). A third follows from the same parents, Kissare (Kishar) and Assoros (Anshar), of whom three gods are born: Anos (Anu), Illinois (Elim?=Bel) and Aos (Ea); finally the son of Aos and of Davke is Belos (Bel-Marduk), called by them the 'demiurge'" (Damascius, *De primis principiis*, ed. Kopp, 125, p. 184).

Berosus's account of the creation of the world and of mankind, as preserved to us by Syncellus who copied it from Alexander Polyhistor, runs as follows: "There was a time when all was darkness and water, and from the midst thereof issued spontaneously monstrous animals and the most peculiar figures: men with two wings, and others with four, with two faces or two heads, one of a man, the other of a woman, on one body, and with the two sexes together; men with goats' legs and goats' horns, or with horses' hoofs; others with the hinder parts of a horse and the foreparts of a man, like the hippocentaurs. There were, besides, human-headed bulls, dogs with four bodies and fishes' tails, horses with dogs' heads, animals with the head and body of a horse and the tail of a fish, other quadrupeds in which all sorts of animal shapes were confused together, fishes, reptiles, serpents, and every kind of marvellous monster presenting the greatest variety in their shapes, representations of which may be seen in the paintings of the temple of Belos. A woman named Omoroca (Um-Uruk, the mother of Uruk) presided over this creation; in the Chaldean language she bears the name of Thavatt (Tiamat), signifying in Greek 'the sea', and she is also identified with the moon.

"Things being in this condition, Belos (Bel-Marduk) came upon the scene and cut the woman in half; of the lower part of her body he made the earth, and of the upper half the heavens, and all the creatures that were in her disappeared. This is a figurative way of explaining the production of the universe and of animated beings from humid matter. Belos then cut off his own head, and the other gods having kneaded the blood flowing from it with the earth, formed men, who by that means were gifted with understanding, and made participants of divine thought.

"Thus it was that Belos, interpreted by the Greeks as signifying Zeus, having divided the darkness, separated the heavens and the earth, and ordered the world; and all animated beings who were not able to endure the action of light perished. Belos, seeing that the earth was a desert, though fertile, commanded one of the gods to cut off his head, and kneading the blood which flowed with earth, he produced men, as well as those animals who are able to live in contact with the air.—Then Belos also formed the stars, the sun, the moon, and the five planets." (Ap. Syncell., 29; Euseb., *Chronic. Armen.*, I, ii, iv, ed. Mai, p. 10; ed. Lenormant, Fragment 1.)

His account of the Deluge, which shows a remarkable agreement with the eleventh tablet of the Gilgamesh epic and a striking similarity to the parallel narrative of Genesis, is of great importance, and has come down to us through Alexander Polyhistor; a short extract is also given by Abydenus. After referring to the ten antediluvian kings (cf. the ten antediluvian patriarchs of Genesis), Berosus proceeds as follows: "Obartes (Ubaratutu) being dead, his son, Xisuthros, reigned eighteen sars (84,800 years). It was in his time that the great Deluge came to pass, the history of which is related in the following manner in the sacred documents: Cronus (Ea) appeared to him in his sleep and announced to him that on the 15th of the month of Daisios (the Assyrian month Sivan, a little before the summer solstice), all mankind would perish by a deluge. He then commanded him to take the beginning, the middle and the end of all that had been consigned to writing, and to bury it in the city of the Sun, Sippara; after that to build a ship, and go on board of it with his family and dearest friends; to place in the vessel provisions for food and drink, and to introduce into it animals, both fowls and quadrupeds; lastly, to get everything ready for navigation. And when Xisuthros asked in which direction he should steer his vessel, he was told 'toward the gods', and to pray that good should come of it to men.

"Xisuthros obeyed, and built a ship five stadia long and two broad; he gathered in all that had been commanded him, and took on board his wife, his children, and his intimate friends.

"The deluge having come upon them, and soon subsiding, Xisuthros loosed some birds, who, having found neither food or place of rest, returned to the vessel. Some days later, Xisuthros again gave them their liberty, but they returned once more to the ship, their feet soiled with mud.

"At last, being loosed for a third time, the birds returned no more. Then Xisuthros understood that the earth was bare; he made an opening in the roof of the ship and found that it had gone aground upon a mountain. Then he came down with his wife, his daughter and his pilot, worshipped the Earth, raised an altar and sacrificed thereon to the gods; at this moment he disappeared with those who bore him company.

"Nevertheless, those who remained in the ship, not seeing Xisuthros return, also descended to the ground and began to look for him, calling him by name. They never saw Xisuthros again, but a voice from heaven made itself heard, bidding them be pious towards the gods; that he had received the reward of his piety in being taken up to dwell henceforth among the gods, and his wife, his daughter and the pilot of the vessel shared this great honour. The voice said, moreover, to those who were left, that they should return to Babylonia, and agreeably to the decrees of fate dig up the writings buried at Sippara, in order to transmit them to men. It added that the country where they then were was Armenia. After hearing the voice they sacrificed to the gods, and returned on foot to Babylonia. A portion of Xisuthros' ship, which finally went aground

in Armenia, is still found in the Gordyean Mountains in Armenia, and pilgrims bring away asphaltum which they have scraped from the fragments; they use it against witchcraft. As to the companions of Xisuthros, they arrived in Babylonia, dug up the writings buried at Sippara, founded a number of cities, built temples, and restored Babylon."

The chronological history of Babylonia, according to Berosus, was as follows: The first period, reaching from the Creation to the Flood, is said to have included ten reigns of 432,000 years. Some of the names of these antediluvian kings have been found also in the cuneiform inscriptions. The second period includes eighty-six kings and a period of 34,080 years, which bring us down to about 2500 B. C. The third period includes eight Median kings who, towards 2500 B. C. must have invaded Babylonia. These are followed by eleven other monarchs, the record of the duration of whose reigns is lost. The fifth period includes forty-nine Chaldean kings and 458 years. The end of this period brings us down to about 2000 B. C. The sixth period includes nine Arabian kings with 245 years. This so-called Arabian dynasty is identical with the now historically ascertained first Semitic dynasty, to which Hammurabi belonged. The seventh period includes forty-five kings and 526 years. The succeeding parts of Berosus's chronology are lost, up to the period of Nabonassar whose era commenced in 747 B. C. The history of this period, which reaches the reign of Alexander the Great, including such illustrious kings as Nabopolassar, Nebuchadnezzar, Nabonidus, Cyrus, etc., is well known to us from the cuneiform inscriptions.

Collections of the fragments of Berosus have been made by RICHTER (Leipzig, 1825); MÜLLER, *Fragmenta Historiarum Græcorum* (2 vols., Paris, 1848); CORT, *Ancient Fragments* (London, 1832). The best and most exhaustive study on Berosus and his history is that of the late Catholic Assyriologist, LENORMANT, *Essai de Commentaire de fragments cosmogoniques de Berosus* (Paris, 1871). For the best text of Berosus see EUSEBIUS, SCHÖNE ed., with GUTSCHMID's comments. See also SMITH, *Dictionary of Greek and Roman Biography and Mythology*, s. v.; ROGERS, *History of Babylonia and Assyria* (New York, 1901), I, 258 sqq., 327 sqq.; BRUNENGO, *L'impero di Babilonia e di Ninive* (1885), I, 67 sqq.

GABRIEL OUSSANI.

**Beroth** (BEEROTH), a city in Chanaan, one of the confederation of cities under the headship of Gabaon (Gibeon), whose territory was invaded by the Israelites under Josue (Jos., ix). Its inhabitants, together with those of three neighbouring cities, in order to save themselves from extermination, went to Josue in the disguise of travellers from afar and begged mercy; the Israelites entered into a league with them, but when the deception was discovered made them hewers of wood and drawers of water for themselves. Their city was afterwards assigned to the tribe of Benjamin (Jos., xviii, 25), but it seems to have remained Chanaanite till the monarchy, as it was only "reckoned" among the cities of Benjamin (II Kings, iv, 2). Later the Berothites fled to Gethaim (iv, 3), probably at the time Saul sought to slay the Gabaonites (Gibeonites, II Kings, xxi, 2), with whom the Berothites seem to have been reckoned (Jos., ix, 3, 17). Two descendants of these Berothites slew Isboseth, the son of Saul, claimant to his throne and rival of David; they brought his head to David, who punished the murder with death (II Kings, iv). Probably revenge on Saul for his injury to their fathers was one of their motives, for blood feud was regarded as a duty. Naharai, armour-bearer of Joab, David's great general, was a Berothite (II Kings, xxiii, 37), and we read of men of Beroth among the returned exiles (I Esd., ii, 25; II Esd., vii, 29), though these were more probably Israelites.

Beroth is usually identified with El-Biréh, a town of 800 inhabitants, about 9 miles north of Jerusalem, near which is an abundance of water (Beroth

wells) at which tradition reports Joseph and Mary halted on their return from Jerusalem when they missed the Child Jesus (Luke, ii). It was the usual stopping place of caravans to Nâbulus and Nazareth.

JOHN F. FENLON.

**Berrettini, PIETRO** (called PIETRO DA CORTONA), a distinguished Italian painter, architect, and writer, b. at Cortona, in Tuscany, 1 November, 1596; d. at Rome, 16 May, 1669. He studied first under his uncle, Filippo Berrettini, and then at Florence under Andrea Comodi. At the age of fifteen he left that city for Rome, and entered the studio of Baccio Ciampi, a Florentine painter. There he applied himself to the study of the works of Raphael, Michelangelo, and Polidoro, to that of the antique sculptures and notably of the bas-reliefs of the column of Trajan. While still very young he attracted the attention of Cardinal Sacchetti, who became his protector, and for whom were painted the first two of his works, "The Battles of Alexander" and "The Rape of the Sabines". Thereupon, Pope Urban VIII gave him the order to decorate a chapel of the church of Santa Bibiana. Such was his success there that he received the commission to paint what proved to be his most celebrated work, the ceiling of the great *salon* of the Barberini Palace, representing, in allegory, the history of that family. He then designed some mosaics for the dome of St. Peter's. After a trip through Lombardy and a sojourn at Venice, he went to Florence, where the Grand Duke Ferdinand II employed him to decorate the Pitti Palace. There he painted several important frescoes, but left without completing the series, angered by the actions of jealous rivals. The compositions included "Clemency of Alexander to the Family of Darius", "The History of Masinissa", "The Continence of Cyrus", and "The Firmness of Porsenna". The work was completed by his pupil Ciro Ferri. On his return to Rome Berrettini received many important commissions, acquiring a great reputation. He executed a number of frescoes in churches, as well as easel pictures. He became wealthy, and Pope Alexander VII created him a Chevalier of the Order of the Golden Spur. His principal pupils were Francesco Romanelli, Ferri, Testa, Giordano, and Borgognone. He is buried in the church of San Martino, of which he was architect, and to which he left a large sum of money.

BRYAN, *Dictionary of Painters and Engravers* (London and New York, 1903-05).

AUGUSTUS VAN CLEEF.

**Berruguete, ALONSO**, for his mastery of the arts of painting, sculpture, and architecture, sometimes called the Spanish Michelangelo, b. at Paredes de Nava, in Castile, about 1480; d. at Toledo, 1561. He was the second son of the painter, Pedro Berruguete, who was his first instructor. His family, however, chose the law for his profession and obtained for him an official position at Valladolid, the title of which he held for years, probably long after he had devoted himself to art. It is said that the fame of Michelangelo led him to Italy after his father's death and he entered the school of that great master in Florence and had among his friends Andrea del Sarto and Bandinelli. In the competition with Leonardo he made a copy of Buonarroti's great cartoon of Pisa. Accompanying his master to Rome, where he assisted him in the Vatican, he was one of the sculptors chosen by Bramante to compete in making a copy of the Laocöon to be cast in bronze, Sansovino, however, being the winner. On his return to Florence, he was engaged by the nuns of San Gerónimo to finish an altarpiece left unfinished at

his death by Filippo Lippi. After a long residence in Italy, Berruguete, in 1520, went back to Spain, where he was greatly honoured by Charles V, who appointed him a chamberlain, and court painter and sculptor, and gave him much work to do at Madrid, at the Palace of El Prado, and at the Alhambra. With Philip II he continued in favour and became a rich man, married a lady of quality and bought the lordship of Ventosa near Valladolid. After his return to Spain, the artist lived for some time at Saragossa, where he made an altar and a tomb for the church of Santa Engracia. At Valladolid he executed many works for churches and monasteries, notable among which is the high altar of the Church of San Benito el Real, belonging to the convent of the Benedictines, on which he spent six years. Berruguete worked with Felipe de Vigar on the sculptures of the cathedral at Toledo. There also, in the hospital of St. John the Baptist, is one of his finest works, executed when he was nearly eighty years of age, the monument of its founder, the Cardinal Archbishop Juan de Tavera. His best work in painting is considered to be in the cathedral of Palencia and in the church of Ventosa; his best work in bronze and marble in the cathedral and other buildings of Toledo.

SIR WILLIAM STIRLING-MAXWELL, *Annals of the Artists of Spain* (London, 1891); BRYAN, *Dictionary of Painters and Engravers* (London and New York, 1903-05).

AUGUSTUS VAN CLEEF.

**Berruyer, ISAAC-JOSEPH**, b. at Rouen, 7 November, 1681; d. at Paris, 18 February, 1758. He entered the Society of Jesus in 1697. His great work is a "History of the People of God", published in three parts. The first of these parts bears the title "Histoire du peuple de Dieu depuis son origine jusqu'à la venue du Messie" (7 vols., Paris, 1728). A revised and augmented edition of this was published at Paris in 1733. Next followed (Paris, 1734) a supplement, containing the continuation of the prophesies of the Old Testament, the History of Job, maps necessary for understanding the sacred history, etc. By 1736 seven editions of the work had been issued. It was translated into German, Spanish, Italian, and Polish. The second part of the "History" was published, also at Paris, in 1753: "Histoire du peuple de Dieu depuis la naissance du Messie jusqu'à la fin de la Synagogue". In 1754 an *édition plus exacte* appeared at Antwerp (8 vols.), and in 1755, at Paris, still another edition (4 vols.). The latter contained five questions: (1) On Christ, the object of the Scriptures; (2) On Christ, the Son of God; (3) On Christ, the Son of Man; (4) On Christ, the founder of a new religion; (5) On the Presentation of Christ in the Temple and the Purification of the B. V. M. According to de Backer, this second part of the History was published without the knowledge, and against the will, of the superiors of the Jesuit house in Paris. Berruyer put his name to only a small number of copies of this publication. The third part of the work has the title, "Histoire du peuple de Dieu, ou paraphrase des Epîtres des Apôtres" (2 vols., Lyons, 1757).

The work, as its various parts appeared, aroused a great uproar and some bitter controversy. Written in a brilliant, very rhetorical and lively style, it was, nevertheless, deservedly criticized. Serious fault was found with the author for giving to portions of the sacred narrative the air of romance rather than of sober history. The freedom with which he described certain facts was considered unbecoming in a Christian writer, and offensive to the Christian reader. Some propositions put forward by him were construed as favouring Nestorianism. But above all Berruyer was blamed for following the singular and paradoxical opinions of Hardouin. For these reasons the work was condemned by many

bishops of France, by the superiors of the society, by the Sorbonne, and by the Parliament of Paris. The first part was put on the Index, 27 May, 1732; the second part, 3 December, 1754, and by a Brief of Benedict XIV, 17 February, 1758; the third part 24 April, 1758, and by a Brief of Clement XIII, 2 December, 1758. (See "Index Librorum Prohibitorum", Rome, 1900, 62). A corrected edition of the first part, approved by the Roman censors, was published at Besançon in 1828.

JOSEPH M. WOODS.

**Berryer**, PIERRE-ANTOINE, French advocate, orator, and statesman, son of Pierre-Nicolas Berryer, an advocate, b. at Paris, 4 January, 1790; d. at Angerville, 29 November, 1868. A pupil of the Collège de Juilly, which the Oratorians had reopened in 1796, Berryer, after having believed himself favoured with an ecclesiastical vocation, eventually consecrated himself to the forensic career. "Leaving college to the sound of the artillery of Jena", he displayed his Bonapartist sentiments in certain verses upon Marie Louise which he wrote in 1810; but eighteen months' study of the reports of the Constituent Assembly, under the guidance of Bonnemant, a former member of that assembly, made a monarchist of Berryer, in 1812, and a monarchist he remained to the end of his days. He always maintained the principle that "the king is not the head of a party"; he took the view that France was not antagonistic to the king personally, or to the king's right, but to the monarchist party, and it was always Berryer's idiosyncrasy to be independent with respect to that party. He distinguished himself at the beginning of the Restoration by assisting his father and the elder Dupin in the defence of Marshal Ney and by his own defence of two generals, Debelle and Cambronne, compromised in the Hundred Days. Debelle, condemned to death, had his punishment commuted to ten years' imprisonment, after an application made by Berryer to the Duc d'Angoulême; Cambronne was acquitted, and Berryer, accused of having in his speech for the defence, maintained the right of insurrection, defended himself victoriously. In 1818 he defended General Canuel, and in 1820 General Donnadieu, both charged with exaggerating the importance of the Lyons and Grenoble risings, which they had suppressed. These interventions of Berryer were very displeasing to the Decazes ministry; but the young advocate, having thus combated the spirit of reprisals against the old Napoleonic army, which the Restoration was developing, next directed his energies to opposing a certain shade of liberalism which seemed to him dangerous to monarchical principles. In 1830, in order to supply the property qualification needed to legalize his election as Deputy for the Department of Haute-Loire, his friends purchased for him the estate of Angerville, in Loiret. His first parliamentary speech (9 March, 1830) was in defence of the Crown and the Polignac Ministry against the address of the two hundred and twenty-one, which he considered seditious. On hearing this speech Royer-Collard remarked, "There is a Power" (*Voilà une puissance*).

Under the July Monarchy Berryer was one of the most formidable members of the opposition. After vainly endeavouring to dissuade the Duchesse de Berri from her insurrectionary enterprise, he was himself arrested as an accomplice, but was acquitted by the jury. He then entered upon a campaign for the liberation of the duchess, and defended Chateaubriand against the charge of complicity. Returned by various constituencies in successive general elections he was the idol of both Legitimists and Republicans. His political life interfered so much

with his law practice that in order to live he was obliged to sell his estate of Angerville; Legitimists and Republicans united, in 1836, to buy it back for him. He continued to advocate every measure calculated to limit the arbitrary power of the central government—jury trials for press offences, nomination of mayors by the communes, abolition of the property qualification. The speech was long famous with which, in 1834, he defeated the treaty according to the United States tardy compensation for vessels confiscated by Napoleon. He was of counsel for the defence in the case of Louis Bonaparte's Boulogne attempt, in 1840; defended the Republican Ledru-Rollin in 1841, in a series of four addresses to the Chamber; in 1844 gloried in the "Belgrave Square Pilgrimage" which, with four other Legitimists, he had made to the Comte de Chambord. Elected by the Department of Bouches-du-Rhône to the Constituent Assembly of 1848, and to the Legislative of 1849, Berryer voted with the Right, but without supporting any of the intrigues of Louis Bonaparte. After the 2d of December 1851, he returned to his practice at the Bar. Montalembert, prosecuted in 1858 for an article suspected of advocating for France the liberties of England, had Berryer for his advocate. Monarchist to the end, he exerted himself as a private individual to reconcile the Houses of Bourbon and Orléans. In 1863 he was chosen to represent the Bouches-du-Rhône, sat with the opposition, and sharply attacked the Mexican war policy of the Imperial Government.

The Academy received Berryer in 1855; on the 20th of December, 1861, the fiftieth anniversary of his call to the Bar, all the advocates of France united in honouring him with a splendid banquet. Only a few days before his death, he wrote to the Comte de Chambord a letter which is an admirable testament of the Monarchist faith. Berryer was a life-long defender of religious liberty. He was the first to make clear (in his articles on the Gallican Church in the "Quotidienne") the changes wrought by the Revolution in the relations between Church and State; he showed that what the State called "Gallican liberties" represented henceforth only a right to oppress the Church. In 1846 and 1847, in two letters to Bishop Fayet of Orléans, he urged Catholics to take their stand on the common ground of liberty. It was in this spirit that, in 1826, he had pleaded for Lamennais, who had accused the Gallican Church of atheism, and that, in 1828, he wrote against the Martignac ordinances on the episcopal schools (*petits séminaires*). In 1831 he spoke against the re-establishment of divorce; in 1833 against the project of Portalis tending to state recognition of marriages by priests. His reply to M. Thiers, 3 March, 1845, on the Jesuits, remains, says M. Thureau-Dangin, "a sovereign, definitive refutation of all those who, then or since, have pretended to invoke against the religious orders the old laws of proscription". Berryer defended the religious associations with all the more authority because, in that same year, pleading for three carpenters who had combined to secure a suspension of work, he formally asserted the right of labour to combine (*droit de coalition ouvrière*), which right French law was not to recognize until 1863. He gained great popularity among the labouring classes when he compared the restrictions imposed on them with the toleration accorded to "coalitions formed in other spheres of society, with the aim of securing not a wage-increase of 10 centimes, but an enormous advantage for operations involving hundreds of millions". Liberty of association for all; respect by the State for the autonomy of the Church—such was the principle from which he never wavered, and in the name of which he brought about, in 1850, the defeat of Jules Favre's project which would have compelled the Church to re-establish the non-amovability of certain members

(*desservants*) of the lower clergy. The return of Berryer to the practice of his religious duties, under the influence of his friend, Père de Ravignan, S. J., was the crowning reward of his fruitful activity in behalf of the Church.

Berryer never wrote his discourses; he meditated before speaking. Even his apparent improvisations were deceptive—"The extempore speaker", he used to say, "has repeated the same thing to himself twenty or a hundred times." During the Restoration his lectures on eloquence at the "Société des Bonnes Etudes" were attended by such men as Montalembert and Lacordaire. He was admired by all for his sincerity and the absence of all oratorical artifice. There was something astounding in the suddenness with which, after a moment of apparent inattention, he was wont to crush his opponent's argument. "If I could act as M. Berryer speaks!" said the actress Rachel, moved by his natural and spontaneous eloquence. On another occasion when Berryer was speaking against Jules Favre, the latter referred to him as "my sublime adversary".

BERRYER, *Discours parlementaires*, 5 vols.; *Plaidoyers*, 4 vols. (Paris, 1872-78); CAUVILLER, *Berryer, sa vie judiciaire, ses discours* (Marseille, 1871); LECANUET, *Berryer* (Paris, 1892); LACOMBE, *Berryer*, 3 vols. (Paris, 1894-95), the leading work on Berryer.

GEORGES GOYAU.

**Bersabee** (בִּרְסָבִי), or BEERSHEBA, a town on the southern extremity of Palestine, one of the most familiar geographical names of Holy Writ, known on account of its position and its connexion with several incidents in Hebrew history. Throughout most of that history, it was proverbially the extreme point to the south in the country; from "Dan to Bersabee" included the entire length of the country, from north to south (Jud., xx, 1, etc.; I Par., xxi, 2 "from Bersabee to Dan"); later, after the destruction of the northern kingdom, the territory was sometimes described as extending "from Gabaa to Bersabee" (IV K., xxiii, 8), or "from Bersabee to Mount Ephraim" (II Par., xix, 4); and finally, after the exile, the place still remains as the southernmost point in the phrase "from Bersabee unto the valley of Ennom" (II Esdras, xi, 30). Milton has helped to fix the name and locality of the town in the minds of English readers by his reference

To Beersaba, where the Holy Land

Borders on Egypt and the Arabian shore.

Still, it was not exactly on the southern border, which was considered to run "along the 'river of Egypt', the present Wady el-Arish, nearly 60 m. S. E. of Beersheba" (G. A. Smith); but there was little arable land beyond it, and it was practically the last stopping point in the country.

The name means, literally, "the well of seven", but Gen., xxi, 30, 31, and xxvi, 26-33, explain it as "the well of swearing". The former narrative, with its insistence on the "seven" (*sheba*) ewe-lambs, leads one to expect the name to be interpreted as "the well of seven", and inclines one to regard the other explanation as a gloss, or as evidence of the interweaving of another narrative; yet it may be "that the two explanations resolve themselves into one; for the Hebrew word 'to swear' (*nishba*), the reflexive of the unused *shaba* seems to mean properly (as it were) 'to seven-oneself', i. e. to pledge oneself in some way by seven sacred things, so that if it be assumed that the 'seven lambs' were used for this purpose, only one ceremony would be described in the passage" (Driver, *Genesis*, 215). Seven was regarded as a sacred number. Still, Driver prefers the explanation "well of seven", that is, seven wells; but there is no evidence that there were ever seven wells in the vicinity. G. A. Smith inclines to the meaning, "well of the seven gods", but offers no proof to support it.

Each of the two narratives referred to has its own

account of the occasion which gave rise to the name. In the first, it was bestowed by Abraham, when, after a conflict between his herdsmen and those of King Abimelech as to the ownership of a well, he concluded a covenant with the king, who was accompanied by his captain, Phicol. In the second, it was bestowed many years later by Isaac when, after a conflict between his herdsmen and those of King Abimelech as to the ownership of a well, he concluded a covenant with the king, who was accompanied by his captain, Phicol. Other points in the two accounts are parallel also, though there are many differences. The traditional opinion regards them as narratives of two different series of events which befell the two patriarchs, surprising in certain details, perhaps, yet not remarkable for the essential facts which are such as might easily recur. The modern critical opinion considers that the same tradition became attached to two different names and was embodied in two different documents (the Elohistic and the Jahvistic; see articles: ABRAHAM, GENESIS, PENTATEUCH). "Doubtless, history repeats itself", says Prof. Sayce (*Early Hebrew History*, 64); "disputes about the possession of wells in a desert-land can frequently recur, and it is possible that two kings of the same name may have followed one another on the throne of Gerar. But what does not seem very possible is that each of these kings should have had a 'chief captain of his host' called by the strange non-Semitic name of Phicol; that each of them should have taken the wife of the patriarch, believing her to be his sister; or that Beersheba should twice have received the same name from the oaths sworn over it." The differences of detail are regarded by the upholders of the traditional opinion as proofs that two distinct facts are related, and by critics as variations that "would naturally arise from the fluctuation of tradition". (Driver, *Genesis*, 255.)

Bersabee, the village that grew up around the wells at this spot, is identified with the present Bir es-Seba which is twenty-eight miles south-west of Hebron, on the road to Egypt. The country surrounding it, known as the desert of Bersabee, is a soil that is said to be naturally very fertile, needing only irrigation to make it productive; the few cultivated plots in the valley give "fine crops of wheat and barley". In the spring, sheep, goats, and camels find there a rich pasture land. Three wells may be seen there to-day, one of which, however, is dry. The largest is believed to have been dug by Abraham (Gen., xxi) and is at least very ancient. It is a solidly constructed piece of masonry, about thirty-eight feet deep; it still furnishes abundant sweet water. The climate of Bersabee, though very hot, is regarded as healthy. The highest altitude is 950 feet above the Mediterranean. At this day, the desert presents a picture of the same pastoral, patriarchal life that we see in *Genesis* (Conder, *Palestine*, 52-55). Bersabee, with the desert around, is the cradle of the Hebrew race and connected with memories of Agar and Ismael (Gen., xxi), of Abraham (ib.), of Isaac (xxvi), of Jacob who was born there, and his sons (xxviii, xli), of the sons of Samuel (I K., viii, 2), of Elias (III K., iii), and of Amos, who denounced its idolatry (v, 5, viii, 14). It formed, at first, part of the territory of Juda (Josue, xv, 28) and later fell to the lot of Simeon (xix, 2). Its site as a halting-place on the road to Egypt made it well known to all. After the Exile, it again became a centre for the Jews (II Esd., xi, 27), and in the days of the empire had a Roman garrison. It was most flourishing in the early Christian ages, when the hermits flocked there. For a time, it was an episcopal see. Extensive ruins of dwellings and public edifices, mostly of Roman days, still remain.

JOHN F. FENLON.

**Bertha.**—Of the various holy women bearing the name of Bertha, five are more particularly worthy of notice. I. **BERTHA**, Queen of Kent, d. c. 612. She was a Frankish princess, daughter of Charibert and the pious Ingoberga. In marrying the pagan King Ethelbert of Kent, she brought her chaplain Liudhard with her, and restored a Christian church in Canterbury, which dated from the Roman occupation, dedicating it to St. Martin. The present St. Martin's at Canterbury occupies the same site. St. Augustine, who was sent by Gregory the Great to preach the Gospel in England in 596, no doubt owed much of his favourable reception to the influence of Bertha. St. Gregory in 601 addressed to her a letter of thanks, which is still preserved. It is printed in Haddan and Stubbs, III, 17. Ethelbert himself was baptized on Whitsunday in 597, and Canterbury became the mother-church of England. Bertha was sometimes styled "Saint", but there is no clear evidence of cultus. (See, on this point, the poems of Reginald of Canterbury in the "Neues Archiv", xiii.) Fuller accounts of Bertha will be found in Lingard, "Anglo-Saxon Church"; "Dict. Nat. Biog.", Plummer, "Bede", and Routledge, "Church of St. Martin".

II. **St. BERTHA**, virgin and martyr, Abbess of Val d'Or, near Avenay, Reims, d. about 690. She was wife of St. Gumbert, Lord of Champenois, a nobleman of royal blood. He built a nunnery for his wife and her maidens at Avenay, and retired himself to a monastery on the coast, where he was soon afterwards put to death by pagan marauders. When the people of Avenay suffered from lack of water, St. Peter appeared to Bertha and showed her a field where there was a good spring. This she bought for a pound of silver. It became a holy well which cured diseases and supplied both her own nuns and the hamlet of Avenay with water. Bertha was martyred by Gumbert's relatives, who were indignant at the distribution of his money to the poor. Whether the abbey founded at Avenay followed the Benedictine or the Columban Rule, does not seem certain even to Mabillon. The whole legend in fact is very late and unreliable. St. Bertha's feast is on the 1st of May. (See Acta SS. for that day.)

III. **St. BERTHA**, Abbess of Blangy in Artois, d. about 725. She was the daughter of Rigobert, Count of the Palace under Clovis II, and married Siegfried, a relation of the king. After twenty years, when he died, she determined to found a nunnery. Two buildings which she constructed fell down, but an angel in a vision guided her to another spot, and there after many difficulties a nunnery was built, which she entered with her two elder daughters, Deotila and Gertrude. A still later legend represents this Gertrude as much persecuted by the attentions of a great noble, Roger, who wished to marry her by force, but she was saved from his violence by her mother's firm courage and trust in God. Some time before her death Bertha is said to have resigned her office of abbess and to have shut herself up in a little cell built against the church wall. But the whole story of Bertha, as Mabillon and the Bollandists agree, is of very late date and historically worthless. Her feast is kept on the 4th of July. (See Acta SS. for that day, and Déobert, "Ste. Berthe et son Abbaye de Blangy", Lille, 1892.)

IV. **BLESSED BERTHA DE BARDI**, abbess, b. in Florence, date uncertain; d. 24 March, 1163. She was the daughter of Lothario di Ugo, Count of Vernio, and is ordinarily called Bertha de Bardi, but the name should probably be d'Alberti. She joined the order of Vallombrosa, a branch of the Benedictines, at Florence, but she was soon sent to govern and reform a convent of the order at Cavriglia in

Valdarno, where she lived famous for miracles until her death. (See Acta SS. for that day, and Soldani, "Vita di S. Berta", Florence, 1731.)

V. **BLESSED BERTHA DE MARBAIS**, d. 1247. She was a Cistercian nun, who became the first abbess of a convent which was founded by Jane, Countess of Flanders, in 1227 at Marquette or Marchet, near Lille. She died on 18 July, and is briefly noticed on that day in the Acta SS. Bertha is called Blessed by the Cistercian chronicler, Henriquez, but the evidence of cultus is very slight.

HERBERT THURSTON.

**Berthier**, GUILLAUME-FRANÇOIS, a Jesuit professor and writer, b. at Issoudun, 1704; d. at Bourges, 1782. He taught philosophy at Rennes and Rouen, and theology at Paris. From 1745 to 1762 he was editor of the "Mémoires de Trévoux", and because of his powerful opposition to the infidel "encyclopédistes" was bitterly attacked, notably by Voltaire. Between 1745 and 1749 he published volumes XIII to XVIII of the history of the French Church (1320-1559). The previous volumes had been prepared by Fathers Longueval (I-VIII), Fontenai (IX, X, and part of XI), and Brumoy (end of XI and XII). In 1762, when the Society of Jesus was suppressed in France, the Dauphin appointed him tutor of his sons and librarian of the court library, but two years later his position at court became so disagreeable that he left France and spent the following ten years in Germany. On his return, in 1774, he retired to Bourges. These years of retirement were spent in study and writing. After his death several of his works were published by Father de Querbeuf: (1) A translation of the Psalms with notes (8 vols.); this was often reprinted. (2) Five volumes on Isaías. (3) Five volumes of "Réflexions Spirituelles".

DE QUERBEUF in *Peaumes traduits*, preface; SOMMERVOGEL, *Bibl. de la c. de J.*, I, 1377 with complete bibliography; BRUCKER in *Dict. de théol. cath.*, s. v.

JOHN CORBETT.

**Berthold**, Bishop, Apostle of the Livonians, killed 24 July, 1198, in a crusade against the pagan Livonians who threatened destruction to all Christians that lived in their territory. He was previously Abbot of the Cistercian monastery of Lockum in Hanover. At the death of Meinhard, the first Bishop of Livonia (c. 1196), Archbishop Hartwig of Bremen, to whose province belonged the newly converted countries along the eastern shores of the Baltic Sea, appointed Abbot Berthold successor. It seems very probable that, as Damberger asserts in his "Synchronistische Geschichte der Kirche und der Welt im Mittelalter", when Meinhard came to Bremen in 1186 to obtain help in his apostolic labours in Livonia, Berthold joined the band of missionaries who accompanied him thither. On this assumption, Berthold had been working ten years as a missionary among the Livonians when he became their second bishop and was, therefore, well acquainted with his field of labour.

The Livonian pagans were fanatically opposed to Christianity. Berthold's predecessor, assisted by merchants from Bremen and Lübeck and a few converted natives, had built fortifications along the River Duna, where the Christians held their religious services and could protect themselves against the fury of the pagans. Following in the footsteps of his predecessor, Berthold tried to gain their confidence and good will by kindness. At first they appeared to become less hostile, but soon their old hatred revived. When Berthold attempted to bless the Christian cemetery at Holm, their pagan fanaticism broke loose in all its fury and they decided either to burn the bishop together

with his church at Holm or to drown him in the Düna. The Christians fled to their strongholds at Uxküll and Holm, while the bishop escaped in a ship to Lübeck.

Pope Celestine III, shortly before his death, was preparing to send a fleet of crusaders to protect the Christians of the Baltic Provinces, and his successor, Innocent III, continued the work. Berthold gained the financial assistance of Archbishop Hartwig and many merchants of Bremen and Lübeck. In a short time a large fleet was ready for departure well equipped and loaded with crusaders and many German peasants who were to settle permanently in Livonia. It put to sea at Lübeck and crossed the Baltic, entering the River Düna from what is now called the Gulf of Riga. Near the mouth of the Düna the German peasants landed with the purpose of making their homes in the vicinity, and laid the foundations of the city Riga, at present one of the most important commercial seaports in Russia. Berthold, accompanied by the crusaders, sailed up the river as far as Holm, where the pagan Livonians had gathered with the intention of attacking the fleet. Having vainly attempted to come to a peaceful agreement with them, Berthold and his companions sailed some distance down the river, with the Livonians in eager pursuit. Finally, the pagans agreed to a suspension of hostilities to gain time for collecting larger forces. At the first opportunity, however, they fell upon the Christians who ventured outside their fortifications, and hostilities were resumed. The crusaders were victorious, but Berthold's horse became intractable and galloped into the midst of the fleeing Livonians. A pagan by the name of Ymant thrust his lance into Berthold's back, inflicting a wound that caused speedy death. The bishop's body was buried by the crusaders at Uxküll whence it was transferred to Riga by Bishop Albert of Apeldern whom Archbishop Hartwig of Bremen had appointed Berthold's successor. Soon after the death of Berthold many of the vanquished pagans came to the crusaders, expressing their regret at the unhappy occurrence and asked to be baptized. The final conversion of Livonia was effected by Bishop Albert, who was assisted in his apostolic labours by the newly founded Order of the Brothers of the Sword which in 1237 was affiliated with the Teutonic Order.

MICHAEL OTT.

**Berthold of Chiemsee**, a German bishop and theological writer, b. 1465 at Salzburg, Austria; d. 19 July, 1543, at Saalfelden (duchy of Salzburg). His real name was Berthold Pürstinger, frequently called Pirstinger; but he is generally known as Berthold of Chiemsee, from his episcopal see, situated on one of the islands of the Bavarian lake of Chiemsee. We have but little information regarding his early life. He was licentiate in civil, and doctor in ecclesiastical law, and in 1495 he appears as the *Magister Camerae* of the Archbishop of Salzburg, and in 1508 was appointed Bishop of Chiemsee. During his episcopal career (1508-25), he resided at Salzburg, in the quality of coadjutor to the archbishop of the latter place.

Berthold twice conspicuously used his influence with the Archbishop of Salzburg in behalf of the unfortunate: in 1511 in favour of the Salzburg town-councillors who had been condemned for high treason, and again in 1524 in the interest of the rebellious peasants. He was present at the Provincial Council of Salzburg (1512), and also took an active part in 1522 in that of Mühldorf (Bavaria), which

was convened to devise means of stemming the tide of Lutheran progress. Soon after, he resigned his bishopric (1526) and retired to the monastery of Raitenhaslach on the Austro-Bavarian frontier. In 1528, or 1529, he removed to Saalfelden, where he founded (1533) a hospital with a church for infirm priests. He died here and was buried in the parish church.

After his resignation of his episcopal functions Berthold devoted his time to literary pursuits. At the suggestion of Matthew Lang, the Cardinal Archbishop of Salzburg (1519-40), he wrote his "Tewtsche Theology" (German Theology—Munich, 1528) and translated it afterwards into Latin (Augsburg, 1531). Earnestness in the suppression of abuses and mildness in his dealings with others were characteristic traits of Berthold, and they appear also in his works; his "Theology" does not bear the bitterly polemical stamp of similar contemporaneous writings. The work does not seem to have been in great demand, as neither the original nor the translation was reprinted until Reithmeier re-edited the work (1852). The book, however, was important. The German original is valuable from both a linguistic and theological point of view. Linguistically, it proves that Luther was not the only able exponent of religious doctrines in the vernacular; theologically, it exhibits the character of Catholic teaching at the time.

The other writings of Berthold were: (1) "Tewtsch Rational", a treatise on the Mass; (2) "Keligpuchel", a defence of the Catholic doctrine and practice of Communion under one kind, against the Reformers; (3) "Onus Ecclesiae" or "Burden of the Church" (Landshut, 1524) is also generally attributed to him. It is a fearless exposition, from a Catholic point of view, of the abuses then prevalent in the Church. The book occasioned much comment and was reprinted twice in 1531, at Cologne and probably at Augsburg, and again in 1620 without indication of place.

N. A. WEBER.

**Berthold of Henneberg**, Archbishop and Elector of Mainz, b. 1441; d. 21 December, 1504. Having completed his education at the University of Erfurt, he became a canon of the Cathedral of Cologne in 1464. Three years later he came to the imperial court of Frederick III. He was chosen Archbishop of Mainz in 1484 and consecrated 20 May, 1485. When in 1486 Maximilian I was elected Roman King, to rule in union with his father, Frederick III, Berthold, as imperial chancellor, obtained the right of having all royal documents submitted to him for signature. Being heart and soul for a political reform of the tottering empire, he used all his influence to bring about a change in its constitution. How Berthold wished to reform the empire may be gathered from the programme submitted to the emperor at the diet of Worms in 1495. All state affairs were to be managed by an imperial council (Reichsrath) consisting of seventeen members. The councillors were to be chosen by the electors and the estates, while the emperor was to appoint the president of the council. The emperor, of course, justly rejected such a programme which would have changed the empire into an oligarchy, with the emperor a mere figure-head.

Berthold's ecclesiastical reforms, on the other hand, which were even more pressing than political changes, were accompanied with great success. He encouraged and urged the reformation of the clergy and the religious orders, which was already

in progress, and was especially solicitous for a better education of the clergy. He courageously resisted the heretical tendencies of many humanists and, though friendly disposed towards the better ones, scathingly rebuked others. To guard against impure literature he established in his diocese, on 4 January, 1486, a censorship of the press, which was the first in history. Berthold had long been dissatisfied with the many pecuniary demands of Rome upon Germany and the improprieties that often accompanied the preaching of indulgences, and shortly before his death he respectfully submitted these grievances of the German nation to Pope Pius III, who had just succeeded Alexander VI. He is buried in the Cathedral of Mains, where a magnificent monument perpetuates his memory.

MICHAEL OTT.

**Berthold of Ratisbon**, a Franciscan of the monastery of that city and the most powerful preacher of repentance in the thirteenth century, b. about 1210; d. at Ratisbon, 14 December, 1272. He was probably a member of a well-to-do middle class family of Ratisbon named Sachs. The excellence of his literary training is proved by his sermons which show more than common acquaintance with the ancient classics. From his knowledge of the usages of secular life, it may be inferred that he was a man of mature age before he entered the monastery. The first fixed date in Berthold's life is 1246, when the papal legate appointed him and David of Augsburg inspectors of the convent of Niedermünster, a proof of the high regard in which Berthold was then held. One of his contemporaries, the Abbot of Niederaltaich, who is a reliable historian, speaks in 1250 of the great reputation that Berthold had in Bavaria as a preacher. Four years later the missionary trips of this preacher extended as far as the valley of the Rhine, Alsace, and Switzerland. During the next ten years Berthold's apostolic labours led him eastward into Austria, Moravia, Bohemia, and Silesia. In 1263 Pope Urban IV appointed him to preach the Crusade and Albert the Great was designated as his assistant.

When speaking to Slavonic audiences Berthold naturally employed an interpreter, just as St. Bernard, in his day, made use of an interpreter in Germany. Notwithstanding any difficulties that might arise as to speech, wherever he went Berthold exerted an extraordinary power of attraction over his hearers so that the churches were not able to hold the great crowds of plain people who came from all quarters to his services, and he was often obliged to preach in the open air. When this was the case, a pulpit was generally arranged under the spreading branches of a linden tree. Long after his day "Berthold's linden" was to be seen at Glatz. About 1270 he seems to have returned to Ratisbon where he remained the rest of his life. The Franciscan martyrology includes his name among the blessed of the order, and his remains form the most precious relic among the treasures of the cathedral at Ratisbon. The poets and chroniclers of his time made frequent reference to Berthold. He was called "sweet Brother Berthold", "the beloved of God and man", "a second Elias", "the teacher of the nations"; all of these expressions are proofs of the high esteem in which his activities were held. The secret of the preacher's success lay partly in the saintliness of his life and partly in his power to make use of the language of humble life. He became the great master, it may be said, the classic of homely speech, and this rank has been maintained by his sermons to the present day. One of his two popular dis-

courses on the Last Judgment became a favourite book of the people under the title "The Valley of Josaphat".

There is no doubt that Brother Berthold preached in German. For a long time, however, scholars disagreed as to how his sermons had been preserved. It is now generally accepted that the sermons were often written down afterwards in Latin, frequently with marginal comments in German; these reports of the sermons, as they may be called, partly German, partly Latin, or at times in the language in which they were delivered, are what have been handed down to posterity. The discourses thus preserved are of the greatest importance for the history of the development of the literature of homiletics; they are of equal value as rich sources for determining the condition of education and culture in the thirteenth century. It is difficult, therefore, to understand how this greatest of German preachers to the poor could have been forgotten for centuries. It was not until some of Brother Berthold's sermons were published in 1824 that attention was called to the eloquent Franciscan. Since this date, the enthusiasm for Berthold has grown steadily so that he has become a favourite, both of Germanic scholars and of the historians of the development of German civilization. He is also regarded as the great pattern of homely pulpit eloquence.

N. SCHEID.

**Berthold of Reichenau**, a Benedictine monk and chronicler of the celebrated Abbey of Reichenau on the Lake of Constance; d. probably in 1088. He was a disciple and friend of the learned Hermannus Contractus. When Hermann saw death approaching, he entrusted to Berthold all the wax tablets that contained the writings which he had not yet committed to parchment and commissioned Berthold to peruse them and, after careful revision, to copy them on parchment. Berthold was also exhorted by his dying master to continue the famous world-chronicle, begun by Hermann, which in chronological order related the history of the world from the birth of Christ to 1054, the year in which Hermann died. To the continuation of this chronicle and to a biography of his master and friend, Hermannus Contractus, is due whatever fame is attached to the name of Berthold.

The chronicle, as far as it was written by Berthold, comprises a concise and impartial history of the troublesome times immediately preceding the accession of Gregory VII and probably also of the early reign of this great pontiff. It is reprinted to the year 1080, with an introduction by Pertz, in "Mon. Germ. Hist.: Script." V, 264-326, and in P. L., CXLVII, 314-442. Pertz contends that Berthold did not begin the continuation of Hermann's chronicle until 1076, and that in the execution of it he made use of another chronicle, written by Bernold who was also a monk of Reichenau; but it has been proved almost beyond doubt by Giesebrecht and Schulzen that Berthold was the first to continue Hermann's chronicle and that Bernold's chronicle is a continuation of Berthold's. It is, however, still undecided as to what year Berthold's chronicle extends. Ussermann and Schulzen hold that it extends only to the year 1066, while Pertz, Giesebrecht, and others believe that Berthold wrote the chronicle at least to the middle of the year 1080, where the manuscript suddenly ceases in the middle of a sentence.

The original text of Berthold is no longer in ex-

istence and all the existing copies have been compiled from various manuscripts found in the monasteries of St. Gall, St. Blaise, Muri, and Engelberg. The chronicle was continued by Bernold to the year 1100, and by others to the year 1175. From various passages in Bernold's chronicle it appears that, for a short time at least, he considered Cadalus, Bishop of Parma, as the legitimate occupant of the papal throne; but he soon noticed his mistake and from the year 1070, or even earlier, acknowledged Alexander II as the true pope. Bernold remarks in his chronicle under the year 1088 that Bernold, an excellent teacher who was very well versed in Holy Scripture, died at an advanced age on the 12th of March.

#### MICHAEL OTT.

**Berti, GIOVANNI LORENZO**, an Italian theologian, b. 28 May, 1696, at Sartavezza, Tuscany; d. 26 March, 1766, at Pisa. His parents were of the lower class. At the age of fifteen he entered the Augustinian order, and preached with success before he had attained his twenty-third year. He subsequently occupied important offices in his order, i. e. those of general secretary, prefect of the Angelica (the former valuable library of the Augustinians at Rome), general assistant. He first taught philosophy, then theology, at Sienna, Florence, Bologna, Padua, Rome, and finally (1748) became professor of ecclesiastical history at Pisa. He suffered, in 1762, a stroke of apoplexy which was repeated and eventually caused his death. His literary career was an agitated one. By order of Father Schiaffinati, his Superior General, he wrote the extensive work "De Theologicis Disciplinis" (Rome, 1739-45), an exposition of the theological teaching of St. Augustine. The book, which appeared in several editions, was vehemently attacked by d'Ise de Saléon (who was successively Bishop of Agen, 1730-35, Bishop of Rodez, 1735-46, and Archbishop of Vienne, 1747-51) and by Languet de Gergy, Archbishop of Sens (1731-53). They accused Berti of Jansenism. In answer, the latter published: (1) "Augustinianum Systema de Gratiâ" (Rome, 1747; Munich, 1750); (2) "In Opusculum" (Leghorn, 1756). The accusations against Berti were submitted to the Roman authorities. Benedict XIV (1740-58) had his book examined and found its teaching sound. Besides other works published in this controversy, Berti wrote: (1) "Commentarius de Rebus gestis S. Augustini" (Venice, 1756); (2) "S. Augustini Quæstionum de Scientiâ, . . . dilucidatio" (Pisa, 1756); (3) "De Hæresibus Trium Priorum Sæculorum" (Bassano, 1769); (4) "Historia Ecclesiastica" (Florence, 1753), an ecclesiastical history, which he later published in an abridged form (Pisa, 1760), and which, thus shortened, was frequently re-edited (recently at Turin, 1892).

#### N. A. WEBER.

**Bertin, SAINT**, Abbot of St. Omer, b. near Constance about 615; d. about 709. At an early age he entered the monastery of Luxeuil in France where, under the austere Rule of St. Columban, he prepared himself for his future missionary career. About the year 638 he set out, in company with two confrères, Mummolin and Ebertram, for the extreme northern part of France in order to assist his friend and kinsman, Bishop St. Omer, in the evangelization of the Morini. This country, now the Department Pas-de-Calais, was then one vast marsh, studded here and there with hillocks and overgrown with seaweed and bulrushes. On one of these hillocks, Bertin and his

companions built a small house whence they went out daily to preach the word of God among the natives, most of whom were still heathens. Gradually some converted heathens joined the little band of missionaries and a larger monastery had to be built. A tract of land called Sithiu had been donated to Omer by a converted nobleman named Adrowald. Omer now turned this whole tract over to the missionaries, who selected a suitable place on it for their new monastery. But the community grew so rapidly that in a short time this monastery also became too small and another was built where the city of St. Omer now stands. Shortly after Bertin's death it received the name of St. Bertin. Mummolin, perhaps because he was the oldest of the missionaries, was abbot of the two monasteries until he succeeded the deceased St. Eligius as Bishop of Noyon, about the year 659. Bertin then became abbot.

The fame of Bertin's learning and sanctity was so great that in a short time more than 150 monks lived under his rule, among them St. Winnoc and his three companions who had come from Brittany to join Bertin's community and assist in the conversion of the heathen. When nearly the whole neighbourhood was Christianized, and the marshy land transformed into a fertile plain, Bertin, knowing that his death was not far off, appointed Rigobert, a pious monk, as his successor, while he himself spent the remainder of his life preparing for a happy death. Bertin began to be venerated as a saint soon after his death. His feast is celebrated on 5 September. In medieval times the Abbey of St. Bertin was famous as a centre of sanctity and learning. The "Annales Bertiniani" (830-882; Mon. Germ. Hist.: Script., I, 419-515) are important for the contemporary history of the West Frankish Kingdom. The abbey church, now in ruins, was one of the finest fourteenth-century Gothic edifices. In later times its library, archives, and art-treasures were renowned both in and out of France. The monks were expelled in 1791 and in 1799 the abbey and its church were sold at auction. The valuable charters of the abbey are published in Guerard, "Cartulaire de l'abbaye de St. Bertin" (Paris, 1841; appendix by Morand, *ibid.*, 1861). The list of abbots is given in "Gallia Christiana nova", III, 485 sqq. See Laplane, "Abbés de St. Bertin" (St. Omer, 1854-55). MABILLON, *Acta SS. O. S. B.*, sec. III, I, 93-150; *Acta SS.*, 2 September, 549-560; BURLIN, *Lives of the Saints*, 5 Sept.; BARING-GOULD, *Lives of the Saints*, 5 Sept.; MONTALEMBERT, *Monks of the West* (Boston), I, 628 sqq.; GUÉZEN, *Vies des Saints* (Paris), X, 462 sqq. The earliest sources are two anonymous biographies, one of them written before the middle of the ninth century, the other somewhat later. They are published by MABILLON and by the Bollandists, *loc. cit.*

#### MICHAEL OTT.

**Bertinoro, DIOCESE OF.**—Bertinoro, anciently called Forum Truentinorum, and, at the time of the Gothic war, Petra Honorii, whence the present name, is a small city in Romagna, province of Forlì, Italy. According to legend, about the year 303 St. Illuminata, a virgin of Ravenna, took refuge here, but did not escape martyrdom. Up to 1360 Bertinoro was subject to the Bishop of Forlimpopoli; in that year, however, Cardinal Albornôz being commander of the troops of Pope Gregory IX, the latter city was destroyed, and the episcopal seat was transferred to Bertinoro. A word will first be said of Forlimpopoli.

Forlimpopoli was founded in 173 B. C. by the Consul M. Popilius Lænas. The first bishop is supposed to have been St. Rufillus, appointed by Pope St. Sylvester, and he is supposed to have transformed a temple of Isis into a church. At all events St. Rufillus is the patron of the city, and the church in which his body is preserved is said to have been an ancient temple of Hercules. In 500 Asellus, Bishop of Forlimpopoli, was present at the Roman synod that passed on the election of Pope Simma-

cus, and in 649 Bishop Stephen attended the Roman council concerning the Monothelites. This city had much to suffer from the Lombards, and in 665 or 670, while the people were assembled in the cathedral for the ceremonies of Holy Saturday, it was suddenly attacked by King Grimoald, who pillaged it and butchered numbers of the people and clergy (Paul Diac., *Hist. Lang.*, V, x). By the famous donation of Pepin, Forlimpopoli with the other cities of the exarchate and the Pentapolis was made a part of the patrimony of St. Peter. In 1073 during the episcopate of Pietro, St. Peter Damian went to Forlimpopoli to reform ecclesiastical discipline, and on this occasion is thought to have delivered a sermon on St. Rufillus, which Vecchiazzani, an historian of this city, claims to have discovered at Rimini in the Library of St. Jerome. But this is very doubtful. Among the successive bishops, Ubertello (1214) and Taddeo (1285) were noted for their beneficence and their efforts for the preservation of peace. During the fourteenth century Romagna was at the mercy of petty tyrants and Forlimpopoli was ruled by the Ordellaffi of Forli. Innocent VI first tried censures as a means of enforcing his commands as sovereign, and sent Cardinal Albornoz to Forlimpopoli (1355). Francesco II, of the Ordellaffi family, however, when the cardinal had left, burned the statue of the pope in the public square, and was guilty of great cruelty towards the clergy.

In 1360 Albornoz took the city by force, obliged the inhabitants to abandon it, and razed it to the ground. The episcopal see was then transferred to Bertinoro, and the bishop, Roberto dei Resinelli, an Augustinian, took with him the relics of St. Rufillus. Forlimpopoli was gradually rebuilt, and Leo XII restored it to the rank of a city. The bishop, however, remained at Bertinoro. In 1377 Roberto was succeeded by Bishop Teobaldo, who received from Urban VI the civil authority over Bertinoro and Cesena, and by virtue of his authority fought against the bodies of mercenaries recruited by the Antipope Clement VII, by whom he was made prisoner. Bishop Ventura degli Abati was highly praised by Martin V for his learning and piety. Tommaso Caselli, a Dominican (1544), was an able theologian; Gianandrea Caligari (1580), formerly nuncio to Poland, restored the Cathedral of Santa Caterina. Giovanni della Robbia (1624), a Dominican, established at Forlimpopoli the Accademia degli Inflammati. In 1803 Pope Pius VII was obliged to suppress the Diocese of Bertinoro which, however, was re-established in 1817. From 1824 to 1859 it was united to the Diocese of Sarsina. In the Diocese of Bertinoro is situated the celebrated church of Polenta, in Romanesque style, which inspired one of the most beautiful odes of Carducci.

The diocese contains 63 parishes, 93 churches, chapels, and oratories, 92 secular priests, 78 regulars, 22 seminary students, 5 lay brothers, 90 members of female religious orders, 1 school for boys, and 5 for girls, and a population of 32,500.

U. BENIGNI.

**Bertonio**, LUDOVICO, an Italian missionary, b. 1552 at Rocca Contrada near Ancona; d. at Lima, Peru, 3 August, 1625. He entered the Society of Jesus in 1575. Sent to Peru six years later, he laboured principally among the Aymará Indians of Southern Peru and of Bolivia, and has left valuable works on the Aymará language. His earliest publications on that idiom appeared under the title "*Arte breve de la lengua aymará para introducir el Arte grande de la misma lengua*" (Rome, 1603), also "*Arte y gramática muy copiosa de la lengua aymará*" etc. The printing press having been introduced and established by the Jesuits at the Indian mission

of Juli in Southwestern Peru, Bertonio had the following works printed there, all in the year 1612:—"*Arte de la lengua aymará con una selva de frases en la misma lengua y su declaración en romance*"; "*Vocabulario de la lengua aymará*" (first and second part); "*Confesionario muy copioso en dos lenguas, aymará y española*" etc.; "*Libro de la vida y milagros de Ntro Señor Jesuchristo en dos lenguas, aymará y romance, traducido del que recopiló el Licenciado Alonso de Villegas*" etc. The publications by Father Bertonio being as rare as they are important, Platzmann has published in facsimile the "*Arte y gramática*" of 1603 and the Vocabularies. Manuel Vicente Ballivian in a pamphlet conclusively refutes the slur cast by Sir Clements Markham on Bertonio, that the latter invented the name "Aymará".

TORRES SALDAMANDO, *Los antiguos Jesuitas del Perú* (Lima, 1882); MENDISBURG, *Diccionario* (Lima, 1876), II; BALLIVIAN, *Boletín de la Sociedad geográfica de la Paz*.

AD. F. BANDELIER.

**Bertrand**, SAINT LOUIS. See LOUIS BERTRAND, SAINT.

**Bertrand**, PIERRE (1) a French Cardinal, theologian, and canonist, b. 1280 at Annonay in Vivarais; d. 1348 or 1349 at the Priory of Montaud, near Avignon. His noble parentage is known to us through the manuscript memoir of Grasset, a Celestine monk of the seventeenth century (*Discours généalogique de la noble maison de Bertrand et de leur alliance avec celle de Colombar*). The legal profession seems to have been the first aim of his education. He successively studied and taught law in the Universities of Avignon, Montpellier, Orléans, and Paris. Prized as one of the best law-regents of his day, he soon reached high positions in the Parliament of Paris, the King's Council, and the Queen's Chancery. His definite calling lay, however, in another direction, and he became a priest. His priestly career was no less brilliant than his legal success. We find him in rapid succession Dean of Puy-en-Valais, Bishop of Nevers, Bishop of Autun. In 1331 Pope John XXII made him a cardinal in recognition of many services rendered to the Church. Among these services are to be reckoned several charitable institutions founded at Annonay, and the Collège d'Autun, or Collège Cardinal, established in Paris on behalf of fifteen poor students, five for theology, five for law, and five for the fine arts. Bertrand's best title to recognition is, however, his defence of the rights of the Church both by word of mouth and also with his pen. Fournier, in his "*Officialités du moyen-âge*" (Paris, 1880), points out, at the beginning of the Valois dynasty, a strong tendency of the State towards curtailing the Church's traditional rights. In 1329 took place the famous "Conférence de Vincennes", where Pierre de Cugnieres, speaking for Philippe de Valois, bitterly complained of undue extension of ecclesiastical privileges (e. g., the ordination of clerics for the sole purpose of enjoying the *privilegium fori*; *causes des veuves*, or widow's causes drawn to ecclesiastical courts; the free use of censures to enforce the Church's privileges; appeals to the Church from the decision of civil courts, etc.). Pierre Bertrand, then Bishop of Autun, was the principal spokesman of the clergy. He replied in a spirit of conciliation to all charges bearing on minor points, but strongly upheld what he considered the essential rights of the Church. Following on the lines of the Bull "*Unam Sanctam*" of Boniface VIII, he summed up his plea in four statements; (1) the secular power is from God; (2) yet, it is not by itself sufficient for the government of the people, for which spiritual jurisdiction is also required; (3) although nothing prevents the two powers from being in the same hands; (4) still, whether in the same or different

hands, they stand in a certain relation of subordination, the spiritual power being the higher of the two. His views are to be found in "Libellus adversus Petrum de Cugneris" and "De origine et usu iurisdictionum", published in Paris in 1495 and 1584 respectively, and later inserted in volume XIV of the "Magna Bibliotheca Veterum Patrum" (Cologne, 1618). Many other writings of Cardinal Bertrand (apologetical, canonical, pastoral) have not been published and are reported to be in the Vatican Library.

(2) BERTRAND, PIERRE, DE COLOMBIER (also known as BERTRAND PIERRE), a French cardinal, nephew of the foregoing, whose name he adopted, b. in 1279, at Colombier, in Vivarais; d. in 1361 at the priory of Montaud, near Avignon. Like his uncle, he studied law and occupied important positions in the Parliament of Paris. Ordained priest, he soon rose to distinction, became Bishop of Nevers, then of Autun, later of Arras, and was made cardinal by Clement VI, 1344. His career as a cardinal was a distinguished one. The popes at Avignon used him as their trusted agent in many delicate missions, notably for the termination of the war between France and England and the election of Charles of Bohemia to the imperial throne. He met little success in his endeavour to stop the Hundred Years' War, but brought about the desired election of Charles IV, and, having in the meantime become Dean of the Sacred College, was naturally chosen by Innocent VI to go to Rome and crown the new emperor. Cardinal de Colombier left no writings. The Celestine monks of Colombier and Montaud, whose benefactor he was, held his and his uncle's memory in great veneration. We are indebted to them for many biographical details on the two Cardinals Bertrand.

BARONIUS-MANSI, *Annales Ecclesiastici*, anno 1329 (Lucca, 1750), XXIV; *Gallia Christiana* (Paris, 1720-70), III, IV and XII; MASON in *Grande Encyclopédie*; IDEM, *Essai historique Vivarais* (Tournon, 1890); CHEVALIER, *Rép. des sources hist. Bio-bibl.*

J. F. SOLLIER.

**Bertulf**, SAINT, Abbot of Bobbio, date of birth unknown; d. 639 or 640. He was the son of a pagan nobleman in Austrasia and a near relative of St. Arnulf, Bishop of Metz, whose pious example had such an influence on Bertulf that he became a Christian and in 620 entered the monastery of Luxeuil. A few years later he became acquainted with Abbot Attala, who had come to Luxeuil on a visit, and, with permission of Abbot Eustace of Luxeuil, joined Attala's community at Bobbio in Italy. Upon the death of Attala, in 627, Bertulf was elected by the monks of Bobbio as their abbot. Like his holy predecessor, he insisted on the observance of the austere rule introduced by St. Columban, the founder of Bobbio, and preached fearlessly against Arianism, which had gained a firm foothold in Italy under the Lombard kings. When the Bishop of Tortona endeavoured to bring Bobbio under his own jurisdiction, Bertulf hastened to Rome, where Pope Honorius received him kindly and granted the monastery entire exemption from episcopal jurisdiction. Jonas, a monk of Bobbio, who accompanied Bertulf on his journey to Rome, relates that, while returning to his monastery, Bertulf was attacked by a deadly fever, and cured miraculously by St. Peter. The same author ascribes a few other miracles to the prayers of St. Bertulf. Most martyrologies give him the title of saint. His feast is celebrated on 19 August.

The first source for Bertulf's biography is a short life written by the above-mentioned monk, JONAS of BOBBIO; MABILLON, *Acta SS. O. S. B.*, *sec. II*, 160; and the BOLLANDISTS, *Acta SS.*, August, III, 752, have published this biography. See also MABILLON, *Annales Benedictini*, ad an. 623, vii; MONTALEMBERT, *Monks of the West* (Boston), I, 582 sqq.; LECHNER, *Martyrologium des Benediktiner-Ordens* (Augsburg, 1856), 323; GURAIN, *Vies des Saints* (Paris), X, 27 sqq.

MICHAEL OTT,

**Bérulle**, PIERRE DE, cardinal, and founder of the French congregation of the Oratory, b. in the province of Champagne, France, at the château of Cérilly, 4 February, 1575; d. 2 October, 1629. De Bérulle came from a distinguished family of magistrates. From his youth and even before his ordination he devoted himself to the conversion of Protestants and wrote a "Discourse on Interior Abnegation". After entering the priesthood he was made chaplain to Henry IV and, in company with his friends the Cardinal du Perron and St. Francis de Sales, he continued his labours for the conversion of the Huguenots. With the co-operation of Madame Acarie (the Bl. Marie of the Incarnation) he introduced Carmelite nuns of the Reform of St. Teresa into France, a work attended with many difficulties. In 1611 de Bérulle founded the congregation of the Oratory on the model of the one formed some years before by St. Philip Neri at Rome. Owing to the differences of time and place the French congregation varied in some important respects from the Italian Oratory. (Cf. ORATORY, FRENCH CONGREGATION OF THE.) In speaking of the French Oratorians it should be remembered that from this congregation proceeded the seventeenth-century reform of the clergy of France. The celebrated Jesuit Cotton called the French Oratory "necessary to the Church", and St. Francis de Sales said also that there was "nothing more saintly and more useful to the Church and God". While filling the office of Superior-General of the Oratory Father de Bérulle was also actively employed in the public affairs of the time; for example, in the arrangements for the marriage of Charles I of England with Henrietta of France, sister of Louis XIII. Pope Urban VIII in 1627 rewarded de Bérulle's services to Church and State by creating him a cardinal. Two years later de Bérulle died while saying Mass. His disciple, St. Vincent de Paul, said of him: "He is one of the most saintly priests I have known", and his friend St. Francis de Sales declared: "He is everything which I should desire to be myself".

Cardinal de Bérulle left several works, the remarkable qualities of which led Pope Urban VIII to call him the *Apostolus Verbi incarnati*. "This expression", wrote Cardinal Perraud, also an Oratorian, in his work "L'Oratoire de France aux XVII<sup>e</sup> et XVIII<sup>e</sup> siècles", "is more than a magnificent panegyric awarded to the piety of the founder of the Oratory; in a word, it contains the essential epitome of his written works, for it may be said of them, as of the entire life of the saintly cardinal, that the one aim was to make our Saviour Jesus Christ better known and more loved." The chief works of Cardinal de Bérulle are: (1) "Traité des énergumènes" (Troyes, 1599). (2) "Discours etc." (Paris, 1609) on various subjects. (3) "Discours de l'état et des grandeurs de Jésus" (Paris, 1623). The last mentioned work was reprinted several times; the substance and often the actual expressions are to be found in the diffuse "Méditations" of Father Bourgoing and also in Boesuet's "Elévations sur les mystères". (4) "Vie de Jésus" (Paris, 1629); this was a sequel to the preceding work, which the pious author had just finished at the time of his death. (5) "Elévation à Jésus-Christ sur Sainte Madeleine" (Paris, 1627). Father Bourgoing issued a complete edition of the works of Cardinal de Bérulle (Paris, 1644), which included some writings not mentioned above, and he added to the edition a "table of the theology of this great author arranged according to the order of the 'Summa' of St. Thomas". In 1856 the Abbé Migne reprinted the third edition of the complete works. Cardinal de Bérulle's writings exhibit a robust and vigorous doctrine full of unction and piety, which is set forth at times in a somewhat diffuse style. One of his biographers, Father Cloy-

senet, has said: "He wrote the books at his leisure and weighed each word", and the biographer adds very justly that the reader is rewarded for his trouble, for "it is impossible to read them without feeling oneself filled with love for our Saviour Jesus Christ".

**Bervanger**, MARTIN DE, a French priest, founder of charitable institutions; b. at Sarrelouis, 15 May, 1795; d. at Paris, 1865. After being for some time assistant pastor in his native city, he took part, in 1822, in the foundation of the Association Royale de Saint-Joseph, and later of the Œuvre de Saint-Henri. These two institutions were destined to give to workmen free instruction and professional training. To reach this end more effectively, he founded, in 1827, a boarding-school where, besides manual training, poor boys could receive intellectual, religious, and moral education. This is the Œuvre de Saint-Nicolas. In the beginning only seven children were in the establishment, but it soon developed and was transferred from its poor quarters in the Faubourg Saint-Marceau, to a better location in the Rue Vaugirard. At the time of the Revolution of 1830, the first two institutions disappeared, but the Institution Saint-Nicolas remained. It had many difficulties to overcome; the resources were insufficient; proper instructors could not always be found; suspicions of political intrigues were entertained by the Government, which led to various vexatious inquiries. De Bervanger succeeded in overcoming all obstacles, and the institution became more and more prosperous. Soon a branch establishment was founded at Issy. In 1859 De Bervanger turned over the institution to Cardinal Morlot, Archbishop of Paris, who gave the direction of it to the Christian Brothers. It has since been enlarged. De Bervanger wrote the "Règle de l'Œuvre de Saint-Nicolas" (1853).

**Besançon** (VESONTIO), ARCHDIOCESE OF, coextensive with the departments of Doubs, Haute-Saône, and the district of Belfort. Few nineteenth-century dioceses have undergone similar territorial changes. The Concordat of 1802 gave the Diocese of Besançon all those districts which, in 1822, constituted the Diocese of St.-Claude. In 1806, Besançon was given jurisdiction over the three parishes of the principality of Neuchâtel (Switzerland) which fell under the control of the See of Lausanne in 1814. In 1870, after the annexation of Alsace-Lorraine by Germany, the district of Belfort was withdrawn from the See of Strasbourg and attached to that of Besançon. The metropolitan jurisdiction of Besançon also underwent singular changes. In 1802 its suffragans were the Bishoprics of Dijon, Autun, Metz, Nancy, and Strasbourg. Under the Restoration, Dijon and Autun were withdrawn from Besançon, the latter becoming the metropolitan of the Sees of Saint-Dié, Verdun, and Belley. In 1874, after the German conquest, the churches of Metz and Strasbourg were under the direct control of the Holy See.

Local legends attribute the evangelization of Besançon to Sts. Ferréol and Ferjeux, sent thither by St. Irenæus, Bishop of Lyons. Duchesne has proved that these legends belong to a chain of narratives forged in the first half of the sixth century and of which the "passion" of St. Benignus of Dijon was the initial link. The catalogue of the earliest bishops of Besançon is to be read with caution. The first bishop known to history is Celidonius (c. 445); other incumbents of the see were St. Rothad-

ius, a monk at Luxeuil and organizer of the monastic life; St. Donatus; St. Hugh I (1031-67), prince of the empire, the real founder of the city whose markets, commerce, and schools he established; Cardinal de Granvelle (1584-86), the famous minister of Philip II, who built the palace of Besançon; Antoine-Pierre de Grammont (1662-98), who strenuously opposed Jansenism and the Reformation, strove to uplift the clergy, and, in 1691, transferred to Besançon the University of Dôle; Le Coz (1802-15), former constitutional bishop whose personality provoked in the diocese no little opposition to the Concordat; Cardinal de Rohan-Chabot (1828-33); Cardinal Mathieu (1834-75), who distinguished himself by his defence of the temporal power, and was a member of the "Opposition" at the Vatican council. He opposed strenuously in his diocese the "simultaneous churches" which sprang up throughout the district of Montbéliard where Protestants are numerous.

The monastery of Luxeuil, founded by St. Columbanus (d. 615), gave to the Diocese of Besançon a series of saints. First came the direct successors of St. Columbanus; the Abbot St. Eustasius who founded a celebrated school in this monastery; the Abbot St. Valbert who sent monks to found the Abbeys of St.-Valéry, St.-Omer, and St.-Bertin, and died in 665; the Abbot St. Ingolfroid; St. Donatus, who became Bishop of Besançon; and St. Ansgéus, author of a celebrated collection of capitularies. The Abbey of Lure was founded at the beginning of the seventh century by St. Déicole (Deicolus), or Desle, disciple of St. Columbanus; later its abbots were princes of the Holy Empire. The Abbey of Baume les Dames, founded in the fifth century and in which Gontran, King of Burgundy, was buried, was the school where St. Odo, afterwards Abbot of Cluny, studied in the tenth century; at the end of the eighth century there was built near it an abbey for Benedictine nuns, members of the nobility. During the Revolution, the superb church of this abbey was laid waste. Among the other saints of the Diocese of Besançon may be mentioned the hermit St. Aldegrin (tenth century), and St. Peter Fourier (1565-1640), one of those who, in the seventeenth century, inaugurated systematic education for girls. During the Middle Ages several popes visited Besançon, among them Leo IX who consecrated the altar of the old Cathedral of St. Etienne in 1050, and Eugenius III, who, in 1148, consecrated the church of St. Jean, the new cathedral. A council was held at Besançon in 1162, presided over by Frederick Barbarossa, in the interest of the Antipope Victor against Pope Alexander III. Guido of Burgundy who was pope from 1119 to 1123 under the name of Calixtus II, and the Jesuit Nonnotte (1711-93), an adversary of Voltaire, were natives of Besançon. The miracle wrought through the Sacred Host of Faverney, during a fire in the year 1608, is annually commemorated by elaborate ceremonies. The places of pilgrimage are: Notre Dame du Chêne at Scey; Notre Dame d'Aigremont; the pilgrimage of St. Pierre de Tarentaise at Cirey-les-Bellevaux, where St. Pierre de Tarentaise died in 1174; Notre Dame des Jacobins at Besançon; and Notre Dame de la Motte at Vesoul. Parts of the Cathedral of St. Jean at Besançon were erected as early as the eleventh century.

In 1899 the following institutions were to be found in the diocese: 15 infant schools in Besançon and 35 in Vesoul; 1 deaf-mute institute in Besançon; 3 girls' orphanages in Besançon and 3 in Vesoul; 2 protectories in Besançon; 1 house of correction in Besançon and 1 in Vesoul; 2 hospitals and hospices in Besançon and 8 in Vesoul; 12 communities for the care of the sick in their homes at Besançon and 8 in Vesoul; 1 house of retreat in Besançon and 1 in

Vesoul; 3 homes for the aged in Besançon; 1 infant asylum, 1 boys' orphanage, and 4 gratuitous industrial schools in Vesoul, all conducted by nuns; 1 deaf-mute institute and 1 boys' orphanage in Besançon conducted by brothers.
